The Nation.

NEW YORK, THURSDAY, JANUARY 3, 1889.

The Week.

THE Boston *Herald* makes the following pregnant remarks upon a step which all accounts seem to agree Gen. Harrison is likely to take:

"It was not the fact that President Hayes went into office under the cloud of a contested title that injured him with the country. The American people were intelligent enough to see that, whatever might be thought of the circumstances attending his election, it was the duty of Mr. Hayes to take the Presidency. What really injured him was the fact that certain men were engaged in questionable doings to elect him to that position, and that he conferred offices upon them all. The lesson ought not to be lost now. Mr. John Wanamaker may be a well-intentioned and a pious man, but his claim to office comes solely from the fact that he collected a large amount of money, which was used, as millions of men believe, corruptly, to promote Gen. Harrison's election to the Presidency. For that reason Gen. Harrison should not distinguish Mr. Wanamaker by any Executive favors."

No public man ever despised a caution of this kind with impunity; for, after the days of triumph and excitement, there come the years of reflection, when the sort of memory he will leave behind becomes his chief concern. It has been the fashion in the Republican party ever since 1876 to sneer at the purists and the scrupulous people who examine too curiously the way success is won—a fashion which is always the legacy of a great war, but is in politics the very gate of hell. Poor Mr. Hayes fell a victim to it; President Arthur gloried in it at the Dorsey dinner; it would have given New York to Blaine if O'Brien had not stolen the money; it has this year found this same O'Brien guilty, not of bribery, but of misappropriating the bribery fund; and it is now making even good men clamorous for a handsome reward to the man who supplied Dudley and Quay with most of the sinews of war in the last election. The devil of it is, too—for this is, under the circumstances, the appropriate phrase—that when you object, your attention is directed to his Sunday-schools and his Bible-classes, the very things which, under the circumstances, his fellow-Christians should try to hide.

Col. Dudley, the Treasurer of the Republican National Committee, was in Philadelphia last week, visiting John Wanamaker in a quiet way, and was apparently much annoyed when the reporters found him out. He has gone to Washington, it is said, to settle down to "the practice of the law." The conduct of all these three worthies, Wanamaker, Quay, and Dudley, has something very queer about it. For instance, good men, such as they are said to be, who have been engaged in an almost religious enterprise, such as the election of Gen. Harrison is said to have been, are usually ready, even eager, when they have been intrusted with large sums of money, to render an account to the public. All promoters of religious, philanthropic, and educational enterprises are very particular about this; but we do not believe wild horses could extract an accounting from these three gentlemen. They will even sacrifice their reputation as Christian workers sooner than show their books or vouchers. Then take Dudley's case. His dearest earthly possession—his good name—is savagely assailed by bad men in his own State, Indiana, and they are at this moment trying to get him indicted by the Grand Jury. One of them has been printing and circulating a letter purporting to be Mr. Dudley's, recommending bribery on a great scale, and has been offering Mr. Dudley for many weeks $1,000 to come home to Indiana, and swear that the letter was not his. All really good men we have ever known would, under such circumstances, be on the ground, looking after their character, and meeting their enemies in the gate, and putting them to rout. But Col. Dudley is not on the ground; in fact, he has not gone near his "home" since the election, and has left his good name wholly in "the hands of his friends." He goes about a good deal, but Indiana has apparently no attractions for him. And yet he is the close friend of John Wanamaker, and John Wanamaker has a Sunday-school, and is, after Col. Elliott F. Shepard, probably the most religious Republican in the world.

The dinner of the Massachusetts Tariff Reform League was a grand reunion of the character, talent, and public spirit of the Bay State, graced by the presence or the well-expressed sympathy of the highest dignitaries of the nation, including the President, the Secretary of the Treasury, and the Speaker of the House of Representatives. The letter of President Cleveland was a high-toned and high-principled communication, showing that the sting of defeat was no longer in his mind. It was received, as it deserved to be, with an enthusiasm that is seldom called out from an assemblage embracing such men as President Eliot, Prof. Peabody, W. L. Putnam, Edward Atkinson, T. W. Higginson, W. E. Russell, and the other leaders of New England thought who were present. The gathering, the speeches and letters, and the spirit displayed, are a sure augury that the battle for the right of every man to the fruits of his own labor is going on with all the more earnestness by reason of the temporary reverse met in the recent election.

Senator Morrill of Vermont contributes to the *Forum* an article asking the question: "Is Union with Canada Desirable?" His answer is that commercial union would not be desirable, because it would mean free trade in fish, lumber, garden-vegetables, salt, and several other things, to the great detriment of our fishermen, lumbermen, gardeners, salt-boilers, etc.; but that political union on the whole would be desirable, because it would open a great field for our enterprise in developing the fine natural resources of the countries north of us. "Their very extensive wheat-fields," he says, "as a supplement to our own, would prove a welcome guarantee against any possible future deficiencies of American crops. Their bituminous coal would be convenient to our Eastern States, and there might be an equal demand for our abundant anthracite in their wintry climate. Certainly the cost would be considerably cheapened. Their wild lands would be a timely and almost boundless reinforcement of our forest and timber-lands." And then what would become of our fishermen? Well, according to the Senator, they would disappear from the face of things, but the Canadian fisheries and fishermen would be ours, so that we should be none the worse off; "the difference would be chiefly noted among our future throngs of sailors by their slightly provincial accent." The owners of the Gloucester fleet are well acquainted with this accent, fortunately, and would be able to man their boats with Canadians as well after political union as before.

The argument of the Senator does not strike us as a very sound one on either protectionist or free-trade grounds. If commercial union would be disastrous to our fishing, lumbering, gardening, and salt industries, political union would be equally so; and it may be seriously asked whether it is right to sacrifice these established industries for a perhaps visionary scheme of development to be promoted by American capital and enterprise. What kind of enterprise? Naturally we might look forward to some development of manufacturing enterprise in that quarter. Not so; for the Senator tells us gravely, in his argument against commercial union, that "we may as well dismiss all golden dreams about a market in Canada for manufactures, as we already know that, since they adopted a protective tariff, the manufactures established in Canada have already produced a glut in their own contracted market." We were somewhat amazed at this statement from so eminent an authority in the world of commerce and finance, and were led by curiosity to examine the imports of Canada as reported in the volume of 'Commercial Relations for 1885-6,' published by our State Department. In the list of American manufactures imported by Canada in 1886, under thirty-three headings are found upwards of $15,000,000 of our manufactures. There are 126 headings of American manufactures in the list where the amounts imported were less than $100,000 each. The total imports of Canada in 1886 were $100,000,000, of which we supplied $44,000,000, Great Britain $40,000,000, and the rest of the world $16,000,000.

The London *Statist* of December 15 makes the important announcement that the scientific examinations of the tin-ore deposits of the Harney Peak district, Dakota Territory, and the metallurgical tests of the same made at the works of Thos. Bolitho & Sons in

Cornwall, have demonstrated the existence of tin in the aforesaid district in paying quantity and quality. The rock tested at the Bolitho works yielded 62.67 pounds of pure metal per ton. Other assays yielded about the same results. A commission was sent out from London last August to examine the deposits. One of them, Mr. Seeton Karr, M. P., says: "I am confident that millions of tons of the same ore can be obtained from your various mining claims." Another, Prof. Vincent, says that these claims show "superficially" more than a million tons. The deposits extend over an area of about thirty square miles. We were somewhat dismayed upon reading these facts in the *Statist*, lest the existence of tin in paying quantities in this country should lead to putting a duty on the article, which is now on the free list, thus making it more difficult and costly than before for the American people to get tin. If we escape this infliction, this punishment for the offence of having a good tin mine, we shall probably owe our immunity to the fact that the Harney Peak deposits belong to an English company.

We are glad to see a letter from Mr. Jefferson, taking himself out of the list of actors who are trying to get Congressional protection from the wicked foreigners who come over here, act better than we do, and get the American playgoers' money away from us. He says he thinks the move "unwise," which is speaking very mildly. It is a move in every way discreditable to American actors. A man pursuing an intellectual calling, who whines and calls for the police because another man's work—no matter what his nationality—is more enjoyed by the public than his is, is, to speak plainly, an object both of ridicule and contempt. A "move" for the protection of the public from bad actors would be far better worthy of Congressional attention than a "move" to protect bad actors from foreign competition. We do not know how this could be arranged, but the subject is worth the study of jurists. A great deal too much good American money now goes into the pockets of that most worthless class of the community, men who take to the stage for a living without any qualification for the actor's profession beyond ability to learn "lines" by heart. If there is to be legislation about the stage, the act ought to contain a stirring section about this description of drones. Their audacity in asking for a monopoly of their wretched trade deserves a rebuke.

There are rumors—we trust, for the sake of the national good name, unfounded—that a publisher proposes to rob Mr. Bryce in broad daylight by printing a pirated edition of his American Commonwealth.' There would be no moral difference between doing this and knocking Mr. Bryce down on Broadway and taking his watch and money. Whatever may be said in defence of robbing an author for the purpose of procuring for yourself cheap mental improvement, there is not a word to be said in defence of robbing an author for the purpose of selling his property for your pecuniary gain. If Mr. Bryce should be the victim of an operation of this sort, owing to his having spent years of hard labor in producing a noble book on American institutions and manners—a book which does honor to the American people no less than to the author—it would be a truly horrible illustration of the need of an international copyright law. It would be barbarous and ungrateful as well as dishonest to cheat Mr. Bryce. We must, therefore, trust that our leading pirates will respect his property, even if they care nothing for his interests. If they pillage him, he will have to revise numerous passages in his second edition.

One of the earliest and most pressing subjects to engage the attention of the Legislature will be the condition of the prisoners in the penitentiaries and reformatories of this State. We have now, or shall soon have, to face an annual deficit of more than a million dollars. The State prison expenses for the year 1887 were $1,628,523, and the earnings $1,111,823. Hereafter it will be all outlay and no income. But that is not the worst of it. Under the system of enforced idleness, the character of the prisoners is becoming worse. Since the tonic of labor has been taken away from them, they have been suffering a degradation from their own low moral standard. They are now maintained at a double expense to society. They are a pecuniary expense, as already shown, and they are a still greater expense from the deterioration of character of which idleness is the proverbial parent. The philanthropist may rightly add that it is an act of cruelty to the prisoner to deprive him of occupation of body and mind, while shut up in the walls of a dungeon. Every argument which can be advanced to the head or the heart pleads for the productive employment of prisoners while serving out their terms of confinement.

Although New York is a rich State, a fresh tax of a million dollars all at once must set a good many people thinking. This is what we shall now have to face. It is the penalty, the fit penalty, for allowing a handful of walking-delegates to override the dictates of common sense and the experience of all nations and all ages. In the illogical report of Mr. Carroll D. Wright, Labor Commissioner of the United States, on this question, in which he shifted his own ground, and took the extreme position of the walking-delegates, it appeared from the statistics that the whole amount of prison labor was only 52-100 of 1 per cent. of the mechanical labor of the country. The amount of competition between prison labor and other labor is therefore imperceptible, except to the senses of a walking-delegate. If reason were to be allowed to enter into the discussion at all, it would be easy to show that the greater the competition the stronger the argument for keeping the prisoners at work; for if prison labor were 50 per cent. of all the labor in the country, instead of being one-half of 1 per cent., it would be impossible for honest labor to support the burden. If one-half of all the people were in jails and penitentiaries, the other half could not support the prisoners and themselves also. It would become necessary to resort to the most efficient and productive forms of prison labor. The highest statesmanship would be that which should get the most work out of the convicts. Our present system is, therefore, confessedly a system of taxing the many for the supposed benefit of the few. The fewer there are in the latter category, the more reason for taxing the former, because the moment that prison labor should become really important, that moment we should all agree that it ought to be made as productive as possible.

Under the heading, "A Big Bonus for a Big Fraud," the Cleveland *Leader* vigorously assails a bill in the House of Representatives appropriating $10,000 for the completion and publication of Consul Schoenhof's report on Technical Education in Europe. This the *Leader* understands to be a bill to pay Mr. Schoenhof "$10,000, in addition to his salary, for running about and collecting free-trade statistics for the use of Democratic committees in the late campaign." The truth is simply that a work entirely disconnected from politics, and of exceeding value to our own industries, and most of all to our manufacturing industries, undertaken by Mr. Schoenhof by direction of the State Department, is only half finished. The first volume, relating to technical schools in France, has been published, and has been received with marked approval by educators in this country. The other portion, embracing the schools of Germany, Switzerland, and Austria, is in an unfinished state, and the question is whether a work of so much importance, upon which a good deal of labor has been expended, shall be abandoned for no better reason than that the person employed to prepare it differs in politics from the majority of the Senate; for it is to the Senate that the *Leader* makes its appeal to refuse the appropriation. The only question fit to be considered is whether this work on technical schools is a good one, and whether it is worth the money. There is no such work accessible to American students at the present time. The older one prepared by a Royal Commission in England several years ago was never accessible here, and if it were, it would be of little use now, being out of date.

The annual report of the Superintendent of Education in South Carolina is most encouraging for the future of the State. Perhaps nowhere else in the South was there originally more prejudice against the public-school system; but the Superintendent now declares himself "sure that a very large majority of our citizens are in perfect sympathy with the efforts of the State to train every child," and that "an intelligent interest grows everywhere." During the past year there has been an increase of 162 in the number of schools, and of 18,417 in the number of pupils enrolled, while the towns are vying with each other in the character of the school buildings which they are erecting. This spirit is not confined to the

larger places, but smaller towns and country districts the State over are rapidly putting their money into modern school-houses. All that is now needed to perfect the school system is a larger fund, and this can be secured by the enactment of a law which will allow school districts to supplement the general tax by a local levy, after the custom in Northern States.

The most hopeful feature about these reports of Southern school superintendents is the spirit of independence which they breathe, the glow of pride in the system of public education which the people are building up by their own efforts. "Best of all," said Superintendent Russell of Florida, in concluding one of his reports, "the people of Florida are doing it all themselves, without any aid from any outside source." This is the spirit which the people of the South most needed to have developed when they were suffering from the poverty imposed by the war, but which mistaken charity would have suppressed. "We do not need book-learning so much as training in independence and self-reliance," said the *Southern Christian Advocate*, the organ of the Methodist Episcopal Church, South, published at Charleston, in opposing the passage of the Blair bill two years ago. "We can get on," it added, "for many years to come with a modicum of schooling, if only our people advance surely in economy, thrift, and in the intelligent appreciation of the real benefits of common-school education. But this advancement depends on self-help and self-denial."

Prohibition has experienced a set-back in Georgia. On the 30th of September, 1887, the sale of whiskey was authorized in only thirty-eight of the 138 counties in the State, while on the 30th of September, 1888, the number of "wet" counties had increased to sixty-one, and since that date three more have been added to the list. The Macon *Telegraph* does not believe that these figures indicate a decline in the temperance sentiment in Georgia, but attributes the change for the worse largely to the rashness and bad judgment of the prohibition leaders in forcing the issue into politics by attempting to organize a third party. Northern Prohibitionists have been quite hopeful that their party would secure a foothold in the South, but the present indications are decidedly against it.

The correspondence between Mayor Hewitt and Mr. Vanderbilt as President of the Harlem Railroad Company, touching the rails on the Fourth Avenue Line, is a very pleasing and unusual incident in municipal politics. Mr. Hewitt some time ago told a melancholy tale of his having been employed years ago, as an iron-master, to furnish rails for street railroads of such shape as to prevent their being used by ordinary vehicles, or, in other words, as to cause the general public the greatest possible amount of inconvenience and the company the least possible amount of wear and tear. In asking Mr. Vanderbilt to redress this original wrong, and lay down new and more convenient rails, as a return for permission to use electric motors on his street-cars, Mr. Hewitt, therefore, spoke with what Gen. Boulanger would call *pleine connaissance de cause*. Mr. Vanderbilt, on his part, in admitting the reasonableness of his request, and promising to accede to it, spoke in accents which few will recognize as those of a corporation, and which the Jacob Sharp school of moralists would undoubtedly attribute to a Molly-Coddle or Miss Nancy. It is pleasant to have such strange and unfamiliar voices herald the coming of the new year. The coming in of electricity as a motor in the streets is probably the best news "our colleague the Horse" has heard since the close of the war. It will deliver vast numbers of his fellows from lives of shame and sorrow, and turn them over to nobler cares and responsibilities.

The "woman question" is making at last a stir in France, all the greater for the length of time it has been staved off. It is only within two or three years that there has been a decided rising against conventual education—a custom so long established that "leaving the convent" has become in French a synonym for finishing a girl's education. At this moment the public is occupied with the attempts of women to enter the learned professions. The Parisians were startled a few weeks ago by the application of a girl in Brussels, who had taken her degree in law, for admission to the bar, which the court denied. More recently, in Paris, a very pretty and very clever Mlle. Schultze read a thesis, when graduating at the Medical School, on the practice of medicine by women. She had been a very brilliant student, and her thesis was very able, and was listened to with great interest by a crowded audience. Dr. Charcot, famed for his experiments in hypnotism, answered her, denying most of her conclusions, but complimenting her highly, in thoroughly French fashion, on her beauty. The public is, however, apparently on her side. Dr. Charcot complained that women doctors did not want to serve in the lower grades of the profession, that they would not doctor quietly in country villages, but insisted on competing with the men in the great cities, where the profession is already overcrowded; to which the *Temps* replies very aptly, that if the women doctors cling to the cities, men doctors do the same thing, in spite of the overcrowding. Conservatives are still further alarmed by a bill now before the Chambers giving women who are at the head of business houses the right to vote at the election of the judges of the tribunals of commerce who pass on disputed points arising out of business transactions. They do not object seriously to the simple proposal that such women should vote, but they use against it the "entering-wedge" argument, and insist that it will end in women sitting as judges, which all seem to agree would be a scandal; at least this is the conclusion we draw from the answer of the *Temps*, that this is something which would never happen—though why it would not happen does not appear.

One of the discussions now raging in France is over the question of submitting the revision of the Constitution to the people. All enemies of the Republic are clamoring for this, and the Royalists go still further, and ask for the submission of the form of government also, believing that, in the present temper of the voters, a majority could be obtained for a monarchy. This the Republicans oppose as unprecedented and impracticable. But Paul de Cassagnac, the great Bonapartist prophet, tries to facilitate it by announcing almost in set terms that the Bonapartists as a party have ceased to exist, and that there are now only two parties in the field, Monarchists and Republicans, the former including all who desire a return to monarchical government in any shape. It is not difficult, however, for the Republicans to show that the attempt to establish a hereditary monarchy by plébiscite would be an absurdity, because if it be necessary that one ruler should obtain his authority from a popular vote, it would be necessary that his son should obtain it also, so that there would have to be an election at each demise of the crown. No man under the régime of universal suffrage can claim political power because his father had it. Nor would it be easy for the Comte de Paris to prove his claim to be the only person voted on to fill a vacant throne. In fact, in order to set up monarchy in France again, divine right would have to be brought in somewhere; and French voters have forgotten all about it, and would not know it if they saw it.

Boulanger is pursuing the plan of taking a plébiscite on his claims to the position of reformer-in-chief of the Republic, by offering himself as a candidate for every vacancy which occurs in the Chamber. He has got majorities in this way now in four departments, and has thus made a considerable impression on public opinion. He is now about to apply the most important test of all to his standing, by offering himself as a candidate for a vacancy in the Parisian delegation, and the Republicans are considerably alarmed as to the result. In spite of the great decline of Paris as a political power, since the insurrection of the Commune, the opinion of Paris has still great weight in the provinces, and if Boulanger can show that he has a majority in the city, the effect in the country at large would, it is feared, be very great. As yet no candidate has been found to oppose him. Floquet has been talked of, but the Republicans shrink from setting up their most considerable man, because, of course, the more important the candidate, the more serious would defeat be. It can be readily understood what a powerful argument in favor of district representation—or *scrutin d' arrondissement*—these Boulanger majorities are furnishing. The *scrutin de liste*, or general ticket, enables him to get the vote of an entire department every time he runs for one vacancy in the delegation.

CABINETS IN THE PAST.

THE President's Cabinet as it now exists is a feature of the Government which has been a growth rather than the immediate creation of the Constitution. The Constitution, indeed, does not mention the institution by name, and the only clause which covers the subject is that which declares that the President "may require the opinion, in writing, of the principal officer in each of the executive departments upon any subject relating to the duties of their respective offices." Washington was inaugurated on the 30th of April, 1789, but it was not until the following September that Congress passed laws instituting executive departments. The Navy Department was not established until the following year, and the Interior Department was unknown until 1849. A bill is now before Congress elevating the Department of Agriculture to the rank of a Cabinet office.

Washington entered upon the Presidency, as he wrote to a friend, with the conviction that he stood "in need of the countenance and aid of every friend of myself, of every friend to the Revolution, and of every lover of good government." Parties had not then been formed, and it was his aim to array in support of the new Government the ablest and best men in the country, without reference to the position which they had occupied in regard to the framing and adoption of the Constitution, or the views which they held as to the workings of popular government. For this reason he called into his Cabinet Thomas Jefferson as Secretary of State and Alexander Hamilton as Secretary of the Treasury—two men who held radically divergent views as to the very theory of our institutions, and who were the predestined leaders of the two great parties which it was inevitable should soon be formed. Their opinions were so irreconcilable that they soon quarrelled with each other, and even attacked each other bitterly in print. Washington repeatedly patched up peace between them; but the situation at last became intolerable, and Jefferson resigned.

With the rise of parties, Presidents realized the political necessity of taking the heads of departments from among those who agreed with them on questions of public policy. For a quarter of a century after 1800 it was their practice to offer the State Department to the man next in prominence to the President in their party, and in turn this man became the successor of his chief in the highest office. Thus, Jefferson appointed Madison; Madison, Monroe; Monroe, John Quincy Adams. This "easy accession," as it used to be called, came to an end with the scandal (now universally held to be baseless) of the "bargain and sale" by which Clay was appointed by John Quincy Adams Secretary of State after he had thrown his influence in the House of Representatives in favor of Adams for President.

The method of selecting candidates for President by nominating conventions naturally led to the President's offering the State Department to one of his chief rivals in the Convention. In 1840 Harrison tendered the place to Clay, and upon his refusal to Webster; in 1844, Polk to Buchanan; in 1852, Pierce to Marcy; in 1856, Buchanan to Cass; in 1860, Lincoln to Seward. Lincoln went still further in giving places to his rivals in the Convention, making Chase Secretary of the Treasury, Bates Attorney-General, and Simon Cameron Secretary of War—though the appointment of the last-named was much against his will, and only in deference to the insistence of his friends upon his redeeming promises which they had made in his behalf without his knowledge.

Had not the secession movement intervened between his election and inauguration, there is little doubt that Lincoln would have followed the example of Washington in giving representation in his Cabinet to all political opinions. His biographers agree that it was his first intention to appoint some representative Southern Democrat to a place. He authorized the offer of the Treasury Department to Mr. Guthrie of Kentucky, who had been one of the most prominent candidates for President before the Democratic Convention at Charleston; and, upon his declination, commissioned an agent to place a seat at the disposal of Mr. Gilmore of North Carolina, who reluctantly declined it because of the prospect that his State would secede. Events compelled Lincoln to abandon this policy, although he still clung to the principle so far as later to defer for some time the appointment of a successor to Judge Campbell of Alabama upon the Supreme Bench, in the hope that the South might soon return to the Union and enable him to pick out a representative Southern man for the vacancy. No other experiment in this direction has ever been attempted, with the single exception of Mr. Hayes's somewhat ridiculous attempt to revive the "old-line Whigs" and bring them into the Republican party, by giving the Postmaster-Generalship to a Tennesseean who had supported Tilden for the Presidency.

Gen. Grant introduced the principle of treating places in the Cabinet as the purely personal perquisites of the President, to be allotted as his private fancy dictated. Nobody familiar with public affairs at the time will ever forget the shock of surprise created by the announcement that Grant had given the Navy Department to Adolph E. Borie, a wealthy gentleman entirely unknown by name outside a limited circle in Philadelphia. The choice, as Borie's successor, of a Camden lawyer whose sole "claim" consisted in the fact that he told stories which amused the President, was perhaps a more startling revelation of the singular conceptions as to public office which Grant carried from the camp to the White House. The impeachment of Belknap, who had won the War Department by pleasing the humor of the President at a banquet, was only the most striking exhibition of the dangers of making a Cabinet in this way.

This year a new principle is advanced in the selection of a Cabinet. Hitherto, with the exception of Grant's eccentricities, it has been the rule to select only men who have been more or less prominent in public life as the representatives of their party. Now it is proposed to give a department to a man who never attained any such prominence, and whose sole claim is the fact that he raised a great amount of money to secure the election of the successful candidate. What adds to the singularity is the accumulating evidence that Mr. Wanamaker is the only man sure as yet of any position in Mr. Harrison's Cabinet. It would be extremely interesting if we could get the views of George Washington and Abraham Lincoln upon this new departure.

THE TRULY PROTECTED LABORERS.

WHEN, on Monday week, in discussing the duty on car-wheels, Senator Harris expressed a doubt as to whether any one would assert that the present duty of 78 per cent. was necessary as a matter of protection to the labor employed, and Senator McPherson pointedly observed that the Senators on the other side of the chamber had abandoned any attempt to defend the legislation upon the idea of protection to labor, and had instead taken the broad ground that the factory interests must have whatever protection they desired, Senator Edmunds came as near taking fire as his nature would permit. With a vehemence of assertion which might have done excellent service at a campaign gathering, he maintained a series of startling propositions which place him, in spite of his age, in the very forefront of the leaders of the new school of Protectionists, who advocate in time of peace that great blessing which the South enjoyed during the war—the complete embargo of foreign commerce. He began his spirited reply to Senator McPherson by boldly asserting that practically the entire cost of any article is the cost of the labor which has produced it. Assuming the weight of a car-wheel to be 300 pounds, and its value to be $5.00, he declared that

> "That 300 pounds now constituting a car-wheel was probably worth, as raw material in the bosom of the earth untouched, three-tenths of one cent. You may call it three cents if you like, and then you get above its real worth. Everything that touches the cost of that car-wheel in the market, and that makes it worth what it is, is the labor of man, and nothing else. . . . So if a car-wheel is worth so many dollars now, 99 per cent. of those dollars is the labor that somebody has put into it."

This statement was followed by the explicit declaration that the admission of foreign-made goods involved the starvation of the American laborer, since "for every hundred million dollars' worth that come and are consumed, . . . the laborer of the United States is deprived of the opportunity to earn his wages by just that much." Finally the distinguished Senator concluded by asserting that the tariff did not raise the price of goods to the consumer, and that he had voted against reducing the duty on cotton-ties in order "to keep the price as low as possible by making the duty as high as possible"! The fact that foolhardy positions such as these should be assumed with such reckless aggressiveness by the Senator from Vermont would seem to indicate that it may be but a few years before the advocates of an embargo policy will be ready to incorporate in

legislation the crowning absurdity of Henry C. Carey, their chief representative in literature, who in 1871 openly argued that a prolonged war would be the best possible thing that could happen to promote the industrial development of our country.

But to answer Senator Edmunds by a further reduction to absurdity of his positions would obviously be an effort hopelessly misdirected. What needs to be done, and what the Democratic Senators signally failed to do, is to show the utter falsity of his fundamental assertion that price and labor-cost are synonymous. Stated in Senator Edmunds's words, there is probably no one living who believes it; yet this was but an exaggerated expression of the doctrine laid down in the majority report on the Senate Tariff Bill, and the statement there was apparently made in good faith:

> "If, in computing the cost of production, we should exclude the sums paid for taxes, insurance, interest, and retained for accruing profits, a large portion of which represents payment for labor and services, *and which together would rarely amount to 10 per cent.*, we should then find the labor cost in all cases to be at least 90 per cent. of the total expenditure."

When stated thus, the position seems plausible. The interest upon capital rarely amounts to 10 per cent.; therefore capital receives less than 10 per cent. of the product, labor more than 90 per cent. The fact that the capital upon which interest is drawn is often ten times the labor bill is completely ignored. A New York farmer is content with 7 per cent. upon the capital invested in his farm; but when he rents it on shares, supplying machinery and stock, he does not on that account demand but 7 per cent. of the product: he demands 50 per cent., or else he makes a bad bargain.

So much for the absurdity of the general proposition. Coming now to the particular example, Senator Edmunds's car-wheel, what is the percentage of labor-cost in each of the two industries in which it receives its value—mining and manufacturing? Fortunately we have in each case official statistics. In the year 1880 the wages paid in the iron mines of the country were $9,500,000; the value of the materials consumed was $2,900,000; the value of the product $20,500,000. In other words, the labor cost was 46 per cent., and the profit remaining to the mine-owners was 40 per cent. The way in which the American laborer has been protected by the duty imposed upon iron ore is beautifully illustrated by comparing the statistics of 1880 with those of 1870. In 1870 the average annual wages paid to the iron-miners were $455. In 1880 it was $301. We have no desire to deal unfairly with the mine-owners. We would call attention to the fact that the real reduction in wages was not so great as the apparent reduction. Measured in gold the average wages in 1870 were but $364. The reduction which had been effected was 20 per cent. Meanwhile, during the same decade, the capitalization of the iron mines had increased 247 per cent. It is quite evident what laborers are protected here.

When we turn to the manufactories of iron and steel, we find that the capital employed is $330,000,000, the wages of labor exactly one-sixth as much, or $55,000,000. If the owners receive then but 7 per cent. upon this investment, their share of the product is 42 per cent. that of the laborers. But the profits of the employers are not to be estimated in this way; we frequently hear them asserting that they are making no profits at all, when they are simply getting competitive rates of interest upon the capital invested. In well-conducted enterprises profits are and should be greater than this. The census report, faulty as it is, affords an indication of this amount. Deducting the wages bill and the cost of materials from the value of the product in the iron and steel industries, a balance of $52,000,000 is obtained. From this must be deducted the cost of taxes, insurance, bad debts, and loss through wear and tear of machinery. For the cost of the taxes, one per cent. upon the capital invested is a liberal estimate, especially in Pennsylvania, where the capital stock of almost all manufacturing companies is exempt from taxation. One and one-half per cent. is a liberal estimate for insurance; 1 per cent. a liberal estimate for loss upon bad debts; and 4 per cent. equally liberal to compensate for loss through depreciation in the value of machinery. Making these deductions, the profits are reduced to about $37,000,000, or 70 per cent. of the labor bill.

The justice of this estimate might perhaps be doubted were it not for the light which foreign statistics throw upon the problem. The income-tax returns for the cities in Saxony (Schaeffle's 'Steuerpolitik,' p. 138) show the total of wages and salaries to be 174,000,000 marks; the total of profits in trade and manufacture, 228,000,000 marks. These are the amounts returned for taxation. In estimating the real incomes, the former amount must be slightly increased, the latter amount very greatly. The real profits of the manufacturers and traders are out of all proportion greater than the wages of the employees. In America it is not pretended that the same proportions will hold good. Production is conducted upon a much larger scale here than in Germany. American laborers need vastly less superintendence, and there are vastly more Americans than Germans capable of superintending large enterprises. This reduces the cost of management in America to the minimum except in industries where the uncertainty due to the tariff prevents competition, and leads the managers to devote their attention to politics instead of business.

It is therefore obvious that the cost of the labor which is employed in the making of Senator Edmunds's car-wheel, instead of being practically the whole cost, is an element little greater than the profits of mine-owners and manufacturers. In addition to this, it is obvious to the most superficial observer of business affairs that the wages of labor are practically a fixed quantity, while the profits of capital change from one establishment to another and from one year to another, now less than nothing, and now treble and quadruple the labor bill. This fact was abundantly illustrated by the statistics for nine paper-manufacturers which were published editorially in the *Paper World* in March of last year:

Year.	Per cent. of capital's share to selling price.	Per cent. of labor's share to selling price.
1850	7.4	6.67
1860	4.42	12.16
1865	29	7.12
1870	56	15
1880	6.16	16.15

For the entire period the average profits of capital were 20.6 per cent., and the wages of labor 11.4 per cent. The latter element has fluctuated but little. Slowly but steadily wages have risen, the one exception being during the war, when prices were abnormally high. It is the employers and the employers alone who have been benefited when either war or protection has made scarce the goods which they alone have to sell.

THE NEXT PENSION RAID.

To everybody who keeps an outlook on public affairs, the largest object in the range of vision is some kind of a new pension bill. Nearly everybody dreads it. All hope that it will not be very bad, but none venture to expect that the next pension raid will be the last or the next to the last. The common belief is that we shall go on as we have been going, increasing the donative in proportion as the number of soldiers diminishes, until our expenditure for pensions alone exceeds that of the largest military establishment in Europe *plus* its pensions. In 1880, a quarter of a century after the close of the war, our disbursements on this score were $56,000,000. Last year they were $80,000,000, and we shall probably never see them as low again in this generation. Patriotism still exists, but it must be paid for at an ever-increasing rate. What the patriotism of the next generation will fetch, in dollars and cents, we can scarcely imagine.

In the January number of the *Forum*, Mr. Leonard Woolsey Bacon has a strong article on the subject, showing how the Arrears Act of 1879 poisoned the morals of the volunteers, who up to that time had been content with the provision made by the pension laws, and proud of their distinction as citizens who had done something more than their duty in the country's crisis. The Arrears Act, as Gen. Hawley stated at the time, did not originate with the soldiers. It had its start in the councils of claim-agents at Washington city. The soldiers were at first surprised, but the claim-agents had not miscalculated the effect of the proposed largess on the minds of the men. We may admit, nay, we must admit, that they were the picked men, the superior men of the community, and therefore the ones least likely to be demoralized by an appeal to the sense of greed. But this was more than human nature could contend against. The demand for arrears went out from Washington, but it came back in time with tenfold strength. It upset all

preëxisting ideas of the nature of a pension, and substituted a totally new idea in its place. It is the duty of a government to protect the soldier who has incurred disabling wounds or permanent illness in its service against the consequences of such disability. Duty goes no further than that. Anything beyond is a gratuity. Such was the conception shared by the soldiers, in common with all other people, until the Arrears Act came in. This act was cunningly phrased so as to invite frauds and prevent the exposure of fraud. "The consequence," as Mr. Bacon says, "was what might have been foreseen:"

"The nation had offered a bonus of $1,000 cash, besides future payments, for every new pension claim that could be proved. The gang of claim agents in Washington were busy urging ex-soldiers everywhere to solicit Government aid, and assuring them of 'our unusual facilities.' What wonder, considering the infirmities of human nature, that the invitation to step up and take a thousand dollars apiece, with an annuity, out of the Treasury, 'on a mere *ex-parte* affidavit,' should be accepted in the same large spirit in which it was offered; that men in comfortable circumstances, who had been ashamed to ask for twelve dollars a month, should find the offer of a thousand dollars in a lump to be quite a different matter; and that men in comfortable health should become conscious all at once of hitherto unsuspected disorders, traceable through subtle lines of causation to a longer or shorter military service? Of course, as everybody (except Senator Blair) might have known, and as everybody now does know, there were frauds innumerable. And the Senator from New Hampshire, whose guileless hands had been employed to pull the lanyard to explode this mine under the Treasury, could only remark, as he saw the rogues running away with the gold, that he had no idea that it was loaded to that extent."

How rapidly men's minds have been changed, how completely the *rationale* of pensions and pension legislation has been overturned by this fatal act, we may learn by going back to the year 1872, and seeing what was then thought by one of the most competent authorities of our time. On the 12th of December in that year General Garfield, as Chairman of the House Committee on Appropriations, reported the pension appropriation, with a few remarks, showing what he believed would be the future cost to the nation. The bill appropriated $30,480,000. "It is interesting," he said, "to inquire what the tendency of our pension appropriations is likely to be from year to year. From figures I have just stated, it will be seen that there has been a steady increase for several years. It is thought by the Commissioner of Pensions that we have now reached the top, so far as the amount of expenditure is concerned; but he does not think that that top is a peak from which we will at once descend, but rather a plain upon which we will go for perhaps several years with a substantial regularity of amount, about the same as we are now paying per annum." With these views of the Commissioner Mr. Garfield concurred, and nobody in the House or in the country differed from him. Gen. Grant set his face sternly against the suggestion of an Arrears Bill in his time, and his views were heartily sustained by the soldiers so long as he remained in the Presidential office.

The thirty millions of that period have risen to eighty millions, notwithstanding the gaps which death has made in the ranks of the pensioners during the past eighteen years. All just conceptions of a pension as a recompense for disability have vanished, and in place of it has come the idea that a pension is a reward for military service. The soldier must not only be placed on as good a footing as he would have had if he had not entered the service, but on a better one. He is content to exchange his proud distinction in the community, as one who has done more for his country than his fellows, for a few dollars taken from the pockets of perhaps poorer men than himself. At least, this is the present attitude of the Grand Army of the Republic. Of course, there are a great many soldiers who do not agree to this. There were 22 negative votes at the Columbus Encampment against 356 in the affirmative; moreover, the Grand Army does not embrace all the soldiers, perhaps not a majority of them. But the political force of the whole is carried by the organization. It points, as Mr. Bacon says, to something "unprecedentedly ruinous and infamous," and leads to the expectation that we shall soon be in the condition of those European countries where "every workman goes to his labor with a soldier strapped upon his back."

GEN. BOULANGER'S REVIVAL.

OUR readers may remember that it was the general opinion, not only in France, but all over Europe, after Gen. Boulanger's absurd appearances in the Chamber in June and July last, and his resulting duel with M. Floquet, that he was ruined as a politician. Some of his most prominent Radical supporters—among others Rochefort—deserted him at that time, and, in fact, the Radicals as a whole fell away from him completely. His own Central Committee was divided, and his most powerful organ, the *Lanterne*, openly repudiated him. His most trusted lieutenant, M. Deroulède, was defeated by an enormous majority in the Charente in June. In July he resigned his own seat, and announced that he would run for every vacancy that occurred in the Chamber, so as to take the judgment of the people in various parts of France on his controversy with the majority. But immediately after this he lost the election in the Ardèche. Then his funds, a large part of which, it was said, came from M. Hériot, the Parisian Wanamaker, gave out, Hériot having become insane in consequence of a quarrel with his wife. In fact, Boulangism seemed utterly dead by the end of last July. Before the end of August, however, Boulanger astonished France by carrying three elections in the Nord, the Somme, and the Charente-Inférieure by enormous majorities. The Boulangist propaganda was then everywhere suddenly revived. The documents and photographs began to circulate once more as in the beginning, and the "brav' Général" became again the coming man, and began to carry election after election.

To what was this extraordinary change in his fortunes due? Not to any gains among the Republicans. It was easily ascertained by an analysis of the election returns in the departments in which he was victorious that the Republicans had definitively abandoned him. It soon became plain that his revival was caused by a combination of the Conservatives of all shades. The word had been passed among them, it was said with the authority and by the connivance of the Comte de Paris, that they were to back up Boulanger and ask no questions. At the same time funds began to flow into the Boulanger exchequer with all the old profusion. The Republicans were at first greatly puzzled to know where they came from; but Boulanger had no hesitation, some weeks ago, in explaining the whole matter to a newspaper correspondent, who sat with him one morning when his mail came in. As the letters were opened, checks, drafts, and bank-notes fell out in wonderful profusion, and Boulanger allowed him to read them. The letters came from all parts of France, and the enclosures were of various amounts from people who wished the General success in his efforts to get the better of the wicked Radicals. In other words, they were a great expansion of the revenue which used in old times to flow in from pious souls to the Comte de Chambord at Frohsdorf. In striking corroboration of this, we have heard from private sources recently, that in Legitimist circles in various parts of France the ladies are saving up their money to send to Boulanger, in the hope that he will use it to confound the Republic.

What all this means is, that the Royalists are satisfied that Boulanger can be made to play the part of General Monk. If he can, with the aid of powerful popular support, impose on the Chambers the task of revising the Constitution, they calculate that the stability of the Republic would receive a blow so serious that the new Government, whatever it was, would literally be in Boulanger's hands, who would then become not exactly a dictator—for he has not the command of the army—but a sort of protector, whose voice in the Legislature would be all-powerful, and who could, if he pleased, say to a Chamber filled with his creatures or followers: "Gentlemen, this farce has gone far enough. The Republic has been thoroughly tried, and has failed. Let us re call the family under which France became a nation, and under which she tasted centuries of glory and prosperity."

There are signs that the Republicans are again seriously alarmed, and begin to see that Floquet's willingness to revise the Constitution would be simply a Boulangist triumph. This was fully set out week before last in an impressive speech from M. Challemel-Lacour, one of the oldest and ablest of the Republicans, in which he warned the Chambers that, after having exiled men of the stamp of the Comte de Paris and the Duc d'Aumale, whose family has been associated for ages with all the traditions of French greatness, they were playing into the hands of a military adventurer of the lowest type. Of course, everybody does not share the belief of the Legitimist ladies, that Boulanger has in him the making of a Gen. Monk. Those who know

most about it believe he would turn out a third-rate Louis Napoleon.

MRS. BROWNING.

FLORENCE, October, 1888.

IT was one of the first hot days of last May that I visited the old disused Protestant cemetery at Florence. Formerly it sloped upwards against the city wall; but the wall has long since been removed, leaving only enough to sustain the earth; and now, surrounded by a high railing, it is a lovely garden in the middle of the broad *viale*. The climbing roses as well as the situation brought back vividly to me those lovely nooks in the angles of the fortress at Corfu which were appropriated to the graves of British officers and soldiers, and which are still kept green and neat, smiling at you as you pass down the wide boulevard. Here, amid the flowers, one reads many names—some well known—of English, Americans, French, Italians, Swedes and Germans, Russians, Poles and Greeks, for all who are not Catholic were formerly interred here; in no order—husband not lying even by wife, nor child always by mother. I saw the flat stone which covers the grave of Landor; I passed the monument of Arthur Hugh Clough; I read the names of Hiram Powers and Theodore Parker; and finally I came to the tomb of Mrs. Browning. Handfuls of lilies of the valley had been strewed between the low columns that support the sarcophagus, either early that hot morning or late the day before, for they were wilted with the sun. On seeing these evidences of affection to the poetess I wondered to myself whether it were possible nowadays to read her poetry; and, with this in my mind, stopped at a bookshop and bought a volume of selections from her poems. Yes, they could indeed be read, often with pleasure and sometimes with surprise. This little volume of the Tauchnitz series has been edited by Mr. Browning, with a short preface in his own manner, and has been so arranged and ordered as "to allow the characteristics of the general poetry the prominency and effect they seem to possess when considered in the larger (not exclusively in the lesser) works of the poet." There was hinted and shadowed in this volume—what was made plainer on considering Mrs. Browning's poetry as a whole in order of time, and on studying her in her letters to Horne, Miss Mitford, and others—that, in spite of occasional brilliant outbursts, her poetic faculty became fully and freely developed only when she had fallen in love with Robert Browning; and that it reached its highest point in her Italian poems, where the love of liberty and of her adopted country excited her ardent soul with better cause than ragged schools, or working children's wrongs, or women's rights. If ever there was truth in the old saying, "Facit indignatio versus," it was in her case.

A Life of Mrs. Browning has just been published by Mr. John H. Ingram in the "Eminent Women Series," which is practically the first biography of her that has been written. The result shows that her friends were right in not undertaking the task sooner, for Mrs. Browning lived no life that could be written. All that she was, is shown in her poems and in her letters, or in the letters to her; how she appeared, must be quoted from the accounts of those who saw and knew her. The earlier years of Elizabeth Barrett were passed with few companions except her family and her books, of which she was always an omnivorous reader, in the country of the Malvern Hills—

> "the ground's most gentle dimplement,
> (As if God's finger touched but did not press
> In making England!), such an up and down
> Of verdure—nothing too much up or down—
> A ripple of land; such little hills, the sky
> Can stoop to tenderly and the wheat fields climb;
> Such nooks of valleys lined with orchises,
> Fed full of noises by invisible streams;
> And open pastures where you scarcely tell
> White daisies from white dew—at intervals
> The mythic oaks and elm-trees standing out
> Self-poised upon their prodigy of shade."

Later, when she had become a confirmed invalid and had been saddened by the death of her mother and by the drowning of her favorite brother, she passed years in London in a single room, which was often darkened for days at a time. She had written verses, mostly bad or indifferent, from her earliest childhood, and she kept herself alive in her sick-room by more ambitious poems, by reviews and articles for the *Athenæum*, to which she was long a contributor, and by letters to friends, in particular to Richard Hengist Horne, now known chiefly as the author of 'Orion'—especially by those who have not read that poem—with whom she engaged in various literary enterprises, including criticisms of contemporary authors. Judging from what Horne says in his publication of her letters, she was the better man of the two. Unknowingly she had at one time worked together with Robert Browning, for whom she expressed her admiration in those lines in "Lady Geraldine's Courtship"—

> "Or from Browning some 'Pomegranate,' which, if cut deep down the middle,
> Shows a heart within blood-tinctured of a veined humanity."

The compliment in course of time brought about a correspondence which led eventually to acquaintance, friendship, and love, until, on one September morning of 1846, Browning and Miss Barrett stepped into St. Mary-le-bone Church, were married, and started immediately for Italy. Like the choleric West Indian planter that he was, Mr. Barrett, who had idolized his invalid daughter, disapproved of the marriage, never forgave her or had intercourse with her, or even mentioned her in his will.

The story of his love for his "moon of poets" has been told briefly but sufficiently by Browning in his "One Word More," appended to his 'Men and Women.' Her tale of dawning and triumphant love was written day by day in the "Sonnets from the Portuguese"—at first for herself alone; for it is said that these sonnets were never shown to Browning till after he married. The title of these unquestionably genuine soul experiences can scarcely have deceived many readers into a belief that they were a translation. More it concerns us not to know. With the exception of one brief visit to England, Mrs. Browning's life was passed thenceforth in Italy, chiefly in Florence, until the end in 1861. She was absorbed in her husband and her child—"my little son, my Florentine"—except when political and philanthropic movements and excitements caused a gust of passion to sweep through her whole being.

That her earlier poems should have given Miss Barrett as great a reputation as she enjoyed seems now almost inexplicable, except when we remember the dearth of poetry at that time, when people read and admired Bailey's 'Festus,' Taylor's 'Philip Van Artevelde,' and Coventry Patmore; and then, too, she was a woman—a reason which, in her inner soul, she detested.

> "You never can be satisfied with praise
> Which men give women, when they judge a book
> Not as mere work, but as mere woman's work,
> Expressing the comparative respect
> Which means the absolute scorn."

she says in 'Aurora Leigh'; adding, further on:

> "I would rather dance
> At fairs on tight-rope, till the babies dropped
> Their gingerbread for joy, than shift the types
> For tolerable verse, intolerable
> To men who act and suffer. Better far
> Pursue a frivolous trade by serious means
> Than a sublime art frivolously."

And then she was admired by women, and placed, as Miss Mitford says, "in the situation of Wordsworth forty years ago—the foundress of a school of enthusiastic worshippers, laughed at by those who do not feel high poetry."

Of the earlier poems some few will doubtless survive, because, although marked by the faults common to all of imperfect and bad rhymes—which she was woman enough to defend, insisting that she had made them purposely—of halting rhythm and prosaic diction, yet they have a certain go and swing, a rush of words and thought, and a something which gives them the quality of lyrical cries. One cannot help feeling that the authoress really doubted her own powers, and to some extent one must share the doubt:

> "My own best poets, am I one with you
> That thus I love you—or but one through love?
> Does all this smell of thyme about my feet
> Conclude my visit to your holy hill
> In personal presence, or but testify
> The rustling of your vesture through my dreams
> With influent odours? When my joy and pain,
> My thought and aspiration, like the stops
> Of pipe or flute, are absolutely dumb
> Unless melodious, do you play on me
> My pipers,—and if, so th, you did not blow,
> Would no sound come? Or is the music mine,
> As a man's voice or breath is called his own,
> Inbreathed by the Life-breather?"

But it was in the "Sonnets from the Portuguese" that the first living soul was breathed into Mrs. Browning's poetry. Sonnets they are not, for they err against all the canons; but they are passionate expressions of love, and a few lines will show their drift.

> "I saw, in gradual vision through my tears,
> The sweet sad years, the melancholy years,
> Those of my own life, who by turns had flung
> A shadow across me. Straightway I was 'ware,
> So weeping, how a mystic shape did move
> Behind me, and drew me backward by the hair;
> And a voice said in mastery, while I strove,
> 'Guess now who holds thee?' 'Death,' I said. But there
> The silver answer rang, 'Not Death but Love.'"
>
> . . . . . .
>
> "I lived with visions for my company,
> Instead of men and women, years ago,
> And found them gentle mates, nor thought to know
> A sweeter music than they played to me.
> But soon their trailing purple was not free
> Of this world's dust, their lutes did silent grow,
> And I myself grew faint and blind below
> Their vanishing eyes. Then Thou didst come—to be,
> Beloved, what they seemed.
> . . . . . "My own, my own,
> Who camest to me when the world was gone,
> And I, who looked for only God, found *thee!*
> I find thee; I am safe and strong and glad."
>
> . . . . . .
>
> "I yield the grave for thy sake, and exchange
> My near sweet view of heaven for earth with thee!"

And love, whether timid or ardent, gave Mrs. Browning an insight to her husband's character which, it may be doubted, his biographers would not express as strongly.

The Brownings had hardly got well settled in Florence before the revolutionary movement broke out, and excited her delicate nature to the highest point. "To her," says an American friend, "Italy was from the first a living fire." While the Revolution was going on she wrote the first part of 'Casa Guidi Windows,' the second part being written two or three years after, under the impression of the reaction. The poem is finer than anything she had written up to that time, and is full of beautiful passages which were understood and appreciated by all except her own countrymen—at least those of them who had not lived in Italy. The opening, which had somehow stuck in my mind almost since its publication, is an epitome of the whole Italian Revolution:

> "I heard last night a little child go singing
> 'Neath Casa Guidi windows by the church,
> *O bella libertà, o bella!* stringing
> The same words still on notes he went in search
> So high for, you concluded the upspringing
> Of such a nimble bird to sky from perch
> Must leave the whole bush in a tremble green,
> And that the heart of Italy must beat
> While such a voice had leave to rise serene
> 'Twixt church and palace of a Florence street!"

To her friends in England she wrote: "Ah! if the English press were in earnest in the cause of liberty, there would be something to say for our poor, trampled-down Italy—much to say, I mean. Under my eyes is a

people really oppressed, really groaning its heart out; but these things are spoken of with indifference." And again: "I see daily a people who have the very life crushed out of them, and yet of their oppressions the English press says nothing." And Miss Mitford wrote to a friend: "Fancy her thinking Louis Napoleon ought to take up the cause of these wretched Italians! And I hear from all quarters that they get into corners and slander each other. It is an extinct people, sending up nothing better than smoke and cinders and ashes; a mere name, like the Greeks." "Have you seen Mrs. Browning's new poem? It will hardly be popular, for there is no great faith in Italian patriots."

"It is a matter of great thankfulness," says Mr. Story, "that God permitted Mrs. Browning to witness the second Italian Revolution. No patriot Italian gave greater sympathy to the aspirations of 1859 than Mrs. Browning." In 'Poems before Congress,' Mrs. Browning's poetic talent reached its highest point; but the book had in England the effect which she feared. She said in the preface:

"If the verses should appear to English readers too pungently rendered to admit of a patriotic respect to the English state of things, I will not excuse myself on such, nor on the grounds of my attachment to the Italian people and my admiration of their heroic constancy and union. What I have written has simply been because I love truth and justice, *quand même*, more than Plato and Plato's country, more than Dante and Dante's country, more even than Shakspere and Shakspere's country. . . . I confess that I dream of the day when an English statesman shall arise with a heart too large for England; having courage in the face of his countrymen to assert of some suggested policy, 'This is good for your trade, this is necessary for your domination; but it will vex a people hard by, it will hurt a people further off, it will profit nothing to the general humanity; therefore, away with it—it is not for you or me.' When a British Minister dares to speak so, and when a British public applauds him speaking, then shall the nation be glorious, and her praise, instead of exploding from within from loud civic mouths, come to her from without, as all worthy praise must, from the alliances she has fostered and the populations she has saved."

But in England her words fell on deaf ears. Official England was not in sympathy with Italian unity, in spite of the personal efforts of Sir James Hudson at Turin To most English people, she seemed unpatriotic. They could not understand her admiration for Napoleon the Third, at a time when they had suspicions of his designs. In fact, she met with much the same fate as if she had written poems in favor of Eastern Christians or in favor of Russia in the worst Jingo period. To one who now reads dispassionately the history of those times, even the diplomatic history, her poems of that period, her feelings, even her inspired 'Ode to Napoleon III. in Italy,' seem perfectly natural. We admire the Emperor's actions, and we envy him for having at least one moment when he could appear as a disinterested and unselfish hero. So much, however, depends upon the point of view. Insular English cannot get really interested in anything but English affairs; and some of the criticisms on these poems of Mrs. Browning, that they are "full of recondite allusions, comprehensible only to those conversant with Florentine literary and political history," remind one of Lord Dover's preface to Walpole's 'Letters,' which he praises for being "a most exact chronicle of the events of the day," and elucidating "very amusingly both the manners of the time and the character of the persons then alive," while the answers of Sir Horace Mann are "particularly devoid of interest," and "consist almost entirely of trifling details of forgotten Florentine society, mixed with small portions of Italian political news of the day, which are even less amusing than the former topic."

What Mrs. Browning looked upon as her greatest work was 'Aurora Leigh'—"the most mature of my works, and the one into which my highest convictions upon life and art have entered." But one feels about this much as about some of her earlier works. The whole story is quite as impossible as that of 'Lady Geraldine's Courtship,' and is disfigured by many faults. In some ways it betrays the influence of her husband. The explanation of this is perhaps best given by her friend Chorley, who says: "Like all whose early nurture has chiefly been from books, she had a child's curiosity regarding the life beyond her books, coexisting with opinions accepted as certainties concerning things of which, even with the intuition of genius, she could know little. She was at once forbearing and dogmatic, willing to accept differences, resolute to admit no argument; without any more practical knowledge of social life than a nun might have when, after long years, she emerged from her cloister and her shroud." E. S.

THE DIARY OF HENRI BEYLE.

PARIS, December 14, 1888.

ANYTHING which bears the name of Stendhal (Henri Beyle) will always attract the notice of a lover of books. There was a time, about twenty years ago, when it seemed as if Stendhal was to be placed among the literary stars of the first magnitude of our day. Taine did much to magnify the glory of this original writer: there is now a slight reaction. Still, the author of the 'Chartreuse de Parme' and of 'Le Rouge et le Noir' has taken his place among the writers of our century who ought not to be forgotten. He has his place in the group to which belong our great Balzac, Mérimée, Flaubert, Alexandre Dumas *fils*. He was a realist before the realists, a dissector, an analyst, and his talent was very personal, very peculiar. He is a better writer than Balzac, in the grammatical sense, but he has not the rich profusion of Balzac; he is a little too dry, like Mérimée, but he puts an intense life into his heroes and heroines. His moral nature is perverse, but his works are not immoral. He considers passion as a force which must execute its work; and its work, whatever it is, seems to him legitimate. He is an adorer of force. Napoleon gave him a vision of genius combined with an utter contempt for all the ordinary rules of common morality.

It is clear that such an ideal could only have been conceived under peculiar circumstances and at a given moment; it is therefore interesting to study the formation of Stendhal's character, and to enter into the details of his existence. The documents are in the library of Grenoble; there are all Beyle's manuscripts, many of them the manuscripts of works already published. In the seventy volumes or bundles kept at Grenoble are found the manuscripts of 'De l'Amour,' a few novels, the 'History of Painting in Italy,' the fragmentary 'Rome, Naples, and Florence in 1817,' the 'Memoirs of a Tourist.' MM. Casimir Stryienski and François de Nior have gone through these seventy bundles, and reconstituted the 'Stendhal Diary.' The *cahiers* of this Diary are bound without any reference to dates; the Diary is in fragments, mixed in the greatest disorder among all the bundles. Beyle's handwriting suffered immense changes: it was first very fine, in Italy and in France; after 1806 it became more and more illegible.

The only biography of Beyle which exists at present is full of errors. M. Colomb, who wrote it, had very insufficient data; nevertheless, his notice has been used hitherto by all who have written on the subject. The editors of the volume before us have given us Stendhal's Diary only between the years 1801 and 1814, and they are obliged to confess that the notes of the Diary are very imperfect, very obscure, sometimes very enigmatic. These familiar lines were certainly never destined for publication. The notes on the years 1807-1808 and the notes written in Russia in 1812 have been lost. Beyle wrote a great deal, if he published little. He said of himself in 1832: "Did you ever see, good reader, a silk worm which has had enough of his leaf of the mulberry tree? The comparison, if ignoble, is just. This ugly beast will eat no more, it needs to make its prison for the night. Such is the animal named a writer." His precept had been for a long time: "Nulla dies sine linea."

The Diary begins in April, 1801, when Beyle was only eighteen years old. He was in Milan, which was occupied by the French. He had entered Italy in the white uniform of a dragoon, and Italy will always remain his first love. He goes to Bergamo: "The country round Bergamo is the finest that I have ever seen." He goes to Brescia, to Cremona; he is always in motion. Nevertheless, he reads much, he goes every night to some theatre. At the end of 1801 he returns to France; on his way he writes at Grenoble:

"I was born on the 23d of January, 1783, at Grenoble, rue des Vieux-Jésuites. I left for Paris on the 8th Brumaire, an viii. I arrived there the 19th of the same month. I left it after five months and twenty-eight days. I arrived in Geneva the 28th of the same month, then I left on the 3d Prairial (I keep the old Revolutionary names) for Milan. I was appointed sub-lieutenant on the 1st Vendémiaire, an ix, and placed in the Sixth Dragoons on the 1st Brumaire. I became aide-de-camp of General Michaud on the 12th Prairial, an ix; I left him at Brescia to join the corps the first complementary day of the same year. I arrived at Bra, where was the fourth company, in which I am sub-lieutenant, the 7th Vendémiaire, an x."

Here we have positive data on the military career of Beyle. But let us follow him in Paris. In 1803 we see him full of literary projects, attending lectures, going to the theatres. "What is my object? To gain the reputation of the greatest French poet. To deserve this reputation I must learn Greek, Latin, Italian, English." He is not much of a poet; he is already realistic. In one of the notes on the same page he writes: "Never attribute to people of a certain class ideas entertained by another class. Do the men of the people speak often of happiness such as we understand it?" He laughs at the people who find that *Dorine* speaks too familiarly to her master in "Tartufe." Molière was right; and "what makes me think so is the fact that in the provinces servants still mix in the conversation; people there have still the manners of the time of Louis XIV." He begins to work at a play destined for the French Theatre: "Letellier" became the definitive title; the first was "Les Deux Hommes." The extracts given from this play, written in verse, show how ill-founded were the ambitions of Beyle when he thought himself a dramatic author and a poet.

"L'aimable Chamoucy sur moi dut l'emporter."

"J'apprends que dans huit jours Chamoucy vous épouse."

Such is the style of "Les Deux Hommes." Beyle was occupied also with the project of a 'Filosofia nova.' He thinks at first of giving a dramatic form to his new philosophy; he imagines a young man entering on the world, and formed by the conversation of four or five per-

sonages of very different characters. His hero will have "the divine character of La Fontaine. I feel that my love for simplicity augments every day." He will give to one of his personages the character of the courtier. His young man will deliver a great monologue and tell what impression the world makes on him. Beyle preferred the dramatic to the didactic form: "By not putting my ideas in a dramatic form, I shall have to take much more pains and shall not do so well."

All this is very chaotic; and the notes represent exactly the disorder of a very active mind which has not yet found its direction. We see in them the germs of many of the ideas which afterwards became dominant, as, the love of energy—"a quality which is the *sine qua non* of genius"; the notion of the crystallization of ideas and sensations round a centre—"all materialism is in these words: everything that exists is crystallized"; the habit of reasoning with his own sentiments and feelings, of conducting the affairs of the mind, even of the heart, on a systematic method, of saying to himself, "This day I will do this, the next day that"—a habit which we find in all Stendhal's heroes, of whom it can always be said that there is method in their madness; the belief in the irresistibility and blindness of passion, which seems contradictory of the habit of analysis, but really is so only in appearance.

Beyle spends some time in Grenoble in 1803, and returns to Paris "more reasonable, and therefore happier." After a representation of "Agamemnon," he is presented to the famous Mlle. Duchesnois, and finds her perfectly natural. He sees Talma dressed "in a blue frock, with black silk stockings. He spoke to the porter of the theatre in the same voice he used on the stage. His aspect made an impression on me; it seemed to me that I was touching glory." Between two notes on Duchesnois and Mlle. Raucourt, "who has the voice of a fishmonger," we read: "Second sitting of the Tribunate, to declare Bonaparte Emperor." The notes are constantly sprinkled with English words. He writes: "If the Two Men réussissent, les faire imprimer, etc." "Faire vite the new philosophy; autrement, etc." After the fête of the proclamation of the Empire, he writes: "We see Bonaparte perfectly. He comes before us on horseback—on a fine white horse, with a bright new coat, the colonel's uniform of his guards. He bows much and smiles—the smile of the stage, when the actor shows his teeth but the eyes do not smile." The habit of self-analysis is well shown in the notes. "I read these notes [of 1804] over again on the 10th of January at Marseilles; they seem to fulfil well their object. There are at times moments of *profondeur* in the picture of my character. These moments of *profondeur* come to me by fits since that date." Speaking of the project of an opera on Don Carlos, which he had formed, he says: "I find the plan of a Don Carlos opera good." Of a criticism which he had made of Regnard's "Joueur:" "I was not on that particular day disposed to be sensible to continual pleasantry; besides, at that time I took things seriously."

This perpetual self-inspection is seen on every page of the new book; it becomes sometimes very shocking when Beyle speaks of women and of the sentiment which he entertains toward them. Many notes ought to have been suppressed by the editors, for they are coarse, cynical, and really of no interest. It is trying to find, after a few excellent lines of literary criticism, or a good anecdote of Napoleon, pages of nonsense upon Miss Louason, a young lady with whom Beyle studies the passion of love, or some other equally unknown deity of his youth. It is irritating to find long details on the most indifferent subjects, and to see the greatest events of the day treated in this manner: "Bonaparte [he calls him 'Milan' in the Diary] was hunting every day some time ago. Now he has been at the Malmaison for four days, in a profound spleen; people say it is because he has just assassinated the Duc d' Enghien. Louis Bonaparte is ill in bed. Joseph has accepted the Kingdom of Lombardy." Here is a good anecdote on "Milan":

"When Milan wished to reëstablish religion in France, he still paid some attention to the opinion of the enlightened people with whom he wished to fortify his government; he sent for Volney [the author of the 'Ruins'], and said to him that the French people asked him for their religion, that he thought it was necessary to the happiness of the people. 'But,' said Volney, 'if you give a willing ear to the people, they will ask also for a Bourbon'; upon which, Milan flew into a great fury, put him out of the room—some people say, kicked him out. The poor Volney, who has very poor health, thereupon fell ill; nevertheless, thinking that this affair would be sent to the Senate, he began a long report on the question. When it was known, people told him to stop, or else he would be assassinated; since then he does not go out much."

Beyle adds in English, "If true, for a future Tacitus."

This first volume of notes (we shall have other volumes) ends in 1809. The true Beyle is not yet quite developed, and we hope that the next volumes will be prepared in a more critical spirit. There is really no reason why the most commonplace remarks of a Diary should be preserved as they are in this volume, and kept for posterity. It is a most laborious work to pick a few plums out of this pudding, and many people, I am afraid, will throw away the pudding after the first attempt.

Correspondence.

THE MILLIONAIRE IN POLITICS.

To the Editor of The Nation:

Sir: "Give me $100,000, and a reliable man at each polling-place, and I will, at any general election, contract to purchase 20,000 votes for any political organization in this State." The speaker was a man of keen observation and wide experience in practical politics, and he evidently believed he could fulfil his contract to the letter. Nor will any one familiar with the politics of to-day doubt that the judicious use of the sum named will, under ordinary circumstances, warrant the assertion made. The implied claim that from eight to ten per cent. of our voters stand ready to put a price upon their suffrage, will seem incredible only to those who have never had occasion to investigate this matter carefully. The lists of "floaters," as Gen. Dudley has so aptly termed them, in the hands of the workers on either side at the late election, certainly justifies the claim.

Those unfamiliar with existing conditions in the rural districts will perhaps be most surprised to learn that the percentage of corruptible voters there is rather in excess of those in the smaller cities and villages. The fact is, the farmer's "help" of to-day is a very different sort of a personage from the farmer's "hired man" of *ante-bellum* days. At the present time the average farmer takes it for granted his "help" will go with him to the polls and vote as he directs, especially if he gives him a holiday on that occasion. The farmer in turn expects, and usually secures, from those who handle the funds for his party due remuneration for the "time" he has given his help, and not infrequently do the more thrifty insist upon payment for the team employed to convey the "help" to and from the polls. Occasionally we find a farmer who is too thin-skinned to engage in work of this character even. In that event, the help is turned over to the less sensitive "worker" of his (the farmer's) own party, to be dealt with directly. Should he dare to make terms with the opposition, however, the righteous indignation of his employer knows no bounds, and he can expect to be dismissed in disgrace as soon as the "fall work" is done.

Under present conditions, then—that is, with a purchasable vote sufficiently numerous to decide the result at any election held in this State for years past—is it strange that the politically ambitious millionaire should, all at once, become the most important factor in our politics? Or is it remarkable that the wire-pullers of a party should show a deeper interest in the financial standing than in the mental acquirements of their candidates? The next problem that presented itself was this: how to utilize the millionaire's money by securing its honest expenditure for dishonest purposes. Long experience had shown that no dependence whatever could be placed upon the professional worker: his method of pocketing the money, and trusting to moral suasion alone to secure the "floater" vote, had proved far from satisfactory. For a time the managers were at their wits' end to devise means for garnering the crop, ripe for the harvest. To the Grand Old Party must be ascribed the credit—in this State at least—of having first furnished a solution of this perplexing riddle.

About four years ago there was a gathering in Detroit of the leading Republicans of the State. The result of that gathering was the formation of a powerful political organization, known as the Michigan Club, with headquarters at Detroit. Immediately thereafter, branch organizations sprang up in every city and village in the State. These minor clubs hold meetings at stated intervals, and communicate directly with the central organization at Detroit. The advantage of permanent organizations of this character over the ephemeral campaign clubs of former years must be apparent. Through the medium of the Michigan Club and its branches the machinery of the Republican party in the State is operated to-day. Alger's "boom" for the Presidency originated here. Its apparent spontaneity was wholly due to perfect organization. The present demand that he be given a Cabinet position, so far as such demand can be said to exist, is traceable to the same source. The acknowledged leaders of Republicanism in Michigan to-day are Alger, Stockbridge, McMillan, and Blodgett, all millionaires, all lumbermen. None of them are possessed of those qualities which would entitle them to be regarded as leaders of thought or expounders of opinion; none of them are men of superior intelligence; none of them, prior to their advent as leaders, had had legislative or administrative experience. The first-named has acquired some notoriety during the past few months as candidate for the Presidential nomination. His methods at Chicago are supposed to have left a sore spot on the person of John Sherman of Ohio. Frank Stockbridge, the Kalamazoo lumberman, as successor to Conger in the United States Senate, is reaping his reward for services rendered in 1886. Upon him devolved the task of carrying the doubtful legislative districts of the State. James McMillan of Detroit, to whom has this year fallen the task allotted to Stockbridge two years ago, is to succeed Palmer as United States Senator. Dr. Blodgett, the millionaire lumberman of Grand Rapids, has never before taken a hand

in politics. He is a large pine-land owner, and the "free lumber" clause in the Mills Bill is said to have frightened him beyond measure. The especial work blocked out for him during the past campaign was the defeat of Congressman Ford in the Fifth District. His efforts have been crowned with success, and he is to be rewarded with the gubernatorial nomination two years hence.

Since the organization of the Michigan Club and its branches, a very marked change has taken place in the character of the Republican workers at the polls. The disreputable workers and strikers of former years have been relegated to the ranks of the "floaters," where they very properly belong, and in their place we now find business men of unquestioned integrity and character. They alone handle the funds at the polls. They deal directly with the "floaters," and while their work is done as quietly as possible, any one who cares to inquire may know their business. They are there to get votes. They get them by argument when they can, they resort to corrupt methods when they must. They pay no money until the work is done. Being men of character and standing, their promise, based upon certain conditions, inspires the "floater" with confidence to believe he will get his money when the conditions are complied with. While it cannot be truly said that work of this character is here regarded as reputable, it may be truly said that no disrepute attaches to those known to engage in it. As it is difficult, and sometimes impossible, to find an accomplished financial agent in the rural districts when no club organization exists, the practice of delegating members of the city or village clubs to attend the polling places in the country is growing each year.

It is not claimed that the Democrats are one whit better than their Republican brethren. At the last election they made an effort to follow in the footsteps of their opponents by placing the honors "where they would do the most good"; but, being without organization, they were at the mercy of the "strikers," and the result, as might have been expected, was disastrous. MICHIGAN.

INDIFFERENCE TO CORRUPTION.

TO THE EDITOR OF THE NATION:

SIR: If the political morals of this country were on the proper plane, the conduct of a large number of party leaders during the last campaign would have produced an outburst of indignation sufficient to arouse the country from Maine to California. The forgery and circulation of the alleged quotations from the London *Times* should have produced a storm of wrath which would have driven Mr. Quay's Committee to resign within three days after their exposure. But nothing of the kind occurred, and nothing of the kind will occur previous to the development of a more delicate political conscience among the masses.

Four years ago, while a student in college, I offered to a fellow-student some documents containing the letters of Mr. Blaine which bore such plain evidence of his moral unfitness for the Presidency. To my surprise, he refused to read a single line, or even to hear me state the contents of the letters. This man was preparing for the ministry, and is now exercising the duties of that profession; and yet he was so blinded by prejudice as to keep himself intentionally ignorant of the character of the man for whom he voted. I have heard the same man say that he belonged to the party of intelligence and virtue. If the intelligence and virtue which is supposed to form the core of the Republican organization were to shake off this parasitical element of ignorance and dishonesty, perhaps the number who really believe in the principles of Republicanism, whatever they may be, would be smaller than is generally supposed.

Such people have worked themselves into a frame of mind which allows them to believe everything that bears the party stamp, and reject everything which does not. They regard the seal of Quay's Committee as better evidence in determining the truth or falsity of supposed quotations from British papers than the editors of the papers themselves, or than even a search through their files. The fact that a man charged with wholesale bribery in Indiana is an earnest and enthusiastic Republican, is a sufficient warrant for his character, no matter how difficult it may be to construe his letters into a plea for an honest election. "I'll have peace if I have to fight for it," said the Irishman. "I'll have an honest majority in Indiana if I have to buy it in blocks of five," says the agent of the party which poses as the champion of an uncorrupted suffrage. And he obtains the prayers and dollars of rich colonels and clothes-dealers in order that he may carry out his high moral purpose.

This is bad enough, to be sure; but what better could be expected of a country which for years has been going on the assumption that it is a legitimate function of Government to put one man's earnings into another man's pocket, and call it "the American system"? Nations cannot easily be dishonest in one respect alone, any more than individuals. We are only reaping the natural harvest of the seed sown when our fathers consented to use the Government to make certain men rich by taxing certain other men under the cover of the specious word "protection." There must be some severe shock to awaken the people to a proper sense of their condition. Taking all things into consideration, the speediest way out of the darkness might be through a Cabinet composed of Messrs. Blaine, Platt, Wanamaker, Clarkson, Dudley, Alger, and Quay. The inner workings of the machine would thus be displayed on the surface, and the people might be induced to consider the question whether it is just the right sort of machine. W.

A FULL VOTE.

TO THE EDITOR OF THE NATION:

SIR: The corruption of voters is not the only electoral evil which demands legislative restraint. For those who practically cannot vote at all, safeguards against dishonest voting have no meaning. In this electoral precinct there are three lumber mills—a small private one, and two large ones belonging to the Northern Pacific—and these constitute almost the only industry. The precinct, I am informed, should poll about 250 votes, and it is admitted that the overwhelming sentiment of the community is Democratic; yet at the late Presidential election but thirty-one votes were cast—twenty-one for Cleveland and ten for Harrison.

The reason for this light vote is, that the Northern Pacific Mills did not shut down work or make any arrangement by which their men could visit the polls in detail. From the nearest mill, I am told, a few did go to vote at the noon hour. Now, it seems to me evident that if our Government is to be carried on by popular suffrage, all men should be secured, as far as possible, in the opportunity to vote. The voting should be not only free, but full, to which end a law should be passed compelling employers to grant their men sufficient time to vote at the nearest polling-place. If then, when they reach it, they are armed with a secret ballot, we shall have an expression of the popular will both full and free.

Whether employees should be docked for all or only half the time thus spent in voting, or whether their wages should be unaffected, are questions of detail. The important thing is, that all should have the time to vote, and that if they fail to discharge this political duty, they shall gain thereby no advantage in wages.

SUE HARRY CLAGETT.

HOT SPRINGS HOTEL, KING CO., W. T.

ANOTHER REASON FOR DEMOCRATIC DEFEAT.

TO THE EDITOR OF THE NATION:

SIR: I think it is not impossible that the late Democratic defeat resulted in part from the *dense ignorance* of some of the voters. Yesterday I met upon the streets of this city a wealthy and respectable farmer, of average intelligence, who saluted me with the remark, "Well, we laid you out at the election;" to which I replied, "I think you laid yourself out. A farmer who votes to maintain the present protective tariff, votes to tax himself for the benefit of of others, without any compensating advantage." "Why, how is that?" he asked. "We farmers in Michigan cannot compete with the cheap wool and beef of Texas and our great West, unless the producers there are compelled to pay a tariff tax when they bring their products here to sell in our market. It is the tariff upon this Southern and Western wool and beef that keeps up the price of ours"; and he assured me that that was really what he understood by our protective tariff. If this man is a fair average of his class, what missionary work can be undertaken to meet such ignorance? D.

SAGINAW, MICH., December 24, 1888.

THE WORK OF AMERICAN MISSIONARY SOCIETIES.

TO THE EDITOR OF THE NATION:

SIR: Your reviewer of the work of American missionary societies in the *Nation* of December 13 inquires what relation education bears to conversion in missionary effort. Will you allow me space to suggest an answer to this question, and to correct a false impression which I fear may arise from his criticisms of the missionary work, especially in Turkey?

The purport of the criticism appears to be that the work in the larger cities in Turkey is mainly educational rather than directly religious; that those engaged in the work live in a degree of comfort, if not luxury, not fully realized by the American contributors to the funds; and that conversions, as far as they are made, are from one Christian sect to another. In these days of religious enlightenment, it is not, of course, to be for a moment considered that your reviewer does not recognize the fact that education is the very groundwork of all permanent and desirable Christian work. His point, I take it, is that the home contributors to missionary funds do not recognize this, and consequently are the victims of a certain deception. But is it fair to attribute to missionary subscribers in America such a low degree of intelligence as to the highest use of missionary funds as this implies; or, with our generous supply of missionary literature, to suppose an ignorance of how the funds are used? I am puzzled to know by what logical process your reviewer deduces "false pretences, malversation, and a breach of trust" from the use of the "hardly earned pennies" of the "little

Sunday-school children" in "supporting a school for Greek girls at Athens," these pennies being subscribed for "enlightening the darkness of the poor heathen." As it happens, there is no school for Greek girls at Athens supported in whole or in part by American missions; but if there were, what possible better means of enlightenment could be suggested? Does any one now believe that hortatory street-corner preaching would produce better Christian results than a Christian school for girls? I may instance the well-known Christian and liberalizing influence of Robert College upon Bulgaria, and ask if there are any "Sunday-school children" intelligent enough to comprehend this work who would not be proud to have had a share in it.

But, however important educational effort may be, it should not be inferred that it forms all, or even a relatively large part of the whole work. In Turkish missions there are about 800 native workers and preachers under the patronage of the A. B. C. F. M. alone, preaching to congregations numbering over 45,000. These congregations themselves gave during the last year nearly $60,000 towards the support of their own institutions.

As regards the elegance in which the missionaries in Turkey live, it should not be forgotten that it is natural for people of culture to create about them an atmosphere of culture in whatever part of the world they may happen to be. Contrast, also, may make their homes appear more luxurious than they really are. As the highest salary paid to any lady teacher in Turkey, including the principal of the "large and flourishing school" referred to by your reviewer, does not exceed $450 per annum, it would not seem that they could live in what in this country would be called a very extravagant degree of luxury. If, with such an income, in a large and rather expensive city like Constantinople, missionaries can surround themselves with "every European and American comfort," it would seem to betoken a thrift in their foreign representatives on which the American Sunday-school children might well congratulate themselves; nor, if the lady missionary in Manissa happened (as was the case) to possess both taste and private means enough to provide herself with a Steinway piano, would it seem that the American contributors to missionary moneys had been greatly wronged.

Finally, as regards the fact that missionary effort in Turkey is mainly directed towards nominally Christian people, while there seems to be a little incoherency between this criticism and the other—that the work is mainly educational—it is sufficient to call to mind that it is a part of the policy of American missionary societies to direct their labors to nominally Christian countries. As examples may be mentioned Mexico, Spain, Italy, and Austria.

Yours truly, G. T. W. P.

Iowa City, December 21, 1888.

THE BIBLE AT DARTMOUTH.

To the Editor of The Nation:

Sir: An open letter in a recent number of the *Century* tells us that Dartmouth College has taken steps to provide for scientific study of the Bible. Will you permit a graduate of that institution to protest against the implication that such a study of that book is there possible? As Büchner wisely says, no trust can be placed in the judgments of one who has given in his adherence to a creed. Dartmouth is creed-bound. The idolator does not calmly collect and organize the teachings of his common sense in regard to his idol or his fetish; neither does the orthodox, having pronounced a book divine, proceed coolly and relentlessly to read it in the light of science.

Eleven years ago President Bartlett of Dartmouth was attempting to demonstrate to the then Seniors the harmony between science and Genesis. Development stood in the way. He demolished the theory. He drew from his pocket a dime, a quarter, a half-dollar, and a dollar, and laid them in a row upon his desk. "These coins," he said to us, "resemble one another in shape, markings and material; therefore, the Darwinian would say, they must be developed one from the other. And that is the absurd claim, the baseless theory, of evolution." On another occasion he read to us an extract from the then recently published lecture of Virchow, in which that eminent scientist said that the development of man from non-human ancestors is not a doctrine as yet sufficiently well established to be taught in the schools. He did not read to us the whole lecture, of which a few detached sentences, read in large type, so well served his purpose; he did not tell us that Virchow was a champion of evolution; and he did not tell us that Virchow had expressed many opinions as to science and life which were calculated to shock the orthodox.

I have no reason to suppose that the President of Dartmouth is any more scientific, or that the spirit of the college is any more liberal, to-day than they were eleven years ago. No one can regret this more than I. But, in justice to science, I am constrained to express the opinion that scientific study of an assumedly inspired volume—anywhere absurdly impossible—is at Dartmouth a pretence made in ignorance.

John Cotton Dana.

Three-Mile Ranche, Colorado.

Notes.

The final volumes, III. and IV., of the Life of William Lloyd Garrison by his children have just been given to the printer, with a view to publication by the Century Co. in the fall. They will be uniform in all respects with the first two volumes published in 1885, and a general index will supersede the partial index issued with Vol. II. The supply of portraits will be liberal. Each volume covers the space of about twenty years (1841-1860, 1861-1879).

We are glad to announce, as just about to appear, the fourth volume of Mr. James Schouler's 'History of the United States under the Constitution' (Washington: W. H. Morrison). The period here covered is 1831-1847, and the fifth (and perhaps concluding) volume, which will break off at 1861, is now in active preparation. The boon of having a history of the first class for the whole of the period before the war will be appreciated by a host of teachers and students. The fourth volume, by the way, begins at the date of the origin of the anti-slavery movement in this country, and will therefore furnish valuable collateral reading in connection with Vols. I.-III. of the Life of Garrison.

The *New Princeton Review* has been purchased by Ginn & Co., Boston, to be merged in the *Political Science Quarterly*. The fusion is a natural one, and every one must desire the *Quarterly* to be strengthened and maintained. Prof. Sloane, in relinquishing the editorial conduct of the *Review*, will share in the production of the *Quarterly*.

The Dunlap Society closes its second year by the publication of the biennial reports of its secretary and treasurer, accompanied by a list of its members, which is not as ample as might be wished. In its two years of active work the Dunlap Society has issued to its members new editions, properly prefaced, of three early American plays, Royall Tyler's "Contrast" and Dunlap's "André" and the "Father." It has also published a much needed biography of Thomas A. Cooper, by Mr. Ireland, and an admirable selection of the poetical 'Opening Addresses' of various American theatres, edited by Mr. Hutton. All of its books have been beautifully printed at the De Vinne Press, and all have been adorned with illustrations. We have been surprised to see the names of so few public libraries on the list of members. A publication society like the Dunlap, working solely for the love of its subject, appeals especially to the incorporated library; and yet we do not find that here in New York either the Astor or the Lenox or the Mercantile or the Society or the Columbia College Library has acquired the books sent forth by the Dunlap Society. Among the volumes which the Dunlap has now in preparation are 'Occasional Addresses,' edited by Mr. Hutton and Mr. William Carey, and 'Brief Chronicles,' by Mr. William Winter, this last being a series of biographical and critical sketches of the leading performers of the American stage who have died in the past quarter of a century.

Charles Scribner's Sons announce 'Chopin, and Other Musical Essays,' by Henry T. Finck, author of 'Romantic Love and Personal Beauty'; 'First and Fundamental Truths: A Treatise on Metaphysics,' by Dr. McCosh; and Prof. Geo. P. Fisher's Dudleian Lecture on 'The Validity of Non-Episcopal Ordination.'

G. P. Putnam's Sons will follow up their series of Hamilton's and Franklin's Works with 'The Writings of George Washington,' edited, in about fourteen volumes, by W. C. Ford. Only 750 sets will be printed.

D. C. Heath & Co. will publish ere long 'Selected Poems of Wordsworth,' for school use, edited by Mr. A. J. George.

The late W. J. Thoms invented the word *folk-lore* for use in English, but it has now been adopted by the French. Among the latest announcements in Paris is a forthcoming 'Folk-lore Brésilien,' by Santa-Anna Néry, to be published by Didier (New York: F. W. Christern), with a preface by Prince Roland Bonaparte.

The house of Hachette & Co., Paris, announce a French translation, by Mme. L. Trigant, of Gen. Greely's 'Dans les Glaces arctiques: récit de l'expédition américaine dans la baie de Franklin (1881-1884).'

In the series of illustrated volumes begun by 'Tartarin sur les Alpes' (of which book nearly one hundred and fifty thousand copies have been sold) M. Daudet's 'Jack' is soon to appear, and so also is 'Uranie,' by M. Camille Flammarion.

M. Daudet's 'Souvenirs d'un Homme de Lettres' (Paris: Marpon & Flammarion; New York: F. W. Christern) is really a continuation or second instalment of his 'Trente Ans de Paris.' It is made up partly out of ten-year old contributions to the *Nouveau Temps* of St. Petersburg, and partly of later contributions to *L'Illustration* and the *Nouvelle Revue*. The 'Histoire de mes Livres' now includes accounts of the genesis of 'Numa Roumestan' and 'Les Rois en exil.' There are sketches of Émile Ollivier and Gambetta to mate with those of Villemessant and Rochefort in 'Trente Ans'; a flattering outline of M. Edmond de Goncourt to match that of Turgenef; half a dozen neatly limned portraits of *gens de théâtre*—Déjazet, Lesueur, Félix, Mme. Arnould-Plessy, Dupuis, and Lafontaine. There is also a little tale

called "Un Membre du Jockey-Club," which seems to have been left over from the 'Lettres de mon Moulin' or the 'Contes du Lundi,' and there are half a score more essaylets of less importance. Obviously, a third volume will be forthcoming in due season, to contain the paper on Mistral contributed to the *Century*, and further instalments of the 'Histoire de mes Livres.' Externally, the 'Souvenirs' resembles the 'Trente Ans' and the 'Tartarin,' but the illustrations are sparser and less tasteful.

Mr. Charles Dudley Warner collects familiar papers of his, 'On Horseback in Virginia etc., with Mexican Notes' (Houghton, Mifflin & Co.). The book is comely and the arrangement of its contents reveals no little skill; there is the tour in Virginia to catch and hold the reader's attention at the start, while as soon as he begins to think of skipping he runs upon the Mexican notes, admirably adapted for that purpose, and then he lights on the bit of Southern California to finish up with and leave a pleasant taste.

Harper & Bros. extend their uniform reissue of Walter Besant's novels with his 'All Sorts and Conditions of Men.' It is dedicated to the memory of his old literary partner, James Rice.

We said lately, of Mr. Edward Eggleston's school 'History of the United States and its People,' that it was well calculated for ordinary voluntary reading. He has, however, concluded that this latter end would be better served by retrenching the questions and expanding the text of the work. Hence we have 'The Household History of the United States and its People for Young Americans' (D. Appleton & Co.). The defects we pointed out in the briefer work have not been overcome. Let any one turn to the index (which, to be sure, misrepresents the work) and see but a single reference to the topic "Tariff" (anno 1887 !), a second being discoverable in the curt account of secession in South Carolina, and he will be made aware of the failure of the author to give any idea of streams and tendencies in our national development. As to the subject of slavery, we will not repeat ourselves.

A little vest-pocket volume, dainty in every respect, and called 'Brilliants: A Setting of Humorous Poetry in Brilliant Types,' has been put forth by the De Vinne Press as a sort of advertisement of the Liliputian resources of this great establishment. Mr. De Vinne has grouped together Goldsmith, Canning, Hood, Thackeray, Locker, Lowell, and other writers of light verse, but has also prefaced his posy with an account of some of the more remarkable ventures in this line of eye-destroying typography. The press-work is admirably clear and the binding very pretty.

The *Photographic Times* (New York: Scovill Manufacturing Co.) issued a Christmas number in token of some promised improvements for the coming year. Illustrations are to be more frequent than heretofore, and in the number just mentioned there are two photogravures, and a plate by Kurtz's process after some detective-camera views made in Italy by Mr. W. J. Stillman.

The November *Studio* is a Verestchagin number, containing several "process" copies of pictures in the gallery now open. Some of these we take leave to think more interesting and pleasing than the originals, and we cannot adopt the editor's laudatory opinion of the collection as a whole.

The entertaining account of the Niger Delta by Mr. H. H. Johnston in the December Proceedings of the Royal Geographical Society contains little that is noteworthy, except the statements in respect to the prevalence of cannibalism among the natives. Even among those who are nominally Christians, and live amid factories, schools, and churches, there are occasional outbreaks of this passion for human flesh. Capt. G. Langen describes the Key Islands, a little group to the south of New Guinea, belonging to the Dutch. The inhabitants number about 20,000, one-third of whom are Mohammedans, "who are greatly increasing every year, owing to the influence of Arabs and natives who have returned to Key as 'hadjis' from Mecca," the expenses of the pilgrims being at times met by the village to which he or she belongs. The people show considerable artistic talent: even "children from three to five years of age are seen trying their skill in carving ornamental figures," or "by drawing on a smooth surface of fine sand houses, animals, steam and sailing boats, fishes, etc.; and I have always been struck by the symmetry of their work." Mr. D. W. Freshfield, in a "Note on the Conservative Action of Glaciers," controverts the theory that the "sculpture" of the mountains and the formation of the lakes is due to what Prof. Tyndall calls the "paramount influence" of ice. He especially commends the scientific reports of this country as "models of clearness," with illustrations "in striking contrast to the obsolete old woodcuts and inaccurate caricatures" in many English text-books written by the best authors.

Lieut. H. Wissmann, the well-known African traveller, contributes to *Petermann's Mitteilungen* for December an account of the Bashilange, a race living between the Kassai and Sankuru Rivers in the southern part of the Congo Free State, among whom he has lived for six years. This people, numbering about a million and a half, appear to be the most promising of all the Central African negroes. Their first advance from pure savagery dates, singularly, from the introduction of hemp-smoking some twenty-five years ago. The desire for hemp led to commerce, which naturally tended to diminish the incessant village and tribal wars; they became less wild and "made laws." At the coming of the whites, they eagerly adopted civilized ways. They improved their breed of domestic animals, began to cultivate rice and to build two-story houses of clay, to put on clothes, to make tables and chairs, and to eat with knives and forks. They have given up administering poison to the accused, have burned their fetishes and abolished the death penalty. The one deep shadow in this bright picture is the slave trade which they carry on with the neighboring tribes, though it is now forbidden to sell their own wives or children. Franz Hertwig describes a trip on the south coast of Natal and Pondo-Land, made in the interest of the German Pondo-Land Company, which intends to colonize this region.

An interesting feature of the coming centennial celebration, in this city, of Washington's inauguration as President on April 30, 1789, is to be a loan exhibition in the Metropolitan Opera-house in April and May. Portraits and relics of the men of the first Administration, the superior officers of the army, the members of the Constitutional Convention of 1787 and of the First Congress, and the officers of Government in New York State and city in 1789, are desired for this purpose. The manager is Mr. William A. Coffin, No. 280 Broadway.

— *Harper's* for January opens with Gen. Lew Wallace's historical play, "Commodus," a poetical performance of which we only remark that the plot, on the whole strong and developed with success, seems to us to suffer from being made too complex, and that the style rarely attains to the large utterance at which it manifestly aims, while too often marred by elaborate conceits and occasionally vulgarisms. Miss Woolson does not give us enough of her new serial to base a judgment upon, though the scene and one at least of the characters promise well. Of the illustrated articles, the one on "The Ancient City of Wisby" leads us quite off the travelled routes, and has real attractions for antiquary and artist alike. Clarence Cook has a short paper on Russian bronzes, with specimens figured from the collection of the Messrs. Tiffany; a rather sketchy account of amateur photography is embellished with several more than usually fine reproductions of the art; and a very clear and interesting description of the haunts and habits of the beaver, by Mr. H. P. Wells, gives the quietus to several unfounded stories about the sagacity of that animal, while fully proving its remarkable skill and tireless industry within narrow lines of intelligent effort. Nothing in the number is more thoroughly studied or better repays reading than the article on "Manufacturing Industry in Ireland," by Mr. (Land) Commissioner MacCarthy. It is marked by extensive historical research and a wide acquaintance with existing conditions. There is something portending trouble to our protectionists in Mr. MacCarthy's account of the rise of woollen manufactures in Ireland and their seeking a market here. To win and hold Irish votes against Irish manufactures would seem to demand new kinds of obfuscation.

— Probably no article of the railway series in *Scribner's* has conveyed more real information than the paper on "Railway Management" in the number for January. Its author is Gen. E. P. Alexander, himself President of the Central Railroad of Georgia, and its orderly arrangement and condensed lucidity witness to the grasp of the hand of an executive upon the pen. Gen. Alexander makes only glancing allusions to the questions of legislative control, now so fully before the country: his aim is rather to give an idea of the vast complexity of the affairs of railway administration. He makes it clear that the machine is too delicate to bear any off-hand tinkering, at the same time that he shows how the talent required to run it is so rare as naturally and inevitably to command the great rewards actually bestowed. Before thus landing us at the end of the nineteenth century, the number carries us back to the Middle Ages in its opening paper, an intelligent account of life in the great seignorial castles, with many fine illustrations from drawings by E. H. Blashfield. To a still older civilization are we borne in the article of Dr. Griffis on "Japanese Art Symbols." He helps one to understand the shapelessness and often hideousness of the figures wrought into these art products of Japan, which, in total effect of outline and color, have so great a power to charm. Prof. Fisher has an entertaining essay on "The Ethics of Controversy," light and anecdotical more than philosophical. Himself *haud ignarus mali*, he might have chosen from his own generation examples of infinite meanness in ecclesiastical polemics. Edith M. Thomas contributes a poem of thought and finish such as we have come to associate with her name. The number is an excellent example of the type which the magazine has set before itself from the beginning.

— A new serial from the tireless pen of Henry James is begun in the January *Atlantic*. It is to be a study of English life, apparently, and the opening chapters are in characteristic

style. Mrs. Deland contributes a short story which strikingly reminds us of the best parts of her bepraised and buffeted book—we mean, of course, the parts where the trail of theology is not over all. Indeed, she has made us so familiar with the spectacle of an aged heart, thrilling over a suspicion of a live ember amid the gray ashes of burnt-out love, that "Mr. Tommy Dove" will seem almost like a literal copy of the old attorney in 'John Ward.' Prof. Shaler's article on "The Athletic Problem in Education" will be sure to receive, as it deserves, marked attention. Whatever may be one's own views, the careful testimony of a veteran to results worked out under his own eyes cannot safely be overlooked. "Washington's Great Campaign of 1776" is the title of Mr. John Fiske's historical paper for the month. He wears the heavy armor of his learning with customary ease, and with a sure though light foot runs over the series of battle-fields, from Long Island to Trenton, which first convinced Europe that a true military genius had arisen in America. Philip Dymond's article on Von Moltke is written in a strong style. It appears to conceive of the "Great Taciturn" more as a military formula than as a man, and leaves one with a vague and far-away sense of an obscure personality; but perhaps this is unavoidable as yet, and, at any rate, the writer's vigorous grasp of the essential principle of Moltke's method, and his acute reflections upon the necessary effects of Germany's intense militarism upon the life of the nation, make his work of high interest. The ordinary poetical restraint of the *Atlantic* gives way to a real irruption of verse in this number; but this does not imply any letting down of the standard.

— We have noted on several occasions Krummacher's examination of Carlyle's style, in the *Englische Studien*. A worthy successor to Krummacher has appeared in the latest issue of that periodical (xii., Heft 2), viz.: W. Franz, on 'Die Dialektsprache bei Ch. Dickens,' pp. 197-244. The writer restricts himself to Dickens's *London* dialect, disregarding the Yorkshire peculiarities of 'Nicholas Nickleby,' the Americanisms of 'Martin Chuzzlewit,' and the idiosyncracies of Mrs. Gamp and the Debilitated Cousin. His work is thoroughly well done; it teaches us once more how the trained foreigner may note and collect peculiarities that the native is apt to overlook. At one point Franz is misled. He says (p. 221, § 12) that the old participle-prefix *ge-* survives in the form of *a* in such locutions as: "I'd a been drunk four days if I'd *a-had* the money"; again, "you'd never have forgotten it, if you'd *a-heard* him"; still again, "I see him *a-forced* to turn away his own self." That is, *a-had*, *a-heard*, *a-forced*=German *ge-habt*, *ge-hört*, *ge-zwungen*. In the last example of the three, *a-forced* is a formation analogous to *a-fire*, *a-fraid*, where the *a* is a survival of A. S. *ā-* or of *an-*, *on-*. In the first two, the *a* of course stands for 'ave (have), and the phrases may be expanded "I would have had," "You would have heard." In connection with the list of intensives (p. 233), we call the author's attention to the quaint Virginianism "powerful weak."

PROF. BRYCE'S AMERICAN COMMONWEALTH.—I.

The American Commonwealth. By James Bryce, author of 'The Holy Roman Empire,' M. P. for Aberdeen. Macmillan & Co. 2 vols., 12mo, pp. 750 and 743.

THERE are few things for which a civilized people have more cause to be thankful than for an impartial but kindly estimate of their institutions and their character by a thoroughly competent judge. It is now commonly conceded that Americans have outgrown the youthful period when foreign criticism found them unduly sensitive to blame or praise, and have a pretty solid conviction that their country has a sufficient importance in the eyes of the world to insure all the respectful consideration they could desire. Educated men are especially disposed to be quite sober in their views of the present and the future, for they feel the burden of great and perilous problems that must soon be solved. All who have a patriotic and intelligent interest in the country will welcome Professor Bryce's book as one of the most weighty and important contributions ever offered us in the study of the gravest questions of public and social concern. For more than than twenty years the author has been well known to all American scholars by his 'Holy Roman Empire,' a book which showed the rare power of grasping the characteristics of a complicated political organization in its entirety, and of simplifying the results of a great epoch so that their spirit and their drift are not hidden by multitudinous historical details. Many of us date our first satisfactory comprehension of the growth of German nationality from our reading of that earlier work. To know that the same writer was studying our Government and our people was enough to set our expectations upon the stretch, with the assurance that the opinions of so judicious and able an observer could not fail to be full of deep teaching for us.

The book does not disappoint these expectations. Every page gives evidence of the conscientious labor which the author has given to his work. His visits to the United States have been repeated and prolonged. They were not confined to the older States, but took in the basin of the Mississippi and the Pacific Slope of the Continent. His personal observation has been supplemented by a careful study of constitutional and political history, going to original sources for the decisions of courts and the opinions of public men. He has interrogated competent witnesses in all parts of the country when seeking the facts which are most significant in the working of our political machinery and the actual forces seen in the development of our institutions. He tells us frankly how successive visits and fuller observation swept away many broad generalizations he was at first disposed to make, and led him to be more cautious in attributing everything that is striking to the democracy of our institutions. He saw more and more the natural effects of habitat and social circumstances working upon an essentially English character in an essentially English people when separated from the monarchic and aristocratic elements of old-world society. It became plain to him that the necessary self-reliance of the early colonists gave shape to local government when communication with the mother country was very slow and very infrequent. The colonial charter became a written constitution for the State when independence was at last asserted. After the unsatisfactory experiment of a confederation without national functions, the separate State governments became the model for the really national organization which had become a necessity. The law of natural development again showed its force in the preservation of State sovereignty as fully as was consistent with the erection of a federal government with such powers as were necessary to an efficient national existence. Under prolonged investigation the complex federal system ceased to be an invention of the great men who founded the Government, and stood forth as the outgrowth of nearly two centuries of free colonial development. Yet the greatness of the founders did not diminish in the observer's eye as their work lost the character of a bold experiment; for the breadth of their practical sagacity and their full obedience to that self-restraint in innovation which has been the best characteristic of progressive British statesmen, proved that they had inherited the qualities which make liberty safe in the keeping of the English-speaking race.

Professor Bryce's method is thus seen to be that which is now regarded as the only scientific one in history. He broadly investigates the facts to find the law of development within them, and reduces to a minimum the appeal to the *Deus ex machina*, whether in the form of extraordinary personal characteristics of human leaders or of the exceptional interference of supernatural forces. He finds himself forced to conclude that De Tocqueville, great as was his sagacity in political deductions, not seldom propounded theories which time has not justified, and he does not hesitate to declare that he shall be "far better pleased if readers of a philosophic turn find in the book matter on which they feel they can safely build theories for themselves, than if they take from it theories ready made." When to so cautious and thorough a method the author brings a genial and friendly spirit, and an evident love for political liberty and faith in human progress, we have a rare combination of qualities for the work he has undertaken. When such a critic touches the weak places in our governmental organization, or points to sores in the body politic which threaten to become chronic ulcers, every patriotic American ought to take the warning to heart as the advice of a wise physician, and should set himself soberly and earnestly to seek the cure. By far the greater part of what Mr. Bryce has to say is in cordial recognition of the wonderfully successful progress, thus far, of democratic government on this Continent. No American could state more forcibly the triumph over difficulties which at several junctures in our history have threatened to be fatal. No sober-minded American would choose to profess a stronger faith than his, that the same national characteristics of intellect and will may, in the future, find an equally successful solution of the serious problems we have still to solve. All this gives only greater weight to his warning words when he must utter them, and should give greater confidence to his frank indications of the directions in which danger lies in our political methods and customs, and in our social and personal tendencies and habits of thought.

As we read his pages, their suggestive and instructive value to Americans is so great and so patent that we find ourselves concluding the book is written for us. It is, however, addressed primarily to earnest students and thoughtful men of the Old World. To such it should have double value, because it may be safely assumed that all candid Americans will recognize it as a truthful and trustworthy picture of our institutions and our people. The prevailing sentiment regarding it in this country will be wonder at its powerful, clear, and sympathetic appreciation of all that is strong and all that is weak in the phase of human progress which is working out upon this continent.

Prof. Bryce divides his work into four principal parts: first, the framework and constitutional machinery of the nation; second, the same of the several States; third, the methods by which this machinery is worked, including party organizations and the men who "run"

them ; fourth, the ulterior forces which move the whole and give it direction. This last includes (as subdivisions) public opinion, the influence of religion and of various social institutions. Illustrations of the good and bad working of methods and of forces are introduced ; and the whole is supplemented by estimates of the worth of what has been here developed, with some forecast of the future.

In giving an outline of the Federal Government and its origin, the author disclaims the purpose to do more than sketch the leading features of the Constitution and laws. Constitutional history proper is beyond his present field. The Government as it is and as it works to-day is his subject, with only a passing reference to the historical steps by which it grew to what we see it. The actual relations of the coördinate departments to each other ; how Congress works in its two houses and in relation to both executive and judiciary ; what independence is there in these departments and what interdependence ; to what extent either has trenched upon the province of the other ; is either a dominant feature in the Government, or does it threaten to become such?—these are some of the pregnant questions which are treated broadly yet succinctly, and with the sure touch of one who is both a philosopher and a man of affairs.

The State Governments are treated in a similar way, and one of the most successful parts of the book is that in which the relations of the national and State Governments are set forth. The chronic puzzle of casual observers from Europe is the apparent duplication of government. Mr. Bryce has grasped firmly the distinction between the specifically delegated powers by which the Constitution gives to the Federal Government all the scope that is essential to national action, whether in relation to the world at large, to the States as united, or to each State in relation to the rest. He clearly points out how the residue of all the powers not thus delegated resides still in the several States, and is exercised over the whole domain of the ordinary and local relations of man to man, whether in regard to person or property, or in the preservation of the peace and the punishment of crime. The irrevocability of the national organization and its triumph over the theories of nullification and secession are clearly explained. The local dispersion of governmental power, as typified in the town meeting of New England, of which De Tocqueville made so much, is given its proper importance, and interesting chapters treat of the government of cities and its relation to that of the State, its practical working, and the general view Americans take of the sphere of municipal government proper.

We all know that when the frame of government is described, the work is but half done. 'The power behind the throne" is as familiar to Americans as to the rest of the world. The organization of parties is as important a theme, in its way, as that of the Government. Wherever representation, either in the Legislature or in the Administration, is in practice, parties arise, and the control and management of these are hardly second in importance to the responsible direction of the Government itself. No reformer dreams of the abolition of parties. He may hope to see allegiance to party made less blind and unreasoning ; he may aim at turning party action into channels which will accomplish something else than a mere scramble for office ; he may wish for the time when the local interests of the State or the city may be considered and decided apart from the conflict over national issues : but he sees that parties will still exist, and that party action may be regarded as a permanent factor in all public business. As the result of his observation, Prof. Bryce has reached the conclusion that party politics, regarded as "the art of winning elections and securing office, has reached in the United States a development surpassing in elaborateness that of England or France, as much as the methods of these countries surpass the methods of Servia or Rumania." With such an opinion, it was natural that he should devote a score of chapters to the consideration of American parties and their phenomena, their use and abuse. The normal and healthful action of parties is considered, with their effect upon the decision of political questions, both directly through the determination of issues submitted to vote, and indirectly by the election of men to office. The abnormal and baneful action of these parties is traced in the construction of the "machine" by which selfish ends of personal power or profit are substituted for the public good and the determination of great matters of public policy. "Rings" and "bosses" are investigated in their most tempting fields of activity, the great cities, and in their extension upward into national politics. Nominating conventions, also, are part of the working machinery of politics, and the development and management of these have, perhaps, never received so skilful a dissection at the hands of a foreign observer.

Back of all machinery, however, is public opinion, that resultant of multitudinous individual opinions reacting upon each other, which indicates the general wish and will of a people in regard to matters of current interest. Prof. Bryce has reached the conclusion that, as our party machinery is the most elaborate, so public opinion, which makes the fundamental law for parties and connects their aims and methods, is more powerful in the United States than in any other country of the world. In it he finds his strongest reason for hope in our future, because the common sense of a people which is devoted to legal methods and more impatient of anarchy than of any legal wrong, is pretty sure, in the long run, to solve its perplexing problems in a way consistent with the common good. He is not troubled because such a public opinion does not represent the wisdom of the wisest more than the impulse of the most simple. He upholds the truth of "the apparent paradox that when the humbler classes have differed in opinion from the higher, they have often been proved by the event to have been right and their so-called betters wrong." He looks, therefore, with hopefulness to the ultimate action of the American people in the difficult straits that are certainly before them, because they are cool, resolute, self-reliant, patient, and absolutely devoted to a few fundamentals in self-government, which they will apply whenever the necessity arises.

The grim character of some of the problems to be solved is not hidden. The discouraging features of our methods in politics, which make it so easy for corruption to get the upper hand, are drawn with all their hideousness; but many a young American, nerving himself for a courageous fight with these powers of darkness, will take heart of hope when he finds that so able and so judicial an observer of our country's institutions and condition retains strong faith in our future.

This general outline of Mr. Bryce's most important book is given in the hope that it may help create the conviction that no earnest and intelligent American can afford to remain ignorant of it. His education will be incomplete as a preparation for his duties as a citizen if he does not take advantage of the helps to a sound judgment and a noble purpose which are here given. In another paper may be presented a more detailed criticism of minor points, in which, from the American standpoint, varying lights may be thrown upon some of the author's views.

GREAT BRITAIN AND THE SUDAN.

'83 to '87 in the Sudan, with an Account of Sir William Hewett's Mission to King John of Abyssinia. By A. B. Wylde. 2 vols. London: Remington & Co. 1888.

It is a pity that before giving these volumes to the world, the author did not submit his proof-sheets to some one acquainted with the rules of English grammar and the art of treating a subject methodically. Mr. Wylde is a man of intelligence and observation. He evidently had ample means of knowing all that was going on in the Sudan during the eventful years treated of in his book. Unfortunately, his ideas on composition resemble the snakes in Iceland: he has none. His grammar is strange and wonderful. The right use of the relative pronoun is a difficulty which he has still to master. The number of sentences is astonishing which, after a vain struggle with their intricacies, he is obliged to abandon in a ruinous condition. He has, moreover, a very bewildering habit of passing suddenly, without note or comment, from the past tense to the present. This we imagine, is occasioned by shooting into the body of his book copious extracts from his journals in an entirely raw and undigested condition. The perplexity which this causes to his readers is much enhanced by Mr. Wylde's abhorrence of dates. He has, moreover, no sense of the relative importance of things, and chronicles the number of sandgrouse, pigeons, doves, bustards, and other animals which he destroys from day to day with a laborious minuteness that one cannot but wish had been extended to weightier matters. It would also have much increased the lucidity of the book if Mr. Wylde had apprised his readers of the nature of his official position. Probably he is so great a man at Suakim and Massowah that he thought this to be needless; but, as Philip Van Artevelde observes, "the world knows nothing of its greatest men." Now, had he submitted his proofs to a friend possessed of a little literary judgment and aptitude, all this would have been remedied, and we should have had a book possessing three or four times the value of what we have actually got. None the less, even as it stands, it is, so far as we know, the best that has been published on the Sudan since the British intervention in Egypt. It is, indeed, the first and only book which makes the internal troubles of that distracted country in any degree intelligible to outsiders. A sadder and more painful story it has seldom been our ill fortune to read.

When the Gladstone Cabinet determined to send an army to Egypt for the forcible suppression of Arabi Pasha and his party, they were inwardly conscious that it was a proceeding which, had it been adopted by a Conservative Ministry, they (the Cabinet) would have denounced from the platforms of all the railway stations in Great Britain. Consequently, they were nervously anxious to convince themselves that the after effects of their intervention were limited to a narrow and clearly defined area. Arabi being put down and sent away to Ceylon, everything, they insisted, must go on precisely as if Alexandria had not been bombarded or the battle of Tel el-Kebir been fought. Especially were they determined not to be bothered about the Sudan. It was a long way off, it lay far outside the limits of

their intervention, and it was a device of the enemy, for the purpose of discrediting their Egyptian policy, to pretend that they were, or ever could be, responsible for the internal condition of the Sudan. It is amazing that a company of such able men as Mr. Gladstone and his colleagues could have thought to escape the consequences of their own action by this infatuated imitation of the policy of the ostrich; but it is a fact which cannot be denied, and the torrents of blood uselessly shed in the Sudan—the misery, desolation, and barbarism which have revelled there unchecked during the last five years—are directly owing to it.

Mr. Wylde's picture of Egyptian rule in the Sudan is identical with that drawn by Gen. Gordon and, indeed, every European who had an opportunity of witnessing it. It was not government at all, but oppression, pillage, and cruelty of the worst kind. During Gen. Gordon's term of office, according to Mr. Wylde, there was a marvellous transformation; but the very energy and success with which he struck at the evil-doers became a cause of the insurrection which had already shattered the authority of the Egyptian Government when Lord Wolseley landed his troops at Zagazig. The plundering and lawless officials whom Gordon chased out of the Sudan collected at Cairo, and became the nucleus of the party which, in the end, procured his removal from the Government. They imagined that, Gordon once got rid of, the Government of the province would quickly recover the character it had before his coming; but Gordon's vigorous and equitable administration had awakened in the Sudanese a sense of their rights as men—a determination no longer to submit passively to whatever their Egyptian oppressors chose to inflict upon them. Consequently, when the Mahdi appeared, he made his appeal to a population already ripe for revolt. The Cairo authorities, who had vainly endeavored to suppress this movement before British intervention, were, of course, doubly incapable of doing so after the destruction of their army at Tel el-Kebir. It was, in fact, manifest even at that time that for Egypt, as regards the Sudan, there was no alternative to a policy of evacuation; and if the British Government had had the courage of its position in Cairo, the withdrawal might have been accomplished without loss of life, and with no interruption of legitimate trade. Instead of this, the British Government attempted to carry through the absurd and impossible policy of treating the Khedive as a puppet in Egypt proper, but as a powerful and independent sovereign in the Sudan. In that part of his possessions in which he still retained some degree of authority, he was accounted to have none; in that part where his power was broken past all hope of recovery, he was accounted as supreme. A policy thus deliberately founding itself upon a gross and palpable fiction could but result in defeat and confusion.

The Cairo Government took advantage of the liberty accorded to it to send Gen. Hicks and 10,000 men right away to Dafur. These the Mahdi destroyed to a man at a place called Melbeis. The Cairo Government then made a second and notable effort. They sent out into the highways and hedges, seized upon a number of the fellaheen, loaded them with chains, and sent them, strongly escorted by police, to Suakim, to see what these heroes could do against the Arabs of the eastern Sudan. All that they could do was to run with precipitation; and the Arabs, being superior in swiftness, killed about 3,000 of the miserable creatures. The British Government then roused itself to do what Mr. Gladstone described at the time as "a small service to humanity." This consisted in sending a British force under Gen. Graham to Suakim which fought the Arabs at El-Teb, and again at Tamaai, losing heavily upon both occasions, but inflicting enormous losses upon the brave but ill-armed enemies opposed to it. Having rendered this "small service to humanity," the British troops took to their ships and disappeared from the scene.

Up to this time, according to Mr. Wylde, the people of this part of the Sudan had no knowledge of the English except such as was to be obtained from the few Englishmen who came into their country from time to time in search of game. An observation of their habits had satisfied the tribesmen that they were mostly mad; for, after going to an immense deal of labor and expense to shoot deer and gazelle, they neither sold nor ate the flesh of these animals, but gave it away; neither did they make bottles or other vessels out of the skins, and the only part of the animal for which they manifested any care was the horns. This presumption of British insanity was transformed into a fixed conviction by the extraordinary conduct of Gen. Graham and his troops. As neither the Arabs, nor, for the matter of that, any one else, could discover what advantage to themselves the British expected to derive from what they had done, they supposed them to be a race of fighting maniacs, in the pay of the Egyptian Government. Their brief stay and swift disappearance they accounted for by setting them down as a species of marine animal, which could not live, except for brief periods of time, away from their ships.

This first expedition to Suakim was typical of British policy in the Sudan from 1883 until 1888, if indeed it can be called a policy. So far as the Sudanese are concerned, it has literally consisted in nothing but in making periodical descents among them, either in person or by proxy, killing several thousands of them, and then disappearing into space. When the British have not acted in person, they have got the Abyssinians to do it, or certain tribes, known as "the friendlies," who, in consideration of payment received, have undertaken to make raids and attacks upon other tribes. The issue of this policy has been an amount of bloodshed, misery, and devastation quite frightful to contemplate. The eastern and northern parts of the Sudan have become a huge charnel-house, in which thousands of Arabs, Abyssinians, Egyptians, and British have perished in sanguinary battles, fought without any definite aim, and leading to no results. The pages of Mr. Wylde's book teem with these horrors. As a solitary example, we give his description of Osman Digna's camp at Tamaai, after a successful attack upon it by "the friendlies."

"I arrived at Tamaai a little before dusk, and a great deal too late to make a thorough look round. I had seen quite enough ghastly sights, however, on entering, and I shall never forget as long as I live the night I spent at Tamaai, with its attending miseries. Talk about abject pictures of despair, the terrors of the infernal regions, and other horrors! I never could have imagined a more terrible sight than what was before me at Tamaai. . . . Sleep was out of the question: around me the cries of wailing women lamenting the loss of their friends; little children, walking skeletons, crying for food and water; within ten yards of me a wretched little boy of about eight years old, groaning and in delirium of fever, his little frame torn every now and then with a hacking cough, past all human aid. . . . His was only one case of many, and the night I was there eleven women and children died. I sat up nearly the whole night, talking, and not a person that I had any conversation with but said they never wished to see such misery again. It was even bad enough to move an Arab to pity, and that is saying a great deal. There had been but little fighting; the garrison were a great deal too weak to defend themselves, and, after the first rush of the attacking tribesmen, which was met by a volley from the defenders, everything was over except the cold-blooded butchery that ensued. Little or no quarter was given to the men; many women were also killed. . . . Three deep wells had been entirely filled with the bodies of those killed and massacred, and round these wells were crowds of horrid vultures, with their wings spread out and their beaks open, gorged with the feast that they had been making off the protruding limbs of the slain."

Since 1883, whenever a British soldier has entered the Sudan, this is the ghastly legacy which he has left behind as a memorial of his presence. Not that the unfortunate soldier is to blame; he, together with hundreds of his comrades, have had to pay with their lives for the want of courage, of foresight, of reasoned purpose and end in the counsels of Cabinet Ministers at home. And, despite all the blood that has been shed, the future of the Sudan is a problem no nearer solution at the beginning of 1889 than it was in the spring of 1883. It is idle to pretend, as the Ministry and Parliament of Great Britain try to make believe, that the Power which rules in Egypt can wash its hands of all responsibility for what is going on in the Sudan. The action of Great Britain in that very province, ever since her troops entered Cairo, demonstrates the impracticability of any such policy, and sooner or later her leading politicians will be compelled to undertake the pacification of the Sudan. This task, easy enough in 1883, has grown, from long neglect, into a difficulty of the first magnitude. It constitutes a very important part of that great "African question" which Europe is being called upon to settle with ever-increasing urgency, and for the understanding of which we know, notwithstanding their many and great defects, no better guide than these volumes of Mr. Wylde.

THE LAND BEYOND THE FOREST.

Facts, Figures, and Fancies from Transylvania. By E. Gerard. Harper & Bros. 1888.

Madam Emily de Laszowska-Gerard is the English wife of a Polish officer in the Austrian service, who has had the fate common to his colleagues of being often suddenly transferred from one distant part of the Empire to another. Most families curse their luck at being subjected to the trouble and expense of these sudden removals. Mme. Gerard, however, liked the chance of seeing different parts of the country, and laments only the hardship of the poor boys who are obliged to conform to the most opposite requirements of utterly different systems of education; and the question of education in Austria-Hungary is in "a provoking and unsatisfactory" state:

"Thus, the son of an officer," she says, "serving in the Austrian Army may be obliged to study half-a-dozen different languages (in addition to Latin, Greek, German, and French) during a hardly greater number of years. He must learn Italian because his father is serving at Trieste, and may be getting on fairly well with that language when he is abruptly called upon to change it for Polish, since Cracow is henceforth the town where he is to pursue his studies. But hardly has he got familiar with the soft Slav tongue when, ten to one, his accent will be ruined for life by an untimely transition to Bohemia, where the hideous Czech has become *de rigueur*. Slavonian and Ruthenian may very likely have their turn at the unfortunate infant before he has attained the age of twelve, unless the distracted father be reduced to sacrifice his military career to the education of his son.

"It is not of our own individual case that I would speak thus strongly, for our boys, being

burdened with only seven languages (to wit, Polish, English, German, French, Greek, Latin, and Hungarian) would scarcely be counted ill-used, as Austrian boys go, having escaped Bohemian, Slavonian, Ruthenian, and Italian; yet assuredly to us it was a very happy day indeed when we made a bonfire of the Magyar school-books, and ceased quaking at sight of the formidable individual who taught Hungarian at the Hermanstadt Gymnasium.

"O happy English schoolboys, you know not how much you have to be thankful for!—your own noble language, adorned with a superficial layer of Greek and Latin, and at most supplemented by a little atrocious French, being sufficient to set you up for life. Think of those others who are pining in a complicated network of Bohemian, Polish, Hungarian, Slavonian, Italian, Croatian, and Ruthenian fetters; think of them, and drop a sympathizing tear over their mournful lot."

When we read Mme. Gerard's charming novel, 'The Waters of Hercules,' with its excellent descriptions of the savage scenery of the gorge at Mehadia, and of the Rumanian, Servian, Magyar, and cosmopolitan society which frequents that bathing-place, we hoped that the author would some day give us an account of the lovely and interesting Transylvania—the Land beyond the Forest—which lay only the other side of the mountain ridge of the gorge, and yet, owing to roads, railways, and mountain passes, was so difficult to reach. We had hoped, too, that her book would be in the form of a novel, which, when written with a pen so skilled as hers, is such a pleasing way of making acquaintance with a new country and its people, or of reviving the recollections of a place which has left agreeable memories. In the present volume, however, there is so much information as well as so much entertainment that we will not complain of the form.

The novel just spoken of was not read with such pleasure at Bucharest, where patriotic Rumanians thought injustice had been done to their compatriots, and especially to their officials. Full atonement has been made now; for the author has studied Rumanians with care and sympathy, and, out of the number of races that make up the motley population of Transylvania, evidently prefers the long-despised Rumans—the Wallachs, as they were contemptuously called—to the Saxons, "with their wooden, Noah's-ark faces," who consider themselves the lords of the country. A popular legend will give us, in a humorous way, some of the national characteristics:

"When God had decreed to banish Adam and Eve from Paradise because they had sinned against his laws, he first deputed his Hungarian angel Gabor (Gabriel) to chase them out of the Garden of Eden. But Adam and Eve were already wise, for they had eaten of the fruit of knowledge; so they resolved to conciliate the angel by putting good cheer before him, and inviting him to partake of it. In truth, the angel ate and drank heartily of the good things on the table, and, after having eaten, he had not the heart to repay his kind hosts for their hospitality by chasing them out of Paradise, so he returned to Heaven without having executed his commission, and begged the Lord to send another in his place, for he could not do it.

"Then God sent the Wallachian angel Florian, thinking he was less fine-feeling and would execute the mission better. Adam and Eve were sitting at the table when the servant of the Lord entered, shod in leather *opintschen* (sandals) and with fur cap under his arm. After humbly saluting, he told his errand. But Adam, on seeing the appearance of this messenger, felt no more fear, and asked roughly, 'Hast brought no written warrant with thee?' At this the angel Florian began to tremble, turned around on the spot, and went back to Heaven.

"Then the Lord became angry, and sent down the German Archangel Michael. Adam and Eve were mightily terrified on seeing him, but resolved to do their best to soften his heart; so they prepared for him a sumptuous meal of his favorite dishes—ham sausage, pickled sauerkraut, beer, wine, and sweet mead. The German angel was highly pleased, and played such a good knife and fork that Adam and Eve began to feel light of heart again. But hardly had the Archangel eaten his fill when, rising from the table, he swung his flaming sword overhead, and thundered forth to his terrified hosts, 'Now pack yourselves off!' In vain did our first parents beg and sue for mercy; nothing served to touch the heart of the inflexible German angel, who, without further ado, drove them both out of Paradise."

In this legend the Rumanian does not appear as possessing a strong and independent character; but this is but natural after centuries of slavery and oppression. The Rumanian peasantry and middle classes—and there are no Rumanian gentry in Transylvania—have not, even now that they are free, attained to the full consciousness of their dignity as freemen. Indeed, it is by their past history that very many of the faults of the Rumanian character are to be explained. The Rumanians were, until 1848, practically slaves; up to the middle of the last century, Rumanians were forbidden to attend German or Hugarian schools, and their clergy were obliged to carry the Calvinistic Bishop on their shoulders to and from his church, whenever he chose to demand it. This latter was sentimentally not such a hardship as it seems; for Calvinists, Catholics, and Mussulmans alike are regarded by Rumanian peasants simply as heathens and pagans. "They are not of our law," they say.

This use of the word "law" seems to point to the old distinction between Romans and Barbarians, and to hint at that Roman descent of which they are so proud. Argue as we may, and think as we do, that any great infusion of Latin blood is highly improbable, yet the language is clearly Latin, and Rumanian faces still have Roman features clearly cut, such as are seen on old busts, bas-reliefs, and cameos. There is a singular tenacity of race very obvious among the Rumanians of the present, which may show how "a little leaven can leaven a whole lump." Mme. Gerard expresses very well the consequences of this tenacity of race, and we can only add that the same is perfectly true in Russia, Bulgaria, and Servia, and even in those districts of Macedonia and Thessaly where this race has taken root.

"Few races possess in such a marked degree the blind and immovable sense of nationality which characterizes the Rumanians: they hardly ever mingle with the surrounding races, far less adopt manners and customs foreign to their own; and it is a remarkable fact that the seemingly stronger-minded and more manly Hungarians are absolutely powerless to influence them even in cases of intermarriage. Thus the Hungarian woman who weds a Rumanian husband will necessarily adopt the dress and manners of his people, and her children will be as good Rumanians as though they had no drop of Magyar blood in their veins; while the Magyar who takes a Rumanian girl for his wife will not only fail to convert her to his ideas, but himself, subdued by her influence, will imperceptibly begin to lose his nationality. This is a fact well known and much lamented by the Hungarians themselves, who live in anticipated apprehension of seeing their people ultimately dissolving into Rumanians. This singular tenacity of the Rumanians to their own manners and customs is doubtless due to the influence of their religion, which teaches them that any deviation from their own established rules is sinful—which, as I have said before, is the whole pivot of Rumanian thought and action."

"In some districts, where an attempt was made in the time of Maria Theresa to replace the Greek popas by other clergymen belonging to the united faith, the inhabitants simply absented themselves from all church attendance or reception of the sacraments; and there are instances on record of villages whose churches remained closed for over thirty years, because the people could not be induced to accept the change."

The Rumanian folk-tales have already been given to us in English dress, but nowhere that we know, excepting in the original Rumanian, is there such an excellent anthology of Rumanian folk-lore, superstition, and proverbs as in this book. A similar remark might be made about the folk-lore of the Saxons, who, separated from their German brethren by an isolation of centuries, have preserved very many beliefs uncontaminated by the influences of modern civilization. These Transylvanian Germans still have remnants of the old Norse mythology. Not only do they believe in were-wolves and witches (the last witch was found at Maros-Vasarhely in 1752), but not long ago a Saxon woman bitterly complained in a court of justice that her husband had cursed her overstrongly in saying "Der Wärlthangd saul dich frieszen!" literally "May the world-dog swallow thee!" These Saxons, except for their folk-lore, are an uninteresting lot. They are cleanly, economical, God-fearing, selfish, inhospitable, and wooden. The author has evidently much more sympathy and affection for the gypsies or Tsigani; but we rather hold to the opinion of Liszt that none but an Hungarian can really understand and appreciate gypsies and especially gypsy music; and there is an old proverb which says: "The Hungarian only requires a gypsy fiddler and a glass of water in order to make him quite drunk." The Westerner who remains any time in Hungary must be gifted with an especially Oriental taste, if after a time he can repress a shudder when he enters a restaurant or beer-garden, and hears the harmonious see-saw chaos of the gypsy bands with which these establishments are always infested.

But two or three pages are devoted to the Armenians, that interesting colony which, like the Jews in some other countries, has got all the banking business of the province into its hands; and almost nothing is said of the Hungarians, as they have been so fully described elsewhere. As the author's residence was, except for some short excursions, confined to the city of Hermanstadt, she has little to say about the Szeklers, those "cut-off" Hungarians who live in eastern Transylvania on the slopes of the Carpathians; yet this is one of the most interesting regions for the tourist, not only for its wild mountain scenery, but for its sport and for the healing wells and springs and mineral waters endowed with every possible chemical element. There are even fissures in the rocks where water trickles forth supposed to be good for eye diseases, but where the blast of carbonic oxide (or acid) gas is so strong as to afford an almost instantaneous remedy to disappointed lovers, whose bodies are not infrequently found lying at the foot of the rock.

With all its charms, Transylvania is not a country to be entered by the traveller without forethought. Hungarian inns are generally bad; although one can eat for awhile *gulash* and *paprika-huhn*, yet one soon gets tired of the various mixtures of pepper and tomato which form the essence of Hungarian cookery. The wines are good but strong, and should be drunk freely mixed with mineral water, as is the custom among the natives. The hotels at Hermanstadt and Kronstadt leave much to be desired in the way of comfort and cleanliness; at the numerous mineral springs and baths the abodes are mere wooden shanties; and further on, one must rough it. Yet, in spite of all these material drawbacks, after reading Mme. Gerard's book one longs to return to that beautiful country, even when one knows, after two months' experience of Kronstadt in summer, how dreadfully dull even Hermanstadt might be in winter.

KENDALL'S KINSHIP OF MEN.

The Kinship of Men: An Argument for Pedigrees; or, Genealogy Viewed as a Science. By Henry Kendall. Boston: Cupples & Hurd, 1888. Sm. 8vo, pp. 216.

THIS absurd little book is the work of an Englishman, and it is stated to be the enlargement of a magazine article. The author maintains that no one has hitherto dealt with the subject as he has done, although some have blindly stumbled on a portion of the truth. It may be so, for certainly no one will be disposed to dispute with him the merit of a puzzle-headed collocation of figures without meaning. His intellect and his methods are akin to those of the seekers for perpetual motion or the mode of squaring the circle. His hobbies are, first, that all people are akin to each other, meaning literally that every man can trace through some line of ancestry to a progenitor common to him and every other man in his nation or community; secondly, that the system of giving any special importance to the male line of ancestry is an error, both in fact and in theory.

Mr. Kendall, at some period in his career as a great original thinker, awoke to the fact that as a man has two parents, four grandparents, eight in the next degree, and so onward, he could figure out that in the twentieth generation he had 1,048,576 ancestors, and in the thirty-second degree he had 4,294,967,296. At this point, overcome perhaps by the difficult mathematical calculation, he paused to deduce various theories and laws from the result. He found that twenty generations, or seven centuries, brought him to the date of the conquest of England. His number of ancestors was equal to the population of England; hence they were identical. Moreover, every other living Englishman, with a lead pencil in hand, could make the same calculation with the same result; the necessary conclusion was, that all living Englishmen are cousins in at least the twentieth degree.

Fired with this unexpected and truly inspiring revelation, Mr. Kendall has beaten out his gold over a relatively large surface, and has attempted to fortify his position by various diagrams and columns of figures, all of which, however, add nothing to his original discovery. They are at best but melancholy evidences of the tenderness which he has felt for his intellectual bantling. His reasoning is unsound besides being directly contradicted by history. The plain fact is, that his tables merely show the *greatest* number of ancestors a man could have. In eight generations this number is 256. But the least number which an animal can have is two in each generation, and the least that any man requires is four in each generation after the first.

That is to say, with beasts, if one pair have issue a male and female, and these reproduce with like issue, the breed may last indefinitely, yet with only two examples in each generation. In mankind, civilized mankind at least, the intermarriage of first cousins is allowed. If, therefore, two pair exist at any one date, so long as each marriage produces one male and one female, there will be in each generation two pair of first cousins, legally qualified to mate and continue the race. This is absolutely all that is required. Instead of 256 ancestors in the eighth generation, the man of to-day requires only four ancestors in that degree, to have an ancestry free from intermarriage within the forbidden degrees.

But if in any generation we assume the existence in any locality of more than two pairs, say twenty or fifty married couples and if we allow them in some instances more then two children to a marriage, we have a provision for the continuance of a race for many generations, and of very varied numbers in each generation. Some children may have died without issue, families may have been large in one generation and small in another; but there is nothing in natural laws that necessitates any regular ratio of increase or decrease, except, as above stated, that every man and woman alive to-day must have had two parents in each generation, and ought to have had four ancestors after the second generation in each step backward.

Reason, therefore, disposes entirely of Mr. Kendall's absurd logic. History, so far as we know, entirely confirms this. It is not only possible for a race to continue for many generations without admixture of foreign blood, but such has been the rule and not the exception. All traditions older than the most ancient records point to the establishment of races or clans, having one progenitor, and preserving as carefully as possible the integrity of the strain. To come to more recent times, we find in England a race, or portions of several races, Angles, Saxons, Celts, and Danes; the result has not been any thorough mixture, but every county has preserved a marked individuality. The Welshman, the Yorkshire man, and the Kentish man do not find a common ancestor at the date of the recolonization of the island. The Highlander of Scotland is, during the historic period, as distinct from the Englishman in blood as in language.

New Englanders can give Mr. Kendall many facts which would teach him to modify his wild theories. Their history covers nearly the whole period during which pedigrees can be traced. An infinitesimal portion only of the Englishmen of to-day can trace their ancestry beyond 1630, because the parish records in England do not exist, and, in fact, were kept only for two generations before that date. Even for the time since 1630, the facilities for tracing the pedigrees of the common people in England are much less than they are here. But in New England we find little communities established, and we can see just what law has governed their growth. The result is, that in one of these towns the population increased, but the intermarriages were mainly confined to the people of the town; and at the present time nearly all of the inhabitants are connected by blood, and trace back to the few original colonists. But a few miles away a similar community has flourished, and the groups remain entirely distinct. There is no chance for doubt, because the records remain and thousands of people can trace out their ancestry on each ascending line up to the first settlers.

What has taken place there for two centuries took place in England for two, four, or six centuries prior to 1600. Each hamlet there was the centre of a race so long as that race continued; but it was not mixed often with any adjoining race, and never with any remote race. Instead of the vast intermingling of lines in the person of each man now living, which is Mr. Kendall's preposterous surmise, the fact is that no two men, excepting brothers, will possess the same ratio of admixture. In one man whose ancestors have dwelt for five or six centuries in one village, the distinct lines would be very few and often crossed. Another man may possess some approximation to Mr. Kendall's idea, and double the lines in nearly every generation; but this calls for an incredible amount of wandering and wedding, entirely beyond the capability of the poorer classes in early times. Still, in every case, nothing must be taken on surmise; but when the evidence fails, the theorist must strike out the example.

Mr. Kendall makes this wild statement:

"That every Englishman has descended, not only from the Conqueror, but from each of his sixty thousand companions that is still represented by anybody in the land, aye, and from several sixty thousands of Anglo-Saxons besides who were living at the same time, is precisely what is here affirmed, and, it is hoped, made sufficiently clear."

The answer to this is obvious. The greater portion of the lineal descendants of William the Conqueror are recorded. The male lines of course are known. Some of the female lines have probably fallen into obscurity, but a fair conclusion would be that those unknown lines terminated as often as the recognized ones did. Hence we can, with a little trouble, work out the problem, and we shall find that instead of forty millions of descendants, there are at most but a few thousands. Moreover, we must allow that there has always been a tendency in England, since the Norman Conquest, to maintain caste distinctions, especially in marriages. The nobles married in their own rank, and though occasionally, especially in female lines, the rule has been relaxed, the descent has been very gradual. This tendency is exactly paralleled by the restrictions forced upon the lower classes by poverty and restriction of habitat. The serfs around the castle intermarried and kept the race alive. Occasionally, we will allow, the blood of a king filtered through the rank of the higher nobility, thence to the lower nobility, the gentry, the yeomen, the laborers, even to the lowest degree; but it is for the person who claims that such descent occurred to prove its existence and its extent. Wherever it occurred, it affected only one locality or race, and innumerable other races have continued to the present day untouched thereby. In fact, the error of Mr. Kendall's theory lies in one word: he says that every Englishman to-day is descended from *every* Englishman living in A.D. 1100 who has descendants now. The word "every" is wrong. The truth is, that every Englishman is probably descended from one Englishman, or more, who was alive in A.D. 1100; but no one knows how many of such progenitors he had, and the number probably varies in each case.

As to Mr. Kendall's second hobby, that it is absurd to trace pedigrees only in the male line, or to suppose that the paternal grandfather in the eighth degree represents more than one two hundred and fifty-sixth part of the man of to-day, there is a possible truth and a palpable fallacy therein. Pedigrees are traced and names are assumed for convenience in identifying persons. If the name was to show the ancestry, each of the 256 lines would claim a word or a syllable. Therefore some selection must be made, and naturally either the male or the female line must be chosen exclusively. A man or woman is named by his father's surname, and he by his father's, and so on, as far as we can trace. The other alternative would be to trace exclusively through the female line—that is, the husband instead of the wife would lose his surname at marriage, and the mother's name would descend to her posterity. But this selection ignores all but one line out of the 256 as much as our present system does, and is no more scientific.

Yet there is some strong ground for our present custom, viz., the natural desire to trace by the ruling side. When women occupy the inferior place which they do in barbarous communities, the son clings to his father as his protector and benefactor. Hence he desires to be known as the son of his father, and transmits

the tradition to later generations. Moreover, the physical resemblance between two men leads the father to feel that a son is nearer to him than a daughter. The son can take the father's place, and, as all descendants cannot be equally designated, the selection of the male line is easily understood.

Mr. Kendall, however, opens up a line of thought which has never been fully traced out when he argues that each of a man's progenitors, not only is essential to his existence, which is a truism, but also has contributed equally to make him what he is. The first statement is a mere platitude: everything that has been is essential to whatever is. The second may admit of doubt, and it lies at the foundation of the doctrine of heredity. Is it true or not that each of a man's eight great-grandparents contribute equally to make him what he is, bodily and mentally? Or, more briefly, does a man derive his body and mind equally from his father and his mother? Is it not evident that if any type is perpetuated, one side or the other must greatly preponderate? In mankind, if this be true, does not the preponderance vary in different cases, and can we yet discern either the facts or the law governing them? These questions are settled off-hand by Mr. Kendall, but what say the authorities? The most that we can feel warranted in saying is, that the common belief seems to be that the paternal line is the stronger, and is most frequently perpetuated, but that exceptions are numerous. Perhaps it would be fair to allow that different races or families vary, and that the influence of a female of some stock may predominate over that of the male of another stock. In subsequent crossings, indeed, this female line may finally overcome all others, and a man may reproduce, not the image of his paternal ancestor, but of the father of some one in some line of maternal ancestry. In other words, if he have in some generation 256 ancestors, he may most strongly resemble one to whom his relationship is traced neither solely by the male nor by the female line. But this is an idle suggestion, since if we could collect the evidence of the fact, we could not apply the knowledge to any purpose to affect the character of our progeny.

Mr. Kendall calls his work 'Genealogy Viewed as a Science.' For the present, that science will continue to be the mere collection of facts to gratify a certain feeling of pride or affection towards one's relatives within certain narrow limits. The idea that Mr. Kendall's unfounded pretence that all living men are allied in blood is to lead to a millennium, is too preposterous to consider. He throws it in as a moral tag to his essay. It is safe to say that the knowledge by A that he is a cousin in the twentieth degree to B will in no way affect his action towards B. The ties of family are largely sentimental, and perhaps less strong than writers usually assume. Like all other feelings, this one is strong or weak in different persons. But Mr. Kendall will not regenerate mankind by the watchword of universal cousinship.

This book would be utterly unworthy of notice but for the fact that the author has so elaborated his story that some readers might think there must be a basis somewhere. A very little examination, however, will show, as usual, that what is new is false and what is true is old, very old. Mankind can continue to transmit family names exclusively in the male lines, can count up only such cousins as the subject pleases, and may decline to recognize any neighbor as a relative without documentary proof, just as if Mr. Kendall had never muddled his intellect in confounding remote possibilities with unvarying necessities.

OLIVIER RAYET.

Études d'Archéologie et d'Art. Par Olivier Rayet, Professeur d'Archéologie à la Bibliothèque Nationale. Réunies et publiées, avec une notice biographique sur l'auteur, par Salomon Reinach. Paris: Firmin-Didot. 1888. 8vo., pp. xvi and 462.

In the death of Olivier Rayet, which occurred in February, 1887, France lost one of the most brilliant archæologists her School in Athens has yet produced. It has, to be sure, trained men of more profound minds, and men whose original contributions to the science of archæology have been more valuable; but there are few, even in France, whose sympathy for Greek art has been so sensitive, and whose power of imparting their appreciation of it to others has been so great. It is impossible to read his writings without catching his enthusiasm for his subject, and without admiring the exquisite discrimination with which that enthusiasm is tempered. Although not forty years old when he died, he had made himself a name that is familiar wherever there is any interest in Greek art, not only in the narrow circle of specialists, but equally among artists, collectors, and dilettants; and in his short career had attained the highest honors to which the French scholar can aspire, having succeeded Beulé and Fr. Lenormant in the Chair of Archæology at the Bibliothèque Nationale, and Foucart at the Collège de France. Although a victim of malaria, which he contracted in the early part of his career, his energy was equal to his ambition, so that in addition to his duties as lecturer and editor of the antique department of the *Gazette des Beaux-Arts*, he edited the most beautiful work on Greek sculpture we possess, his 'Monuments de l'Art Antique,' a great part of which he wrote himself; he began a history of Greek ceramics, which was completed after his death by his younger colleague, M. Collignon (see *Nation* No. 1213); and when his last illness overtook him, he was preparing a volume on Miletos, (where he had conducted an archæological campaign), a work on the topography of Athens, and a history of Greek sculpture. Besides these, the miscellaneous essays and studies he has left are sufficient to fill two volumes, the first of which is now before us.

Rayet was born at Cairou, in the south of France, September 23, 1847. To his southern origin he undoubtedly owed the impetuosity as well as the enthusiasm which often characterized his writings. He was educated in Paris, first in the Lycée Bonaparte, then in the École Normale, from which he graduated in 1869 as *premier agrégé* in history. This honor entitled him to become a member of the French School at Athens, an opportunity which he improved, although, as M. Reinach informs us in the sympathetic notice which precedes these Études, he was neither archæologist nor epigraphist at the time. Rome was then more interesting to him than Athens, and history more than archæology. Leaving Paris the year of his graduation, he went first to Italy, and was brought face to face with Greek remains in Pæstum and Sicily, whence he went to Athens. The next year seems to have been divided between Greece itself and the shores of Asia Minor. He was fortunate in being at hand when the first discoveries of terra-cottas at Tanagra were announced in Athens, and his fine artistic perception showed him the value of this hitherto neglected side of Greek art long before the fame of these figurines spread through Europe. To this circumstance is due the fact that the Louvre now possesses the finest collection of Tanagras in the world. Rayet bought them when they were first offered in the market, and before the dealers had discovered that it was worth while to counterfeit them. Collector as well as student, he became familiar with the methods and the devices of dealers and clandestine excavators to an extent which is impossible to-day, and was then to all but a very few; and consequently two of his most valuable papers are the essay on the "Figurines de Tanagra au Louvre" ('Études,' pp. 275-324), and that which accompanies plate 77 of the 'Monuments,' in which his account of the first excavations at Tanagra has, as Reinach says, all the value of an original deposition.

While on a trip through Asia Minor, in the summer of 1870, news of the Franco-Prussian war reached him and carried him back to France, where he took some part in the latter portion of the war. His work was thus interrupted until the spring of the following year, from which time until his death he devoted himself to Greek art and archæology. Returning to Athens, he contributed a number of studies to the *Bulletin* of his School. In 1872 he was able to undertake a scheme which he had cherished since his first visit to Asia Minor, and to gratify the natural instinct of every archæologist—the passion to excavate. The opportunity to do this he owed to MM. Gustave and Edmond de Rothschild, whose acquaintance he made that year, and whom he so interested in Miletos as a promising site for excavation that he was charged by them with a commission to investigate the place at their expense. The history of the undertaking is comprised in two of the most interesting essays in this volume of 'Études,' in which, with admirable taste and graphic pen, he has set forth the vexations and hardships which counterbalance the pleasures and triumphs of archæological field-work. To those who wish to form an idea of the perseverance, the courage, and the energy, not less than the knowledge, required for this kind of work, these two essays may be especially commended.

In spite of all the qualities which Rayet, aided by the architect M. Albert Thomas, brought to the work, this campaign cannot be regarded as one of the most successful parts of his career. A number of fine architectural fragments were brought to light, though as a whole not to be compared with the discoveries at Ephesus, which Rayet doubtless hoped to emulate; and enough of the lines of the building were uncovered to enable M. Thomas to make a restoration of it. But the difficulties of bringing their task to anything like a successful completion were insuperable, and in the following summer (1873) they returned to France. Rayet, who had caught the fever of the country, carried away with him, as his most important trophy of the campaign, the germs of the disease which tormented the last years of his life, and caused his premature end. For the next ten years his time and energy were taken up with the literary and professional labors we have described, until, shortly after his appointment as professor at the Bibliothèque Nationale in 1884, he was obliged to give up all work, and yield to the physical exhaustion in which he passed the last two years of his life. Brief as was his career, he has left behind him a record of which a much older man might well be proud, and the excellence of what he had already accomplished renders so much the keener our regret that his life should have been cut off in the first flower of its maturity.

Rayet's greatest ability was as a popularizer and critic of the work of others, rather than as an original investigator; for although a thorough scholar and a careful worker, his

original theories were often of an extreme character, and, ingeniously supported as they were, have usually failed of general acceptance. On the other hand, gifted, as we have said, with extreme artistic sensitiveness, and a thorough master of that style which makes French prose the most delightful reading in the world, few men have equalled him in analyzing the beauties of Greek art, and placing them in their true light before readers who are not archæologists. It is in the artistic side of the science of archæology that the French school has always surpassed the German, for the reason that no modern race has such close sympathy with the artistic instincts of the Greeks; and in this characteristic of his countrymen Rayet was preëminent.

This being the case, these 'Études' show him at his best. They are a collection of occasional essays which have appeared before, most of them in the *Gazette des Beaux-Arts*. We have referred above to two of them—those on the Tanagra Figurines in the Louvre, and the Temple of Apollo at Miletos. With regard to the latter, it is to be regretted that some reproductions of M. Thomas's drawings and restorations could not have been inserted in the volume, since the essay was written to describe these when they were exhibited at the Salon, and without them it is difficult to follow the description. Of the other essays we cannot speak at length, but there are two which we may recommend especially. That on "Les Antiques de St.-Pétersbourg" contains the best description we know of the marvellous collection of Greek jewelry and ceramics found in the Crimea, of which it is not too much to say that, were all the other museums in the world to select their finest specimens of these arts, they could not make up its equal for beauty; yet in its present abode it is almost as unappreciated by the world at large as before it was brought to light. Finally, the essay on "Les Antiques au Musée de Berlin" contains (pp. 261–267) what seems to us the finest criticism of the Pergamenian sculptures that has yet appeared. In these few pages the brilliancy of his style and the acuteness of his judgment are displayed at their best; and there is perhaps no paragraph in the book that shows these characteristic qualities better than that in which he summarizes the Laocoön as "un acteur qui étudie son rôle, et cherche devant sa glace l'effet que produit la contraction de son visage." What would Winckelmann and the men of his time have thought of such heresy?

Forging His Chains. The Autobiography of George Bidwell. New York: George Bidwell, 124 Nassau Street. 1888.

In one of his inimitable character sketches the late Artemus Ward describes his hero as having been in early life "engaged in business as a malefactor in western New York," and the description applies accurately to the writer of this volume. With sufficient ability to earn an honest living, he preferred to devote himself to the systematic practice of fraud, simply because it seemed to be the easiest way of making money. Even after he had secured a competence by his crimes, and might have retired with the praise accorded by mankind to those who do well to themselves, he continued to steal until justice put a sudden and permanent restraint upon his operations. He was sentenced for life on account of a series of gigantic forgeries perpetrated upon the Bank of England, and, having succeeded after fourteen years of incarceration in procuring his release on a ticket-of-leave, he is now endeavoring to earn a little money honestly by the sale of this book. As his punishment seems to have been both severe and efficacious, we feel justified in commending the work to whom it may concern as interesting and instructive.

We do not feel disposed, however, to concur with the reverend chaplain of a New Jersey penitentiary in commending it to the Presbytery of Jersey City, or—but for its size—to all Sunday-schools. We are aware that the lives of deceased saints are not generally found so edifying as they ought to be, and that there has been a good deal of wit—somewhat cheap wit, it is true—expended upon the memoirs of good little boys who died young; we will even admit with Mr. Augustine Birrell that the life of a rogue like Cellini has irresistible charms: but we think that even the ordinary Sunday-school book might be preferable for boys and girls to the biographies of repentant rascals. Conceding the natural depravity of the human heart, we apprehend that it may better be corrected by the atmosphere of virtue than by the exhibition of examples of even unsuccessful vice. The lives of Abraham, of Isaac and of Jacob, of Samson and David and Solomon, may not have been in all respects immaculate, but they constitute a better propædeutic than those of Dick Turpin and Jack Shepard. Doubtless a Sunday-school concert with recitations from the Newgate Calendar, and with admonitory chants, such as—

> "You've carved your epitaph, Claude Duval,
> With your chisel so bright, tra, la,"

might convey a moral lesson; but, upon the whole, we should select other means of instruction for children of tender age.

There is, however, a lesson of great importance taught very forcibly by this book. It shows, far more impressively than any treatise of jurisprudence, the immense value to society of its penal system. The example of Bidwell and his associates proves that there are many men so devoid of conscience that only the terrors of the penitentiary avail to check their predatory instincts. The discovery of anything like confidence in their honesty is so far from arousing their moral sense that it rather appeals to their rapacity. Any unguarded spot, any opportunity for fraud in the transactions of commerce, affects them as rats are affected by a hole in the meal-chest. It is not the loftiest kind of morality that is produced by reflecting upon or experiencing the consequences of wrong-doing; but if society can get nothing better, it must, at all events, have this. The cruel treatment of convicts, so feelingly described by this writer, is indeed deplorable; but his own story shows how difficult it is to remedy this abuse. He had received the kindest treatment from a doctor, whom he described as a noble-hearted Christian gentleman, and yet he was induced to denounce this benefactor to the prison authorities. The disregard for truth among criminals is so complete that it is in many cases impossible for human ingenuity to discover whether they are lying or not, and the outrages which they falsely declare they suffer prevent the investigation of those which are real. Reading between the lines of this book, we are convinced that the English prisons in the main are well managed, and that most of the cruelties described are occasioned by the wilful misconduct of those who suffer them.

Plutarch's Morals. Ethical Essays translated with Notes and Index by Arthur R. Shilleto, M.A. 1 vol., pp. 408. London: George Bell & Sons; New York: Scribner & Welford. 1888.

It is a reproach to human nature and a proof of its indifference to ethics that Plutarch's 'Morals' is not as well known and appreciated as his 'Lives.' These essays are characterized by the same learning and spirit as the more celebrated work, and supported by a personal life equal to that of the best and purest men of Greece and Rome. Emerson said that he was more indebted to Plutarch than to all other ancient writers, and the merits of this book show the ground of such a confession. The essays are a perfect anthology of ethical incidents and maxims regarding private and social virtues. They are in no sense theoretical discussions, but the moral reflections of a man equally interested in history, poetry, practical life, and philosophy. It is a tribute to the universality and soundness of his judgment that he could present the maxims of an ideal life without embroiling himself in the controversies about pleasure and pain that so distinguish the philosophy and moral reflections of Plutarch's race, the Greeks, and which everywhere provincialize the subject of ethics. It is not too much to say of his essays that they would be more useful and suggestive to students, not for theories, but for subjects productive of healthy thought, than any of the pedagogical systems of ethics usually dealt out to them.

The course of ethics in our ordinary colleges is a disgrace to the present civilization. No doubt the difficulties in making ethics interesting are great, and perhaps the greatest of these is the instinctive disposition of this individualistic age to resist all hortatory discourse as an attempt to infringe upon personal liberty. Ethics to the ordinary mind have the disagreeable feature of a *duty*, reflected from an age that has given it the color and associations of dogmatism and authority; but the reflections of Plutarch are free from a disadvantage of this kind, because they have no personal interest in the beliefs and assumptions supposed to condition the ethics of the present day.

Into the contents of the book we cannot enter. It is enough to say that the collection of "conjugal precepts" are as interesting material for the study of sociology as they are remarkably humane in spirit, and come up to the level of the best attainments even of the present, if we allow some exceptions which have to be made as a concession to environment. The "consolatory letter to his wife" on the death of a daughter is one of the noblest relics of antiquity, and in piety and purity is equal to anything that Christian thought has produced.

Gibraltar. By Henry M. Field. Chas. Scribner's Sons. 1888. Pp. 139.

There is much that is entertaining in Dr. Field's account of his visit to Gibraltar. He naturally begins with the fortifications, saying, among other things, that the increase in the size of the guns and their calibre is greater since 1870, when "there were seven hundred guns in position on the Rock," than in the century previous. A description of the presentation of colors to one of the regiments, a chapter upon the great siege, a few words on the contraband trade and the relations of Spain and England, together with a detailed account of the courtesies shown the author by prominent officials, make up the remainder of the book. If the reader expects to get any real, living picture of the strange town which has grown up under the great cliff, its motley inhabitants, their modes of life, and their occupations, he will be disappointed. Dr. Field has nothing to say of a score of things about which we should have liked and should have looked for information in a book devoted to a single town, as, for instance, the sources of its food and water supply, the trade of the place, especially with Af-

rica, the relative number of the different nationalities living in it, and their position as regards each other. There is not a word even of the inhabitants who antedate all others, Moors, Spaniards, and Englishmen—the historic Barbary apes—nor any mention of the famous caves, with their beautiful clustered stalactites. Despite its attractive appearance and its interesting pictures, the chief impression which the book leaves is that Dr. Field had a very pleasant time in Gibraltar.

Letters to a King. By Albion W. Tourgée, LL.D. Cincinnati: Cranston & Stowe; New York: Phillips & Hunt.

THOSE who have read the previous works of Mr. Tourgée will scarcely need to be told what qualities distinguish the present volume. There is the same childlike delight in military similes and metaphors, the same tawdry splendor of diction, the same profuse verbiage, the same "bumptiousness," and withal the same flashes of vigorous common sense. If the author would confine himself to the humble office of giving practical advice, he might exert a considerable influence; but he must needs set up as a political philosopher, a part which he is fitted neither by temperament nor by education to assume. Whether he has read the works of Rousseau or not we cannot say; but the theories that he propounds belong to the era of the French Revolution. They have been modified to suit American conditions, but their essence is of unmistakable origin.

The "king" to whom these letters are addressed is the individual voter of this country, and his sovereignty consists in the exercise of the right of suffrage. In plain language, what Mr. Tourgée attempts to do is to urge the voters of this country to discharge their trust conscientiously; but in order to enforce his suggestions he constructs an elaborate scheme of political maxims, the merit of which is open to considerable question. Thus he lays it down that popular government is based upon certain postulates, viz., that a majority of the people will always be wise enough to know what is right, honest enough to demand it, and vigilant enough to secure it. *Vox populi, vox dei.* With such a creed as this, no political morality is possible except the merest opportunism. Equally unsatisfactory is the theory that there always has been and always will be one and the same issue in national politics, upon which there must be an eternal division of the people into two parties. History needs to be violently strained in order to countenance such a theory as this.

Having divided his "kings" into two parties, to one of which it is a religious duty for every man to belong, Mr. Tourgée easily demonstrates that the caucus is as sacred an institution as the party, and thus his constructive work is apparently complete. Every voter must belong to a party, attend the primary, and vote for delegates to the conventions. When the conventions have nominated, it is the duty of the voters to support the candidates of their party. This is simple enough, but Mr. Tourgée's passion for theorizing leads him to introduce some needless complications. The party, it appears, has entered into a contract with every one of its members that the will of the majority shall be honestly ascertained, that it will devote itself to the great issue upon which it was formed, that it will adopt only proper measures, and employ only capable, reputable, and loyal representatives. This "contrat social" is, of course, a mere fiction, and a confusing one. That abstraction, "the party" cannot enter into a contract, nor could there be any sanction for such a contract if it were entered into. Young Americans will get no good by groping among such theories as this, and they will be likely to understand their Government better by bearing it constantly in mind that a party can by no possibility have any existence except in the minds of the men that compose it.

Taking it for granted, however, that Mr. Tourgée only means that when a number of men combine for a common purpose, they must do so upon certain terms, express or implied, he yet seems to become hopelessly involved upon the question of party allegiance. The member of the party, after all, is obliged to support the party only "so far as it is possible to do so without the sacrifice of convictions which he deems of paramount importance to those his party represents." This concession is inconsistent with the theory of the book, and is fatal to strict party discipline. It expresses very nearly the views of the independent voter, and the rant over the Mugwumps might as well have been omitted. Mr. Tourgée would have done wisely to study the history of the Protestant Reformation, and especially the history of the rival doctrines of authority and of individual judgment, before grappling with this question.

BOOKS OF THE WEEK.

Besant, W. For Faith and Freedom. A Novel. Harper & Bros.
Brown, Mary E. and W. A. Musical Instruments and their Homes. Illustrated in Pen and Ink by W. A. Brown. Dodd, Mead & Co.

READY JANUARY 3D:

CAPITAL:

A CRITICAL ANALYSIS OF CAPITALIST PRODUCTION.

By KARL MARX.

TRANSLATED FROM THE THIRD GERMAN EDITION.

One vol., 8vo, 816 pages, cloth. Price, $3.

"The publication of an English version of 'Das Kapital' needs no apology. On the contrary, an explanation might be expected why this English version has been delayed until now, seeing that for some years past the theories advocated in this book have been constantly referred to, attacked and defended, interpreted and misinterpreted in the periodical press and the current literature of both England and America."—*From Preface.*

D. APPLETON & CO., Publishers,
1, 3, and 5 Bond St., New York.

OLD BOOKS. NEW CATALOGUE No. 17, 34 pp., mailed on application. GEORGE P. HUMPHREY, Rochester, N. Y.

The ÉDITION DE LUXE of

THE WORKS OF W. M. THACKERAY,

In Twenty-four volumes, imperial octavo, containing 248 steel engravings, 1,473 wood engravings, and 88 colored engravings.

This FINE EDITION of MR. THACKERAY'S WORKS has been produced in the highest style of art, and all other considerations have been made subsidiary to perfection and completeness.

ALL THE ORIGINAL ILLUSTRATIONS, by the AUTHOR, RICHARD DOYLE, FREDERICK WALKER, A.R.A., and GEORGE CRUIKSHANK, have been retained while to supply the ADDITIONAL ILLUSTRATIONS deemed desirable the publishers have had the advantage of the skill of EMINENT ARTISTS.

The illustrations (with the exception of those in color) have been printed on REAL CHINA PAPER; the STEEL ENGRAVINGS by Messrs. J. H. and F. C. McQUEEN; and the WOOD ENGRAVINGS by Messrs. CLAY, SONS, and TAYLOR, who have also executed the Letterpress. The Paper has been specially made for the work by Messrs. DICKINSON. The full beauty of the illustrations can thus for the first time be appreciated; and this ÉDITION DE LUXE will find a place in all COLLECTIONS of RARE and CHOICE BOOKS. The FINAL VOLUME contains an ESSAY on the WRITINGS of W. M. THACKERAY by Mr. LESLIE STEPHEN.

The NUMBER of COPIES PRINTED is LIMITED, each copy being numbered.

A new copy of this edition, with a portrait of Thackeray, bound in cloth, uncut, offered for $125.00, less than one-half the original price, by

J. B. LIPPINCOTT CO.,
715 and 717 Market St., Philadelphia.

The Nation.

NEW YORK, THURSDAY, JANUARY 10, 1889.

The Week.

It is, of course, not easy to say exactly what Gen. Harrison meant by his remarks to the Grand Army post at Indianapolis, about "standing shoulder to shoulder as we did during the war to preserve a free and honest ballot," and about the danger of a "corrupt and suppressed ballot." We hope it meant something specific. We have during the past fifteen years heard a great deal of this sort of talk from Republican politicians without its meaning anything at all. When Gen. Harrison talks of a "free and honest ballot" "or a corrupt and suppressed ballot," he most probably means the ballot at the South, and not the ballot in Indiana or New York But, unfortunately, although Republicans talk much about the Southern ballot, they never tell us what they mean to do to improve it. Gen. Harrison does not tell us what he means by "standing shoulder to shoulder" when the bugle blows. What does this figure of speech foreshadow—a Constitutional amendment? an act of Congress or joint resolution setting up a pure ballot at the South? If none of these, what?

We see by a despatch to the *New York Times* from Indianapolis that

"among the politicians, however, it is pretty well agreed that Gen. Harrison means to have a vigorous Southern policy—one that will resemble the policy of Thad Stevens and Ben Wade. Most of the Republican politicians here are in favor of such a policy, and their bias that way perhaps makes them put a stronger interpretation on Gen. Harrison's words than they will bear. It is a fact, though, that the idea which his comrades of the Grand Army post who heard him make the speech gathered, and held when they came out of the meeting, was, that Gen. Harrison believed that the Republican party ought to rule in the Southern States, and that it would be his business to see that it did rule, even if it should take the most rigorous measures."

Is it not too bad that such rubbish should be talked among politicians in the hundredth year of the Constitution? Of course Gen. Harrison does not mean that he will overturn the Constitution and set up a dictatorship at the South, or be any more "rigorous" to any human being than the law of the land allows. The only sternness that he could show the South would consist in filling Federal offices exclusively with the ignorant and disreputable people who, in the Southern States, comprise the great bulk of the Republican party; but how this would help the cause of ballot-reform does not clearly appear. Unhappily, if we may judge from the experience of the past, loud Republican talk about the electoral abuses in the South usually means a determination not to reform abuses nearer home which are completely within our reach. If anybody has a plan for securing free and pure voting at the South, let us see it and discuss it. If he has not, let him give his time and attention to several plans for securing free and pure elections at the North which are now before the public.

The enormous difficulties of this Southern ballot question are well illustrated by the failure now announced of the Northern and Southern Presbyterian Assemblies to agree on a plan of union. The negro has been found an insuperable obstacle. The Northern Assembly wants him to be admitted on a footing of perfect equality in church membership and church government. The Southern Assembly absolutely refuses this, and says that if it were a practical question for the Northern Assembly, it would decide it in the same manner—a view which gets much color from the treatment the negro experiences in Northern hotels, churches, and society and politics. The truth is, that the way the negro question, like the pew question, is settled in church organizations depends largely on how seriously people take their Christianity. If they take it only with such seriousness as will not interfere with their comfort, they will keep both the negro and the ill-flavored white man out of the church. If they accept it absolutely, without qualification or conditions, just as they profess it in prayer and preaching, neither the negro nor the ill-flavored white man will give any trouble.

The Democratic Governor of the Southern State of Georgia shows a much clearer conception of the Constitution than most Republican speakers and writers in the North. The Legislature recently passed a special school bill for the city of Macon, which provided that the taxes paid by white persons should be spent in maintaining schools for white children exclusively, and that the colored schools should receive only the proceeds of taxes paid by colored people. This was undoubtedly an attempt to do what is explicitly forbidden by the Fourteenth Amendment to the Constitution of the United States, in the clause declaring that "no State shall make or enforce any law which shall abridge the privileges or immunities of citizens of the United States," inasmuch as the proposed policy would abridge the privilege of such citizens of Macon as are colored to an equal share with other citizens in the enjoyment of the money raised by the taxation of all citizens for school purposes. The measure was also obnoxious to the State Constitution, as well as opposed to sound public policy, and on these grounds Gov. Gordon vetoed it. Similar propositions have been mooted before in other Southern States, but the fate of the Georgia experiment will probably put an end to them.

If this bill had been enacted into law and enforced, there would have been a case for action by the Federal Government under the fifth section of the Fourteenth Amendment, which provides that "the Congress shall have power to enforce by appropriate legislation the provisions of this article." But it seems not to be understood by most northern Republicans who write flippantly upon the subject of the new Administration's "Southern policy," that in the absence of some obnoxious State action, the Federal Government has no right to interfere when things go wrong in a State. The Supreme Court took the utmost pains to make this point clear in the decision annulling the Civil Rights Act on the ground of its unconstitutionality. "Until some State law has been passed," said the Court, "or some State action through its officers or agents has been taken, adverse to the rights of citizens sought to be protected by the Fourteenth Amendment, no legislation of the United States under said amendment, nor any proceedings under such legislation, can be called into activity; for the prohibitions of the amendment are against State laws and acts done under State authority."

It is very noticeable that Democratic sentiment in other States than New York does not sympathize with Gov. Hill's objections to an exclusively official ballot, printed, marked, and distributed only by sworn State officials. His idea that official and unofficial ballots should both be received at the ballot-boxes finds no advocates anywhere. The Indianapolis *Sentinel* says that no law which does not put the printing and distributing of the ballots entirely into the hands of the State "would be worth the time and trouble involved in securing its passage," and that "a moment's reflection will convince any intelligent person that State-printed and distributed tickets constitute the key to any real reform in our election system." Similar in tone is the utterance of another Democratic newspaper, the Chicago *Globe:* "The law must take the voting paper into its own hands exclusively. The law must initiate it, print it, hold it, guard it, protect it against the touch of any person not its own authorized agent, and deliver it to the voter as he approaches to vote, out of the reach of all other persons." Gov. Morehouse of Missouri, in his message to the Legislature, gives emphatic expression to the same sentiment, and urges as models for a law in Missouri the new Massachusetts ballot act and the one vetoed by Gov. Hill last year. So far as our observation goes—and we have watched the current of discussion very closely—not a single advocate of the reform in any party has sustained the positions taken by Gov. Hill in his latest utterances.

There is now scarcely a Northern State in which active steps are not being taken to secure the enactment of a ballot-reform law, and in a large number bills are either pending before the Legislatures or are ready for introduction. There are bills in some stage of development in New York, New Jersey, Pennsylvania, Rhode Island,

Connecticut, Indiana, Missouri, Maine, Michigan, and Illinois; as well as in South Carolina and Alabama. Massachusetts has passed a complete law, and there are laws in Kentucky and Wisconsin embodying special applications of the law to cities. In every instance in which the experiment has been put into practice, as in the cities of Milwaukee and Louisville, it has worked so successfully as to silence all hostile criticism. There is, in fact, nothing to be said against the reform except that it will destroy the business of the professional politicians who have for so many years managed our elections for their own personal benefit, and to the detriment of the public interest. It is very evident that public sentiment is so thoroughly aroused to the need of the reform that the efforts of the politicians to block the way of it cannot prevail for any long time.

Senator Edmunds's resolution, expressing the serious concern and disapproval with which Congress would look upon any connection of any European Government with the construction or control of any canal across the Isthmus of Darien or across Central America, was passed by the Senate with only three dissenting votes, and would have passed unanimously but for the clause in it which requests the President to communicate "this expression of the views of the Government of the United States" to the Governments of Europe. There is certainly room for difference of opinion among the friends of the resolution as to this part of it. The Executive is the sole organ of communication with foreign powers, and it may be rightfully, or at all events honestly, held that Congress cannot put into his mouth the form of words he shall use in such communications, or prescribe the time and manner of making them. The resolution, as passed by the Senate, strictly interpreted, would require the President to make a fair copy of the text and send it to each of our representatives abroad. It is "this expression," not any different one, longer or shorter, that he is requested to transmit. It would be much more comformable to the line of safe precedent to leave the time and manner of making the communication to the President's discretion. It is altogether likely that the President would choose his own time and manner even if the resolution were to pass the House exactly as it has passed the Senate. Moreover, no harm could come from the exercise of his discretion in the premises, since all the Governments of Europe will be possessed of our views on the subject-matter without any formal communication of them.

A petition has been extensively circulated asking Congress to allow a refund of duties on tin plates imported and used for the canning industries. Under the present law a drawback of such duties is allowed on cans exported to foreign countries. That is to say, if a packer of fruits, meats, oysters, fish, vegetables, etc., has actually exported $10,000 worth of tin cans, he can collect back from the Treasury about $3,400, that being the amount of duty paid for the tin plates of which the cans were made. The petition recites this law, and then argues that, because the domestic use of tin cans is temporary, since they become useless as soon as they are opened, the same drawback should be allowed as in case of exportation. The analogy does not seem to be perfect. A drawback is allowed in exportation because the exporter must meet foreign competition, which is a very different thing from the temporary use of a can in the home market. What is temporary use? The farmer's wife uses a tin pan until it is worn out, but this use is temporary. A roofer uses tin plates until the weather destroys them, but this use, as all householders know, is temporary. The canner uses tin cans until he sells them, or until they are opened in order that their contents may be consumed. All these uses are alike temporary. Is there any reason why the canner for the home market should be preferred above the farmer's wife, the roofer, or the workman who carries his dinner in a tin pail? The petition is a new attempt to get rid of the evils of a tariff without attacking its principles, like cutting a hole in a tight shoe, or "whipping the devil around the stump." It is probably pushed in the interest of those who want the duty on tin plates increased, but who fear the opposition of the canning industries.

It is announced that the movement for the exclusion of foreign stock actors has been practically abandoned by its originators, and that no formal argument for it will be made before the Congressional Committee. Simultaneously with this announcement comes another one, that Messrs. Booth and Barrett, whose names alone made the proposal worthy of serious consideration, were misrepresented when they were said to be in favor of it. It is now asserted that they were never in sympathy with it, and it will give their friends great pleasure to believe that this is true. The future is full of gloom for the incompetent American actor who has been temporarily cheered by the hope that he could force the American theatre-goer to take him or nothing; but he must buckle down to work like other men, and win on his merits or go to the wall—or to the country towns.

The report that the doctors, like the actors, had begun to clamor for protection from foreign competition, has very little foundation. It originated in an article in the last number of the *Medical Record*, which complained of the advent from Germany mainly, but also from France, Italy, and England, of large numbers of medical students who had failed to get their diplomas, and therefore could not practise in their own countries, but who settle down here, put out a sign, and pay visits for twenty-five and fifty cents. The *Medical Record* says the practice of some of the older German physicians has "been seriously curtailed by these interlopers," and calls for the appointment of an independent board of medical examiners in this State who shall pass on the qualifications of doctors, whether they have the diploma of a medical college or not. This is desirable even as regards natives, because, as everybody knows, there is a great difference in medical schools, and consequently a great difference in the value of diplomas. It is doubly desirable with regard to foreigners, about whose diplomas few people here know anything. It will thus be seen that tariff protection for home doctors against the pauper doctors of Europe is not asked for. It is the false doctors whom it is proposed to exclude, and whom no good government permits to practise on the poor within its jurisdiction.

It is a long time since a more perfect specimen of what is known in the speculative world as the "bubble" has been seen than the Electric Sugar Company, which collapsed on Thursday. It seems to have been a fraud of the simplest kind—so simple that it is a wonder of human credulity that men could be found who were willing to invest money in it. A German "professor" appeared here about four years ago with an alleged discovery for refining sugar by a new electrical process, claiming that at least $12 a ton could be saved by it. He kept the process a profound secret, locking the machinery of it in a room which he connected by a shoot with a room beneath. He took raw sugar ostentatiously into the upper room, and allowed visitors to assemble in the room beneath. They soon heard the whir of machinery, and a few moments later saw beautiful refined sugar come down the shoot. They examined it, saw that it had a crystalline beauty superior to that of any sugar they had ever seen, at once went into raptures over the discovery, flooded the "street" with specimens, organized a company, and began to sell stock. The sugar dealers of this country were shy, however, and the stock went slowly till it was taken to England, where it went off like hot cakes, until something like a million dollars' worth of it was taken. When it had been placed, the company's officers began to notice suspicious developments in the conduct of the widow of the inventor—the latter died a short time ago—who was in charge of the secret. She soon had a sudden call to the West. They broke open the door of the secret room, and, instead of a refining process, discovered nothing but some sugar-crushers, through which sugar, already refined, had been run and sent down the shoot to the audience-chamber below. Not a particle of the raw sugar taken to the secret room had been touched. Refined sugar, secretly conveyed there, had been treated to some chemical process which gave it the admired crystalline appearance, and then it had been put through the crushers. That is all there was to the secret. And the victims of this cheap fraud are not only adults, but many of them, in England at least, experienced sugar refiners.

Testimony which is entitled to weight as to the workings of prohibition in Kansas is furnished in a report just made by the Stockholders' Committee of the Farmers' Loan and Trust Company, who treat the sub-

ject as "a matter of financial interest and otherwise to our stockholders," and with "no motive other than to apply the deductions obtained therefrom to the value of your Kansas investments." The Committee, all of whom are residents of Boston, give such facts as these upon the authority of the Attorney General of Kansas: In Leavenworth County the saloons were closed in March, 1887, and commitments to the penitentiary sank from 36 in 1886 to 13 in 1887, and 5 during the first half of 1888; in Atchinson County the saloons were closed in 1886, and sentences to the penitentiary decreased from 23 in 1885 to 13 in 1886, 6 in 1887, and but 1 during the first half of 1888; the penitentiary has 104 less inmates than a year ago, and "the jails of the State are practically empty"; the proportion of paupers, which was 1 to every 750 persons in 1880, is now only 1 to 1,350. "Our observations," the Committee say, "lead us to believe that this movement is a grand success in Kansas, which adds, and will continue to add, value to all the lands in the State;" and they conclude by expressing the opinion that the facts cited are "a strong argument in favor of loans in a State advancing so rapidly in moral as well as material progress."

The explanation appears to be that Kansas is so largely an agricultural State, made up of small farming villages, and has so few cities and large towns, that public sentiment generally sustains prohibition, and the law is enforced, as is not the case in Bangor and other cities of Maine. The good effects of stopping the sale of liquor in another part of the country are shown by the experience of Washington County in Georgia—an agricultural county, with a population in 1880 of 12,515 blacks to 9,449 whites. The county was formerly "wet," but "went dry," in 1886, and declared its adherence to the same policy by a larger majority at an election last month. Under the last three years of license, the number of acres of land owned by the colored people remained almost stationary—5,886, 6,001, and 6,046; but the first year of prohibition carried it up to 11,690. In other words, the negroes acquired almost as much land in a single year when the saloons were closed, as they had done in twenty years when the saloons were open. The whites also benefited largely, of course, by the superior efficiency of their colored laborers, to say nothing of what they saved themselves. It is one compensation for the presence of the negroes in the South that it greatly strengthens public sentiment against the saloon among the whites.

The first message of Mayor Grant is a fair-spoken document, and will win for him the approval of his fellow-citizens if followed by an administration equally respectable. In some particulars his views do not coincide with those of his predecessor, as, for example, those relating to new facilities for rapid transit. In so wide a field, there is room for differences of opinion. Mayor Grant invites the public to make suggestions on this subject. He will undoubtedly receive more than enough, but it is possible that some plan may be brought forward that will conform to his views of the financial exigences of the city. This is the most urgent and also the most difficult problem pressing upon the city government. Scarcely less so is that which relates to the water-front and the proper accommodation of our maritime commerce. Here the new Mayor agrees substantially with his predecessor in urging the necessity of acquiring title to all dock property for the city. A measure to accomplish this end would have passed the Legislature at its last session if it had provided for the compensation of present owners for the use of their property during the time that condemnation proceedings were pending, and not merely after they were completed. This is a small matter, and we look to see the difference adjusted on principles of equity this winter. On the subject of overhead wires, the Mayor's position is in happy accord with public opinion. He holds that the law which requires that the wires be placed under ground, must be carried into effect, and not treated as a dead letter. As the Mayor is himself a member of the Board of Electrical Control, he will have abundant opportunity to push the work forward or to find out the reasons why it has been delayed. The city will now look to him for information on this knotty subject, and we trust that it will not look in vain.

The London *Statist*, in its issues of December 15 and December 22, has two very strong articles on the duties which the large financial institutions of Great Britain owe to clients to whom they have sold American railway securities. It contends that the consequences of rate wars among American railways have become so disastrous to the holders of these securities, and the prospect is so gloomy, that some heroic remedy must be resorted to lest the whole investment be lost. Its remedy is apparently very simple. It is that the holders of American railway securities shall be sought out, registered, and "bunched" in such manner as to make them influential in the election of directors of the several companies; that when this is done, supposing that similar steps are taken on this side of the water, the offending railway officers shall be admonished by the voice of authority to desist from the practice of throat-cutting, and that any one who thereafter offends shall be deposed as soon as the voting power can reach him.

This is merely putting in practice a maxim in everybody's mouth, that shareholders ought to look out for their own interests. Why they have not done so heretofore is because they have had no rallying-point, no leaders, no organization. The *Statist* rightly holds that the large banking-houses, and they alone, can supply this want. They have the confidence of the shareholders, which the railway officers have to a large extent forfeited. They have the knowledge which it is impossible for scattered shareholders to possess. They have the influence which the holders of the purse always have in times of financial distress. They are interested in seeing their clients through any crisis which may have supervened through their acts, in warding off any evils which may have befallen those who have, in past times, followed their lead, since their clientage is in a large sense their capital. There is probably no railroad of any magnitude whose shareholders would not come to their call in a case of danger of suspended dividends. There is certainly none whose bondholders would not seek refuge in that quarter in case of default of interest. The remedy proposed by the *Statist* is even more necessary among American shareholders than among English ones, because the interests affected by the railroad wars are enormously larger here than there. When these interests are brought together they will be all-powerful. Of course, some difficulties will be met in bringing them together, but they are not insurmountable. The influences that prompt one set of sufferers to send their voting powers to the large banking-houses will be equally potent with all. That the movement initiated here a week or two ago is coincident with that outlined by the *Statist*, there is every reason to believe.

Lord Salisbury has made all the amends he apparently means to make for his "black man" blunder by denying, in a speech at Scarborough, "that the words 'black man' necessarily involve a contemptuous denunciation." This is probably the least of an apology ever offered. Every one knows the words "black man" do not "necessarily" express contempt, because they might be used as simple description. What they are intended to convey in any particular case is to be ascertained by the context. When, for instance, you are angry with a man, and in your rage call him "a black man," it is inferred from your anger that you think "black" an opprobrious epithet. In the present case Lord Salisbury was ridiculing the Liberals for trying to elect a Parsee to the House of Commons; and the reason he gave for condemning their conduct and being prepared for their defeat, was that the candidate was a black man, showing he thought black a poor color for a legislator. But Mr. Badahai Naoroji is not black, he is simply brown, and not browner than many Englishmen; and as to race, he is as good a Caucasian as Lord Salisbury himself. Lord Salisbury further amended his remark by saying that what he really meant was, that nobody should sit in the House of Commons but "those who have been born in the British Isles," which, as the *Daily News* points out, would exclude Mr. Mathews, the Home Secretary, who was born in Ceylon. We may add, still more pertinently, that it would exclude the famous Mr. Ashmead Bartlett, who was born in Massachusetts, and is a sufficiently absurd person to have been born in the heart of Africa and to be black as the ace of spades.

MARKING THE BALLOTS.

Gov. Hill's remarks on the question of ballot reform, in his annual message, have served the very useful purpose of narrowing the discussion to the really vital points at issue. These are, first, an exclusively official ballot; and, second, such official marking of that ballot as will prevent the use of any counterfeit at the polls. The Governor expresses himself in opposition to the views of leading advocates of ballot reform on both these points, but we are willing to believe that he is open to conviction on both of them. As to the first, the arguments in favor of it are so conclusive that even so devoted a friend of the Governor as the *World* declares frankly that it thinks he "is clearly in the wrong." Nothing can be plainer than that official and unofficial ballots cannot both be received at the ballot-boxes without defeating the most important of the benefits hoped for under the reform system.

Concerning the necessity of marking the ballots, the evidence of experience is so strong that we think the Governor and his friends must admit the force of it. The Governor says in his message that there should not be permitted any marking of the ballots by the ballot-clerks by placing their initials thereon, or otherwise, and adds:

"It is significant that the new election law of Massachusetts which was passed last year, but which does not go into effect until November first next, has omitted all provisions requiring the marking or identification of ballots (except in the case of illiterate electors), thus departing essentially in that respect from the English or Australian system."

This is an error. The Governor appears to have overlooked in his examination of the Massachusetts law the following passage from section 10, defining the form of the official ballot:

"On the back and outside, when folded, shall be printed 'Official Ballot for,' followed by the designation of the polling-place for which the ballot is prepared, the date of the election, and a facsimile of the signature of the secretary of the Commonwealth or city clerk who has caused the ballot to be printed."

This makes the official printer of the ballot the man whose endorsement is the sign of its official character; but the object is the same as that sought by the requirement of the ballot-clerks' initials. The Massachusetts law provides (section 26) that "no ballot without the official endorsement shall, except as herein otherwise provided, be allowed to be deposited in the ballot-box, and none but ballots provided in accordance with the provisions of this act shall be counted." The exception alluded to is found in section 19 of the law, which authorizes the city or town official to prepare new ballots in case the official ballots are found on election day to have been destroyed, or are for any other reason not at the polls. In this case he must take oath to the preparation of the new ones, and the attendant circumstances, and these must be received at the ballot-boxes. In section 29 of the law, forging the signature of the official in charge of the printing, or wilfully destroying or delaying the delivery of the ballots, is made punishable by a fine not exceeding $1,000, or by imprisonment for not more than a year, or both.

Instead, therefore, of "departing essentially from the English or Australian system," the Massachusetts law is in strict accord with it on the principle of marking the ballots. That principle is, in fact, the corner-stone of the whole ballot-reform system. It is found in the Canadian law; and in a very interesting letter which we publish in another column, will be found a detailed description of its successful working furnished by a writer who for many years has had a practical experience as an election officer under it. He shows not merely the importance of the inspector's or some other identifying official mark on the back of the ballots, but also that the Governor's pretence that such a mark destroys the secrecy of the ballot is without foundation in fact. In addition to the inspector's mark, the Canadian law requires also a counterfoil or coupon check at the bottom of the ballot, as a further safeguard against counterfeits of the official ballots; and yet, with both these checks in operation, there is no delay or confusion and no violation of secrecy.

This Canadian letter is an instructive chapter in practical experience of the reformed ballot system on other points than the marking of the ballots. It furnishes a complete answer to the familiar charge of "complexity," and shows that the new system gives orderly elections, abolishes all electioneering and bulldozing of voters at the polls, and secures a really secret ballot. That it does not entirely stop bribery has been said before by observers of its operation in Canada. Undoubtedly it helps to do so; but in Canada and in this country, it will be found that the final remedy for bribery can only be secured, as it was in England, by a law compelling the publication under oath, after election, of a complete statement of all expenditures made.

The first step is, however, the official secret ballot, and any system which is to give us that in effective form must include some provision for marking the ballots. Whether it be in the form proposed by the Saxton bill and in successful use in the Australian, English, Canadian, and Louisville law—that is, by inspectors' initials—or whether it be in the form provided in the Massachusetts law, does not matter. One method would, probably, prove as effective as the other, but the mark must be there in some form.

It is urged by some commentators on this subject, whose views are chiefly interesting as the deliverances of simple ignorance, that an official marked ballot interferes with and even destroys the constitutional right of a voter to mark his own ballot. It does nothing of the kind. Under the new Saxton bill it is especially provided that a voter may not only write or paste any name he pleases on his ballot, but so great latitude is granted him in this respect that if he chooses he may carry into the polling place a complete written ticket of his own, take it into a compartment with him, paste it over the entire face of the official ballot, fold it thus pasted, with the initials of the inspector on the outside, and it must be received and counted. It is also provided that a "reasonable space" shall be left between the names of candidates on the official ballots, in which the voter can write or paste such names as he chooses. What more can any voter ask than this? He can put any names, and as many names as he chooses, upon the official ballot which is handed to him after he has entered the polling place; but he must put them on that ballot by himself in the secrecy of the compartment, and on no other. This is the only way by which an absolutely secret ballot can be secured. Gov. Hill is so strongly in favor of a secret ballot that he says in his message that the elector should not only be *permitted* to cast it, but *compelled* to do so, and he makes the distinction, as we reproduce it, in italics. This is going much further than even the advocates of the marked-ballot requirement; for the Governor would have to guard by fine and imprisonment against the possibility of a voter's voluntarily revealing the nature of his ballot by calling out at or about the polls the name of the candidate for whom he had voted.

NEW YORK AND HER UNIVERSITY.

The discussion over the nature and uses of universities in this country entered on a very sharp phase a fortnight ago, owing to an attack of Mr. A. D. White's in the *Forum* on the present management of Columbia College. He compared the trustees to "savages who have found a watch," and accused them of having proved "blind to their opportunities"; of having failed to make the College "exert a great civilizing and enlightening force in the metropolis and in the country, like the University at Berlin, the Collège de France and the Sorbonne in Paris, the Academy at Geneva, the School of Higher Studies at Florence," etc. To this, and much more of the same kind, one of the trustees, Mr. Harper, made answer that "Columbia is making rapid strides towards the position which we all desire her to fill; but if we had attempted twenty or even ten years ago to push her forward as rapidly as has been suggested by some, it could not have resulted successfully"; and "as to Dr. White's capability for criticism on such a subject, he can no more be compared to Dr. Dix in scholarly ability, sound learning, and a knowledge of educational requirements than an ordinary Western school-teacher can with a German university professor."

These personalities are in one way regrettable, as they throw no light whatever on the matter in hand; but they are in another way valuable, for they show that university management is at last beginning to excite real interest. Acrimonious discussion of such matters is better than no discussion at all. The trustees of Columbia do not at all resemble a savage who has found a watch. They rather resemble a watchmaker who has to modernize an old and badly tinkered time-piece, and has had but little experience in such work. And even if it were true that Mr. White could not hold a candle to Dr. Dix in scholarship and sound learning and so forth, his criticism of the condition of Columbia College would

still be worth listening to, even if put into harsh language. If nobody were to be permitted to criticise Columbia College except people whom the trustees acknowledged to be Dr. Dix's equals, would there not be some danger of their becoming an odious and irresponsible oligarchy? There is no doubt that Columbia College has not exerted and does not exert in New York the influence, or anything approaching to the influence, which the colleges named by Mr. White exert in their cities respectively. One reason of this is—and the trustees might as well admit frankly what every intelligent observer in the city is saying—that until very recently no attempt was made to convert the College into an influence of any kind in the city at large. It was managed, down to about fifteen years ago, simply as a piece of property in the hands of highly respectable trustees. The education it gave was exceedingly poor, and nothing was done to make it better. Its affairs were considered private affairs, and kept as far as possible from the public. It published no accounts, and solicited no gifts and got none, and was hardly any more associated with learning in the public mind than the United States Trust Company.

The present trustees are, we believe, conscious of all this, and are trying to make up for it. Much has been done in the right direction under Dr. Barnard's Presidency. What further progress will be made will depend greatly on the kind of man selected to succeed him. We do not mean to be in any way disrespectful to Dr. Dix when we say that if Mr. Harper's view of Dr. Dix be the one generally held by the trustees—that is, if they think a man like Dr. Dix, or a man who would look up to Dr. Dix as a final authority on university matters, would be, if he could be got, the right kind of President—the further progress of the College would not be what this generation looks for. Dr. Dix is an able and useful man, but he is not what is now known as a scholar, or a man of what is now known as "sound learning," and has had no experience either in teaching or in organizing universities. He is not the kind of man, in short, excellent as he may be in his present position, that is now sought after for the headship of colleges which are meant to make a mark on the culture of the country. It is for the same reason open to doubt whether he could describe the right kind of man, if called on to do so, or has half as clear or correct an idea on the subject as Mr. White.

On the other hand, where Mr. White is distinctly unjust to Columbia College is in assuming that either the Berlin University, or the Collège de France, or any other great European university was made what it is, or converted into "a great civilizing and enlightening force," without any help from the world about them. Universities, like all other things which grow and cannot suddenly be made to order, have to be planted in a congenial soil. They have, in other words, to strike their roots in a sympathetic community which sets a high value on culture, and has a strong sense of its political and social importance. A university is in large part the product of the opinions and aspirations of the people who live around it, so that the Collège de France probably owes as much to Paris as Paris to the Collège de France, and Oxford and Cambridge as much to the English upper class as the English upper class to Oxford and Cambridge. If this be true, Columbia College has been very unfortunately situated ever since the Erie Canal was opened and New York city entered on that astonishing course of material growth which has made her what she is today. During the last fifty years the city has done nothing to foster a university, and the university has, almost inevitably under these circumstances, done but little to influence the city, and would have done but little even if the funds had grown at the same rate as the city's wealth and trade.

There is one other point which Mr. White has overlooked, and which is overlooked in almost all discussions on university making in the United States—and that is, that no university has anywhere ever become a great influence, or anything but a school for children, which was not wholly or almost wholly in the hands of the faculty or teaching body. *The faculty is the university.* If you have the right sort of faculty, you have a university, though you have only a tent to lecture in. If, on the other hand, you try to make a university out of a board of sagacious business men acting as trustees, and treat the professors as simply "hired men," bound to give the college so many hours a week, you may have a very good school for youths, but you will get no enlightening influence or force out of it for the community at large. Instead of speaking with authority on any of the great themes of the day, the college will be sneered at, as colleges are apt to be in the United States today, as the home of theorists and pedants, whose impudence in differing in opinion from millionaires merits and is sure to receive severe rebuke.

THE MORIER AFFAIR.

Nothing so singular and discreditable has occurred in Prince Bismarck's career as the Morier incident. Sir Robert Morier, the present British Minister at St. Petersburg, is a man of the highest personal character—a man, too, of cultivated tastes and liberal opinions. Nobody in the British diplomatic service is more respected or respectable. He was, in 1870, when the Franco-German war broke out, Chargé-d'Affaires at Hesse Darmstadt, and was on terms of intimacy with the Crown Prince and Princess, and much in their society at that time, and so remained until the Emperor Frederick's death. When the Emperor's diary appeared, it showed, or seemed to show, that Bismarck, far from being the chief or only instrument of German unity, shrank, both during the war and after it, from the attempt to create the Empire, as a task too formidable to be then undertaken, and that the chief promoter of the scheme was the Crown Prince, who had to contend with his father's scrupulous conservatism and the Chancellor's timidity. This evidence, if it could not be overthrown, of course struck a serious blow at the Chancellor's reputation and prestige. He met it promptly by reporting, first, that the published version was garbled and partly forged; and, secondly, that the Crown Prince was an incompetent witness, inasmuch as the Emperor and he (the Chancellor) had to keep him ignorant of their policy and plans lest information should reach the French through the English court. He followed this up by arresting Dr. Geffcken, who had given the diary to the public, and ordering his prosecution, on what charge did not clearly appear—sometimes he was accused of falsifying documents, and at others of treason in revealing State secrets. The case against him, however, has been abandoned as untenable, and he has been set at liberty. He could undoubtedly have proved that the diary was authentic, and that he had the legal right to publish it.

This left the Chancellor, however, in rather a humiliating position. Something more had to be said or done to support the charge that the French got information about the German military policy from the Crown Prince's circle through English channels. Accordingly, one of the Emperor's aides-de-camp, a certain Major Deines, was made to say through the *Cologne Gazette* that Marshal Bazaine had told him at Madrid that the first news of the movement of the German troops on the Moselle came to him at Metz from Sir Robert Morier, the intimate friend of the Crown Prince and Princess. It seems that this story was set agoing before the Marshal's death, and reached the ears of Sir Robert Morier, who thereupon wrote to him asking if it was true that he had ever made any such assertion. The Marshal answered that it was a lie made out of whole cloth. When it appeared in print in the *Cologne Gazette*, Sir Robert, knowing, what we believe everybody in Germany knows, that the *Gazette* is a semi-official organ, and is used by the Chancellor to set afloat any stories that he may think serviceable to his policy, wrote a somewhat heated letter to Count Herbert Bismarck, as the Prince's lieutenant in the German Foreign Office, enclosing Bazaine's letter, and asking the Count to repudiate the charge publicly as a slander. To this the Count made answer that the tone of Sir Robert's letter was extraordinary, and that he must decline to step out of the usual official routine in order to oblige him.

The European press at this stage began to ring with comments on the brutality of Herbert Bismarck's manners, and his amazing readiness to insult publicly a man of Morier's standing; so he was directed by the Emperor to say dryly that the story was not credited in the German Chancellery. Morier was, however, not satisfied with this, and he was thereupon promptly slapped in the face with another charge, namely, that the Bazaine letter was forged by Morier, and its French revised in Paris before publication. This came from the Berlin *Post*, and is endorsed by the *Cologne Gazette*. The *Vossische Zeitung* and the *Weser Zeitung*, two of the most respectable German newspapers, both admit that unless proofs of this accusation are promptly forthcoming, its

production "must fill German readers with a feeling of profound shame."

Some of the other journalistic performances of Prince Bismarck, however, make this last one seem less disgraceful than if it stood alone. During the Battenberg affair he explained to the Emperor Frederick and the Empress that the marriage of their daughter to Prince Battenberg, the recently deposed Bulgarian ruler, would undoubtedly offend Russia and destroy the good relations then existing between the German and Russian Governments. They thereupon promptly answered that all thought of it must be abandoned; but this did not prevent his subsequently giving out through his newspapers that the persistence of the Emperor Frederick, and especially of the English Empress Victoria, in forcing on this marriage was likely to compel the Chancellor to resign his office, in order to avoid responsibility for a piece of criminal folly. In fact, when the occasion calls for it, his "journalism" becomes as unscrupulous and mendacious as any on the Island of Manhattan.

INDIA UNDER LORD DUFFERIN.

LONDON, December 24, 1888.

LORD DUFFERIN'S last act before leaving India was to deliver a speech in glorification of himself and his administration. He reviewed the works of his hands and found them all exceedingly good. This vainglorious performance has a somewhat ominous resemblance to the valedictory address of another Viceroy who ruled India a little more than thirty years ago. Lord Dalhousie, when laying down the reins of government, viewed his achievements in the same optimistic light as Lord Dufferin. He left India, so he said, without a cloud in the political sky—the finances sound, the land at peace, the army loyal, the princes and the people contented. This was in 1853; and three years later the English in India were engaged in a desperate struggle for their lives—a struggle kindled by that very policy which Lord Dalhousie had reviewed with so much pride and self-complacency. It is not, perhaps, very probable that Lord Dufferin's eulogy upon himself is destined to be falsified in a like terrible fashion. This, however, is certain, that Lord Dufferin leaves to his successor an India thickly beset with perils from within and without, and that these perils are largely the direct consequence of his policy.

The position of an Indian Viceroy is a most unhappy one. It is not in his power to do much if any good, while he enjoys an almost unlimited scope in the doing of mischief. What British India stands at the present time most grievously in need of, is a thorough overhauling of the whole mechanism of its internal administration. But this is a work which no Viceroy, during his brief tenure of office, could venture to undertake. On his first arrival in the country, and for the greater part of his stay in India, he is engaged in learning his work; and during this educational interval he is, of necessity, a mere tool in the hands of the permanent officials. When he has acquired a sufficient knowledge of the intricate problem before him to form an independent judgment upon it, his first discovery is that he lacks the instruments whereby to carry improvements into effect. All administrative change involves more or less of injury to those who are carrying on the existing system; and where is an Indian Viceroy to get the leverage wherewith to overcome the passive resistance which the Bureaucracy is certain to oppose to his projects? As if to debar their viceroys from ever attempting any such quixotic undertaking, the British people have, in their wisdom, subjected the Viceroy in Calcutta to the control of an Indian Council at home, which, consisting of retired officers and civilians, is always on the side of the services against that pernicious article, a reforming viceroy. But in the field of foreign politics, a viceroy has a free hand. Wars and annexations are always popular with the services. They break the monotony of life; they offer chances of distinction to military men; they are invariably freighted with new and highly-paid appointments for the civilians. At home, too, they command a majority of suffrages. The mercantile world sees in them the prospect of new markets; the religious world, an extension of the light of true religion to regions hitherto unblessed by it; and almost all Englishmen rejoice in them from some confused and unintelligent notion that they are highly disagreeable to the Russians.

In the fields, therefore, of foreign policy, Lord Dufferin has exhibited great activity; and the net result of this activity has been to destroy along its whole length a land frontier which kind nature had made absolutely impregnable. India can no longer be defended in India. He has transferred the struggle for empire from the Indus, where we were invulnerably strong, to the deserts of Central Asia, where we are pitiably weak. This consequence of his foreign policy is not seen as yet in England. It is, indeed, vigorously denied, and from this fact of denial comes the great danger of the future. Lord Dufferin and those who are responsible for this policy know perfectly well that it is an aggressive policy, leaving us no alternative but to annex Afghanistan and attack Russia in Central Asia; but they dare not confess this to the British public. When others demonstrate the fact, they protest that they are being misunderstood or calumniated. No measures for the future are, in consequence, being made, and when the storm bursts upon us we shall be most inadequately prepared to meet it. Meanwhile, the policy of extending the Empire into countries which cannot pay the costs of their occupation is producing in India itself a state of feeling which might easily endanger the stability of the government. It was a saying of Lord Mayo that a foreign invasion would be less dangerous to British rule in India than a large and permanent increase of taxation. Lord Dufferin has practically reversed this dictum. He has largely increased taxation in order to obtain an illusory security against the mere spectre of foreign invasion. And though it is the fashion to cast ridicule upon what is known as the "Congress movement," as representing nothing but a few English-speaking natives, only those can believe this who are content to look at India through the rose-tinted spectacles used in the official world.

The movement obtains its strength and its increasing ubiquity from the prevalence of administrative abuses, which greatly and everywhere sharpen the intensity of the struggle for existence. And here, again, those whose knowledge of India goes back to a period anterior to the insurrection of 1857 cannot but recall that the optimism of the present day is but a repetition of the optimism which prevailed then. Then, as now, the voices of the undiscerning many drowned the warnings of the reflecting few; then, as now, those who had the audacity to declare that our eastern empire was not founded upon a rock, broad-based upon the affectionate loyalty of India's millions, and so forth, were set down as "croakers," "pessimists," and—that most terrible form of human depravity—"un-English." The official world of that day, just as the official world of this, was incessantly engaged in chanting its own praises, and much too self-absorbed to "read its history in the people's eyes." People here at home conceive of British rule in India as if the English officials out there were in constant and immediate contact with the great body of the people. This is not, and never can be, the case. Speaking generally, the administration of the country is carried on by a number of departments, consisting of two or three European superiors and a great number of native subordinates. If the head of a department be a man of more than ordinary intelligence, knowledge, and energy, he may possibly impress his own character upon these subordinate officials; but, in nine cases out of ten, the situation is the reverse of this. The superior leans upon his subordinates, and the action of the department upon the body of the people is then determined by the character, not of the British, but of the native element in it.

The constitution of this native element is peculiar. Probably there is no people in the world among whom the claim of kinship is recognized as so authoritative as among the natives of India. If one native obtains any sort of service, there will always be living upon his charity two or three relatives, who hope, in course of time, to enter through his assistance into some similar post. These men are called "úmedwars," or expectants. Should they succeed in effecting an entrance, then they too will have their "úmedwars" hanging upon them in the hope of sooner or later sharing in their good fortune. Nothing can surpass the noiseless, persistent perseverance with which the man in office will push the claims of those who are as yet outside of that paradise. The "úmedwar" himself is ever on the watch to promote his claims by the rendering of gratuitous service. The reward of all this labor may be long delayed, but it is bound to come at last. And when the process has gone on, as it has done in India, for the better part of a century, the result is that the native element in the state departments represents a kind of trades union, linked together by ties of blood as well as a desire for profit. A native who suffers wrong or oppression at the hand of one of these subordinate officials might as reasonably expect to discover a gold mine in his field as to obtain redress. Even if he got within hearing of the English head, his story could not hold its own against the crushing weight of testimony which the offender could adduce, to prove that it was an utter falsehood, from his departmental fellows. Or, supposing that the victim succeeded, his last state would be worse than the first. The dismissed official would be succeeded by an "úmedwar" pledged to avenge the injury done to the family by fresh injuries heaped upon the audacious complainant.

In the rural districts, in fact, there is but one way in which the peasantry—and even the native gentry—can escape from the power of these native officials, and that is by bribery. This fact it is which makes it impossible for the Indian Government to impose a new tax, or to enter upon any project whatsoever which requires native agency, without inflicting upon the people an amount of oppression and extortion which constitutes a serious political danger. Thus the land tax, the income tax, the irrigation fees, the forest charges, and a host of others have all to be collected by underpaid and irresponsible native agents; and it is no ex-

aggeration to say that for every shilling paid to the Government, two are paid to the collector. The English officials, meanwhile, though they know well that such things are done, have no means of ascertaining when or how they are done, far less of putting a stop to them. They must work with the only tools which are at their disposal. Illustrative of this, I may quote a remark which a retired Indian civilian made to me a few years ago. He had left the Government service in order to practise as a barrister at the Calcutta bar, and, from his knowledge of the inner workings of the former mystery, he rapidly acquired a large practice. This seeing of matters from the native side came as a very startling revelation. "If," he said to me, "when I was a civilian, an angel from heaven had told me the things that I now know are habitually done under our authority in India, I would not have believed him."

Now it is easy enough to demonstrate on paper that representative institutions cannot be set up all at once in India; but paper demonstrations cannot remove or mitigate the actual daily ills which I have sketched above. The people of India are ready to throw themselves into any agitation for political change, not because they desire to overthrow the Government of the Queen, or have thought out any scheme of reform; but because they are suffering from a multitude of evils which, under the existing regimen, they know to be remediless. This fact it is which has won for the party of political reform an abundant measure of support in a surprisingly short time, and which will effectually prevent the movement from dying out. It is objected to the spokesmen and leaders of this party that they do not number among them the landed gentry, or the old aristocracy, or the native princes; but this fact is easily accounted for without supposing that these classes hold aloof because they are at heart opposed to the schemes of the reforming party. One result of British rule in India has been to create an opulent and influential class which, its prospects in life being independent of the Government, has nothing to fear from the hostility of the officials. This class consists of the native barristers and *Vakils* who practise in our courts of law, the editors and writers for the native press, English and vernacular, and the rich mercantile community residing in the great cities and seaports. Any political movement that is set up in India must at the outset derive its recruits almost wholly from these people, no others being in a position to enter upon it without serious inconvenience and even danger to themselves.

The movement is still in its infancy. It has been provoked into life by the intolerable friction everywhere caused by the existing bureaucratic régime. But it is supremely diffident of its own powers; it hardly dares to guess whither it may be going; and there is planted deep in the Indian character a profound reverence for authority. If our English officials would deign to look with a kindly and encouraging eye upon these first attempts to translate into practice the lessons which these Indian reformers have learned from us, they would be greeted with effusion and loyally accepted as leaders. Unfortunately, they are practically unanimous in denouncing the party of reform as disloyal and seditious. The moderation of their projects they hold up to ridicule as a proof of their insincerity, and thus, to the utmost of their power, they are forcing the conduct of the agitation from the party of reform to the party of revolution. Such a party, and in formidable strength, is to be found in every province of British India. In fine, the dangers which menace the future of our eastern Empire, whether from without or within, will spring in the main from the obstinate perversity which deliberately refuses to take account of the actual facts. All our writing, all our speaking about India consists of a nauseating reiteration of self-laudation. Practically, we assume that we are not simply morally impeccable, but that it is impossible for us to make a mistake. We denounce as unpatriotic or seditious or vilely ignorant any one having the audacity to hint at rocks below the surface, or signs of coming danger. We decline to take thought for the morrow. We have no policy—unless to drift blindfolded can be designated such.

ROBERT D. OSBORN, Lieut.-Colonel.

ON GRECIAN SHORES.

ALEXANDRIA, December 1, 1888.

IF the condition of the Greeks, socially, morally, and materially, has improved, as can be demonstrated to be the case—in fact has emerged from darkness since independence in 1832—the visitor at this day is still unfavorably impressed with the many elements of its lagging progress. It requires long years to reproduce forests, to restore watercourses for agricultural purposes, to teach a people modern arts, and long periods of peaceful pursuits to bring back a population. All this, apparently, is being done, if slowly. There is, too, among the better classes a profound faith in the ultimate fate and greatness of Greece. There is a politician in every house, a consuming curiosity for news and political gossip, and, in the islands still in the possession of Turkey, a deep undercurrent of resistance. A striving after improved methods, educational advancement, the erection of imposing municipal and other public buildings for the poor, sick, and orphans, and a well-to-do Church, form the better side of the picture.

There are far more Greeks living under Turkish rule than in Greece itself, the latter numbering but two millions, and there is a well-founded belief in a wide extension of territory northwards, the reclamation of the islands still in painful subjection to large Turkish garrisons, and perhaps ultimately a strip of seacoast in Asia Minor. In these places the money interests, the language, the actual inhabitants are all preponderatingly Greek. Even at Constantinople the Greeks rank second in a mixed population of a million, the Turks numbering 390,000. In fact, much of the wealth and trade, the commanding influence, in a way, of this section of the world has again come to them; and it remains to be seen what they will do with themselves in the approaching political crisis. This element may receive more consideration at St. Petersburg than elsewhere, and may yet precipitate the solution of the Eastern question. The national forces are being gradually strengthened, and this expense, coupled with a growing ambition, may prove too severe a strain upon so poor a country. Taxes upon imports are enormous, and many domestic articles commonly in use in other countries are out of reach of the masses. In this case, home production is not stimulated, for practically there is but little manufacturing or skilled handicraft carried on. There are a few macaroni factories and soap works about the Piræus, and at Syra some ship-repairing machine shops, a marine railway for ships up to 2,000 tons, and a large tannery industry. The wealth of the country is in its natural productions—wine, oil, currants, salt, tobacco, and fruits, and a limited mining industry. The fisheries and shipping interests employ many thousands. In trade and commerce the Greeks surpass in skill all the races they come in contact with, not excepting the Jews, Armenians, and Persians they compete with in Stamboul, and they handle most of the money and products in the Levant. Salt is produced by evaporating the sea-water in shallow basins, and is seen in great pyramidal heaps for miles along the shores of Attica and the adjacent islands. Olive trees are seen everywhere, and the noble groves, some of great age, are greatly sought for shade by flocks and the people. Flowers and color plants grow profusely, and gardens need only irrigation to bloom perennially, while of fruits there is apparently the whole list of semi-tropical and temperate zones.

The Corinth canal enterprise, connecting the Gulfs of Corinth and of Ægina, is progressing slowly, and is being executed by a French construction company. No time can yet be fixed for its completion, certainly not within two years; and even when finished, the saving of the three hundred miles in the water route to the Black Sea, Asia Minor, and Athens may become of less moment than the necessary charges and increased difficulties attending narrow inland waters, though the winter passage around Cape Matapan can then be avoided. The Peloponnesan railway leads up to and crosses the excavation, and gangs of natives, Montenegrins, and Italians can be seen at work. The line of the canal follows the still existing marks of the similar attempt by Nero, and the track over which small vessels have been transported for centuries. It is about five miles in length, and unexpected difficulties are being met with in the rock formations. There is also a "railway development" at hand, judging from controversies regarding privileges, concessions, plans, and projects, formulated by the newspapers. More railways and roads are needed, the latter certainly; the haste in connection with the former, their extension in a grand system conformably to the necessities of modern times and the country, all wear the familiar guise of promoters and speculators. The present railways seem to be fairly equal to the necessities of the country, and the sea washes all sides of a land not a long distance across. The rolling-stock is English, and, according to the usual standard, the service is not what it should be.

One must rough it to some extent when travelling in Greece, and more than primitive accommodation cannot be expected outside of Athens. Even in that city the water supply is lamentably deficient, the springs and wells being often brackish, and potable water is sold on the streets. At this time, however, great improvements are being effected in the capital city; streets are being widened and macadamized, new buildings are going up, and there is a struggling attempt to throw off the inertia and provincialism of the usual dusty town. The new exhibition building erected at one extremity of the royal gardens in honor of the King's twenty-fifth anniversary is a marble-faced portico, with wings in plaster, facing the great Corinthian columns of the old temple of Olympian Zeus, and is sadly dwarfed in the presence of the mute giants in sight on all sides. The dusty slope towards the Ilyssus is more or less parked, containing an artificial basin; but the grounds were, when I saw them, in confusion consequent upon hurried preparation and the work of caring for arriving exhibits. The number of articles of domestic manufacture that will be shown should indeed point a moral.

Excavations on the Acropolis are continuing, and the work at the National Museum and the Polytechnic goes slowly on. The Schliemann collection at the latter is the great attraction, and to the Museum are added the best of the finds as they occur in the country at large.

Half the building is still closed to visitors. In the broad space between the building and the street is enough more material to stock an ordinary museum elsewhere, including sarcophagi, pieces of columns, capitals, reliefs, and figures in considerable numbers. These two buildings are a great credit to the state in every respect, and are well designed to preserve for museum and educational purposes the best of the remnants left of classic Greece. They are spacious, have marble facings or linings, and are of appropriate classic type externally. The Museum has but one floor; the Polytechnic is more elaborate, consisting of two lateral colonnades and a central quadrangle of two floors, with an ornate double marble stairway externally. The material is beautiful Pentelic marble, and the white, gleaming surfaces and numerous columns in a fine open section of the city form an impressive picture.

From Athens to the Piræus the train passes vineyards, lovely gardens and groves, stopping at Phalerum, the summer resort. Phalerum, bay and shore, is a beautiful spot, has now a large, complete hotel, long rows of bathing-houses, pretty groves, and the bluest of waters. From the beach one sees Mt. Hymettus, the Acropolis, and the Theseum, with Athens on the left, and on the right the terraced heights of Elias and Munychia. Piræus is a large, straggling seaport town, with wide busy quays and unclean streets, and surrounds the circular, roomy, and convenient harbor. A few traces only of the old walls running down from Athens seven miles away are found now, unless search is made for them. They enclosed Athens, a strip of country several hundred yards wide, and this magnificent natural basin, besides two smaller ports, Zea and Munychia, over the hill to the left towards Phalerum, where are still seen the stone galley-ways, a theatre hewn out of the rock, and the best remains of the wall itself. A tramway; noisy, dirty shops and cafés; fleets of small trading vessels of quaint old type; motley groups in fustanella, white stockings, and embroidered jackets; black eyes and fine handsome faces; coffee-sipping and mastic-drinking; and the people always in the streets—are passing memories of Piræus. A few hours after leaving this port, in passing Cape Colonna, the remaining upright columns and part of the architrave of the ancient Temple of Athena, splendidly crowning the hill, are plainly seen standing out in the purest white from the green background.

The Greek islands are both richer and poorer than the mainland. Some, like the Ionian group, are of wonderful fertility and healthfulness; others, often mere barren rocks, with miserable remnants of ignorant humanity clinging to them. Corfu is much frequented by invalids, by yachtsmen and sportsmen, and the fall and winter months bring many outdoor livers and wild-boar hunters. The neighboring mainland of Albania and Epirus is also full of game, the climate is mild, and there is every facility and comfort of existence attainable. The Ulysses Rock, a favorite resort of the Austrian Empress, beautifully conserved by a few monks; the mulberry and olive groves; the great variety and profusion of fruits; the drives, and King George's residence and park, all combine highly to favor the island. Among the monuments is one of Capodistrias, the first President of Greece. The exportations of figs, oranges, olive-oil, wine, honey, currants, silk, and cotton continue large, and the sea fisheries are of importance. The stout old walls and citadel that successfully withstood Islam, the Italian element in the population, and the peculiar dialect give the city a character quite its own. The city has a population of 28,000; the island, 85,000.

Cephalonia and Zante are in many respects also favored islands, and are much sought by winter yachtsmen and invalids. The former has in recent years been the rendezvous of the English fleet in the Mediterranean under the Duke of Edinburgh, as offering superior facilities for the many needs of the force. Zante, the southernmost of the group, does not greatly differ from Cephalonia in the character of its population, its fertility, and healthful environment. A part of the island is composed of blue mud and clay—in places whole hills are of this material—and in the interior are found bubbling wells of mud mixed with a crude bitumen or asphalt. The town is on the shore of an open bay, the hill behind it being crowned by a large old Venetian fortification, now used as a general prison. The late Minister of the Interior of Greece was from this town; and upon his decease (at Athens of malarial fever) the people omitted for some weeks all amusements, music on the promenade, and theatricals. Like nearly all Greek towns, the necessity of public sanitation is a matter not yet entertained, and white-faced children with diseased eyes are far too common. In 1887 there were exported 8,000 tons of currants, and a great quantity of wine, much of this appearing in Europe as port. These wines are sweet and heavy, as a rule, and, with the introduction of better methods, could be improved, beyond doubt.

Crete, still under Turkey and hardly yet recovered from the last insurrection and its repressive horrors, is vainly hoping for the morning. For the present it remains undeveloped, with a suspicious, uneasy people, living in fear of the ill-paid, ragged garrison of 10,000 soldiers. It is, from its position and superior natural resources, capable of supporting a large population, and has even now a considerable trade in silk, wine, oil, fruits, and chestnuts. Candia, the largest town (30,000 population), and the Governor's residence, is an agricultural community. The roads are bad, excepting near the principal port of entry, Canea, and Suda Bay on the northern side of the island. The latter is one of the finest and largest harbors in the Orient, but is lacking in life and activity, containing only a small, desolate village and a decaying naval arsenal. Steamers come to this bay in winter, in summer lying off the shallow small basin of Canea. The Ottoman steamers from Tripoli to Constantinople stop here, and slaves are occasionally found aboard and set free by the English consular authorities, whose cavass, or dragoman, keeps track of the business. The considerable number of blacks about are said to be of this description: they have in such cases the option of returning to Africa. The old Venetian walls, moats, naval arsenal, and citadel are still of imposing strength and appearance. Canea has about 12,000 inhabitants, and its roughly cobbled, narrow, unclean streets, fish markets, leather workers, and motley crowds render it unattractive, though it has a decidedly Oriental appearance. Passing up a street to the Governor's palace, I noticed a hive of notaries and lawyers, and upon inquiry learned that these men of the law and pleaders have sprung into existence only since 1878, previous to which time justice inclined towards the longer purse. It is believed that Crete will richly reward future efforts at excavations, the people as a rule observing great secrecy in regard to this matter, especially in the disposing of such articles as they may have from time to time in their possession.

Syra, the centre of the Cyclades, is the second port of the kingdom, and is noted for its shipping and tannery interests. The town is built along the bay shores and on two cone-like hills, each surmounted by a large church—one Roman Catholic, the other the Greek Church—and in its blue and white limewash gleams like a stage picture. In the time since the independence it has risen from a mean village to be the chief port of the whole group. Activity is noted in its little shipyards, and all the steamers to the East touch here. New roads about the island are being constructed, the city is erecting a large, pretentious municipal building of marble, and there are hospitals, asylums, and schools. A good water supply is lacking, five cents the gallon being the cost of pure water on the streets; each house has under it a rock cistern, collecting the year's supply in the few rainy months of the year. The lower levels and streets almost rival a Chinese city in uncleanliness and smells. Mount Pyrgos, immediately back of the town, gives one a view of the whole group of the Cyclades and Greece itself. At certain seasons, migrating quail rest on Syra to such an extent that they are slaughtered by the thousands. The rocky island is treeless, has but little rainfall and a warm climate. Smallpox has recently found many victims, and still exists, and fevers are common.

Milo contains the largest perfectly enclosed harbor in the Mediterranean, but one meets here with a desolate picture. The straggling little town of Castron clings around the peak of a considerable hill far above the ruins of the ancient Melos, whence the celebrated Venus was taken in 1820. In this great bay the Venetians annihilated the Turks in a memorable sea fight in 1661. The island is volcanic, has a small mining, sulphur, and fishing industry, and contains not over 3,500 inhabitants. Samos, though a principality tributary to Turkey, is wholly Greek. It is fairly prosperous and content under its Christian prince, Alexander Kara Theodora, who was one of the Turkish Commissioners at the Berlin Congress. Since that time he has taken no further part in Turkish imperial affairs and has resided here—a kind of polite banishment. The annual tribute is £2,000. Samos is rich in classical remains, and, like many of these islands, has not been completely investigated. It is a curious fact that the natives generally in this part of the world have a greatly exaggerated idea regarding the character and value of the still undiscovered remains of antiquity. The principal ruins here are a Temple of Juno, and the rock aqueduct described in the *Nation* at the time of its discovery some seven years ago (Nos. 908, 909). The port of Bathi, the Prince's residence, has a picturesque, rock-bound harbor and the quaintest of broad ancient quays. The trade is mainly in the superior wine and tobacco produced, the former rivalling the best port, and the latter ranking with the best grown in Yenidge and Latakiya. Tenedos and Rhodes still retain their mediæval features, the latter especially, with its tunnel-like passages and streets, enormous walls, bastions, and defences, and crowded town. Rhodes is among the most fertile and beautiful islands in the Levant, and, like Samos, has many pretty little villages scattered about on its verdant slopes.

Many of the islands are mere barren rocks, some with villages clinging to the highest peaks crowned by crumbling castles and fortifications, or with groups of white clusters of houses far up on the rare green pastures. The skies are seldom unkind, there are no extremes of climate, the mariner sails on for months without losing sight of land, threading the wonderful storied archipelago with its traces of the

old time. The scenes of to-day seem to belong to another world. C. A. SIEGFRIED.

Correspondence.

A PATRIOTIC PROTEST FROM ABROAD.

TO THE EDITOR OF THE NATION:

SIR: Reports have reached Europe since the recent election at home which reveal such widespread and shameless bribery that every honest American cannot but feel disgusted and indignant. Something *must* be done, and the *Nation* thinks something *will* be done, to prevent further disgrace and secure better methods and laws governing our elections.

It is with this hope and assurance of yours, Mr. Editor, that a number of American teachers and students in Berlin and Leipzig, irrespective of party, wish to express their sympathy, pledging at the same time their hearty coöperation with all who will help on reform. We believe that continued indifference would bring us to a condition more wretched than that of any nation in Europe. We should not even be so fortunate as to fall into the hands of pedantic and military bureaucrats, where we should at least be safe, much as we might fret under their paternal guardianship and their martinetism; but, as the *Nation* has said, we should be at the mercy of political auctioneers who would sell our Government to the highest bidders.

Against running such risks we protest. We will no longer be cheated out of the full value of our votes by the corrupt of any party whatever. We call for a strictly secret ballot, for stringent laws against bribery, and for their vigorous enforcement; and we hope to unite with our fellow-teachers and fellow-students at home—in fact, with the honest and intelligent of all parties—in securing these safeguards, whether it be by joining reform clubs already in existence and organizing new ones in every county and town, or by other practical agitation.

At present, our boasted universal suffrage is laughed at in Europe. The papers and intelligent observers see clearly that it is the bribed legions and their "bosses" who hold the balance of power in our national elections, and the purchasable "blocks of five" who can turn the scale in many a State and county election.

Of course, there are those who will call us doctrinaires or academic idealists; but we are not quite ready to succumb to the realism of fraud and rascality simply because the rascals are wide awake and the honest seem hard to rouse.

[Signed by 27 American teachers and students in Berlin and Leipzig, representing 4 different political parties, 13 different States, North and South, East and West, and 11 different colleges.]

BERLIN, December 25, 1888.

INSIDE A CANADIAN POLLING-BOOTH.

TO THE EDITOR OF THE NATION:

SIR: In Canada the Australian ballot system has been in force for the past fourteen years. We have grown familiar with it, and what astonishes me most is how any one can call it complex, or, having once seen it, could possibly endure to work with any other. It was adopted in the Dominion in 1874, and for the provincial elections of this province a couple of years later. The first election held under it in this city was in January, 1877. I was one of the presiding officers there. Since that time we have had fully a dozen elections, Provincial and Federal, and at every one of them I have spent the day in some capacity, either as presiding officer or candidates' agent, inside a polling-booth, generally in a city district, but sometimes in a rural one. Possibly a description of the practical working of the act may be interesting to readers in the United States.

Our nominations are now in the simplest form. Twenty-five electors can nominate a candidate by nomination in writing provided a deposit of $200 accompanies it. This sum is forfeited in case the candidate fails to poll half the vote of the successful candidate. If only as many nominations are made as there are seats to be filled, the returning officer returns them as elected by acclamation. If more, he issues a proclamation that a poll will be held, and containing the names of the candidates in alphabetical order, with their occupations and residence. The day of polling is fixed by the act for the seventh day from nominations. Then the returning officer proceeds to make his preparations for a poll. Of course he has known long beforehand whether or not the regular parties intend making nominations, and has made his preparations accordingly. The district has already been divided off into polling-sections by the revising barrister who makes up the electoral lists. These polling-sections must not contain more than 300 electors, and in practice (here at least) it has been found most convenient to keep them smaller than 200. These small polling-sections are the most effectual safeguard against disturbance and disorder yet discovered.

In each of these sections the returning officer hunts up a conveniently situated house or shop to serve as a polling-booth, and arranges the space inside so that one portion is completely guarded from observation, both from inside and outside. Then he appoints a presiding officer and a clerk for each district. He swears in the presiding officers and furnishes each with his ballot-box, a certified list of the electors in his district, a poll-book, a supply of ballot-paper and lead-pencils, and a number of printed directions (given in a schedule to the act), directing voters how to mark their papers, which the presiding officer sticks up about the booth. A constable is appointed for each booth. The booths open at nine and close at five. A little before the time of opening the presiding officer and his clerk arrive. The former swears in the latter. The agents, if they are wise, will also take care to be on hand sharp on time. Each candidate appoints two agents in writing. In practice the appointment is left with the committee of the district: the candidates sign a number of blanks, the committee arrange who are to be agents, and fill in their names. Of these two agents one requires to be sworn not to reveal the names of the candidates for whom any of the electors may mark their ballot-papers in his presence. This is for the protection of the illiterates and other incapables. The sworn agent is obliged to remain in the booth till it closes. The unsworn one can go in and out, and practically serves as the medium of communication between the sworn man and his party outside. Each agent of course has been "posted" by his district committee, and furnished with a list of electors marked with hieroglyphics to designate "for," "against," "doubtful," "dead," etc., etc. The presiding officer, poll-clerk, constable, and agents are the only persons allowed within the booth. There are no provisions preventing persons congregating about the polling-booths—a matter which I see most of your correspondents attach great importance to. There are one or two provisions for the suppression of disorder, conferring the powers of a magistrate upon the presiding officer, etc. But in practice it is found that the small polling-district and the secret voting do away with all temptation to riot. In former times here, with open voting and a few large sections, we had furious fights about the booths. Now the only signs of a booth are three or four men talking about the door and a couple of cabs drawn up. There is nothing to do outside, and the "worker" who could find no better employment than standing all day outside a booth watching the voters go in and out the door would not find much appreciation of his services in the party. Last of all, the presiding officer opens his ballot-box, exhibits it to the agents in the manner of a stage conjuror, opens the slide, locks the box up, and deposits it on the table.

These preliminaries over, the constable is directed to open the doors, announce the poll open, and admit the voters one at a time. One enters and presents himself at the table. The presiding officer asks his name, and looks to see if it is on his certified list. If it is not, as sometimes happens, the voter goes off to hunt up the right district; but this seldom happens. If the name is on the list, the poll-clerk enters it on his book, with the occupation and a number, and if no objection is taken by the agents, the presiding officer hands him a ballot-paper. The ballot is in a form prescribed in the act. Here is one of the official papers from the last Dominion election in this city:

Election for the Electoral District of Halifax, 1887

FULLER.

I. H. H. Fuller, City and County of Halifax, Merchant.

JONES.

II. Hon. A. G. Jones, City and County of Halifax, Merchant.

KENNY.

III. Thomas E. Kenny, City and County of Halifax, Merchant.

STAIRS.

IV. John F. Stairs, of the Town of Dartmouth, Manufacturer.

The portion below the perforated line is the counterfoil. Its use is to counteract the device mentioned by your Louisville correspondent, viz., putting in a blank and bringing out the official paper. The presiding officer puts his initials on the back of the ballot so as to be visible when the paper is folded up. The poll-clerk numbers the voter on his poll-book, and the presiding officer puts the same num-

ber on the counterfoil. In practice I have always found it the best plan to fold the ballot before handing it to the voter, and tell him to fold it in the same creases. He is apt to fold it up in such a tangle that it is necessary to open it to tear off the counterfoil.

The names on the ballot are required to be printed in alphabetical order. There is no envelope. At first we had them; but they were after one trial unanimously voted an unnecessary nuisance, affording an opportunity to commit frauds such as your Louisville correspondent describes. If no objection is raised by the agents, the voter retires with his ballot into the screened-off apartment, where he finds a table, a couple of lead-pencils, and, pasted on the wall, the official directions how to mark his ballot. He puts a cross to the right of the name or names he wishes to vote for, taking care not to cross the lines or to mark more names than there are seats to be filled. Then he folds up the paper and brings it back to the presiding officer, who looks at the number on the counterfoil to see that it is the same paper that the voter received, and then tears off the counterfoil and puts the ballot into the box. Then the voter must leave the booth.

Of course, things do not always go as smoothly as this. Your voter may be unable to read. If so, he declares his inability and his desire to have his ballot marked for him. The officer swears him to the truth of his statement and retires with him, accompanied by the sworn agents, to the private compartment, where he marks the ballot for the names told him by the voter; or a man may come forward claiming to be some one whom you have been instructed is dead or away. Thereupon, you, being an agent, act according to circumstances. In the last resort, you can ask the officer to put the oath to him. You can also challenge and swear on suspicion of bribery. It is not common to do either without just suspicion, as retaliation is inevitable and unpleasant. The poll-clerk makes a minute in his poll-book opposite the voter's name of whether he voted, and of any objection, and whether he took the oath or refused it.

At five o'clock the poll is closed, the box opened, and the votes counted in the presence of the agents. If any paper appears marked so that it is not clear for whom it is intended, or for more names than there are seats to fill, or with a "distinguishing mark," any agent can take an objection. Thereupon a number is put on the ballot, and a record of the objection made in the poll-book, and the presiding officer has to decide whether to count it or reject it, a record of which decision is also made. Then the presiding officer puts the ballots for each candidate — those spoiled, those rejected, and those unused—into separate envelopes and puts them back into the box. He makes out a statement, for which official blanks are provided him, showing the votes cast for each candidate and the number rejected; gives one to each candidate, keeps one himself, and pastes one in the back of his poll-book. Then he and his clerk swear before some justice of the peace, who has been notified to be on hand, that they have duly discharged their duties; and a certificate of this oath also goes in the back of the poll-book. Then poll-book and voters' list go into the box, the box itself is locked and sealed and taken back to the returning officers.

There seem to be a good many details here, but in reality they are very simple, and very few mistakes are made. You want honest and fairly well-educated men for presiding officers. On the practical working of the system:

(1.) As to secrecy, there can be no two minds. No one can have the least notion how any voter has marked his ballot.

(2.) As to preventing disorder, it is equally effectual, both outside and inside the booths. Election day with us has become absolutely one of the quietest days of the year until night.

(3.) As to simplicity of working, there can be no just complaint. There was a little difficulty at first, though nothing like what was predicted. But now very few mistakes are made or votes thrown away. Even the illiterates nearly all learn to mark their ballots without making mistakes.

(4.) As to preventing bribery, it is not such a success as we should like. It has done a good deal; nevertheless, the most of our bribable electors, especially in the country, make it a curious point of honor to vote the way they have been paid to. As a preventive of corruption, the Corrupt Practices Act, taken from the English act, with its speedy trial by a judge sitting in the constituency, is far and away more effectual than the ballot.

BLUENOSE.

HALIFAX, N. S., December 28.

POSTMASTER-GENERAL VILAS AND CLEVELAND'S DEFEAT.

TO THE EDITOR OF THE NATION:

SIR: The friends of civil-service reform should not fail to hold up continually the fact that one of the efficient causes of Mr. Cleveland's failure of reëlection was that he did not live up to his pledges with regard to the civil service, notably in the Post-office Department. The pressure brought to bear on him from the political machine was, doubtless, overwhelming; but the changes made materially impaired the efficiency of the service, thus discrediting the Administration with many who would otherwise have been disposed to look favorably upon it. Many instances of this have come under my notice. A florist, doing a large business by mail, stated to me the other day that half his catalogues sent to one of the "pivotal States" had gone amiss this year, very much to his loss and to the great disgust of his regular customers. He explained this on the ground that the State was a doubtful one, and that the Administration had made so many changes in the post-offices throughout the State in order to make itself "solid with the boys." Over a year ago a leading business firm of this city mailed a draft on a customer to a bank in another city for collection. On the envelope was printed the firm name and the usual "to be returned in five days if not called for." For upwards of a year they could get no trace of it. Finally it turned up. Some new clerk had sent it off to another State than that to which it was plainly directed, and there it had lain. Efficient and popular carriers on city routes have been displaced to give green "henchmen" a job, to the great annoyance of the public. A "clean sweep" was made in the post-office of a town of say six or eight thousand inhabitants in this State. The aged mother of the wife of a fairly well-known citizen sent a letter asking to be met a week later at the depot, as she was coming on a night train. The letter lay in the post-office because neither the postmaster nor his clerks were acquainted with the people of the town, and the old lady was put to the annoyance of finding her way about a strange town at night.

These are things to which the public was not accustomed under the old régime—at least to any such extent; and every such occurrence has made votes against the Administration. So much trouble has been made by these changes in at least one town in northern Ohio, and so many are the aspirants for the place under the new Administration, that the people of that town are asking that the candidates be voted on, and that all except the one receiving the highest number of votes withdraw their application.—Sincerely,

L. B. TUCKERMAN.

CLEVELAND, O., December 27, 1888.

A PLEA IN ABATEMENT.

TO THE EDITOR OF THE NATION:

SIR: On Tuesday last, Collector Saltonstall of Boston was the recipient of a simple but eloquent testimonial from the employees of the Custom House. In responding, the Collector referred to civil-service reform as follows:

"There is one word for the Civil-Service Law which I must say, and I hope I shall not be misunderstood. It is absolutely impossible to take so broad a departure as this law and expect perfection in the first place; and it is impossible to expect that this law should be supported and carried out in the great portions of the enormous territory of the United States where no sentiment of that sort has as yet been planted. But it has been planted here. It is in Boston that we expect all these great movements of reform to take their origin, and I may say that it is Boston that in the future people will point to as the place where the planting of this great reform took place with effect. No thanks to me—not at all. In doing this and in saying this, I take no credit to myself. It is the community which demanded it, and no one who fills my shoes hereafter will be permitted to go back upon that reform."

The reason I call your attention to this significant quotation from the utterances of a man respected alike by Republicans and Democrats is, that nearly a year ago I gave you my reasons for believing, contrary to your expressed views, that President Cleveland *could not if he would* effect the changes demanded of him in Maryland and elsewhere. These reasons referred to a public opinion that was sufficient to support the President in his appointments, and to furnish evidence of that support in the nomination and election of State and city officials in favor of the reform in the service. This has never been possible in Maryland or Indiana, or advocated with success in any State except Massachusetts, where a State law has been in force for several years past, and the people know the worth of the President's efforts in this direction. It seems now that here is better authority for taking this view of the President's position and so-called failure to carry out his promises.

If there is any truth in Collector Saltonstall's observations on this point, I would like to see the *Nation* publicly admit it, since it has seemed to me inconsistent that President Cleveland should be the only one who has been aware of the difficulty of enforcing this law and reform, while the *Nation* has, during the past fifteen years that I have subscribed for it, shown a general and sound understanding and impartial fairness in its criticisms of the national administration.

Respectfully, BENJ. SPAULDING.

BOSTON, January 5, 1889.

[We must still think that our correspondent's mind is not quite clear on this subject. Does he mean that the President was bound to gauge the public sentiment of the locality before making any given appointment in the Federal service? Does he think Collector Saltonstall's appointment proved a sentiment adverse to the spoils system on the part of a majority of the voters in Massachusetts, any more than Postmaster Pearson's retention here had a like significance? Does he feel sure that evasions of the law by Mr.

Saltonstall's successor will be impossible? Will he deny that every one of this Administration's shortcomings will serve as a precedent for Gen. Harrison's, without regard to locality; or, in other words, that the appearance of a Republican Rasin in Boston can be justified by the appointment of a Democratic Rasin in Baltimore?—Ed. Nation.]

TURKISH MISSIONS ONCE MORE.

To the Editor of The Nation:

Sir: I have read the very satisfactory replies made by your correspondents to a paragraph in the *Nation* of December 13, regarding American missions in Turkey, and would only ask to correct (from my personal knowledge) certain statements of fact.

I think a false impression will certainly be made by the reference to missionary funds as devoted to the "conversion of one sect of Christians to another" and to "proselytizing Armenian Christians." It should be remembered that the first missionaries had no thought of introducing a new sect. They aimed to work for the enlightenment of the old churches and for the promotion of reforms within them. Only the act of the old churches themselves caused any departure from this plan. The Gregorian Church persecuted and excommunicated all sympathizers with evangelical views, and, by maintaining this attitude of intolerance, forced the formation of a new church organization, which has since been steadily developing; and even now—while missionary work is, and must be, mainly along the lines of the Protestant organization—a constant and beneficial influence is exerted over the old churches, and this influence is a legitimate and desirable result of American missionary effort.

It is said of the Protestant communities in general that they are disposed to break with the missionaries and "threaten to return to the Orthodox American Church, unless they are allowed the management of the funds collected for them in America." Now, there is absolutely no movement in favor of a return to the old church; and disaffection and ill-feeling towards the missionaries is by no means the spirit of the communities anywhere, and is limited to a few isolated individuals, whose influence is very slight.

Again, we are told that Robert College, "in order to preserve its freedom of action, has been obliged to cut itself loose from all connection with the missionary societies." The facts, however, are that Robert College was founded by a New York merchant (the late Mr. C. R. Robert), it never had any formal connection whatever with any missionary organization, and has never received a cent from any missionary funds. It was, however, established as a distinctively Christian college, and has always been in sympathy with missionary work.

Respectfully yours, F. M. Herrick.

New York, January 3, 1888.

FRENCH LEGISLATIVE COMMITTEES AND BUREAUS.

To the Editor of The Nation:

Sir: A passing reference on the first page of the fifteenth chapter of Mr. Bryce's book, 'The American Commonwealth,' calls to my mind a subject upon which information may be of interest to some readers of the *Nation*, viz., the system of Bureaus and Commissions in use for the expedition of business in the French Houses. Mr. Bryce speaks of the Bureaus as being somewhat similar to the American Committees of Congress. This, if not explained, would convey a false impression, although most of Mr. Bryce's references to French constitutional and political matters are as accurate as was to be expected of a writer of such power, clearness of mind, and wealth of information. Under the general name of "bureaus" Mr. Bryce evidently alludes to both the bureaus and commissions, the latter much more important than the former. In fact, except in one important particular, the bureaus are merely the agency employed for the appointment of commissions—nothing else.

What is most likely to strike an American or Englishman as strange in French parliamentary life is, that the bureaus are the creation of chance. At the beginning of every month both the Senate and House are divided into a number of bureaus, always an odd number—now nine in the Senate, eleven in the House—fixed by the rules adopted by each house in its first session. The formation of the bureaus is a perfect lottery, the name of each member being drawn in turn, and assigned to some bureau by the rank it occupies in the drawing. This drawing, formerly a very tedious operation, is now performed by a very ingenious contrivance, the invention of a late member of the House, M. Tamisier.

As soon as their membership has been fixed the bureaus meet, and organize by the election in each of them of a president or chairman and a secretary. They also elect the members of the three monthly commissions or committees, viz., on Parliamentary Initiative, on Furloughs, and on Local Bills. Then, whenever a special commission has to be appointed for the examination of a Government bill, a bill brought from the other house, a bill introduced by a member and for which urgency has been declared, or which has been *taken into consideration* after being reported, favorably or not, from the Commission on Parliamentary Initiative, each Bureau elects one, or two, or three members of that Commission, as the house may direct. Such election is usually preceded by a summary discussion, in which the members who desire to be elected members of the Commission take part, and state whether they are for or against the bill, or non-committal.

The real work is done in the Commission. As soon as it is elected it organizes by the election of a chairman and secretary, and, if large, like the *Commission du Budget*, which usually consists of three members per Bureau, divides into sous-commissions. Bills are not necessarily reported by the chairman of the Commission, but by a special *rapporteur;* but it often happens that the Commission elects the same member as *rapporteur* who was originally elected chairman. The *Commission du Budget* usually elects several *rapporteurs*—first, a *rapporteur général*, second, one *rapporteur spécial* for the budget of each ministry.

It thus appears that most of what is done here by the Committees of Congress is done in France by the Commissions, and not by the Bureaus. In one instance, however, the Bureaus act as real committees, viz., in examining the credentials of new members. The departments and colonies of France are allotted among the Bureaus, and each Bureau reports to the full House, through a specially-elected *rapporteur*, on the admission or non-admission of each member returned as elected, fulfilling thus somewhat the same duties as the American Committee on Privileges and Elections.

Yours truly, A. C.

Harvard University, Dec. 30, 1888.

COMPLETE PROTECTION FOR ACTORS

To the Editor of The Nation:

Sir: I trust that in framing the proposed law for the protection of American actors Congress will not fail to make it complete, by adding a section compelling the American people to buy tickets to the theatrical performances. Curiously enough, an analogous omission is invariably made by legislators in "usury" laws. They always omit a section compelling the capitalist to lend his money to those in whose interest the law is supposed to be made.—Respectfully, T. H.

Philadelphia, December 29, 1888.

SHORTCOMINGS OF THE 'ENCYCLOPÆDIA BRITANNICA.'

To the Editor of The Nation:

Sir: In your last number you review the 'Encyclopædia Britannica,' and conclude with: "The 'Britannica' is a highly undigested work for scholars." The criticism I think is just. It is a most valuable work, but not abreast with the times. Many subjects are treated at too great a length, and others not at all. As an illustration may serve the subject "Algebra," to which in my edition forty five pages are devoted. Any one who possesses the Encyclopædia is supposed to have received a fair education; and as elementary algebra is taught in the public schools, there is no occasion to go into such details as giving the rules for addition, subtraction, etc. Undoubtedly every possessor of the Encyclopædia is possessor of a text-book on algebra also. On the other hand, I have been frequently disappointed in turning to the work for a certain subject in not finding it. For example, "Photogrammetry" is not to be found therein, although it is an art that has been actively pursued for more than fifteen years, and is of the highest import. Why it should be found in 'Brockhaus' Conversations-Lexikon,' a less pretentious work, and not in the 'Britannica,' I fail to see. Many more examples could be cited.

Yours truly, Otto J. Klotz.

Preston, Ont., January 2, 1889.

Notes.

Macmillan & Co. have in press a new work on Darwinism, by Dr. Alfred Russel Wallace, which promises to have much scientific significance.

Longmans, Green & Co. will shortly issue 'The Great War Syndicate,' by Frank R. Stockton; and 'Social Progress,' by Daniel Greenleaf Thompson, President of the Nineteenth Century Club of this city.

Harper & Bros. make an important and welcome announcement of a 'Latin Dictionary for Schools,' by Charlton T. Lewis, who has not abridged the larger dictionary edited by him in connection with the late Dr. Charles Short, but has made an entirely new and independent work. In choosing illustrations, the earliest books read by schoolboys have been preferred, as, Cæsar's Gallic War, Cicero's Catilinian Orations, Virgil's Æneid, etc. Such a work has been long needed and will be a great boon.

The late Laurence Oliphant's 'Scientific Religion; or, Higher Possibilities of Life and Practice,' is to be reprinted forthwith by Chas. A. Wenborne, Buffalo, N. Y., in an authorized edition.

Two new volumes in the "Canterbury Poets" series come to us from Walter Scott (New York: T. Whittaker), viz., 'Poems of Wild Life' and Milton's 'Paradise Regained and Minor Poems.' The first collection has been made by Mr. Chas. G. D. Roberts, and aims to exhibit the unconventional muse who flourishes on the border between barbarism and advanc-

ing civilization. As a matter of course, he draws mostly from our American anthology, but without confining himself to Joaquin Miller or Walt Whitman (from Bret Harte he was precluded by copyright): Bryant, Fawcett, De-Kay, Lanier, Gilder, John Boyle O'Reilly, Stedman, Stoddard, also occur, among many Canadian versifiers, like the editor himself, and even Thomas Pringle and the Swedish Tegnér. The flavor of this little volume, as may be judged, is fresh and pronounced. The Milton is another happy selection, with the sonnets and translations appended, "On the Morning of Christ's Nativity," "Il Penseroso," "L'Allegro," "Comus," "Lycidas," "Samson Agonistes," and "Paradise Regained"—the *pièce de résistance:* all in pocket compass.

From the same London and American publishers we have two more volumes of the "Camelot Series"—translations of the 'Encheiridion' of Epictetus and of some of the 'Dissertations' and 'Fragments,' by T. W. Rolleston, with a rather discreditable list of errata, English and Greek; and essays on Spenser, Shakspere, Milton, Wordsworth, and Keats, on Lessing, and on Rousseau and the Sentimentalists, by James Russell Lowell—all, save the Lessing, originally lectures for his college classes. Mr. Lowell furnishes "an apology for a preface," in which he confesses to small experience in preface writing and no great regard for what, after all, is an art like any other. Thirty years have, as he says, made the Professor bearing his name a stranger to him; but the public know that a much longer period is required to make his literary criticism antiquated or charmless.

From Lowell to Dante is a natural transition, and we proceed to remark a flattering notice of Fay's 'Concordance of the Divina Commedia,' by A. Pagliani, in the Florence *Nazione* for December 6; "ottimo libro," "non dubbia utilità," "non poco importanza filologica," are some of his phrases. Further, we observe in the Milan *Perseveranza* of December 19 mention of a youth's commentary on the "Purgatory"—'Il Purgatorio di Dante dichiarato ai giovani da Angelo De Gubernatis' (Florence: Luigi Niccolai). De Gubernatis published last year the "Paradiso" in a uniform style of typography and exposition, believing that the best introduction to Dante for the young is in the order he pursues. The enterprise was undertaken for the sake of his son and namesake. Finally, in the *Perseveranza's* monthly *Rivista Scientifico-Letteraria* for July, Policarpo Petrocchi discusses adversely Stefano Grosso's dissertation on three variants in a codex of the 'Commedia' recently discovered in Udine by Vincenzo Ioppi.

Prof. Paolo Mantegazza, the famous Italian scientist, has just issued the first part of his work on the nervousness of the present age and its causes. The volume is called 'Il Secolo Tartufo.' The immediate publication of another work by the same author is announced—the latest of a series of metaphysical studies—'Fisiologia dell' Odio.'

In the fourth number of the Journal of the British and American Archæological Society of Rome is printed a paper read by Mr. W. J. Stillman on "Prehistoric Walls in Greece and Italy," beginning with Monte Leone, concerning which fortified peninsula he has written in these columns. He classifies the varieties of construction in these walls (by the aid of which he assigns antiquity in this order to Tiryns, Mykenæ, Argos, and Corinth), and indicates their distribution on the Italian peninsula, in the Peloponnesus and the isles of Greece, and on the shore of Asia Minor. His theory is of a civilization autocthonous in Italy, and spreading southeasterly, instead of a counter current from Egypt or Phœnicia, the absence of metal tool-marks on the stones being conclusive in his eyes.

Mr. Edward Roth's 'Complete Index to Littell's Living Age' reaches the word *Tale* in the department of Fiction (Philadelphia, No. 1135 Pine Street.)

Nos. 2 and 3 of the Publications of the American Statistical Association contain a paper on "Park Areas and Open Spaces in American and European Cities," by E. R. L. Gould, and a very useful "Key to the Publications of the U. S. Census, 1790–1887," with occasional references to other statistical works, and an historical sketch of our census, by Edward Clark Lunt.

Mr. Christern sends us the first number of the illustrated paper, *L'Exposition de Paris de* 1889, conformable to its predecessor of 1878. It contains a bird's-eye view of the grounds and buildings in their final shape, portraits of Eiffel and other engineers, views of the great tower, etc., etc.

From this date, beginning its eleventh volume, the *American Chemical Journal*, issued by the Publication Agency of Johns Hopkins University, will appear in eight numbers a year instead of six—or monthly save during July, August, September, and October. This enlargement will permit the revival of reviews, reports, and abstracts discontinued for want of space. The price will consequently be raised from $3 to $4 a volume.

Great variety and interest characterize the contents of the *New England Historical and Genealogical Register* for January. Mr. H. F. Waters's "Genealogical Gleanings in England" whet the appetite with a copy of the will of Lawrence Washington, grandfather of our first President, which seems to indicate a northern county of England as the hive of the family, rather than Northamptonshire. The descendants of Thomas Palmer, one of the early and best citizens of Boston, are concerned with Mr. Waters's batch of Palmer wills. There is a list of the alumni of Princeton who have held official positions. But the literary gem of the number is the late Alvan Clark's autobiographical sketch, written at the age of seventy-four. There are passages here which have the stamp of Defoe. Mr. Clark's account of his career as an engraver and miniature painter will surprise many. He tells of going abroad in 1859 with one equatorial mounting and two object glasses, on which he had paid 30 per cent. duty when imported as rough glass into Boston. "Nor was that all. The glass was warranted first quality, and when I informed the Deputy Collector that a large portion of the amount in invoice was in consideration of the warranty, and asked him if any allowance would be made in case it turned out worthless, he said, 'No, not a cent. If you buy the devil, you may sell him again.' The crown *did* turn out defective, and I had to import another and pay 30 per cent again. But we were then under a Democratic Administration," he adds naïvely. Mr. Clark never sued but one man, and that was the Collector, and he won his case.

Under the title of 'Physical Development' (Boston; Lee & Shepard), Dr. Nathan Allen of Lowell has rearranged many of his essays published in the last twenty or thirty years on that and kindred subjects. The idea around which all the discussion centres is the modification of the race for better or worse by care—or the want of it—in breeding, with constant insistence that the children of pure American stock are steadily declining in numbers.

Dr. G. A. Evans has "compiled and arranged" a 'Handbook of Historical and Geographical Phthisiology' (Appletons). A very careful examination fails to discover any sufficient reason for it, notwithstanding the fact that consumption is an ever-present terror at our doors. The book is not indexed.

Two interesting books were issued last July from the Weidmann'sche Buchhandlung, viz., the third edition of Blass's 'Aussprache des Griechischen,' and the second edition, enlarged and improved, of 'Grammatik der Attischen Inschriften,' by Meisterhaus, of which we may speak hereafter. Blass has made his enlargements chiefly in the notes. He calls special attention in his preface to an interesting appendix containing the Lord's Prayer in modern Greek—not in the literary language, but in the language of every-day intercourse. This is followed by a carefully marked and accented transcription in Roman letters. Blass confines himself mainly to the theoretical side of the question. In contrast with this is an interesting lecture that deals with the practical side of the matter, viz., what pronunciation is to be adopted as the one to be taught in schools ('Die Aussprache des Griechischen: Vortrag gehalten im wissenschaftlichen Verein zu Breslau, von Dr. Konrad Zacher' (Leipzig: Teubner, 1888). The lecture, of forty-two pages, is supplemented by five pages of notes.

A novelty in calendars is that distributed by Thurber, Whyland & Co., in which each day of the year is set in a circle standing for the moon, and showing the appropriate phase of that luminary. The calendar prepared by Francis & Loutrel is elegantly simple and distinct, and has on the back of each monthly leaf a memorandum diary.

—"Round as Giotto's O," with much else in the master's life and work, acquires new significance under Mr. Stillman's fine historical treatment in the January *Century*, while Mr. Cole's reproductions, five in number, are enough to vindicate the high praise that a just criticism bestows upon the painter who first substituted true dramatic expression for the conventional faces that had gone before him. Mr. Frederic Remington has a subject which he has already made his own—"Horses of the Plains"—writes about it with great intelligence and from a full experience, and is his own illustrator. Nearly all of his blocks are good, some of them excellently spirited, and in almost all it is not hard to trace the influence of the instantaneous photograph. Fine illustrations also accompany Edward L. Wilson's Syrian paper. Charles de Kay has the first of what is to be a series of articles on Ireland. He lays out his work with great thoroughness, writing in this number of pagan Ireland, and giving with sufficient detail an account of Irish mythology and pre-Christian society, the aim of all being to enable us to understand the Irishman and the Ireland of to-day. Mr. Kennan breaks off the thread of his narrative so as to group in a single article details of the life of what are known in Russia as "administrative exiles," that is, men who are hurried into Siberia without a trial, without even knowing of their offence, deprived of the rights of a citizen without being accorded the privileges of a criminal—victims, in short, of the Government's most brutal and intolerable cruelty. What may be taken for a tapering-off of the war-papers is given in an article on "The West Point of the Confederacy," a slight but entertaining account of the Military School at Lexington, Va., and of the honorable part borne by the cadets in the battle of New Market.

—A series of photographs bearing the name of "Raphael's Hours" is brought home by many Americans who travel abroad. These

representations are general favorites. The same designs when colored are considered still more charming. Curiosity has been naturally roused regarding the origin of these graceful and fairy-like creations. At least eight articles on this matter have appeared in the London *Notes and Queries*. The "Hours" have been traced to the studio of a celebrated painter in Rome, Nicola Consoni. This artist, born near Perugia in 1814, was employed at Rome in frescoing the Vatican as well as the Corsini Palace, and in England was engaged for decorating the Albert Memorial at Osborne. But at an earlier day he had been commissioned to paint the "Hours" on panels at the Queen's residence, Buckingham Palace. Did the "Hours" originate with Consoni? By no means. He owed them to certain engravings which appeared in the seventeenth century in the style of Marc Antonio, the only artist who was allowed by Raphael to engrave his designs as soon as they were drawn, and before he had begun to paint them, and in whose engravings some lost works of Raphael—notably the "Lucretia"—still survive. These seventeenth-century engravings were universally called "Raphael's Hours." This is the testimony of Alexander Mantovani, the court painter of Pius IX., and of his successor. Moreover, Signor Consoni told Miss Busk, an English sojourner in Rome, that in his youth he had seen a print of that Borgian apartment of the Vatican where the signs of the zodiac still remain, in which room the twelve "Hours" "were roughly indicated as having been at one time there also." The lady's conclusion was that the "Hours" once adorned that room, but that, having become damaged, they were painted over, as the portrait of Dante was in the Museo Nazionale at Florence. What we still desiderate is to know the date at which the "Hours" began to be called Raphael's, and evidence that those engravings, though they lay hid till the seventeenth century, were possibly the handiwork of Marc Antonio himself in the sixteenth. The Zodiac Room was painted by Pinturicchio after designs, as is said, of Raphael. When the Pope shall permit the whitewash to be removed, traces of the "Hours," though long buried, may come forth to newness of life. Such a consummation must be devoutly desired by Mary Cowden Clarke, who has had the "Hours" frescoed on the entrance-hall of her Villa Novello at Genoa, and of all others who have loved to gaze on those aerial nymphs, which we should say had been copied from Pompeian panels had they not been well known before Pompeii was discovered.

—The Sixth Annual Convention of the Modern Language Association of America was held December 26, 27, 28 at Cincinnati, under the auspices of the University of Cincinnati. For the first time in its history, the Association met west of the Alleghanies. The result of this new departure was extremely gratifying. The Convention was largely attended, a series of interesting and scholarly papers was presented, many of them by Western men, spirited discussions were had, and the members of the Association were royally entertained by the citizens of the Queen City. In the absence of President James Russell Lowell the Convention was called to order by Prof. James Morgan Hart of the University of Cincinnati, who, after a few words of welcome, read a letter from the absent President in which the latter expressed his profound interest in the progress of the Association, and his regrets at being prevented from attending this meeting. A formal address of welcome was then delivered by Gen. J. D. Cox, President of the University, who pointed out the marked advance in the method and scope of teaching modern languages and the growing interest in the study of modern philology and literature. This address was followed by a discourse from the Rev. E. D. Morris, D.D., upon the "Language and Literature of Wales."

—The business meetings of the Association extended through Thursday and Friday, December 27 and 28, with both morning and afternoon sessions. Among the papers read and debated, the following were of special interest: "The Allegory as Employed by Spenser, Bunyan, and Swift," by Dr. H. E. Greene of St. Paul's School, L. I.; "On the Origin and Development of the Story of Reynard the Fox," by Prof. A. Gerber of Earlham College, Ind.; "Italian Poetry and Patriotism at the Beginning of the Nineteenth Century," by Prof. F. M. Page of the University of the South, Tenn.; "The Origin of Separable Compound Verbs in German," by Prof. H. von Jagemann of Indiana University; "The Study of Modern Languages in some of our Secondary Schools," by Prof. C. Zdanowicz of Vanderbilt University, Tenn.; "Dante's Paradiso, Cantos XXIV-XXVI," by Prof. E. Walter of the University of Michigan; "The Huguenot Element in Charleston's Pronunciation," by Prof. G. Primer of the College of Charleston, S. C.; "On the Impersonal Verbs in German," by Dr. J. Goebel, New York; "La Naissance, Le Chevalier au Cygne, and the Cycle of the Crusades," by Dr. H. Todd of Johns Hopkins; "The Anglo-Saxon House at the Time of Cynewulf," by Prof. H. Schilling of Wittenberg College, O.; "The Creste of Auberi le Bourgoing," by Dr. Thos. McCabe of the University of Michigaa.

O'CONNELL'S LETTERS.

Correspondence of Daniel O'Connell, The Liberator. Edited by W. J. Fitzpatrick. 2 vols. Longmans, Green & Co. 1888.

ORATORS who make no attempt at perfection of form, or who do not, like Burke, deal with the philosophy of politics, are soon forgotten in our day. This generation, both in the United States and in Great Britain, knows so little about Daniel O'Connell that it is difficult to believe that it was of him that even Greville, the keen and somewhat cynical contemporaneous observer, said in his Memoirs, "History will speak of him as one of the most remarkable men who ever existed; he will fill a great space in its pages. His position was unique; there never was before, and there never will be again, anything at all resembling it."

To understand the impression O'Connell made on his contemporaries, and the large space he filled in English politics between 1829 and 1843, one has to remember two things. The first is, that before his day the popular orator, the man who swayed vast audiences by mere eloquence, was unknown in England. Before the passage of the Reform Bill, the only oratory known to Englishmen was the oratory of Parliament, of the bar, and of the pulpit. The great politicians part of the eighteenth century and of the early part of the nineteenth—Chatham, Pitt, Fox, Sheridan, Burke, Grattan, Canning, Windham—made their mark in Parliament only. The machinery of agitation, which plays so large a part in the politics of our day, had not been thought of. Large meetings held to criticize the Government were almost unknown. Attacks on the established order of things were made on paper, mostly in pamphlets, and were answered in pamphlets. Defoe, Wilkes, and "Junius" furnished the type of non-parliamentary defenders of the people against the abuses of power. Moreover, the voters were so small a body that great assemblages composed of them were hardly possible in any part of the country. A large public meeting, if held, would necessarily have consisted in the main of non-voters, who passed in the political nomenclature of that day as "the mob," whom it would have been undignified for a statesman to listen to or address. The appearance of O'Connell in an arena of this sort, with a huge crowd of followers behind him clamoring for rights denied them by the Constitution, and swayed by his eloquence to an extent which, to the phlegmatic English temper, seemed incomprehensible, was a very startling phenomenon. Nothing of the kind had been witnessed in English political history, and it excited mingled astonishment and indignation among the ruling classes.

The second thing is, that O'Connell may be said to have introduced the Irish people to the modern political world. Englishmen knew something of the Protestant Anglo-Irish gentry, who had achieved parliamentary independence under Grattan and Flood, sent members to the English House of Commons after the Union, furnished officers in considerable numbers to the army, and figured in London and at Bath as adventurers, fortune-hunters, and duellists; but of the Irish Catholics, forming the bulk of the Irish people, they may be said to have known nothing—indeed, they were hardly aware of their existence. Nor was this surprising when we remember how little the real Irish were known to their Protestant countrymen. There is a short passage in Burke's letter to Sir Hercules Langrishe which has been much quoted in recent controversies, and which throws a flood of light on the place which the conquered race occupied at the close of the last century in the eyes of their masters. He says:

"Sure I am that there have been thousands in Ireland who have never conversed with a Roman Catholic in their whole lives, unless they happened to talk to their gardener's workmen, or to ask their way when they had lost it in their sports, or at best who had known them only as footmen or other domestics of the second and third order."

When O'Connell was admitted to the bar—one of the first of his creed and race to be so admitted after the relaxation of the Penal Laws—there had been considerable change for the better in the political and social status of the Catholics, but hardly any diminution of English ignorance of all that concerned them. Their feelings, their aspirations, their condition, their history, were all hidden from the ordinary Englishman. That they were "papists" and priest-ridden was nearly all he knew or cared to know about them. This accounts for what may be called the O'Connell sensation in English politics and society when he came to London after his election for the County of Clare—a sensation of which his letters in the present volumes give very interesting glimpses. It accounts, too, for what, to this generation, which is very weary of the Irish question in all its aspects, now seems somewhat puzzling—the great success which attended the earlier Irish novels, such as Carleton's 'Traits and Stories of the Irish Peasantry' and Mrs. S. C. Hall's sketches of Irish peasant life and manners, between 1830 and 1840.

O'Connell's private correspondence with his family and friends, now for the first time published, will furnish a very complete defence of his memory against the charge of insincerity and self-seeking so freely made against him by the English press in his lifetime. They abound with proofs and illustrations of his single-mind-

edness and independence. They show, to begin with, that he was, during his whole public life, laboring under pecuniary difficulties caused by early imprudence in endorsing notes for friends —a folly which the exuberant generosity of his nature seemed to make natural. His earnings at the bar from the very first were extraordinary for a young man in a poor country. During the remainder of his career they might have had no limit except what was imposed by his physical ability. But, although he drew but a small income from an hereditary estate in Kerry, and had a large family to provide for, he completely neglected his professional business for politics, and bore the total expense, then very considerable, of numerous contested elections, not only his own, but those of brothers and friends enlisted in the same cause with himself. He was most generous with his purse as well as with his professional services; and if he had not had, in a certain Mr. Fitzpatrick—a business man in Dublin to whom a very large proportion of the letters in the present volumes are addressed—a devoted friend, who looked after his financial affairs for him with untiring assiduity, he would probably have come to serious grief before his career was half over.

O'Connell had, when he first went to London in 1826 as counsel of the Catholic Association, a great success socially, but it was a *succès de curiosité*. As the leader of the movement for Catholic Emancipation he was not a bad lion for the drawing-rooms and dinner-tables, and received an amount of notice by which his letters to his wife show he was much flattered. This lasted down to his entrance to the House of Commons after the passage of the Emancipation Bill; but his social popularity in England died out very soon, under the violence of his own language. The virulence of the abuse which he heaped on political opponents was something new in the upper circle of English politics. "Scoundrel" was about his mildest term of condemnation—"scoundrel aristocracy," "scoundrel reporters"; but that he was unconscious of its force is made probable by the fact that he applied it to himself in moments of self-reproach over a blunder or piece of negligence, in cases in which other men would have called themselves fools or blockheads. Tho English newspapers paid him back in kind. He had a row with the reporters of the London press very early in his parliamentary career, over incorrect or garbled reports of his speeches, and revenged himself and forced them into good behavior by having them excluded from the galleries, under the rule as to "strangers." In this conflict, however, he had the support of the then editor of the *Times*, Carlyle's friend, Captain Sterling. This good understanding did not last very long. In 1841 the *Times* described him in a leading article as "an unredeemed and irredeemable scoundrel," and the priests who supported him as "surpliced ruffians." But seven years before this, in 1833, when he was first beginning the repeal agitation, he had been planning retribution for these attacks by a series of personalities which he describes as follows:

"You are aware that we must show up by real names and characters the persons who write for that paper. At the first leisure moment, I will give you sketches of the two principal writers, one a thin-skinned adventurer of the name of Barnes; the other with something of a tougher hide of the name of Stirling (*sic*). We will trace him through his different changes, now an Irish barrister, then a captain of militia, then a parson, and lastly the Great Unknown of the *Times*, who is saluted with awe by the *ci-devant* Whigs and now beplaced Tories of Brooks's Club. Mr. Stirling is not known at the *Times* as the stage falsehood of the scene. Nor do I see why old Walter himself should escape. He uses an engine to assail others as under a masked battery."

It does not appear that this exploration was ever carried out, but the warfare continued as long as O'Connell's health and vigor lasted. The resemblance between his relations with the *Times*, as indicated in the above extract, and those which exist to-day between the same journal and O'Connell's successor, Parnell, is a curious illustration of the vitality of the "Irish question," and of the smallness of the progress made towards a solution of it.

The exuberance and impetuosity, and one may say recklessness, of O'Connell's temperament are brought out more clearly in his letters than in his speeches. Everything in his character overflows—his affection for his family, his devotion to the Catholic Church and to the Irish cause, his hatred of his enemies, his gratitude to supporters, and his fidelity to friends. There is a vein of exaggeration in all his political writing and talking. His eulogies and his abuse are both fervid to the last degree. All the traits ascribed by ethnologists to the typical Celt were produced in greater or less fulness at every stage in his career, and they were made the more prominent by the fact that he was not only a Celt, but a Celt all aflame with the passion of a great struggle, who felt that the fortunes of a downtrodden race depended on his tongue. That there was, too, as there often is in Celtic heat, a good deal of method in his heat, there is little doubt. He came early to the conclusion on which his successors in Irish agitation have continued to act, that the best way to get the ear of Englishmen about matters which do not concern them personally is to shock them, to offend their sense of propriety, to alarm them about their persons and their property, and make them believe that they are dealing, not simply with ruffians, but with dangerous ruffians.

That O'Connell produced some such impression as this on English opinion, in spite of his belief in and enjoyment of peaceful agitation and his real horror of violence, there is, unhappily, little question. Its effect in separating him from Englishmen of whose sympathy with him in Irish matters he could feel sure, is curiously illustrated in a passage of Richard Cobden's diary, reproduced in John Morley's biography of the great apostle of free trade. O'Connell supported the free-trade cause steadily from the beginning. He opposed the Corn Bill of 1815, and stood by the Anti-Corn-Law League from 1838 down to its triumph in 1846. He had rendered the same service to every good cause of his day, including the anti-slavery cause in the British West Indies and the United States; and yet here is what Cobden says of him in 1848, when explaining his own silence on Irish questions in the House of Commons:

"I found the populace of Ireland represented in the House by a body of men, with O'Connell at their head, with whom I could feel no more sympathy or identity than with people whose language I did not understand. In fact, *morally*, I felt a complete antagonism and repulsion towards them. O'Connell always treated me with friendly attention, but I never shook hands with him or faced his smile without a feeling of insecurity; and as for trusting him on any public question where his vanity or his passions might interpose, I should as soon have thought of an alliance with an Ashantee chief."

This passage probably throws more light on the question of "Home Rule" than any other of equal length in recent political literature. O'Connell's private letters fortify the proofs afforded by his public career that Cobden was absolutely unjust to him, that he not only did not understand the Irish temperament, but was incapable of doing so; and yet Cobden was an unusually candid, fair-minded, well-meaning Englishman. O'Connell's letters show that he was really a valuable and perfectly trustworthy ally in every good cause, provided it did not interfere with his service to Ireland; that he was, for his time, a man of unusual political light and liberality; that his devotion to the Irish cause was sincere, and was marked from first to last by self-sacrifice, and was maintained under considerable private trials and difficulties. And yet, here is an Englishman of the very best class who avows that he could not sit comfortably in political council with him, owing to prejudice against his looks and manners. Could there be a stronger argument in favor of some sort of separation, be it little or great, between the legislators of the two countries?

PROF. BRYCE'S AMERICAN COMMONWEALTH.—II.

The American Commonwealth. By James Bryce, author of 'The Holy Roman Empire,' M.P. for Aberdeen. Macmillan & Co.

THE general conclusion which Prof. Bryce reaches is, that the faults which need correction are not so much in our constitutional frame of government as in our methods of working it. In this most of us will cordially agree. It is, however, interesting to note some of the differences of view which come of the different standpoints occupied by Englishmen and Americans. Habit makes almost any system easy, and a stranger is apt to be mistaken in selecting the parts which chafe.

Nothing is more common than to contrast our fixed and "rigid" Constitution with the so-called unlimited powers of the British Parliament. It is commonly said that Great Britain has no Constitution in our sense of the word. It may be questioned whether our use of it is as strict as is supposed, or their system as unlimited. Recent writers are prone to drop the once venerable and oft-recurring phrase "the British Constitution"; but, vague as it was, it had real meaning. Every people recognizes the fact which Cromwell put to his Parliament: some things are fundamentals. These fundamentals may be as firmly fixed when part of the common law of custom as in a written charter. The barons' declaration, "We will not have the laws of England changed," could not have meant that all making of statutes and decrees should cease, but that those fundamentals should not be meddled with on which the organization of the kingdom and the liberty of the subject depended. Magna Charta, from this point of view, was simply a deed of confirmation of these fundamentals under the King's great seal, and generations of Englishmen for seven centuries have regarded it as irrevocable. So far as it put in written form the fundamentals to which the nation was attached, it is hard to see how it differs from any other written constitution. The Petition of Right, the Habeas Corpus Act, the Mutiny Act, etc., seem to us amendments of the Constitution. In ordinary times the discussion may have little importance; but let us suppose a parliament to abolish all these safeguards, to enact, as in Henry the Eighth's time, that proclamations of the King should have the force of a statute, and to reinstate the Star Chamber. From our American point of view, we should expect the British people to treat this as exactly such a violation of the Constitution as if an American Congress should set up a king. We should not expect them to say that Parliament was acting within its lawful powers, and could only be reached by a revolution: we should rather look to see them declare that Parliament

had made a revolution against the nation, and that the people must sustain the "fundamental" law by squelching that Parliament in the swiftest and most thorough way possible. It would be the people who were acting within their constitutional powers, and the Legislature who were illegally usurping despotic functions. The difference seems to us very great; and in a critical time, the lawful rights of the contestants count for much. The fiction that Parliament is the nation would be found to have died long ago, and to have been quietly but solidly replaced by the doctrine of national representation. Such considerations make us doubt if the difference between Great Britain and America is that the former has no constitution; but, rather, to hold that it is to be found in the fact that our Constitution is separately written, while the British is partly written and partly founded on established custom which hereditary public opinion has declared to be "fundamental."

The independence of the coördinate departments of our Government is another subject which European observers find it hard to grasp. The relation of the judiciary to the other departments is especially difficult for them, though they have often unduly exalted the office of the Supreme Court in declaring laws unconstitutional. We do not remember any foreign writer who has so neatly and clearly shown, as Mr. Bryce has done, that the judicial judgment, in determining what is the law of the case at bar, necessarily includes the determination of the prevailing law, if the Constitution and a statute are in conflict; yet he seems to have yielded a little too much to the tendency to assume that the judgment of the court of last resort in effect repeals a law declared unconstitutional. It cannot be too explicitly understood that in the United States the judgment is strictly limited to the decision of the issue between a plaintiff and a defendant; the authoritative thing is the judgment for plaintiff or the judgment for defendant. The grounds for the Court's opinion form a precedent, by which lawyers will advise their clients as to the probable result in a like case; but there is nothing to prevent the lower courts, whether Federal or State, from deciding contrary to the precedent, and sending up fresh cases, to give the Supreme Court the opportunity to overrule the former decision.* So there is nothing but the probable futility of the result to prevent counsel from taking up cases decided below in exact accord with the precedent, and it is in fact often done.

The Legislature may differ in opinion from the Court, and often leaves laws upon the statute-book which the courts do not enforce, waiting for the results of further discussion, or for a change in the personnel of the Court. In the legal-tender cases cited by Prof. Bryce, the law for a time was thus judicially suspended, but the same law was again enforced under the later decisions; it had remained in the Revised Statutes all the time. American lawyers do not feel that this contingency that decisions may be overruled is a harmful thing. It is usually in questions of a political character that the change occurs; and we find no insecurity resulting from the understanding that a change of judges on the bench will bring the court into harmony with the prevailing public opinion on important public questions. Changes made for the purpose of reversing a judgment shock us as violent and abnormal; but those which come in the usual course of events are taken to be part of the natural progress of history. It would have shocked none of us to have the Dred Scott decision overruled by a contrary one after the civil war, had the question not been disposed of by general emancipation. In like manner, we should fail to see how the respect for law would have suffered if English courts had overruled the old decisions that it was the province of the court, and not of the jury, to decide whether a publication were libellous. If Parliament had chosen to declare and interpret the common law so as to reverse that rule, as they might, it would have been a conclusive determination that the courts had erroneously decided, and the theory of infallibility would be as really overturned as if the courts had themselves done it. We fully recognize the historic truth that decisions have changed, are changing, and ought to continue to change (to paraphrase Dunning's celebrated resolution), and only ask that the change shall be judicious, as well as judicial, as the logic of events draws new conclusions from human experience.

The relations of the Judiciary to the Executive are not more difficult than those with the Legislature, if we only follow the right clue. We need to remember (1) that the Executive (like the Legislature) is its own judge of constitutional power and duty; (2) that the Judiciary as such is absolutely dependent upon the Executive for the execution of its judgments. Identical as is the proposition, it is often forgotten that execution is executive.

As to the first of these propositions, it is clear that if the Judiciary could by precept determine for the Legislature and the Executive the limits of their duty, both affirmatively and negatively, the courts would be the supreme power of the land, and the other departments would be subordinate, not coördinate. As to the second, it needs to be remarked that the judicial function properly ends with the award of the writ after judgment; the Executive must then take up the task, and see that the laws are executed. In ordinary cases between man and man, the routine of executive action by the sheriff or the marshal is so much a matter of course that men forget that the court is not acting. It is only when the gravity of the occasion calls in the chief executive, or the judgment of the court is one the chief executive alone can execute, that the coördinate independence and discretion are necessarily revealed. Jackson's mode of speech was rough and not official when he said in the Cherokee case, "Let John Marshall enforce the judgment himself"; but the *thing* was constitutional, and every way as legal as the judgment in question. It was a high political question whether he would use the army of the United States to coerce the people of Georgia. Waiving all question as to the legal accuracy of the judgment of the court, there was no mere ministerial duty to enforce it, cost what it might, but a coördinate responsibility to use his high political discretion in doing so. This responsibility was to the people of the United States and not to the court.

So in the action of Lincoln, when he refused to allow his military officers to obey the habeas corpus issued by Judge Taney. He distinctly assumed as indisputable his own right to interpret the Constitution, and the absence of all right in the judge to dictate his interpretation. That Taney was suspected of sympathizing with the rebellion cuts no figure in the matter. It was the assertion of the right of the President to use his own judgment, subject only to the perils which the Constitution itself declares, among which attachment for disobedience to a court is not one. It would be absurd if it were, for he and his subordinates would have to execute the attachment! In the Hay and Nicolay biography is Lincoln's draft of his message to Congress on the subject, and it leaves no doubt as to his position. He asserts his discretion, under his solemn responsibilities to the nation, to determine which to omit if he finds it impossible in such a time to enforce all the laws; but as to the right to suspend the habeas corpus, which Taney had denied, he said: "I decided that we have a case of rebellion, and that the public safety does require the qualified suspension of the writ of habeas corpus which I authorized to be made." His reason for his opinion that he had the power, he finds in the absence of any denial of it in the Constitution, and in the fact that the danger which made the suspension necessary could not be assumed to wait for the assembling of Congress.

Prof. Bryce would seem to go too far in assuming that these executive acts were violations of the Constitution, and, as we think, has not fully seized upon the independent character of the departments of the Government. An old legal maxim says, it is the quality of a good court to enlarge its jurisdiction. Students of our laws naturally look to the judicial interpretation of Constitution and statutes for their guidance; but in this delicate province of executive independence it should be remembered that the language of the courts is apt to lean in favor of their jurisdiction, and we have to look to historical acts like those of Jackson and Lincoln for the rules of constitutional action which have been enforced in perilous times, when alone such questions are at all likely to arise.

Our author, however, very accurately touches the spring of ultimate power which prevents clashing in the great departments of the Government. Each, as he well says, is appointed by the people to its special work, for the express purpose of harmoniously coördinating their action. Their business is to work together and not at odds. Behind them is that intelligent and omnipotent public opinion which will apply the penalty to the one which in the public judgment may be at fault. This sense of direct answerability to a watchful master is what prevents, and may safely be trusted to prevent, a dead-lock between them.

It also tends to preserve the proper balance between them; for with public opinion on its side, either department may speedily reconquer anything it may seem to have lost. As all are sovereign in a sense, the old maxim, that Time does not run against the King, applies to each. Precedents have practically no weight when the letter of the Constitution may be appealed to. When public opinion sustained them, the houses of Congress constrained Johnson to submit to undue limitations on his power to appoint officers and to remove them. When Grant's popularity was thrown into the other scale, the Tenure-of-office Law was first changed and then repealed. The consciousness of this is a powerful influence against strife, because defeat is almost certain if one goes counter to public opinion.

After noting in turn many points in which, to an Englishman, our system seems to lack coherence and unity (which space forbids us to examine in detail), Prof. Bryce still concludes that perhaps no other organization of government would be found, on the whole, more de-

*What we are saying, of course, holds equally true of State Supreme Courts. Here is an authentic anecdote from the Life of the late Senator B. F. Wade of Ohio, when on the bench of that State: "A case arose before him of considerable difficulty. He gave it full consideration and decided it. It was taken to the Supreme Court of Ohio and there reversed. On mandate it came up before him. He disregarded the mandate and followed his own first decision, and such was his judgment. 'But, your Honor, the Supreme Court reversed your former judgment!' exclaimed the now re-beaten counsel. 'Yes; so I have heard. I will give them a chance to get right,' was the quiet reply. It was again taken to the Supreme Court and re-presented there, and this time with Judge Wade's reported opinion. On reconsideration, this was found to be the better rule. The Court, instead of attaching him for contempt, reversed itself and affirmed his last judgment."

sirable or freer from grave objections; certainly, he thinks, no other would be likely to suit so well the conditions of American life and character. It is in the political methods of working the system, after all, that we must find the evils which do most mischief, and to which the people must apply the cure lest worse things befall us.

A careful reading of the shameful list of abuses done in the name of liberty still leaves the impression that it would be hazardous to conclude that a remedy can be found in this or that statutory expedient. As public opinion is found in the last analysis to be the source of strength for every department of the Government, for every officer of it, for every party which succeeds, it is a public opinion enlightened and aroused by looking at abuses without a veil, that must be trusted to apply the remedy. From whatever point we start our examination, we are pretty sure to come back at last to the one conclusion, that the spoils system has so degraded and corrupted politics that our ordinary methods of political action are completely overslaughed. When we have rooted out this evil, we shall be able to see how our system works under normal conditions, and not till then. Ballot-box stuffing, repeating, forging tally sheets, bribery, are simply the methods by which political criminals work out their end, namely, to get possession of offices and enrich themselves by the plunder of the public. When the people have learned that no party platform offers any advantage at all to be compared in importance with the suppression of the corruption and plunder that make our politics a bye-word whilst our Constitution extorts admiring praise, they will subordinate party for a time to the radical cure of this chief cause of their woes and their disgrace. After that will come a time when the working of our institutions may be studied under favorable conditions to learn whether this or that change of method will improve the general system. Their working under the control of rings and bosses, big and little, affords us no criterion of their value or their capability of securing the common weal. As we can hardly conceive of any influence more likely to help in forming a right judgment on these momentous subjects than that of so wise, so temperate, and so able a discussion of American institutions as Prof. Bryce has here given us, we repeat the wish that it may find its way to the library of every patriotic citizen, and be studied with earnest care.

VIRGIL IN THE MIDDLE AGES.

Master Virgil: The Author of the Æneid as he seemed in the Middle Ages. A Series of Studies, by J. S. Tunison. Cincinnati: Robert Clarke & Co. 1888. 8vo, pp. vii., 230.

THAT the author of the Fourth Eclogue should have been considered throughout the Middle Ages as a prophet of Christ, and taken his place upon the mediæval stage with Isaiah, Simeon, and Elizabeth, is not remarkable. That he should have figured in mediæval legend as a magician is not so easy of explanation, and has occupied the attention of many students of myths. A considerable amount of material designed to illustrate the varying character assumed by the great Roman poet in the Middle Ages was collected in Germany and France prior to 1872; but no one scholar attempted to cover the whole field, or to offer a satisfactory explanation for the legendary elements in the mediæval Virgil. In the year above mentioned Professor Comparetti of Pisa issued his work 'Virgilio nel Medio Evo,' which has generally been considered to be the last word upon the subject. In this remarkable book, the author traces the vicissitudes of Virgil's fame in literary tradition down to the time of Dante, and in popular legend down to the present day. With a minuteness of which we can give no idea, he has studied the history of the poet in his own and succeeding times, until at the close of the Middle Ages Virgil appears as the guide of Dante, and receives from him a double immortality.

In this exhaustive history, Comparetti is careful to distinguish two currents, one of literary tradition, the other of popular legend—although he confesses that the two categories of fabulous products have a common basis, since both arise from an exaggerated idea of the wisdom of Virgil. The genesis of the myth of Virgil the magician the author finds in certain Neapolitan local traditions based upon the poet's long residence in that city, the presence of his tomb, etc. The fundamental idea of the legend in its origin was that Virgil had not only lived in Naples, but had shared in its government and displayed the greatest love for the public good of the Neapolitans. There existed besides in Naples monuments of ancient or mediæval art to which were ascribed wonderful and talismanic properties, and these were naturally attributed to Virgil. The two vital questions—when the Neapolitans first entained the notion of the talismans, and when Virgil's name was connected with them—Comparetti is unable to answer.

This theory, supported as it was by Comparetti's amazing erudition, was generally accepted by scholars in all countries. In Germany, exception was early taken to the author's separation of the popular legend and literary myth; but it was not until five years after the appearance of Comparetti's work that a serious attack upon his theory of the rise of the Virgil myth was made by Professor W. Vietor in the *Zeitschrift für romanische Philologie* I, page 165 ("Der Ursprung der Virgilsage"). It is impossible within our limits to cite the arguments by which (using Comparetti's own material) Vietor shows that the distinction between the popular and literary tradition is unnecessary and groundless, and that the legend is of learned and literary origin.

It is interesting that an American student should have reached the same conclusion independently, and have embodied it in a work which reflects great credit upon its author. Mr. Tunison has modestly entitled his book 'A Series of Studies,' and arranged his material in nine chapters, which treat of Virgil's connection with diabolism, literary tradition, magic, science, the legend of the Salvation of Rome, Virgil the lover, the prophet, and Virgil in later literature. A preliminary chapter, needlessly termed an apology, states the problem to be solved and the author's theory of its solution. This theory, and the method by which it is applied to the various phases of Virgil's fame during the Middle Ages, constitute the originality of the book. Mr. Tunison does not profess (with one slight exception) to have discovered any new material, and his debt to Comparetti is largely and fully acknowledged. He has, however, by the thorough assimilation of his material, won a right to speak with authority, and his theory is the outcome of independent research. It has always seemed a matter of regret that Comparetti's book had not been translated into French and English (there is an excellent abridgement in German), for a working knowledge of Italian is not so extensive even among scholars as might be supposed. Mr. Tunison's work will diminish that regret, for it contains all that any but the specialist will need, and is more attractive for the general reader in form and style than the original work.

The problem of Virgil's legendary character in the Middle Ages is a most interesting one. A well-known historic person, whose individuality is never obscured, appears in the works of scholars in the twelfth century, invested with the character of a magician, and later becomes the hero of the more popular French and German romances. The problem is not so difficult as at first sight appears, and the key to it is to be found in a combination of two factors—the exaggerated idea which scholars gradually formed of Virgil's wisdom, and the tendency during the Middle Ages to explain exceptional learning as the result of magical practices. It must not be forgotten that the works of the poet themselves contributed in no small degree to their author's peculiar renown. The Fourth Eclogue was sufficient to rank the writer among the prophets of Christ, and the Eighth Eclogue led at least one learned author, in a MS. of the fifteenth century, to attribute magical powers to Virgil (Comparetti, vol. i, p. 196, n. 1): "Et fuit magnus magicus, multum enim se dedit arti magicæ ut patet ex illa ecloga 'Pastorum musam Damonis et Alphesiboei.'" The influence in the same direction of various parts of the 'Æneid,' notably the Sixth Book, must also have been considerable. It must further be remembered that Virgil is not the only poet of ancient Rome who has undergone this transformation, which Comparetti (ii, p. 15) declares to be so rare. In No. 1151 of the *Nation* was noticed briefly De Nino's 'Ovidio nella tradizione popolare di Sulmona' (Casalbordino, 1886), in which the poet of the 'Metamorphoses' has undergone the same transformation as his greater countryman. We must therefore differ entirely from Comparetti when he says (ii, p. 15) that the scholastic type of Virgil alone, without any other occasion, could not, by natural transformation and association of ideas, be changed into the type of magician we are now considering.

Comparetti believes this "other occasion" to be the popular Neapolitan legends referred to above, which he supposes to have grown up about Virgil's name. These arguments, after all, rest upon the literary tradition; and Comparetti himself confesses that the people of Naples did nothing but draw material inferences from the literary conception of Virgil, which was such that the cultivated themselves were not surprised at these popular legends. The diffusion of the Virgil myth in European literature took place earlier and more extensively out of Italy than in Italy. It was little known beyond Naples, and little attention was paid to it there, while it was collected by foreigners who visited that city, and transported from the sphere of popular tradition to the sphere of literary tradition, and passed contemporaneously into works of a romantic nature in the vulgar tongue and into Latin works of a learned nature. It appeared from the twelfth century on—that is, at the time of the origin of romantic prose and poetry, properly speaking. These are the words of Comparetti himself (ii, p. 19), and they contain the refutation of his own theory. We may add to the above the significant fact that the contents of the Virgil myth belong, not to the Neapolitans, nor even to the rest of Italy, but constitute the commonplace of popular legend everywhere.

Such is a bald outline of the confutation of Comparetti's theory which Mr. Tunison has rounded out into a compact argument, presented in a clear and attractive manner, and forming part of an agreeable narrative of the various phases of Virgil's renown during the Middle Ages. Mr. Tunison has done his work

so thoroughly as to leave little room for criticism or suggestion. The name of the great scholar of the thirteenth century, Vincent of Beauvais, is uniformly given as Vincent of Beauveis—for what reason we do not know; the name of the Italian poet Cino of Pistoia appears (p. 193) incorrectly as Cinoia of Pistoia. With the literature of the subject since 1872 Mr. Tunison is not so well acquainted. He has not seen the important article of Vietor mentioned above, and is not aware that the Latin original of the French 'Dolopathos' (p. 56) was discovered by Oesterley and printed in 1873 (Strassburg: Trübner) under the title: 'Iohannis de Alta Silva Dolopathos sive de Rege et Septem Sapientibus.' This discovery was of great interest and importance, as it proved (what had long been suspected) that the 'Dolopathos,' which occupies such a unique position among the versions of 'The Seven Wise Masters,' rests upon the basis of oral tradition.

These criticisms detract in no way from the value of Mr. Tunison's work, and are offered as corrections for a second edition, which we trust the book will speedily reach.

The Origin of Floral Structure through Insect and Other Agencies. By the Rev. George Henslow, M.A., Professor of Botany, Queen's College. Pp. 349, with many illustrations. D. Appleton & Co.

THE author of this work disarms criticism in good measure by frankly stating that his observations "with reference to the origin of existing floral structures will not profess to be anything more than theoretical, and at most only a working hypothesis for future investigations." This candid admission is emphasized by the statement which immediately precedes it on page 3: "To attempt any theoretical exposition of the evolutionary history of flowers considerable caution is required; for the causes of variation are generally so obscure, the chances of seeing them in activity so small, and experimental verification so well-nigh impossible, that speculations on this subject cannot altogether escape the bounds of hypothesis so as to become demonstrable facts." In our view, the admission might have been carried further still by saying that speculations of this character can hardly, at this stage of knowledge in regard to the genesis of flowers, pass beyond the bounds of hypothesis into the domain of reasonable theory.

Prof. Henslow seeks for a cause of that variation which appears in the succession of organisms from generation to generation, and which lies at the foundation of the Darwinian theory. Admitting that organisms vary, and that of the variant forms those alone survive which are best fitted for their surroundings, we still need light on the origin or cause of the variation itself. It is well known that, long anterior to the time of Darwin, attempts were made to account for the genesis of diverse forms on the ground of the surroundings. And since the time of the publication of Darwin's 'Origin of Species,' there have been many endeavors to point out the relations of the surroundings to variation; for instance, in this country, much of a highly suggestive character has been brought forward by Cope, Hyatt, and Ryder, while much has been published abroad. The explanations dwell chiefly on the supposed response of organisms to their surroundings, resulting in the production of changes in form or structure which may be transmitted to offspring. These hypotheses of "effort" or "stress" and the like have shown clearly that evolutionists are in search of an adequate cause of that tendency to vary which we see everywhere. The present volume is the outgrowth of studies by Prof. Henslow in precisely this direction.

There is some vagueness in his use of terms, but in general he succeeds in rendering his subject clear and readable. It is unfortunate that he should at any point have weakened the effect of excellent work by the employment of such careless statements as the following (page 142): "If a particular locality be perpetually irritated, so to say, for generations, all analogy shows that the effect may become permanent and hereditary; at least, as long as the irritation is persistently renewed year after year." The general reader inclines at once to apply this statement to the particular case of the feet of Chinese women, where the dwarfing becomes "hereditary" provided the bandaging is undertaken early enough and in every generation. And the general reader seriously questions whether that can be Prof. Henslow's view of "permanent" and "hereditary." Aside from occasional faults of this kind, which it is difficult to condone, there is no adverse criticism to be urged either against his statement of facts or the greater part of his reasoning. He has gathered many of the results of recent work in morphology, particularly in the field of histological morphology, and turns the materials to good account in the presentation of his views.

Starting with a general description of an ideal flower, composed of circles made up of regular parts, distinct from each other, and having certain proportions, he traces in the ordinary way the innumerable deviations from the type. The deviations are attributed by him largely to disturbances of nutrition by irritation or by other mechanical causes, notably strains. In the ideal flower all the parts are assumed to be distinct from each other: the whorls, made up of sepals, petals, stamens, and carpels, are wholly separate. Now, as matter of fact, there are very few flowers of which this is true: there are various unions between parts of the same circle (cohesion) and between the parts of different circles (adhesion), and the question is plainly this: In what way did all this come about? The author's answer is here given in his own words:

"Differences of floral structures depend largely upon different distributions of nutrition in the several organs. The irritation set up by insects themselves is one of the most potent causes of a flow of sap to certain definite places, which encourages local growths, thereby inducing unions to take place between the parts of any whorl, forming 'cohesions,' and also between different whorls, or 'adhesions.' Other causes may determine them, for hypertrophy may set in through a purely vegetative stimulus" (p. 86.)

What experimental evidence is there that such irritations as those caused by insects can give rise to abnormal forms? That distortions innumerable can be produced by the sting of insects is too well known to need further reference; but can the mere visit of an insect, clinging to a blossom and withdrawing a little nectar, produce any marked irritative effect? Probably not. Any effect following could be more reasonably assigned to *strain*, from the weight of the insect or by his thrusting the parts of the flower aside. That strains result in change of form is well known, and the study of these effects has been one of the most interesting contributions of Herbert Spencer to botany.

Granting that, through strains of various kinds and degrees, marked modifications of floral structure can take place in an individual, we are brought back to the fundamental question, Can this modification, originating through an outside influence, be transmitted to posterity? Unfortunately, there is no direct experimental evidence of an unquestionable character, although there is some which points in that direction; and therefore the reasoning must be analogical. Prof. Henslow adduces for this process of reasoning a great number of instances which he interprets as bearing on this cardinal question; but while his speculations are ingenious and are very honestly put, there are many unsatisfactory gaps, and probably no one would more willingly admit this than the author himself. It appears to us that he finds his strongest analogies in certain cases of disturbed nutrition among animals, in which various maladies seem to many to be directly transmissible from parent to offspring; but it must be remembered that to many others some of these maladies appear to come upon given individuals because of an inherited susceptibility to external influences. Here, to be sure, is the hair's breadth which divides.

While we are not convinced by the reasoning of the author that the effects of mechanical and other disturbances are transmissible, it seems to us highly probable that to some degree they are; and his interesting work has deepened a conviction long entertained that the question ought to be attacked by botanists in an experimental manner. What has been observed in the animal kingdom is well known to our readers, and it is plain that plants offer a better field for this investigation than do animals. The response to the environment can be better watched in most plants than in most animale, and the question of direct transmissibility be perhaps answered there. The belief that this volume may do something towards stimulating research in this field, inclines us to give it a hearty welcome.

Cinque Ports. By Montagu Burrows. [Historic Towns. Edited by E. A. Freeman and William Hunt.] Longmans. 1888. Pp. viii., 261. 8vo.

THE federation of towns in Great Britain is one of the many subjects relating to English municipal history that have suffered great neglect. Most scholars who are familiar with the Anglo-Saxon period have doubtless heard of the league of the five Danish boroughs; but few, we may venture to assert, even among the best students of history, are aware that there was a league of Irish towns in the thirteenth century, and that Scotland also had a powerful municipal federation, the Convention of Royal Burghs, which is still in existence. Few, likewise, are acquainted with the important rôle played by the Cinque Ports of England in the Middle Ages. True, the strong central government of England after the Norman Conquest would not brook the growth of such potent federations of towns as arose in Germany, Italy, and Scotland; but the Cinque Ports, the only prominent federative union of English boroughs, exercised considerable influence upon the fortunes of the nation, and performed important functions as an adjunct of the State. Just what these functions were, however, it has hitherto been difficult to ascertain, so slow is the progress in bringing to light the many hidden treasures of English town history. We heartily welcome Professor Burrows's book as the first comprehensive treatise on the Cinque Ports, though he gives us only an outline of their history.

The author informs us that the federation of the Cinque Ports—Hastings, Sandwich, Dover, Romney, and Hythe—originated under Edward the Confessor. To these five places the "two Ancient Towns," Rye and Winchelsea, were added in the twelfth century. The name

of "Cinque Port" came soon afterwards to be applied also to the so-called "Members" or "Limbs," various towns dependent upon and affiliated with the seven "Head-Ports." After the Norman Conquest the confederation remained for a time in a "state of suspended animation." "With the advent of the Angevin House, there are signs of fresh vitality; but not till the reign of John does their distinct military service, performed at the will of the Crown, project itself plainly before us as a part of the national history." During his reign the confederation became the chief support of royalty on the seas, being bound to stated services. The author styles it "the right arm of England," "the parent and exemplar of the Royal Navy itself." John and his successors frequently called upon these ports "to guard the seas." Their most important charter, which was granted by Edward I. in 1278, requires "their full service of fifty-seven ships, at their own cost, for fifteen days, when summoned by ourself or our heirs." In 1347 they furnished 105 ships and 2,140 men. Edward III. adopted the plan of placing the whole of his fleets under the Lord Warden of the Cinque Ports. "It was not till the end of Edward III.'s reign that the disasters of the Ports, from which they never recovered, began; but even in the previous half-century their preëminent place in relation to the naval service was not so marked as it had been under John, Henry III., and Edward I. . . . The decay of the originally fine harbors of the Cinque Ports lay at the bottom of this gradually declining position." Most of the harbors became silted up, owing to what the author calls "The Law of Eastward Drift," which he describes in detail. In the fifteenth century the confederation continued to decline, and was thenceforth of little national importance.

In return for their ship-service the Cinque Ports enjoyed various franchises, the most important of which were exemption from the ordinary assessment of national taxes, and the right to be impleaded in no courts except their own. They also had charge of the "Yarmouth Fair," and thus exercised control over the herring-fishery, a principal industry and food-supply of the English people in the Middle Ages. They had a central judiciary and court of appeal, originally at Shepway, afterwards at Dover. At an assembly called the "Brodhull" or "Brotherhood" (originally held, it is supposed, at Brodhull, later at Romney), they met to appoint bailiffs for the Yarmouth Fair, to make provision for their ship-service, and to assess taxes. The confederation is still in existence, though shorn of most of its ancient functions; the last meeting was held in 1887. "Speaking generally, the Cinque Ports and their members are still independent of the counties in the matter of roads, licenses, and police, and free from county juries and county rates."

We have not much fault to find with the way in which the author has done his work. Every part of his book displays painstaking study. He has not contented himself with giving us a mere compilation based upon other printed works, but has evidently consulted the original records in many scattered local archives. Only the few who have attempted similar investigations in England can appreciate what labor this involves. The author's arguments regarding the foundation of the confederation by Edward the Confessor (pp. 55-59, 62) are not convincing. His main ground for this inference is the vague allusion in the charter of 1278 to previous grants of Edward the Confessor, William I., etc. The more one has to do with records of English towns, the more one feels inclined to treat such references to the remote past with distrust; they should never be made the sole basis of an argument. Similar allusions to previous grants of Edward the Confessor, William I., and William II. are to be found in many town charters; and yet neither in local archives nor in the Confirmation Rolls of the Public Record Office do we ever succeed in unearthing any of these eleventh-century grants, with the single exception of the Conqueror's charter to London. We know, too, that municipal charters often contain accounts of the "great antiquity" of a place that are clearly as untenable as Fitz-Stephen's declaration that London was built before Rome—*Urbe Roma [Londonia] satis antiquior est.* The organization of the Cinque Ports into a confederation for national defence was a plan more apt to emanate from the constructive mind of William I. or Henry II. than from the inert and prayerful Confessor.

It is wrong to call the charter of 1278 an "Inspeximus" (p. 55); this technical term has a definite meaning, and ought not to be applied to a grant that contains merely allusions to previous grants. The *firma burgi* was an important municipal franchise, but the author exaggerates its importance when he calls it "the coveted sign of self-government," and asserts that to secure it was the main reason "why towns desired to possess a mayor" (pp. 112, 202). The mayoralty did not necessarily presuppose the existence of the *firma burgi*, or vice versa, though the two often went together. On page 118 we are told that after 1278 the additional franchises granted by later charters were "trifling," but on page 125 mention is made of two later charters "considerably extending their franchises." The author speaks of the grant to the Merchant Adventurers in 1617 as though it were something entirely new, which "broke up the trade of the Ports with the Low Countries" (p. 184); and yet the Adventurers had become invested with all their principal privileges by a patent of Henry VII. in 1505. But these few mistakes only slightly mar the general excellence of the book. Mr. Burrows hopes that his "sketch will be the means of eliciting a desire for a complete work" on the Cinque Ports. We join him in this hope, and trust that he will undertake it.

The Satires and Epistles of Horace, edited, with notes, by J. B. Greenough. Boston: Ginn & Co. 1888.

THE long-expected beginning of the "College Series of Latin Authors" is made in this volume of Prof. Greenough's. The scheme of the series, which (in this respect differing from the companion Series of Greek Authors) is to be the independent work of the several editors, presumably accounts for the very different rates at which the two series have progressed; for the *vis inertiae* of authorship is naturally greater where the starting-point is not provided in the form of a foreign edition.

A glance at the Harvard announcement of courses will show that the study of Horace is now placed in the Sophomore year (an example much to be commended), and that the teaching of the Satires and Epistles is in the hands of Prof. Greenough. This edition is, therefore, the work of an editor who, constantly dealing with the subject treated, knows well the difficulties of the—not too immature—student mind. Yet the difficulties of the student mind are determined largely by the ways of the mind of the instructor. One man loves grammar, another textual criticism, another history; while a happy few, not loving these less, love literature still more. No one who remembers the preface to the recent edition of Cicero by the same editor will be surprised to find in the preface of the present book the tenet—which includes a word for the intellectual emancipation of the youthful learner—that "college students sufficiently advanced to undertake Horace ought no longer to 'get and recite lessons,' but to study the literature, and understand and enjoy it."

The details of the book are consistent with this conviction. The young reader will find it unsatisfactory or excellent, according to the spirit which he brings to it. If his best aim is to "get his lesson" with a large economy of thought on his own part, we can imagine him complaining that he finds too little direct translation; and, if his teacher happens to lean toward grammar at second-hand, too infrequent references to the text-books on that subject. (There are but about twenty in all—a remarkable abstinence on the part of an editor who is himself a distinguished grammarian.) But if he wishes to read his author, and brings to his work some natural aptitude of taste and comprehension, he will owe the editor his gratitude for giving him for the most part, instead of translations, illuminating paraphrases of the contents of passages, and happy expositions of the links of thought, and, instead of references to grammars, clear and brief statements of the force of the constructions noticed. It follows from what has been said that the other party in the case, the teacher, will, with no relaxing of insistence upon sound scholarship, find himself aided in leading his students out of that way of looking at classical authors which furnishes the most dangerous weapons to the opponents of classical studies, and into the way of looking at them first as men of letters and delightful commentators upon human life.

These are the essentials. Having granted them, we must add that, if the book errs, it is on the side of repression. We should have been glad to know the editor's opinion on a few matters on which he has not touched, *e. g.*, the force of *catulus* in Ep. I, 2, 67, which surely cannot be the inert stop-gap which a number of editors have practically taken it to be. In the rather full statement of possibilities in regard to the "troublesome passage of which nobody can find the key," Sat. I, 1, 108, the opinions of Palmer and of Kiessling might well have been added, both of whom accept *qui nemo ut*, the reading of V, instead of *nemon' ut*, but interpret differently, the latter reaching a sense which, if not without difficulties, yet seems less forced than any other. That the reason of the omission is not a low opinion of V is shown by the note on *lusumque trigonem*, Sat. I, 6, 126. If, in Sat. II, 3, 262, *vocat* is read, against the weight of manuscript evidence, on the strength (insufficient, it would seem to us) of the parallel *arcessor* in the Terentian original, the student is in need of help with regard to the construction. Technical terms are generally explained, but not *spectatum*, in Ep. I, 1, 2. The references to the Odes are less full than the cross references in the Satires and Epistles. The notes are also occasionally too condensed in expression. Misprints are few, even for a first edition. We have noted especially *adunctum* for *ad unctum*, Ep. I, 17, 12, and the omission of *Hor.* in Sat. II, 3,326, which gives the verse to the wrong speaker. The spelling is so careful throughout that one is surprised to find that the editor, like Prof. Wilkins, appears to prefer *quodsi* to *quod si*, in spite of the *quod tibi si* of Catullus, the *quod mihi si* of Propertius, and the evidence of *quod utinam* and the like.

The notes, as in the Series of Greek Authors, are at the foot of the page. We are still so ac-

customed to the other arrangement in American text-books that many may fear that the school-boy will have too easy a time of it; but, for ourselves, we hope that the system of interposing manual and visual difficulties in the student's way will be brought to an end through the example of these two series. The Germans, whom we do not accuse of being our inferiors in the art of teaching, are of one mind in this matter, and, where they have occasion to speak of our way, characterize it as unpractical, as was done recently by a reviewer of an American text-book.

A comparison of this edition with the corresponding editions of Palmer and Wilkins and of Kiessling shows interesting differences of purpose. The German edition is larger by more than a half, while the notes alone in the English edition occupy three times as much space as the sum total of notes and text in the American edition. The American and the German editions dispense almost wholly with textual criticism, which in the English edition is a prominent feature. In both these points we subscribe to the decision of the American editor. Textual criticism, for example, is an indispensable part of a complete collegiate training in the classics. But let everything have its place. The boy who takes his Horace well mixed with textual criticism in his Freshman, or even in his Sophomore year, is thereby the more disposed to want nothing further of classical literature in subsequent years. The innermost defences of classical study, which today are thought to be threatened, are the charm and power of the literature; and the way to keep the young student faithful to his classics until the time arrives when, in the course of nature, he will be glad to know about the transmission of texts and the evidence of manuscripts upon this or that passage of the author he is reading, is first to make him feel that charm and power. And to the same end there should be a judicious repression in the volume and the scope of the notes. Palmer's edition of the Satires, then, a work of remarkable learning and point, should rather be called a sketch for a great edition for the purposes of advanced study than a well-adapted volume in a "classical series for schools and colleges," to which it purports to belong. Prof. Greenough, who has done much for the scientific side of classical study in America, but much also for the humanistic side, has set himself the true aim in his edition, and, though possibly with an excess of self-restraint in a few places, has produced an admirably helpful book.

The Architecture of Provence and the Riviera. By David Macgibbon, [joint] author of 'The Castellated and Domestic Architecture of Scotland.' Edinburgh: David Douglas. 1888. Pp. xx., 467, many illustrations.

THIS is an account of the ancient buildings to be found along a line of travel easy to describe and not hard to follow—from Lyons down the Rhone, through Vienne, Valence, Orange, Avignon, and Tarascon, to Arles, then westward to Nîmes, St. Gilles, Aigues-Mortes, and along the coast to Carcassonne, and as far as Perpignan; then back to Marseilles, and along the coast eastward as far as Genoa. In a curious fashion, which may be noticed in other writers than this one, all Languedoc and Roussillon with a bit of Dauphiné is treated of as if belonging to the geographical "Provence." It is a fascinating county, Provence, for those who love the south, with its white glare and its blue glow and the pale grayish-green of its foliage: and more than all fascinating to those who love the large carelessness of its picturesque towns and untended monuments. But it only reaches as far north as Orange, at the largest interpretation, and from the Rhone eastward to Nice: most of the buildings with which this book deals are beyond its narrow borders, and unless our author defines "Riviera" as the whole coast from the Pyrenees eastward, his title seems insufficient.

He has been wise, though, to see the characteristic independence, architecturally speaking, of this region, and its capability of being treated apart from other districts of France and of Europe. There are, first, the Roman buildings, and second, the mediæval buildings, each class peculiar and worthy of treatment by itself. There are at Nimes the finest Roman temple extant, and at Vienne perhaps the second finest; at Nîmes and Arles two large amphitheatres, showing between them about all a Roman amphitheatre can show; at the river Gard, just north of Nîmes, a nearly unique Roman aqueduct-bridge, and at St. Chamas a quite unique road-bridge with commemorative arched portals; at Orange a Roman theatre, with one at least of its peculiar features preserved in an elsewhere unequalled fashion, and at the same town and at St. Remi two fine "triumphal arches," as we have to call them for want of a really descriptive appellation—the one at St. Remi standing beside a Roman monument in remarkable preservation. These are the showiest buildings of classic times, but these are by no means all, or even the only very interesting ones, in this region of wonders. It is as important to study this region after studying Rome as it is to study Rome after this region. The western spirit of the great Empire has left to our times traces less grandiose but quite as precious in the southern Gaulish provinces as in the capital itself.

All this Mr. Macgibbon describes, or at least enumerates, in rather a perfunctory way, as if he took little interest in the buildings. He cites Prosper Mérimée and M. Viollet-le-Duc for opinions as well as facts, like the compiler of a guide-book rather than an architect recording his personal observations. He seems to think it a general characteristic of large Roman buildings to be built with "enormous blocks of carefully cut stone, set without cement," and, indeed, calls that "the Roman manner," as if forgetful that there is very little of such cut-stone dry-walling in Rome itself, and that the quarries of Languedoc, and not Roman traditions especially, are the causes of the lithic construction of these great buildings. He does not distinguish between the very unusual and therefore precious monuments of antiquity and those more familiar and matter-of-course; and his nomenclature is very odd sometimes, when it is mixed with Latin, or what is meant for Latin.

Of mediæval architecture the most important, in Provence and Languedoc, is Romanesque, or round arched work of the centuries preceding the thirteenth; and next to this the military architecture of the thirteenth and fourteenth centuries. The Romanesque is not, indeed, comparable to that of the north, nor to that of Pisa and Verona, for it seems rather the result of detached efforts than a developed and well-understood architectural style; moreover, much the greater part of it is of small scale, not decorative, not very elaborate; and the three examples of great richness of sculptured ornament—the front of St. Trophime at Arles, the cloister of the same church, and the front of St. Gilles—are feeble and purposeless in design when compared to the finest of north French or north Italian work. But it is well worthy of study, and it is especially rich in oddities, in curious devices for solving the problems of plan and construction which all buildings offer to the architect.

The mediæval military architecture of this region is especially valuable. It is too generally the case throughout Europe that of its Middle Age fortresses great and lofty walls remain, mere meaningless masses, bereft of their characteristic features. The guide-book bids you expect to see "walls of the fourteenth century, nearly intact," or the like; and you find what might be the walls of a garden, for all the defensive character they have. The whole interest and character of a castle or a town wall, built before gunpowder came in, is in the crown of battlements, with or without machicolations, which of old afforded the means of defence, and which for us afford picturesqueness of effect. And the walls of Avignon; of St. André at Villeneuve-lez-Avignon; of the lofty tower close by, which, dominating the famous bridge, still looks down on the spot where

> "Sur le Pont d'Avignon
> Tout le monde y danse,
> Tout le monde y danse en rond";

of Aigues-Mortes, and, most famous of all, Carcassonne, are almost perfect. Restoration, indeed, has passed along the Avignon ramparts, and the whole *cité* of Carcassonne has been renovated by Viollet-le-Duc and his successors; but so much existed intact before restoration began that this last was generally obvious and easy. Moreover, there is nothing impossible in such restoration, nothing ineffable to try to say, nothing unseizable to try to grasp—only plain, squared stone-work and simple mouldings. There are no warlike buildings more worthy of study than these, and none more impressive to the non-student. Moreover, there is one great fortress which, although shorn of its battlements, is still one of the buildings of all Europe the most impressive—the vast Palace of the Popes at Avignon. There is no such combination of the princely dwelling and the stronghold as this. Yet is King René's castle at Tarascon a structure not to be disregarded, and that at St. Honorat is even more of a treasure. More nearly unique than these are the strange fortified churches and monasteries—Les Saintes Maries, Montmajour, Agde, and Maguelonne; and they are all in fair condition for study and comparison.

This mass of mediæval art is treated by our author with a little more spirit than is the classical architecture, but still the value of the chapters devoted to it is rather in full enumeration and geographical indications than in analysis. It is strange that one of the two authors of 'The Castellated and Domestic Architecture of Scotland' should write so cursorily and so little to the point of these interesting buildings.

Three hundred illustrations, apparently drawn by the author, add to the value of the book as a guide to the traveller and to the student. The complete inadequacy of the index detracts from this again, and prevents the book from being even as good a guide as it might be. Neither text nor pictures are very inspiring nor very attractive; both text and pictures may often serve your turn when you visit, and also when you cannot visit, the beautiful south of France.

A Blockaded Family: Life in Southern Alabama during the Civil War. By Parthenia Antoinette Hague. Boston: Houghton, Mifflin & Co.

THIS little book has a worthy aim, and succeeds to a considerable degree in realizing it. The

paralysis of trade, the forced diversion of agriculture into unaccustomed lines, the starting up of rude domestic industries, as if under the magic wand of protection, the system of makeshifts in food and apparel—all these incidents of the war, far away from all actual fighting, it is the author's attempt to set forth or illustrate. Not unnaturally, considerable space is given to the devices to which the feminine instinct for ornament had to resort, in the absence of the usual shopping; but much is also told of the ways in which articles of stern necessity in dress were provided, and of the improvisations which a ready wit made in the sphere, not only of dyes and weaving, but even of medicines. For the most part, the writer's style is pleasant enough, though a thought heavy-footed; but her political and moral reflections are in bad taste, and there is something almost absurd in her seeming effort to make out a case of great hardships for a family which did not see a Federal soldier or hear a gun all through the war, and which had abundance of supplies and the faithful service of slaves throughout.

Yone Santo, a Child of Japan. By E. H. House. Chicago: Belford, Clark & Co.

'YONE SANTO' is a study of contemporaneous Japanese life by an author thoroughly acquainted with his subject by a long residence in the Mikado's empire. With a firmer touch and truer coloring than in any work of fiction treating of the far East, he delineates the lovely character and the misfortunes of a young girl of gentle birth, who has been bred to the lofty ideas of honor peculiar to the *Samurai* or gentry of Japan. These misfortunes, in their order, are as follows: Her home life broken up by political revolution; poverty, cruel treatment by the elders of her own sex at home, a forced marriage to a low-born and stolidly ignorant husband; but first, last, always, and worst, the tribulations suffered at the hands and malevolent tongues of two or three American missionary ladies living in the foreign quarter in Tokio, called Tsukiji. A considerable portion of the book is taken up with description, dialogue, and remarks about these destroyers of the young lady's peace. Dr. Charwell, who seems filled with equal proportions of hatred to the traders, the British, the clerical and the female missionaries, an adroit questioner, but easy in conscience concerning fibs, is Yone's constant friend, not to say worshipper. Miss Gibson, his own and Yone's friend, is a Boston lady, who has fathomed the true character of the atrocious missionary women, and who escapes from their thrall to assist Dr. Charwell in his philanthropic plans. Yone is a marvellous character, absolutely unselfish, guileless, noble, and of a sort more rare on earth than in the airy realms of romance. Escaping the temptations of a European lover, she sinks under the burdens of sore mental trials and the stress of toil in house and hospital during the cholera visitation. The epidemic results from the shameless violation of quarantine by an infected German vessel convoyed into Yokohama by a war-ship in defiance of Japanese law. After Yone's death, Dr. Charwell finds his chief happiness in visiting her tomb.

This is the story that was published as a serial in the *Atlantic Monthly*, and which, though a novel in form, is rather a series of sermons, and cannot well be spared from the list of tracts for the times. The author, having pleaded his cause in magazine and review articles, correspondents' letters, pamphlets, and otherwise, now employs the vehicle of fiction to preach the wickedness of foreigners in oppressing Japan by treaty. As an eloquent prophet, he sets forth, in this burden of Japan, the wrong which even good men and women, trained in alien systems of morals and education, may inflict even when most intent on doing good. Above all, Mr. House preaches to men on chastity, honor, and the duty of treating a Japanese woman as a woman, a sister, and, under certain circumstances, a wife. Herein he is not excelled in cogency and clearness even by the "sainted" Dr. David Abeel in his address "To the Bachelors of India, by a Bachelor"—now a classic, but not read as much by the men intended to be reached as it should be. The defect of the book is its manifest unfairness to the American men and women who have made Japan their field of work, with motives at least as pure as those of Dr. Charwell or his thinly disguised original. The literary critic demands that a professed painter in words use other pigments besides tar and whitewash. To transfigure into almost unearthly loveliness of character a native girl, and to heap all sorts of ridicule on the women of one's own country, is not fine art, though it may be fiction. "Experienced wolves disguised as ancient lambs," "old maids," thinkers and plotters of nearly all things diabolical, are the females who, alas! are also missionaries; while among all the scholars, philanthropists, and gentlemen who happen, though Americans, to have received, among other lines of culture, a theological training, not one is found or known whom Dr. Charwell can trust or refrain from abusing. All this seems to us inartistic—ranting, but not elocution.

In other respects, the novel has notable merits. Finely drawn are the contrasting pictures of British rudeness and Japanese high-bred grace. The eloquent outbursts of passionate eloquence in defence of Japanese womanhood are noble passages, both as to style and truth. The satire upon Americans who make all native ladies of gentle birth "princesses" is fine. The incidents in the lives of the male characters in the story are like windows, and open to our admiring gaze a world of honor and chivalry almost unknown in our commercial days. These are told with a pathos that must draw tears to the eyes of those who know their intrinsic truthfulness. In short, we have in 'Yone Santo' a work of high literary art, disfigured by its own author, who has been unable to control his personal prejudices and keep out his dogmatic opinions. The novel is strong in what the author knows and weak in what he believes. Since publication in the Boston magazine, his doctrinal views are set forth in the Chicago reprint in a "postscript" of thirteen pages. Like that interesting addendum to a lady's letter, it contains the root of the whole matter.

BOOKS OF THE WEEK.

Archer, W. Masks or Faces? A Study in the Psychology of Acting. Longmans, Green & Co.
Balzani, U. The Popes and the Hohenstauffen. A. D. F. Randolph & Co. 80 cents.
Comba, Dr. E. History of the Waldenses of Italy, from their Origin to the Reformation. F. W. Christern.

The Nation.

NEW YORK, THURSDAY, JANUARY 17, 1889.

The Week.

THE deadlock between Mr. Weaver of Iowa and the people of the United States did not reach a conclusion until Saturday, when it was brought to an end by a bargain or "compromise." Mr. Weaver got—so he tells the newspapers—all he wanted, but the people of the United States did not get back the twelfth part of the second session of the Fiftieth Congress, which had been wasted and thrown away. All that Mr. Weaver conceded was that if he could get what he wanted he would get out of the way, and leave to the people of the United States what might remain of the session. It is idle, however, to quarrel with Mr. Weaver, unprincipled and audacious though it be for a legislator to sacrifice the general welfare for his particular measure; for so long as the people of the United States tolerate a system which is a hot-bed for "deadlocks" and "one-man power," they must expect such results. This particular deadlock was but another product of "the short session." If there were no impending cataclysm absolutely certain to bring the present House of Representatives to an end on the fourth day of March—if the House, like the Senate, could continue *organized and in session* until its legislative business should be finished—Mr. Weaver never would have thought of his deadlock. Its efficacy lay in the fact that he was able to destroy one of the twelve working weeks of the short session of Congress. What is wanted is, not an indignation meeting over Mr. Weaver, or a revision of the often-revised rules of the House, but a legislative system which will not be irremediably knocked to pieces on every alternate fourth of March. The reformation of the House of Representatives has been a frequent subject of consideration in these columns, and, if our readers will turn back to the editorial in No. 1171, they will see that the present illustration is but a new phase of the inherent evil.

The clause in the Senate Tariff Bill which imposed a duty on fish if frozen or packed in ice, the same being now free, was a sectional measure of a very contemptible sort. It proposed to favor the people within easy distance of the Canadian border, at the expense of all the rest of the country. Senator Plumb was right in objecting to this discrimination, but his opposition resulted only in getting all fresh fish, frozen and unfrozen, put on the dutiable list at one-half cent per pound. The clause in question throws much light on the meaning which the Republican party gives to the phrase "revision of the tariff." Years ago, when the party was in easy possession of all branches of the Government, and there was no Treasury surplus menacing the business interests of the country, it put all fresh fish on the free list. At that time frozen fish and fish packed in ice was a common article of commerce in the chief markets of the country, but no distinction was made in the law between frozen and unfrozen. Now, with a Treasury surplus on hand, and with a mouthful of promises to revise the tariff, we find the party going back to ways and practices once discarded in order to add a new tax on the many for the benefit of the few.

The sugar-bounty amendment to the Senate Tariff bill has some noteworthy features, apart from its general character as the introduction of a new Governmental policy of very grave import. It proposes that the bounty of one cent per pound shall be paid for the production of sugar from cane, beet, or sorghum, under such regulations as may be prescribed by the Commissioner of Internal Revenue. Nothing could be easier on paper than this mode of paying bounties. Nothing can be more difficult in practice than the payment of bounties on any one variety of sugar without the risk of frauds on the Government. Twenty-five pages of the Revised Statutes are filled with Draconian legislation to prevent frauds on the revenue by distillers and rectifiers. This mass of legislation is none too minute and none too severe to accomplish its end. It has been worked out by the experience of a quarter of a century. In spite of all this carefulness on the part of Congress, enormous frauds have been perpetrated at times, and great scandals have been exposed in the courts of justice. Now it is deemed sufficient by the Senate Finance Committee, in dealing with a still more complicated matter, to refer the whole subject to the wisdom of the Commissioner of Internal Revenue. Sugar from cane, sugar from beets, sugar from sorghum are all produced by different means; they are also of different degrees of excellence. The payment of bounties on each requires different machinery. What is to prevent the introduction of foreign sugar into the manger from which the bounty is fed? What is to prevent the payment of bounty for glucose? Some kind of machinery, of course. But, what machinery? Is Congress not to know beforehand? Perhaps it was believed by the Committee that the bill would not pass, and therefore it would be best not to waste time in providing safeguards against fraud.

It was a deft use of words to provide that the bounty shall be paid out of the duties on imported sugar. This carries the suggestion that the money in the public Treasury is of different kinds, viz., one kind derived from taxes on the people, and another kind derived from duties on sugar. During the war and the suspension of specie payments, it was customary and necessary for Congress to make distinctions between money received from customs and money received from the internal revenue, because the one was payable in gold and the other in greenbacks. No distinction was ever before made between two kinds of gold revenue. Imagine the Secretary of the Treasury keeping a separate strong-box under this bill to hold the receipts from sugar duties, so that he might not make any mistake by paying the sugar bounties out of any other description of funds. Another provision of very questionable character is that the bounty shall be paid till April 1, 1900. This is an attempt to tie the hands of future Congresses for a period of eleven years, and would of course be unavailing if any Congress in that period should repeal the bounty law or refuse to make an appropriation to pay the bounty. Altogether the sugar amendment is a Pandora's box of coming ills, and we fancy that its supporters are more troubled by it than its opponents.

The National Wool-Growers' Association has "materialized" again, and has been holding a séance in Washington, for the declared purpose of getting higher duties on wool than are provided for in the Senate bill, and of conferring with the wool manufacturers "if deemed advisable." The end which they seek is set forth in one of their resolutions, viz.: "that duties on wool and on woollen and worsted goods shall be adjusted and maintained so as to secure to them the American market." This modest demand, that sixty millions of people shall have no clothing except what the Association can supply, and at such prices as they choose to ask, is not likely to be granted in a hurry, for the reason, if no other, that the demands of the wool-growers, if conceded, would put it quite out of the power of the manufacturers to do their part in furnishing the supply. The requirement of Pharaoh that the Children of Israel should furnish bricks without straw, was not more unreasonable than the demand of the alleged Wool Growers' Association that the manufacturers shall supply the American market with all the woollen goods needed under the severest restrictions as to raw material. We are now importing $45,000,000 worth of woollen goods yearly because the American manufacturers cannot get their wool on as good terms as the foreigner gets his; yet we are admonished that in order to produce all the goods we need, we ought to make it still more difficult to get wool.

The absurdity of this demand of the alleged Wool-Growers' Association is matched by its impudence. For years they have been strutting before Congress as a great political power, pretending that they could make and unmake parties, and have actually inspired terror among both Democrats and Republicans; but when a crucial test came last November, their political importance collapsed in the most signal manner. In the three great wool-growing States, Ohio, Texas, and California, they lost votes heavily on the very issue that they have invited.

Free wool was the first and foremost question of the Presidential contest. It was not a question of a small reduction, like that in the tariff of 1883, but of total abolition; and these bullies of the political field, who have been threatening for a whole generation that if their slice of tariff plunder was lessened, nobody else should have any, were beaten ignominiously on their own ground and in their own territory. The alleged Association is, for all political purposes, a myth, a jack-o'-lantern, a scarecrow. It consists of a handful of persons who sign themselves "Presidents" and "Secretaries," and who go about here and there, pretending to represent other people who care nothing about them or what they do, so long as they pay their own board and room-rent, or get the manufacturers to pay it for them.

If the present weather continues much longer, there will be a serious deficiency in the ice crop, and the result will be that the country next summer will be deluged with foreign ice. It would seem, therefore, as if the native icemen were entitled to protection for the little ice they will have on hand, so as to maintain those high prices which are the greatest blessing a community can have. The cheapness of ice for many years past has been a deplorable feature in our industry, but it has been impossible for Congress to prevent it by legislative restrictions on production. It would have been easy enough, of course, to forbid unlicensed frost, but it would have come just the same in the remoter regions. The result has been that for several years there has been little or no profit in the ice business. The prices have been extremely low, and the dealers have only been protected from foreign competition by freight and insurance. Under these circumstances, the condition of the icemen has been pitiable, and they have had the extreme mortification of peddling ice at prices which put it within everybody's reach. This winter, unless there should be a speedy change in the weather, they will enjoy the benefits of a great scarcity, which surely nobody will begrudge them. Even the sick and the poor will, for the poor ice-dealers' sake, rejoice at the thought that ice at last is going to be beyond their means. But if the Canadians and Nova Scotians are allowed to bring ice here free of duty, as at present, of course these pleasing dreams will not be realized. Low prices, with all their attendant horrors, will prevail. Many icemen's wages will be cut down, and some drivers of ice-carts will have to drive soda-water and root-beer carts instead. We therefore respectfully suggest that a duty of one cent per pound be placed on all foreign ice imported in American bottoms, and two cents a pound on all imported in foreign bottoms, the latter to be required in addition to prove the presence of a lighted stove in the hold during the entire voyage.

Judge Barrett's decision in the case of the People vs. the North River Sugar Refining Company is the first important deliverance of the courts against Trusts in any part of the country. The gist of the decision is, that when a corporation abdicates its charter powers, or turns them over to be exercised by third parties, it commits suicide. This is in pursuance of the general principle of the law of corporations that the act of incorporation is to be construed strictly, and that powers not granted expressly, or by necessary implication, cannot be exercised. The decision does not invalidate Trusts in general, but it breaks up their continuity. The property remains unaffected by the decision. The parties composing the Trust can buy it in and keep it together, and carry on business to all intents and purposes as before; but their relations *inter se* are very seriously disturbed. Their position becomes somewhat analogous to that of the railroads under the anti-pooling clause of the Inter-State Commerce Act. They are deprived of a means, which they deemed essential to their purposes, for holding themselves together. They are no longer endowed with perpetuity, and therefore the individual members are put upon their vigilance to protect and secure their private interests. Having compared the opinion of the Court with the very able argument on the other side by Prof. Theodore W. Dwight, in the *Political Science Quarterly* for December, we are constrained to say that Judge Barrett's reasoning seems to us to be the better of the two. We may add that it is, in our judgment, more conformable to public interests and more in harmony with public opinion. The latter is an element which lawyers most commonly cast out of the reckoning, but it is of all elements the controlling one in the long run, as it ought to be.

Mr. Fairchild's reason for removing Mr. McMullen from the Appraisership is "his general belief that, either through age or some other cause, he [McMullen] could not properly judge of the qualifications of his subordinates, or supervise their work." A belief of this sort by an appointing officer can hardly be criticised or found fault with by any outsider; but any bystander can safely say that a man of seventy-two years, who has thirty-six years of faithful service behind him, deserves, even if he has become incompetent, to have reasonable notice given him, and to have his retirement from the service soothed by a little kindly explanation. If a servant of as long standing as Mr. McMullen were got rid of in this peremptory way by a private employer, the latter would be visited with the severest kind of social reprobation. Why the laws of social morality are not considered applicable to the relations of the Government to its subordinate officers is one of the greatest mysteries of politics, and it is deepened when we see as kindly and upright a man as Mr. Fairchild "decapitating" with so much ruthlessness of manner. One's wonder is increased by the fact, too, that if great reforms are needed in the Appraiser's office, Mr. Fairchild should have left himself only six weeks for their accomplishment, and that he should seriously expect that anybody whom he puts in Mr. McMullen's place will be retained by the incoming Administration. Surely, the cause of reform would suffer no grave discredit, and the public Treasury no perceptible loss, if Mr. McMullen were allowed to stay in office till March 4, and if Gen. Harrison were allowed to pass on his defects. We make this remark with the less hesitation because we see no sign of any desire to get rid either of Surveyor Beattie or Deputy Collector Davis, both of whom, in the general belief of this community, have been prevented "by age or some other cause"—most probably the latter—for four long years from serving the Government faithfully or reflecting any credit on the Administration. It is rather late to dismiss them, we admit; but to save the public even six weeks of them would be a patriot's work. Their prompt decapitation by Gen. Harrison will be some compensation to those who are sorry, as we are, that such an honorable career as Mr. McMullen's should end in such a way. Thirty-six years of honest service for poor pay and without promotion has a great deal of real glory in it.

Mr. Schurz's speech before the Commonwealth Club on Saturday evening is the most important political discussion since the Presidential election. Of course, there will be differences of opinion as to the causes of Mr. Cleveland's defeat. Mr. Schurz thinks that the Democrats gained more than they lost by the tariff issue, and that if the educational campaign had begun two years earlier the result would have been very different. But, however people may disagree as to the *vera causa* of the election of Gen. Harrison, scarcely anybody will differ from Mr. Schurz in the conviction so pointedly expressed by him, that the first duty of all good citizens is to put a stop to bribery in elections, and to take up this work by a candid admission that the evil is not confined to one party alone, but has penetrated both to a dangerous and alarming extent.

Mr. John Wanamaker denies distinctly to a reporter that he has destroyed any accounts of the Business Men's Advisory Committee of which he was Chairman, and which raised money for the National and Quay's Committee. He says he has all the books and accounts of his Committee, and has done nothing in connection with it which he is ashamed of or regrets. His partner, Mr. Ogden, added that while he could not trace the money paid over to Quay, the Advisory Committee "knew in a general way for what purposes the money was expended," and Mr. Wanamaker would not countenance a misappropriation. The Quay Committee on their part say they have only burned the correspondence relating to appointment to office, but have preserved the "valuable" documents. We made the statement that they had burned everything, on the faith of a description in the daily papers of what took place at the headquarters after the election. What Mr.

Quay considers "valuable" papers, of course we do not know. That Mr. Wanamaker had kept the accounts of his receipts we never doubted, because they are of no particular importance. It is the expenditures in a campaign which interest the public, and which ought to be made public, and for which we now ask, but which we have no expectation of seeing.

Mr. Saxton has made some changes in the Ballot-Reform bill which was introduced in both Houses at Albany last week, but they are mainly in the provisions in regard to the publication of the official ballots in the newspapers prior to election, and in regard to the preparation of those ballots by the officials in charge of printing them, and are in all cases in the interest of wider publicity and more complete freedom of the exercise of individual choice on the part of the voter. In every way they strengthen the bill. The provision in regard to the marking of the ballots stands unchanged—namely, that "before delivering any ballot to an elector the said two inspectors shall write their names or initials upon the back of the ballot, immediately under the printed endorsement." This method has been adopted by the advocates of the bill after a most careful and exhaustive consideration of all the methods proposed. It is less expensive than an official stamp, which would have to be changed at every election in order to prevent forgery. The fear that in signing his initials an inspector might put on a distinguishing mark which would enable him to identify a ballot in the counting, and thus defeat secrecy of the ballot, has no perceptible foundation. Initials have been used in Australia and Canada for years, and nothing of this kind has ever happened or has even been tried.

It is evident from the tone of Gov. Hovey's message to the Indiana Legislature that the Republicans of that State, like the Blaine Republicans of Maine, are not at all eager for ballot-reform legislation. Gov. Hovey is very careful not to say a word in favor of that kind of electoral reform, but confines himself mainly to recommending the old and futile remedies for abolishing bribery in elections by fixing fines and penalties. His attitude towards the subject is not of much consequence, however, as the Democrats have a majority in both houses of the Legislature, and in Indiana a majority vote is sufficient to override a veto. In Maine the opposition of the Blaine faction grows more open daily. The redoubtable "Joe" Manley himself is at the head of it, and a plan has been arranged, it is said, to crush the movement before it gets much further. The bill providing for the reform will be allowed to get into Committee, but will probably never get before the Legislature in any other shape than as a minority report. This combination of opponents to ballot reform—Gov. Hill, Tammany Hall, and the *Sun* in New York, the Blaine Republicans in Maine, and the Dudley Republicans in Indiana—is most instructive. It shows more plainly than columns of arguments that the proposed reform is all that its advocates claim it to be, since the most rascally influences in the politics of all parties hasten to unite against it as their most deadly foe.

The doctrine of evolution, or the "preservation of profitable variations," has a new illustration in the discovery made by Mr. C. A. Alexander of Wilkes Co., Georgia, some four years ago in his cotton-field. He found one stalk of the plant which was different from the rest in the formation of the leaf. Instead of having a solid leaf about four inches wide, and therefore casting a considerable shadow over the plant and furnishing a good, broad surface for caterpillars to spin their cocoons on, this plant had a leaf divided into several partitions or fingers. Mr. Alexander saved the seed of this stalk, and planting it found that it reproduced the same kind of leaf as the parent. He repeated the experiment four years in succession, and found the new leaf reproduced in every case. He found, also, that the new plants were more thrifty than the old. Receiving more sunlight, the bolls were less liable to mildew, and, offering less surface, they were less liable to the attacks of the caterpillar. The *Financial Chronicle* has a leading article on this discovery, which it looks upon as having probably a high economical value. Probably the evolutionists will make much of it also, and tell us how, in the natural course of things, even without the intervention of man, the five-fingered cotton-plant, having once secured lodgment on the earth, would inevitably supersede the old variety, being better armed and equipped in the struggle for existence. If anybody asks how the variation came about, the question cannot be answered.

Mr. Chamberlain's announcement in his speech at Birmingham, that "he will live and die a Commoner," that is, will not accept a title from the Tories, is doubtless intended to quiet the apprehension created in the minds of those Radicals who still cling to him by the great change which has come over him regarding London society. Up to 1886 he was much reviled and despised by Conservatives as a vulgar radical and demagogue, and was never seen in what were called "the best circles." He was then preaching the "three-acres-and-a-cow" gospel, and proposing to tax accumulated wealth as "ransom" due by the rich to the poor. He paid back this odium in kind by deriding the pretensions of London society, and maintaining that the charms of Birmingham and other provincial society were as great or greater. As soon as he turned on Gladstone, however, it became "the thing" in London to take Chamberlain up. The duchesses and countesses went for him with a will, and captured him almost without a struggle, and he was soon within the charmed circle, and seemed to enjoy it immensely, to the dismay of many of his old co-laborers. It would appear that they have lately begun to fear he might even disappear into the House of Lords, and become a "K. G.," like Disraeli. He will probably stay where he is, however, and see what luck is in store for him when the Grand Old Man dies.

Mr. Gladstone has in the last number of the *Nineteenth Century* a review of O'Connell's Letters, of which we had a notice last week. It contains some fresh illustrations of the difficulties which O'Connell had to contend with in the House of Commons, in addition to that which we quoted from Richard Cobden. Cobden said in one of his letters that, although O'Connell "always treated him with friendly attention," he "never shook hands with him or faced his smile without a feeling of insecurity; and as for trusting him in any public question where his passions or his vanity might interfere, he would as soon have thought of an alliance with an Ashantee chief." So he remained silent on Irish affairs for eight years in the House of Commons, because he disliked O'Connell's looks and manners. And yet O'Connell opposed the corn laws of 1815, and steadily supported Cobden in his crusade against them from the moment he entered the House of Commons. Mr. Gladstone now mentions how much he had been impressed in his first session of parliamentary life by the way O'Connell "poured out his wit, his pathos, and his earnestness in the cause of negro emancipation," and says he was "as thorough an English Liberal as if he had had no Ireland to think of." He fought for law reform, for postal reform, for the secret ballot, and, "in short, for whatever tended within the political sphere to advance human happiness and freedom."

Nevertheless, Mr. Gladstone confesses that he too shared the prejudices against him, which were established, "not by conviction, but by tradition and education." Although he never "drew" him in the House by the sort of attacks which the young Tory members now make on Mr. Gladstone himself, the English prejudice against O'Connell and his followers—that is, the Catholic Irish—as expressed by Cobden, he ascribes to the "hatred which nations are apt to feel towards those whom they have injured." But we doubt if its source is as respectable or historic as this. It is rather the dislike which men feel to people of a different temperament, different manners and religion and traditions, which the reserved feel to the demonstrative, the refined to the coarse, the silent to the noisy. We have little doubt that if Cobden or Goldwin Smith had to serve a few sessions in the New York Legislature, their hatred of a large part of the Assembly would be as bitter and as implacable as Cobden's of O'Connell or Smith's of the Parnellites. Goldwin Smith's hatred of the Irish is to him a reason for keeping them close to him, in some place where he can see them and curse them every day. More philosophic politicians, however, think the less politicians who hate each other, without knowing why, see of each other the better, or, in other words, that more or less separation is the best cure for incompatibility.

THE INTER-STATE COMMERCE COMMISSION'S SECOND ANNUAL REPORT.

THE work of the Inter-State Commerce Commission has increased in variety as well as in volume. It has gradually divided itself into three distinct departments instead of one. It was at first supposed that the Commission would be merely an administrative body, exercising a sort of supervisory power over the railroads in connection with the operations of the Act. But the course of events soon made the work of the Commission itself approach more nearly to a judicial character. It was occupied with interpretation rather than with supervision. Cases were presented for decision which involved a most careful discussion of principles, and where each particular decision furnished precedents for a hundred others. So important did the preparation of these opinions become that the Commission had little time for its purely administrative duties. These were at first left under the general control of the Secretary, but were soon put into the hands of a separate and almost independent officer —Mr. McCain. Some idea of the extent of his work may be obtained from the fact that no less than 270,000 tariffs have been received and filed, nor does the number show much sign of diminution. They are still coming in at the rate of 500 a day, and require a force of fourteen men to attend to them.

When it came to the collection of railroad statistics, a further subdivision was necessary. The work in its early stages was under the general supervision of Mr. McCain, but it was soon found that he had quite enough to occupy him in connection with the filing of tariffs and with questions which arose in that connection. The result was the establishment of two subordinate bureaus instead of one; rates and transportation being left in Mr. McCain's charge, while Prof. Henry C. Adams was placed in control of the statistical department. It is his work which gives the most opportunity for discussion in connection with the report before us. The statements and conclusions of the Commission, however interesting and valuable, are already familiar. They have, for the most part, been outlined in previous decisions of particular cases. They have been given to the public in the advance sheets of a partial report some little time since. The questions with which they chiefly deal have been discussed in recent numbers of this and other journals, not merely in connection with the report itself, but with speeches like those of Mr. Adams at the Commercial Club or Judge Cooley at the more recent merchants' dinner in Boston.

On the other hand, the work of the statistical department has promised to give much new material. For railroad statistics in this country we have hitherto depended on two sets of publications—the United States Census of 1880 and the successive volumes of Poor's Manual. Each is, to a certain extent, unsatisfactory. The Census was wonderfully well planned and executed; but it could not, in the nature of things, meet all demands. In the first place, it was largely occupied with the descriptive and physical characteristics of railroads rather than with their economical and financial condition. What was done under the latter head was good as far as it went, but it formed only a small fraction of the whole. More than that, it soon became antiquated. The conditions of railroad economy change so rapidly from year to year that what was true in 1880 is largely changed in 1889. The facts were somewhat old when the transportation volume of the census was published. Before we can hope for the issue of the corresponding volume of the next census, many of them will become quite useless. An annual issue is necessary to meet our requirements in this respect. To a certain extent Poor's Manual has filled this want. Considering the difficulties involved in any general collection of American railroad statistics, its publishers deserve great credit; but it was quite out of their power to accomplish all that was desirable. Different railroads made their returns on such different systems that anything like a classification of operating expenses was out of the question. There is no way of telling how much the railroads of the country as a whole charge to transportation account, how much to equipment, or how much to maintenance of way. Even the classification of the different sources of income or the different items in the general balance sheet is subject to great difficulty and more or less inevitable error.

A Government office, with the power not merely to collect statistics, but to prescribe forms of annual reports, has had a great opportunity. It remains to be seen how well that opportunity will be used. The present report is in some respects a disappointment. Prof. Adams was handicapped from the outset by the fact that the schedule of questions in the prescribed form of annual report had been pretty much determined before he came into office. He obviously thinks, though he does not directly say so, that some of them might have been modified to advantage. The persons who prepared the blanks do not appear to have had any conception of the magnitude of the work which they were undertaking. They imposed a task upon the railroads which must cost them hundreds of thousands of dollars in preparing the original returns, and which it will involve great labor and expenditure to digest properly. Not contenting themselves with a few of the more important matters on the lines indicated by the act of Congress, to which subsequent inquiries could be added from year to year, as the necessity was felt for them, the Commission has sought to obtain statistics more complete and more detailed than those of any other country in the world, plus a vast amount of past history which is often obscure and sometimes absolutely unknown to any one living. It is no wonder that the Commission and the railroads were both, to a certain extent, swamped with the work thus laid out. Although the blanks were issued in their final form more than six months ago, it has been impossible to obtain returns available for tabulation from more than about 120,000 miles of railroad, nor have the results from these been put in shape to be printed. The statistician faces his work courageously, but he has not been able to push it forward rapidly.

A more serious criticism is that the few results given us are very far from being correct. Only one table has been published which purports to give complete returns. It is that of railway mileage by States and Territories. A summary of this is given with the proportion of each State to the total mileage of the country, as well as that to each square mile of territory. The report describes these figures as showing "the length of line existing in each of the States and Territories on June 30, 1888." How do the figures compare with actual facts? Idaho is given as having only 63½ miles of railroad; in point of fact, it had about 850. Iowa is credited with 3,497 miles; in point of fact, it had at least 8,300 miles. On the other hand, Illinois is credited with 16,172 miles, or more than 10½ per cent. of the total mileage of the United States; while the proportion of railroads in Illinois to each square mile of territory is made out to be nearly as great as that of Massachusetts, and far larger than that of any other State. But in point of fact, the railroad mileage of Illinois was but hardly 10,000 miles, and there were several other States besides Massachusetts which were better supplied with railroads in proportion to their territorial extent. Other errors somewhat less marked in amount appear throughout the whole table.

What is the explanation of this? In the absence of details, it is impossible to be perfectly sure. But the figures correspond closely to the mileage owned by companies organized in the several States, and it is fair to presume that the table has been made out on this basis. The location of the office making the report rather than that of the railroad itself has been made the standard. For instance, the lines which centre in Chicago and run across the State of Iowa have been credited to Illinois, and have been made the means of adding several thousand miles to the latter State at the expense of the former. Of course, if the results are made up in this way, no special interest attaches to the relation between mileage and area. It becomes a mere accident of finance or corporation law where the mileage is credited. The whole series of calculations is rendered useless. It is a mere chance that many of them come out so nearly right as they do. Kansas, for instance, loses the mileage of companies organized further East, but gains that of the Atchison Line in the Southwest; that the two so nearly balance is a mere accident.

The fact that so serious a mistake has been made in the only complete results which are given us is a clear indication that the office is overworked. If matters cannot be digested more carefully or successfully than this, it seems unfortunate that the attempt should be made to accomplish so much. A few questions carefully answered and well tabulated are worth a great deal more than an

imperfect presentation of a vast number of details. We have no desire to criticise too severely the work of the statistician, surrounded as he is by difficulties; but the results before us furnish a reason for reducing rather than for increasing the amount to be thrown upon his shoulders. We believe that it is far sounder policy to begin by getting a few things correctly, and then to increase the scope of the work from time to time, than to tabulate a great many things carelessly, and trust to a gradual attainment of higher standards of accuracy.

THE RAILROAD AGREEMENT.

THE provisional agreement of the presidents of the railroads southwest of Chicago, adopted at the meeting at Mr. Morgan's house on Thursday, is the most important event in business since the passage of the Inter-State Commerce Act. It is the first rational attempt at self-help since the short-haul and anti-pooling clauses of that Act abolished the old methods of traffic. No such self-help was possible so long as anybody looked to Congress for relief. Those who fancied themselves strong and those who knew themselves to be weak equally felt constrained to carry on a ruinous war until either the Commerce Commission, or the people, or the gods should be moved by pity to do something for them. When all hope of external aid had disappeared, and when self-help was the only alternative to bankruptcy, they began to ask seriously whether they might not find a refuge in the principles of honor among gentlemen and responsibility to their shareholders. Probably the quest would have been unavailing had not the banking-houses taken the initiative. The latter, representing the investing public, and holding the means for building new lines, and able to prevent, or at all events to restrain, the building of such lines, were, of course, a very important part of the railroad machinery of the country. There was no leaving them out. Even if the initiative had come from the railroad men themselves, it would have been necessary to call in the bankers. When the latter took the first step, and said, "We will coöperate to save the investments already made, even if we have to forego some future profits," one formidable difficulty was removed. It may or may not be true that the bankers went further, and resolved in the last extremity to appeal to the shareholders against the warring presidents. What we know is, that they did take the first step, and that the result has been an agreement to transact business on the principle of live and let live, to which honor and responsibility are the indispensable adjuncts.

The agreement provisionally made seems to be sufficient for the time being. But the public have seen agreements so often shattered within a few weeks or months of the signing, that they will doubt the efficacy of this one. Time alone can restore confidence in railroad investments after the many and serious disappointments that have been met with during the past five years. Has the present agreement, if it shall be accepted by all the companies concerned, the elements of permanency? Can any compact of railroad presidents and bankers take the place of that control which must in the long run go with ownership? Can any new understanding resist the powerful shocks that have shattered the old ones, unless the shareholders take the same intelligent interest in the management of their railroad property that they do in their professions, their shops, their ordinary means of livelihood? The stockholders own the railroad, and depute the directors or managers to administer it as their trustees. But the rapid and enormous growth of the railroad system has left the stockholders far in the rear. The decisive feature of ownership, the right to elect directors, has been dwarfed till it is scarcely a reality. Control once secured, the party in power, or a small clique within the party, usually manages to prolong its control until office becomes a personal or family perquisite. They ask officially for proxies, and proxies are indifferently sent to them. Indifference on the part of stockholders has been so common that even their existing powers in this respect are scarcely exercised, while the attempts to improve them by new legislation are few and far between. There are good statutes, here and there, as, for instance, in favor of minority representation or against the official request for proxies; but in most cases the annual meeting is a mere form, in which the candidates and the electors seem alike predestined. The present crisis throws a vivid light on this practical apathy; for the new agreement can produce lasting good only if it leads the way to a fresh and habitual exercise of intelligent ownership.

The response of London to the above action is by no means effusive. It is tinged with the bitter memories of past agreements which have been made only to be violated and to be followed by secret rate-cutting and more savage wars. We have been at pains to obtain the opinions of one of the most conservative railroad men in the country on the underlying difficulties of the situation west of Chicago, for the purpose of learning whether these difficulties are curable or not. We give them as nearly as possible in his own words. In the first place, railroad competition is peculiar in this, that the percentage of the total expense which is practically fixed, and goes on whether much business or little is transacted, is larger than it is in trade generally. Another peculiarity is, that the service which is sold is a commodity that cannot be stored away and kept for a better market. Practically, all of the business is now competitive, although it was not always so; and if a service is not sold to-day because the price is unsatisfactory, that which might have been sold to-day is never sold — and yet a large percentage of its cost, that is, the fixed proportion of the expenses, has been incurred and paid by the company. Thus it happens that there is no other business which is so sensitive to the natural law of competition as the business of transportation by rail. Under conditions of freedom, therefore, the history of railroads in this country is a record of sharp competition, constantly decreasing rates, rapid increase in the value of land, and rapid growth in general trade and manufactures. As railroads increased in numbers, it was found that this sensitiveness to the law of competition tended to carry them to extremes, to wars of extermination ending in consolidation; and as present owners, as a rule, did not wish to exhaust their property for the sake of forcing their neighbors into bankruptcy, even the strongest and best-located lines, and those most likely to survive a contest to the end, were willing to join each other and their weaker neighbors in agreeing upon rates.

But experience demonstrated quite early in railroad development that a mere agreement to maintain rates could accomplish little. It was not difficult for shippers to create suspicion of each other among railroad managers and their necessarily widespread agencies; and with a commodity on hand and for sale which had been largely paid for, and could not be kept for the next day or the next week, it was wise to sell rather than lose the opportunity, even if only a small part of this fixed expense could be recouped. The problem then was to find a way to increase the confidence of managers and agents in each other; and this was to some extent accomplished by appointing common agencies to collate statistics and divide the traffic, or the revenue from it, upon some agreed basis, among the various competitors. This pooling method of management, while far from perfect, was a great help, and was tending towards greater perfection when Congress enacted an Inter-State Law. This law practically denied to railroads the right of combination.

Shortly before the enactment of the law, several new trunk lines had been built or undertaken west of Chicago. Even without the Inter-State Law, it is reasonable to suppose that these new roads, with their inequalities in length and otherwise, would have reduced the revenues of the older lines. There were more to divide the business; and there would have been pretty radical differences of opinion about percentages in the pools and other matters, so that it is more than likely some of the questions coming up would not have been settled without contests and reduced rates. But the Inter-State Law greatly added to the embarrassments of the situation.

Difficult as it is to maintain rates by mere agreements, even among roads which are about equal in point of distance, equipment, and terminals, the difficulty is much greater when inferior roads become parties to the contest for business and to the agreements about rates. It is obvious that an old road, with an established business, having pretty direct lines between commercial centres, can afford to maintain rates and let business go where it will, provided its competitors will do the same thing. But this is equivalent to saying that a new road without an established business, or a road with an indirect or a long line between the same commercial centres, cannot afford to sit still and let the business take its course, because, at equal rates, business will, under such circumstances, go mostly by the older and more

direct lines. It is obvious, also, that the older and more direct lines cannot afford to sit still and permit the new or the indirect line to fix its rates materially lower than theirs, unless by agreement and with proper safeguards, because it would be easy to make differences on certain commodities which would turn the traffic entirely by the new or indirect line. The pools enabled the railroads to meet this difficulty by compensating the lines least able to take care of themselves at equal rates. It seems pretty clear, therefore, that, with the number of new roads west of Chicago and a law against pools, much demoralization was to be expected.

It is easy to say that the railroads can agree upon rates and maintain them if they choose, and all be the richer; so it is easy to say that, if all the nations of Europe would disarm and keep the peace, all would be richer. As a matter of fact, however, the railroads would not all be the richer if equal rates were absolutely maintained, because the inferior lines would get very little, if any, of the competitive traffic under the circumstances. Then, again, the difficulty of agreeing upon through-rates, and of keeping the agreement, if one is made, even among the lines which are equal as competitors for the through-traffic, is much increased by the long and short-haul restrictions of the law, because the road with a considerable intermediate business, the rates upon which are affected by the through-rates, has a very different interest in the through-rates from the road without such intermediate traffic. So it is easy to see that the complications are almost endless. Now, no line, new or old, weak or strong, is going to give up the ghost without a life-and-death struggle. No agreement, whether made by the railroad presidents among themselves, or by the presidents and bankers together, is worth a rush which does not recognize this fact. The law of self-preservation will assert itself always and everywhere. One of two things will happen: either the weaker lines must have business enough allotted to them by agreement to keep them out of the receiver's hands, or the fight must go on until they are worn out, and sold to the stronger at half their cost, as the West Shore Road was sold to the New York Central. If such an agreement can be made, it is obvious that an impartial tribunal must be in session to decide what proportion of traffic ought to and must suffice for the needs of the weaker lines.

If such an agreement be put in force, and maintained for a fixed period, say sixty days, there will be time and opportunity to learn whether economies can be introduced in operation to offset the losses which excessive competition has entailed. Here is a hopeful field for inquiry. Undoubtedly, there has been great waste in the scramble for business. While gross earnings have been increasing, net earnings have fallen off. Some of the increased expenditures, which might have been avoided in the beginning, cannot now be thrown off, but probably much may be curtailed under a supervision in which all have confidence.

POLICIES, SOUTHERN AND NORTHERN.

SENATOR SHERMAN is entitled to great credit for having exposed the utter absurdity of the talk about Gen. Harrison's "Southern policy," of which we have heard so much from Republican organs the last few weeks. On Tuesday, Junuary 8, Mr. Sherman introduced "a bill to make and alter regulations as to the times, places, and manner of holding elections for Representatives in Congress," accompanying it with the following remarks:

"I desire to state that the bill has been prepared by a very able gentleman, familiar with the election laws of both Northern and Southern States. It is absolutely non-partisan in its character. It contains all the provisions, so far as I know, that have ever been suggested with a view to securing an absolutely fair and just election in every part of the United States. It is confined to the election of members of Congress. It is uniform, and modifies the regulations and laws of the several States so as to embody, I think, as perfect a form of election law as can be devised or gathered from the election laws of the several States. Many of its provisions are rather novel to me, because they are founded upon the laws of the Southern States, with which I am not familiar, and many of its provisions are drawn from the laws of the Northern States, where they have been proven by experience to be necessary. I am not at liberty to give the name of the author of the proposed law, because it is not material, and he does not wish to be mentioned in connection with it. He lets the measure stand upon its own merits. I merely make this statement to show that I am not entirely responsible for the bill, although I believe its merits are very marked and deserving of the consideration of the Senate."

The bill in question provides that after May 1, 1890, elections for Representatives in Congress shall be conducted under the system provided for by the bill, and holds out a bribe to the Legislatures of the various States to place the choice of Presidential electors under the same system by an offer to have the expense of the latter election in such case paid out of the Federal Treasury. This distinction is drawn because the Constitution makes the choice of Presidential electors a purely State matter, except in the unimportant detail of the time for choosing them and the day on which they shall cast their votes, which are left to Congress; while Congress is expressly authorized to make or alter regulations as to the times, places, and manner of holding elections for Senators and Representatives, "except as to the place of choosing Senators."

The Sherman scheme authorizes the President to appoint in each State five qualified voters, to be known as the Board of State Canvassers, and in each Congressional district three voters as an Electoral Board. All these are to hold office during good behavior —in other words, for life—subject, of course, to impeachment for misconduct. The Electoral Board of each Congressional district shall appoint a registrar and three judges, not all of the same political party, for each election district or precinct, and may increase the number of voting precincts whenever in their judgment necessary to secure a free and fair ballot. These election officers are to hold their offices for six years, subject to removal for misconduct. These Federal officials are to register the voters, count the ballots, "correct irregularities," and declare whatever result seems to them best.

It will be seen that the Sherman bill would take the entire control of the Congressional elections in each State out of the hands of the people of that State, and place it in the hands of men appointed for life by the President. While undoubtedly within the strict letter of the Constitution, which authorizes Congress to make any regulations it chooses about Congressional elections, the scheme is utterly opposed to the spirit of that instrument, to the traditions of our political history, and to the proper relations between the Federal and State Governments. Undoubtedly, if Senator Sherman had proposed a "rigorous" policy like this for application solely to the Southern States, it would have been heartily endorsed by the Republicans as the right sort of a "Southern policy." But Senator Sherman knows, as scarcely any Republican editors appear to know, that any regulations which Congress may make as to the manner of holding Congressional elections must be uniform throughout the Union, and apply to Maine or California, Massachusetts or Ohio, equally with the South. In other words, if you are going to have a "rigorous" policy in one part of the country, you must have a "rigorous" policy in all parts.

It is amusing to observe the indignation expressed by Northern Republicans who have been demanding that the Federal Government should "do something" about elections at the South when they find that whatever is done at the South must be done also at the North. No sooner was it understood that Mr. Sherman's plan would turn over the control of Congressional elections in Northern (as well as Southern) States to officials appointed in Washington, than Northern Republicans answered that it would never do. Congressman Cooper of Ohio, who is a member of the House Elections Committee, said that he would oppose Federal supervision if it tended to Federal control over State elections. "I do not believe," he added, "there ought to be any invasion of State rights unless absolutely required. Such a broad assumption of power as that proposed by Senator Sherman's bill would receive careful consideration before the Republican members of the Elections Committee would agree to it." Congressman Powell of Illinois, another member of the same Committee, said that the Sherman bill does not strike him favorably, as "it is entirely too sweeping." An attempt at Federal control of elections, he thinks, would probably excite a deal of hostility and fail to accomplish its purpose. No matter how strict the law is, fair elections, in his opinion, depend largely on public sentiment.

In the same vein is the sharp criticism of the Worcester *Spy*, a Massachusetts Republican paper of the highest standing, which, after some reference to details, says:

"A more serious matter is the fact that Senator Sherman's plan would establish a new and distinct system of registration and election in every State, entirely independent of and separate from the State election system; and this intrusion of an external authority, and substitution of a novel and separate election machinery for that which

is familiar, established by State authority, and conducted by local officers, would be unwelcome and irritating everywhere, and not least in those States and communities where elections have always been conducted with substantial fairness. The plan of giving to members of canvassing and electoral boards a life tenure will scarcely commend itself to the general judgment. As politicians, having personal or party ends to serve, they might easily be led into misconduct which would make their continuance in office undesirable, but would not, perhaps, be sufficient to insure their removal by impeachment. Altogether, Mr. Sherman has not, by this bill, enhanced his reputation for statesmanship."

"DELPHI IN THE MARKET."

SUCH was the announcement made on Monday night at a small gathering of gentlemen convened by Bishop Potter to hear from Prof. Norton of Harvard an appeal for funds to complete the purchase. We do not mean Delphi, N. Y., or Delphi, Tenn., or Delphi, Ind., or Delphi, Mo., but the original Delphi in Greece, the seat of the oracle, and the site of the most famous temple in the world. Ever since Greece settled down in peace and quiet, and improved steam communication began to bring her within easy reach of the Western World, eagerness to excavate her soil in search of the remains of her splendid antiquity has spread through the leading western nations, and there has, of course, been more or less competition for excavating privileges. The Germans have got Olympia, the site of the most famous temple of Jupiter, where they have been digging with remarkable results; the Greeks themselves are working at the Acropolis at Athens, and the English and Americans in other places. France, Germany, and England have all had schools, containing corps of explorers, in Greece for some years. The United States have maintained one for the last six years, founded by the Archæological Institute, and supported thus far by contributions from a number of American colleges, most of them ill-able to give.

But of all sites for exploration, none compares to Delphi, the great shrine of the ancient world, where Apollo prophesied for a thousand years, and the Amphyctyonic Council sat. The French some years ago obtained a refusal of it from the Greek Government, and were to have had the final concession under a commercial treaty which has been for some time in negotiation, but which the French Senate has just refused to ratify. This event throws the concession once more open to all the world, and the Greek Government has offered it to the Americans; but it will cost $80,000, as the modern village of Castri, which now stands on the ground, will have to be bought out and removed. It is to raise this sum, if possible, that Prof. Norton, on behalf of the Archæological Institute, came here, on Bishop Potter's invitation. The opportunity will not remain open very long. The French and Germans will jump at it, and in their case the needed money comes out of the public treasury, because it is an old and settled tradition of theirs that the encouragement of art and literature and science is one of the leading functions of government. So that the work of excavation there is sure to be done; but the glory of it and the direct instruction of it will not come to the United States. The railroad from Athens comes within a short distance of the place. In a year Delphi will certainly be not more than half a day from Athens, and Athens will be in railroad communication with the rest of Europe, so that the Castalian spring may before long receive more visitors than it ever did in ancient days.

It, of course, at first sight seems rather hard on the rich men of America, who have to do nearly all that is done to found and maintain institutions of art and learning in their own country, that they should be called on to furnish the means of delving in the soil of Greece for the relics of ancient piety or learning; but, as Prof. Norton pointed out on Monday night, if there be any value whatever in the study, now pursued in our colleges, of the art and literature and philosophy of the ancient world—and nobody denies it some value—it must hereafter, in order to be pursued effectively, be pursued in connection with the explorations which are being carried on both in Asia and Europe on the sites of Greek and Roman and Egyptian temples and cities. These explorations have already almost revolutionized our knowledge of the Greek and Roman world.

The American School at Athens is now in possession of a good house, constantly occupied by a small corps of American explorers, under the superintendence of an "annual director," sent in succession by one of the colleges. It is sorely in need of an endowment of $100,000 to maintain—or as we say, "run"—the house permanently, and keep a permanent director, who would give the work greater continuity and a more intelligent supervision than can be supplied by the annual detail from the United States. A fourth of this sum has been subscribed in Boston. New York is appealed to to make up the remainder. New Yorkers have plenty of money, and have seldom been appealed to in vain; but no such appeal as this has ever been made to their cultivated imagination, and its result will be interesting. The man who feels that America ought to have the glory of laying bare the foundations of the Temple of Apollo and of the hall in which the Amphyctyonic Council sat, may be sure that the culture which is worshipped so much and joked over so much has entered into his veins, though he may not know how.

THE TOTAL SOLAR ECLIPSE.

THE extent of the astronomical harvest gathered in on the afternoon of New Year's Day is already pretty well known, although the critical gleaning of results is as yet only just begun. The daily prints have announced the remarkable good fortune which fell to the lot of the eclipse observers everywhere, in that the area or belt of total obscuration of the sun was practically cloudless throughout its entire extent, from the Pacific Coast to Manitoba. It is doubtful if any eclipse region in the last quarter-century has been equally favored; and although the present number of scientific expeditions has often before been exceeded, in consequence of more attractive weather probabilities or a longer duration of the total phase, there is perhaps the best of reasons for the belief that the outcome of all the observations of this astronomical event will exceed in importance that of any previous eclipse.

This view is, of course, based on the supposition that all the photographic work already done, in the shape of exposing dry plates in specialized cameras and telescopes, comes out on development quite as expected; and the elaborate preparation, the thorough adjustment and painstaking drill, which all the parties for the most part went through with, encourages the belief that no slips worth mentioning have been made. At the same time, the dry-plate photography, now so powerful and helpful an adjunct in all astronomical research, has the significant drawback that the operator who exposes the plates automatically is, to some extent, working in the dark, and has no means of knowing the blunders he may be making until it is too late to correct them.

A fortnight and more ago the most important preparations for the eclipse were noted in our columns, and we have here to call attention to the successful carrying out of all these plans on the part of the astronomers who had made them—to summarize, in so far as present indications will admit, the additions to solar science which appear likely, and to relate the interesting story of the rapid gathering of the news of what the observers had everywhere succeeded in accomplishing.

Harvard's expedition, under the direction of Mr. W. H. Pickering, and stationed in the Sacramento Valley, achieved the most marked success, and one well worthy the ingenuity displayed in the variety and novelty of their apparatus. It seems not too much to hope that their broad spectroscopic attack of the sun's prominences, and the corona particularly, may lead to results which will render this eclipse fully as significant in the solar physics of today as were those of a score of years ago in that time. The detailed forms of this apparatus were such as to include in the most ample manner every part of the coronal spectrum, and with a thoroughness never before attempted. About twenty plates are available for the subsequent study of this spectrum. The great thirteen-inch Boyden telescope, with a lens specially corrected for photographic work, was successfully operated in securing eight large-scale pictures of the sun's corona, and these appear certain to be the finest representations of this strange object ever obtained. Their size is an important consideration, as heretofore the photographs of the corona have mostly required subsequent enlargement, or the application of much magnifying power in making drawings of the details of their filamentary structure. None of these plates are yet developed, but the evidence already in, both in the shape of drawings made by expert artists and of photographic plates already developed, goes to show that this corona is perhaps the most marvellous one ever observed, both in the wealth and complexity of its detail, the irregularity of its structure, and the vast extent of its streamers outward from the sun. The abundant materials just collected will, when fully discussed, contribute in great degree to the further perfection of solar theories. It need only be said here that the type of corona appears to repeat itself in a period about the same as that of the solar spots, the corona of 1889 strongly resembling that

of 1868, as drawn by Bullock and reproduced in Prof. Young's 'The Sun'; also that of 1878, as represented by the work of the eclipse observers in our Western States on that occasion, and abundantly pictured in the reports issued by the United States Naval Observatory. Its general appearance was that of a pyramidal wisp of light extending out zodiacally on the east side of the sun, while in the opposite direction was a much more extensive coronal blaze, cleft near the middle, and quite of the fish-tail type.

About the solar poles the drawings show an interlacing of filaments heretofore unknown, both straight and curved and intertwined in the most intricate forms, and strongly suggesting the plausibility of the notion that the physicist must bestow a deal of labor on the question of their origin and structure if the problems of the sun's heat are to be solved in their most general form. Not less important are the long ecliptic streamers, amply observed both visually and photographically, stretching outward even further from the sun than when they were first discovered in 1878. Their appearance will perhaps go a long way towards supporting the theory of an ecliptic ring about the sun, temporarily formed and maintained during the period of minimum spots.

The quest of the existence of intra-mercurial planets will be conclusively settled, no doubt, on the development of the plates used in the eight-inch Bache telescope of the Harvard party, with which five exposures were made. Other searchers, optically, were unsuccessful; comets, two in number, were reported to have been found, but this was subsequently contradicted on the direct authority of the reputed observer, Dr. W. L. Elkin of the Yale Observatory.

The meteorological observers, Prof. Upton, Mr. Rotch, and others, were enabled to gain much information bearing directly on their line of research. The approach of the moon's cold shadow caused the thermometer to read seven degrees lower, but the fluctuations of the barometer were so slight as to be quite imperceptible. This result is now established beyond reasonable doubt for all coming eclipses, and this instrument may properly be eliminated in the observation of future phenomena of a like sort. The fall of dew is generally influenced by the presence of the lunar shadow cone, but this is quite likely a result of local conditions, as no dew was observed to fall during the recent eclipse. The peculiar behavior of the wind is not easy to account for, but meteorologists have better data now than ever before. It veered about towards the west, and its velocity first diminished, and afterwards increased—perhaps an effect of some change in the vapor conditions of the atmosphere.

The curious stripes of light and dark which always flit across the landscape just before and immediately after the sun's total obscuration, were in some places well marked, and in others only faintly seen, though very carefully looked for. Their behavior is most puzzling, and they will remain perhaps as much a mystery as ever, though Prof. Upton has data for the solution of the problem which have never before been secured. They were very faint at his station at Willow, but he momentarily saw them nearly stationary upon the white screen he had set up to receive them, and accordingly made an exposure with his camera to photograph them. Ordinarily these shadow-fringes are seen swiftly traversing the surrounding objects with a velocity much in excess of that of any human locomotion, and our best theory of their cause makes them an effect of irregular atmospheric refraction. They seem to proceed with the wind, at least in direction; but it is not yet known whether their velocity has any definite relation to the local wind velocity. One observer is reported to have seen the shadow-bands during the period of total eclipse—a novel observation; and others, who were ignorant of the existence of the shadow-bands, describe certain phenomena of the eclipse as "visible wind"—undoubtedly attributable to the shadow-fringes.

The usual natural eclipse-effects were conspicuous, and have been accurately reported in full detail. Domestic creatures of all sorts began at midday their preparations for the night, fowls going to roost, cows coming home, etc., etc.: and Digger Indians were observed to go to bed.

The instructions mentioned previously as sent out by Prof. Todd to many amateurs and intelligent residents along the line of total eclipse, have brought in a valuable return. Nearly a hundred drawings of the sun's corona have been thus obtained at very slight cost, and they show, not only the pictorial effect of the entire object, but the complexity of curved filaments about the solar poles, while many of the observers devoted their attention, with excellent results, to the long zodiacal streamers which were more difficult to depict, as the eyes must be very sensitive to the faintest light, and the greatest care must be exercised to make the streamers visible at all and to prevent ocular deception. The main reliance of astronomers for information of the appearance of these strange and puzzling phenomena must rest upon the optical sketches willingly contributed in this manner. The photographic plates are hardly sensitive enough to record them in the brief duration of total eclipse, and the professional astronomers have themselves been too busily occupied with their own apparatus to take the time to draw them.

A matter of interest in connection with this eclipse, or rather the reporting of the results reached by the numerous observers, as effected by our zealous and enterprising contemporary, the New York *Herald*, is worthy of mention here. Nearly ten years ago, Prof. Todd, in a paper before one of our scientific bodies, directed attention to the fact that the telegraph and cable lines of the globe might advantageously be called into the service of eclipse observers. For example, if an important and novel observation should chance to be made at a station near the west end of the track of totality, it appeared to be feasible to despatch it eastward, in advance of the moon's shadow, to some observer located near the eastern end of the shadow-path, in abundant time for verification of the possible discovery when the eclipse should become total there. Astronomers have not yet carried out this proposed plan, but the operations of the news-gatherers for the *Herald*, under the immediate supervision of Prof. Todd, have proved the idea a perfectly practicable one. For the purpose of testing the feasibility of this suggestion, and with its usual liberality in all matters scientific, the Western Union Telegraph Company gave Prof. Todd the free use of a line some 3,000 miles long, in an unbroken circuit, and reaching from New York city to the principal stations where the eclipse was observed. It was thus possible to secure nearly immediate knowledge in New York of the successes or otherwise of the various parties. Notwithstanding some unavoidable delays, the message communicating the main results of the Harvard expedition was received in the *Herald* office in cipher, translated to the stenographer, written out for the compositor, and the proof pulled and read within an hour of the absolute time when the moon's shadow passed over the eclipse-station at Willow, Cal. The practicability of the telegraph as a possibly useful adjunct in the observation of total eclipses of the sun is thus demonstrated, and it remains to be seen whether astronomers will avail themselves of it on the next favorable opportunity, some ten years hence.

HONORÉ FRAGONARD.

PARIS, December 26, 1888.

THERE are books which speak for themselves, and address themselves to the eye as much as or more than to the mind. To this class belongs the magnificent volume just published by Baron Roger Portalis, under the title 'Honoré Fragonard: His Life and His Work.' As many as two hundred and ten engravings appear in this book, made from the original paintings and drawings of this famous master. Fragonard holds a very high rank in the French school of the eighteenth century, which was almost forgotten after the French Revolution, under the influence of the school of David, but which is now the object of a great return of favor.

Baron Portalis has devoted much time and care to the study of the masters of the eighteenth century, and has already published very interesting works upon the engravers and book-illustrators of this time. Fragonard was one of these illustrators. He made, for instance, a series of fine drawings to illustrate La Fontaine's 'Contes.' Some of these drawings were engraved, and are found in a well-known edition of La Fontaine; some others, made towards 1780, were not engraved at the time. The volume which contained them was bought in 1840 by a bookseller for 800 francs; these fifty-seven drawings were sold in 1844 for 1,200 francs to M. Feuillet de Conches, a well-known collector. Baron Portalis bought them from M. Feuillet de Conches for 17,500 francs. These figures will show how differently Fragonard was appreciated at a few years' interval. But the rise in value did not stop there. These very same drawings were a little while ago bought from a French bookseller, into whose hands they had come, for the sum of 50,000 francs. I give these figures only in order to show how high Fragonard now stands with the lovers of French art, especially of the light art which found its most elegant expression during the reign of Louis XV. In 1865 the brothers Goncourt published an interesting fascicule on Fragonard, in the series of 'Portraits of the Artists of the Eighteenth Century.' Their monograph, however, is imperfect, and they did not know many of Fragonard's pictures and drawings.

Jean Honoré Fragonard was born in Provence, at Grasse, on April 5, 1732. Grasse is the country of perfumes, and furnishes Paris with its flowers. The father of Fragonard was a glove-maker; he ruined himself, and sent his son to Paris. The young man went to the atelier of Chardin, and was recommended to Boucher; he was soon remarked, obtained a prize, and was sent to Rome. He paid a parting visit to Boucher, who said to him, "My dear Frago, [he was always called in this abbreviated manner, and himself signed many of his works "Frago,"] you will see in Italy the works of Raphael and Michael Angelo, but I say to you in confidence, and as a friend, if you treat these fellows (*ces gens-là*) seriously, you are a lost man." Fragonard was much moved by these fellows. He related his first emotions to a

friend: "The energy of Michael Angelo frightened me. When I saw the beauties of Raphael I was moved to tears, and the pencil fell from my hands." He remained for a few months quite powerless, and he only recommenced drawing when he was before such painters as Baroccio, Pietro da Cortona, Tiepolo. His first copy was from a picture of Cortona's.

He became intimate in Rome with Hubert Robert (famous for his views of Rome), and with Saint-Non, the amateur engraver and etcher, an abbé, who took Fragonard with him to Tivoli and to the Villa d'Este. We owe to this journey some of the most beautiful of Fragonard's drawings. They returned together to France, travelling by short stages in a *vetturino*. Fragonard had remained five years in Italy. He soon became acquainted with the littérateurs of the time. Italy had not modified him so completely that he did not quickly feel the influence of the Parisian *milieu;* he soon forgot the severe lessons of ancient Rome, and gave himself up to what is still called the *peinture de genre*, abandoning classical painting for ever. He did well, for even his copies of the classics show how little he was able to enter into their spirit. He was essentially modern, frivolous, addicted to pleasure; he was in harmony with the elegant but corrupt society of the rich *fermiers-généraux* and their wives, of the *abbés galants* of the Saint-Non type, of the famous amateurs of the time, who liked to adorn their rooms with such pictures as "Les Baigneuses," "La Fuite à dessein," "Le Début du Modèle," "La Fontaine d'Amour," "Le Sacrifice de la Rose," "Le Vœu à l'Amour," "La Toilette de Vénus." I give the names of the first pictures which made Fragonard's reputation, and which marked at once the peculiar character of his talent. He became rapidly the favorite of gay society, of the nymphs of the opera and their protectors. In 1770 he began the decorations of the "Temple of Terpsichore," as people called the new hôtel of the famous Guimard. Some of the painted panels of this house have been preserved, as well as the portrait of Mlle. Guimard. Grimm tells a story about these decorations: Fragonard, like most artists, did not much like to receive directions, and did like to work at his own hours. "Will you never be done?" said Guimard to him one day. "Oh! it is all done," said Fragonard. He went away and never came back. David, then quite unknown and still very young, was chosen in his place. Guimard became embarassed in her affairs, and had the curious idea of putting her house in a lottery. There were 2,500 tickets at 120 livres apiece. The house was won by the Countess Du Lau. Fragonard quarrelled also with Mme. DuBarry, for whom he made the decorations of the principal drawing-room of Louveciennes; he kept these decorations for himself, and they remained twenty years in his studio. They are now preserved at Grasse, and they are the best specimens of Fragonard's first manner.

Fragonard married in 1769 Marie Anne Gérard, who was born in Grasse, and had come to Paris, where she made her living by painting fans. This marriage was the beginning of a new life. Fragonard and his wife lived much in the country, and the painter now shows us constantly episodes of rural and family life. He had two children, and they often became his models. If he returns sometimes to his first manner, and paints scenes which, with all their grace, are often immodest, it is because he received special orders from his admirers. However, he delights still to paint love scenes, and with a degree of warmth and animation which has never been surpassed. The Goncourts have, in this respect, compared him with truth to Diderot: Fragonard is as sensual, as fervid. "Does not," they say, "a picture of Fragonard's resemble a page of Diderot?"

Fragonard returned to Italy in 1773, with a friend, Bergeret de Grandcour, who has left a journal of the journey, which is inedited, but which Portalis has seen, and he gives an account of all the episodes—visits to the museums and churches, receptions, dinners at the French Embassy, presentation to the Pope. Bergeret was one of the great financiers of his time, and, like so many of them, had a great love of the fine arts. The long extracts given from the journal are amusing. Bergeret was, however, the poorest of writers; he makes one think all the time of the "Bourgeois gentilhomme." He quarrelled with Fragonard about the drawings made by the artist during the journey; the financier kept them, maintaining that they belonged to him, while Fragonard said that they were his own. The quarrel ended in a law-court, and Bergeret was condemned either to give back the drawings to Fragonard or to pay him a sum of 30,000 livres, which the financier preferred to do. M. Portalis doubts that the sum was ever really paid. He believes that an arrangement took place after the judgment, for he thinks that in his later pictures Fragonard often used the studies made in this second tour in Italy.

Fragonard had now an atelier in the Louvre, and gained about 40,000 francs a year, which was opulence before the French Revolution. This Revolution was a blow to the artist, not only because it altered all the conditions of his life, but also because it substituted an entirely new ideal of art for the ideal of the eighteenth century. Fragonard consoled himself philosophically for his pecuniary losses. He had 18,000 francs in the public funds; when the interest was reduced by two-thirds, he began to dance in his room. "Are you mad?" asked his wife. "No, but I am rejoiced." "Why?" "Because they might have taken everything." The protection of David, who had been one of his pupils, and who was now in the ascendant, shielded him from persecution. By David's influence, he became a member of the National Museum of Art, but he had lost all interest in his own work; the triumph of the new school was too much for him. He tried modestly to change his manner, to abandon his light and graceful compositions; he made himself heavy and what was then called classical, in order to paint, like David, Greeks and Romans. But, as La Fontaine says:

> "Ne forçons point notre talent;
> Nous ne ferions rien avec grâce."

Fragonard is not only beneath himself, he is beneath the most ordinary painters of the school of David, in such compositions as "The Senate Deliberating on Peace or War" and "Shutting of the Temple of Janus." He became very timid, and lived in great fear of the Commune of Paris. He became poor, but he never fell into a state of complete poverty, having many affectionate relations and friends. In 1794 he left Paris for Grasse, his native place, where he became the guest of his friends the Mauberts.

When the storm was over, he returned to Paris, but he was already forgotten: he belonged to another age. The public admired now such pictures as David's "Serment des Horaces"; even his sister-in-law's (Mlle. Gérard) pictures were preferred to his own. In 1806 he was obliged to abandon his apartment in the Louvre (what is now the great gallery had been for two hundred years cut up into apartments, given to artists). He died at the age of seventy-four years, on the 22d of August, 1806, in a house on the Butte des Moulins (the street was entirely cut away during the Second Empire). The work which Baron Portalis has given us on Fragonard is full of curious details; it ends with a complete iconography of the painter, containing as many as 176 numbers.

Correspondence.

THE SOLIDARITY OF REFORM.

To the Editor of The Nation:

Sir: While the result of the late elections seems as bad as possible—a victory of the spoils, by the spoils, and for the spoils, both in the State of New York and in the nation—yet there remains the most interesting political situation known within twenty years certainly. Civil-service reform has been advocated, and a "painful inch" of progress has been made, under one or two administrations, only to discover that further progress is blocked by the want of tariff reform. The beneficiaries of our present tariff give high official position to those who, in return, will guard their interests in Congress, and will influence all appointments in the public service to place men useful to these private interests on guard in their behalf. Therefore, civil-service reform waits on tariff reform.

In the recent educative campaign the workers in the best sense were very hopeful of success at the polls; but there they were confronted with another evil, and met with defeat and great disappointment. The Presidency was bought, we believe. Thus another reform becomes a prominent necessity. Efforts to reform the tariff are seen to be futile until the real will of the people may be registered. Therefore we must now advocate ballot reform. Congress and the Presidency must no longer be for sale to the highest bidder. Perhaps while we address ourselves to the task of realizing this last-named reform, we may find ourselves forced back upon a still more difficult reform—to secure worthy nominations and to protect them from public sale.

It seems to me that our present duty is clear to work toward all the reforms in sight. The intricacy of the snarl in which our inexpedient tariff has involved us is hardly yet apprehended. When once we do extricate ourselves, the steps of our way out will form a most interesting study. Our absorbing study now must be, how to get out.

Two things suggest themselves to me: Between now and 1892 the best ballot-reform bills which can be passed must be pushed to adoption in as many States as possible. Meanwhile, evidence must be presented and arguments must be urged constantly to show the unwisdom of retaining the protective principle in our revenue system. Two classes should be easily won—the laborer and the farmer. The former, by the last campaign, is shown to be more easily won than the latter, and we must have both. Many manufacturers whose raw materials are either directly taxed or are the finished product of other industries, and therefore enhanced in price, might seemingly be brought to reason and a right understanding of the proposed reform.

My own interest is in the problem of gaining the farmer, and to this end I propose a plan and desire suggestions. In the last campaign I sent some money to the National Democratic Committee. Perhaps that money helped to buy "floaters in blocks of five," either in Indiana or (odious thought!) in New York for

Hill. Now I purpose to use some money where it will surely do the most good, as it seems to me. I mean to place a small, sound library of political economy in the hands of a Republican farmer, personally known to me, in each of several towns. The offer will be made to give a full set of these books, or their equivalent in value in other books, to the three protectionists of each region who first read the whole list and report that fact to my agent. The original stock of books is to be a gift to my farmer friend for loaning the books and reporting to me.

My chief difficulty is in selecting the most suitable books. Perhaps a greater one may be to get them read! Such books as that of J. S. Moore addressed to farmers will do little good, and possibly serious harm. Objurgation is not a winning style of presenting our case. I take it that the majority of those who believe they profit by the tariff are not consciously robbers; nor does the farmer believe that he is robbed. Therefore it will only prejudice our case to fume and scold. Both the unconscious robber and the unwittingly robbed must be shown why our present tariff is injurious and therefore unwise. Supposed self-interest supports the system: only enlightened self-interest can overthrow it.

To my mind the books to begin with are: (1.) Chapin's 'First Principles of Political Economy'; (2.) Francis A. Walker's 'Political Economy' (Advanced Course); (3.) Taussig's 'Tariff History of the United States'; (4.) Fawcett's 'Free Trade and Protection'; (5.) Edward Taylor's 'Is Protection a Benefit?'

The long winter evenings are the farmer's time for reading. The books I have suggested may be read in one winter by many farmers. We have four winters for this kind of work before another Presidential election. Before that time, if this scheme proves feasible, it could be applied in manufacturing centres similarly by friends of tariff reform who are intimate with workmen. These little coteries of intimate acquaintances would appreciate the friendly interest manifested in them, and might be stimulated to investigate so important questions.

A sentence on page 93 of Prof. Fawcett's book puzzles me. Can you explain it? It has reference to the United States, and says: "No article, for instance, is subjected to a higher import duty than timber." On the next page he speaks of "protective duties now imposed on imported iron, amounting in some instances to 100 per cent." Timber bears only 18 to 20 per cent. duty, I believe.

I shall be glad to have suggestions which may improve my plan, or which may better the list of books mentioned. Investment now in the next campaign, through the personal outlay of one's own funds, has its advantage, at least, in securing one's contributions against use for purchasing votes. MILLS WHITTLESEY.

LAWRENCEVILLE, N. J., January 7, 1889.

[In the first particular Prof. Fawcett was in error; in the latter quite right—*e. g.*, in the case of structural iron.—ED. NATION.]

"LIBERTY THAT IS ANCIENT."

TO THE EDITOR OF THE NATION:

SIR: Aside from the injustice of protection, there is another aspect of the question that will appeal strongly to men's minds as soon as they begin to look at the case of Protection vs. Free Trade from the moral standpoint: it is the immorality of the mode by which the verdict for the plaintiff has been arrived at in that case. The rule of law and justice and common sense, that the burden of proof rests on the affirmative, has been set aside by those whom the *Nation* aptly calls the "howling dervishes" of protection; the *onus probandi* has been shifted: instead of being presumed innocent until proved guilty, the accused has been presumed guilty, and called upon to prove his innocence—to prove a negative; and, to cap the climax of absurdity, verdict has been pronounced against him without hearing his case at all.

It is assumed here that the burden of proof rests upon protectionism. If any man doubts this, he had better clear his mind upon this point as soon as possible, for to a candid mind the difference is enormous. If the burden of proof rests upon protectionism, then the presumption is in favor of free trade. The affirmative must be proved beyond a reasonable doubt, and, if any doubt exists, we who deny are entitled to the benefit of it.

The advocates of protection, so far as I have examined what they call their arguments, have never undertaken to show that the burden of proof is on their opponents: they have simply ignored the general rule that the presumption is in favor of innocence rather than guilt, of liberty rather than any abridgement of liberty. An unfair advantage is given them in the fact that protection is established. Of this they have availed themselves to the utmost. Precedent outweighs abstract principles; long established custom hardens into law. We have allowed those who profit at our expense by protection to plunder us so long that it doubtless seems to them insolent in us to object at this late day.

"Who'd expect to see a tater
All on eend at bein' biled?"

Protection has everything in its favor but logic and reason, truth and justice. It has prescription, antiquity, and the authority of great names. But the wildest and most baleful delusions have had all these. If Blaine, Sherman, and the Rev. Edward Everett Hale believe in protection, Cotton Mather, John Wesley, and Sir Matthew Hale believed in witchcraft. The fact that a system has existed from a time so ancient that the memory of man runneth not to the contrary, raises no conclusive presumption in its favor. And the thinking world cares daily less and less what great men believe, aside from the reasons on which their opinions rest. A belief, when traversed, must defend itself by argument, and cannot shirk the *onus probandi*. And a system, if it is apparently in conflict with the broad principles of justice established and sanctioned by the experience of the race, must ever hold itself in readiness, when challenged, to prove that it is not really in conflict with those principles. And it cannot shirk the burden of proof.

The general admission of these principles would change the whole face of the discussion. The duty of the average voter would become plain. For the average voter knows the duty of a juryman: it is to find a verdict for the defendant unless the plaintiff makes a case; it is to acquit the accused unless his guilt is proved beyond a reasonable doubt. And that any large number of voters, having examined this great question according to that due "process of law" "without which," says the Constitution, "no person shall be deprived of life, liberty, or property," can honestly say they are convinced that the demand of protectionism to deprive us of our liberty and property is a just and reasonable demand, such as a sworn jury would require, leaving no reasonable doubt—is something which no thinking man will believe for a moment.

Belief is an immoral thing when it is arrived at and held, after the manner of the "howling dervishes," without any adequate examination of the matter under discussion. And the examination should be measured by the gravity of the question rather than the ability of the inquirer. He who lacks the ability to examine should deny himself the luxury of belief, should impose upon himself the duty of doubting, and should give the negative the benefit of the doubt. He who puts his belief in act to the detriment of his fellow-man, as by voting for a policy that deprives them of liberty and property "without due process of law," should feel bound to defend and justify his belief by arguments that appeal to the reason of instructed men. Where is the protectionist that imposes upon himself any such responsibility for his belief? H.

THE CURE FOR NATIONAL CORRUPTION.

TO THE EDITOR OF THE NATION:

SIR: In my mind, the present decadence of church power, the corruption of the civil service, the misuse of the ballot, and other evils not lately discussed by name in your pages are closely linked together as capable of only one cure, and that common to them all, namely, the redemption of the public morality. Missions to city outcasts, as discussed at Chickering Hall, are very noble and godly works; but to begin with or to rely upon them is like trying to correct the bad sewerage of a city by a thorough cleansing of the harbor and nothing more. What this nation needs is, that its farmers, craftsmen, business and professional men shall be first purified; and then, largely as a necessary consequence, the lower classes. I see that things look very badly indeed, both in church and state; that the preponderance of numbers, activity, and noise is greatly in favor of a national progress through increasing immorality to a cataclysm. Especially I dread the paralyzing (I had almost said putrefactive) influence of the present deification of luxury and display, which, among a hundred other evils wrought by it, has turned your city worship into what you have well called a kind of club-matinée, and which is sapping the virtue of the nation in its remotest districts, as far as a newspaper is read or talked about.

But history shows us that a cure has been wrought for other nations as much or worse diseased than ours. Pestilence has done it, and so have war and famine; preaching has also effected it: but in every case the remedial agent has been, in one form or another, the hand of God. Thoughtful men have no patience with dogma; pure "doctrine," so called, has become a weariness to them; the revelations of God's hand in the universe do little more than interest them; church history is a very dry matter of discourse; polemics may fill churches, but they cannot redeem a nation. Yet these comprise nearly all the subjects of present-day preaching; and in them that whole side of Bible teaching which we so urgently need is not found.

Why? Because it can neither be understood nor taught unless it is lived; and in such a moral atmosphere as now pervades our country, such living is very difficult and very rare. But if our preachers were radically convinced, as some few of them are, that religion is a life, an active condition, the most real and best part of existence, an absolute but at the same time delightful necessity being laid upon each one of us to be God's man, and none other's; and if they also held and taught that "doc-

trine" and emotion are not this life, nor even necessary to it—then their preaching would be so full of illuminating and pregnant thought upon the common ways and wants of all, and their services would be so hearty and harmonious, that going to church would be the one pleasure of the week which must not be foregone. To those who entered upon this life, many things would be possible which are now unapproachable or even undreamed of; and many things would be impossible and horrible which are now certainly not greatly condemned in the so-called religious world—among others, such gross vices as peculation, bribery, and malfeasance in office. Moreover, such men's influence cannot fail to permeate those among whom they go. They cannot be moved or restrained by fear or expediency. In store, factory, and farmyard they would be certain to speak and act for the right. They do it now; but how many of them are there?

There is an old English proverb, "You can't make men do right by act of Parliament." And, for my part, I have not much faith in the purification of elections by any legislative reform in the process of balloting. It might work or it might not, as we see by the examples of England and Canada. But a reform of the consciences of intelligent voters, just so far as it extends, cannot fail of a strong effect. I have no knowledge of Canadian preaching, but it ought to be remarked, apropos of the present purity of elections in England, that English preaching concerns itself much more than ours with the daily conduct of the religious life.

To a very great degree this matter lies in the hands of native-born Americans. There can be no patriotic devotion in the half-assimilated mass of foreign immigrants, most of them grossly ignorant, and unbalanced alike in heart and head by reaction from the bonds and poverty of their European lives; but among our native population there are men and brains enough, if there is enough passionate love of the country and the right, to battle with the tide of corruption and to cleanse the stream of politics from its source.

Yours very respectfully, R. K. C.

WHY MICHIGAN WENT REPUBLICAN.

To the Editor of The Nation:

Sir: A correspondent, who signs himself "Michigan," gives your readers to understand that the want of a campaign fund of $100,000 and a good worker at every polling-place were the only things that lost Michigan to the Democrats last November. Organization and money, he thinks, carried the State for the Republicans. The country voter, he says, was corrupted by campaign funds contributed by millionaires. Indeed, one would suppose, to read "Michigan's" statements, that the Democrats were simply unfortunate in having a short supply of millionaires, and that no such thing as an issue or a principle appeared in the contest. A brief review of some of the well known facts of the campaign will serve to show that there were causes at work which must have influenced the vote of the State against the Democrats and in favor of the Republicans.

In the first place, the civil-service-reform policy of President Cleveland found a poor exemplar in Mr. Dickinson, who used the patronage to put down the Congressmen and to create a new Machine. Mr. Dickinson never pretended a liking for civil-service reform; and, by using his power for his friends, he made factions in his own party and thus contributed to Democratic weakness.

Again, Mr. Burt, the Democratic candidate for Governor, on the day before he was nominated, openly repudiated the tariff-reform policy of President Cleveland as represented by the Mills bill. Then, on the day of his nomination, Mr. Burt gave a mild endorsement to the President's position. Genuine tariff-reform Democrats, like ex-Congressman Yaple, were so disgusted with Mr. Burt that they took no part in the campaign, while many old-line Democrats refused to vote for a man whose personal antipathies alone had led him to leave the Republican party. Both Mr. Burt and his companion on the ticket, Mr. Moran, are millionaires, and they spent their money freely during the campaign.

On the other hand, Gov. Luce, Mr. Burt's opponent, had strengthened himself with the people during his first term by standing out for an economical administration of State affairs. Moreover, he was known to be in favor of the most advanced temperance legislation; and though on this account he was badly cut in the cities, he made votes in the temperance counties. Indeed, the temperance legislation enacted by the Republicans during the legislative session of 1887, and the need of completing the work then begun, were the prime causes of Republican success in 1888. The country voter was not a "floater," as "Michigan" charges: he was a temperance man.

Then, too, last year saw the collapse of the old Greenback movement, and the return to the Republican fold of such stray sheep as Regent Moses W. Field and John Heffron—men who had become disgusted with President Cleveland's hard-money policy.

Moreover, the Mills bill seemed to be aimed at every Michigan industry—salt, lumber, copper, iron, and wool. Many Democratic farmers voted with the Republicans, and in the upper peninsula the fact that almost all the mines were running without labor troubles made it easy sailing for the Republican protectionists in that quarter. This result might have been due to the ignorance of political economy; but it certainly was not brought about by lack of funds, because Mr. Burt had been working that section for more than a year.

I agree with "Michigan" that the Michigan Club and its branches were a great help to the Republican party. The annual supper of that club last year was attended by Harrison, McKinley, Hawley, and Cannon, each of whom was eagerly listened to by Republicans from all over Michigan. But the club has never been a machine nor a distributor of a corruption fund: the branches have been debating societies, and the headquarters at Detroit have been used as assembly rooms for visiting-statesmen.

Without stopping to discuss the past of Michigan politics, as exemplified by Gen. Alger or Senator Stockbridge, and without waiting to peer into the future to estimate Mr. Blodgett's chances for the nomination for Governor, a word should be said about Senator Palmer's successor, James McMillan. It must be supposed that the man who was the unanimous choice of the overwhelming majority of Republicans in both branches of the Legislature must have some qualities beside his money to commend him. Mr. McMillan is not a lumberman, as "Michigan" claims. He is a manufacturer, an owner of steamboats, a president of railroads. In all these fields of industry he has been successful in the face of the severest competition. He has helped others to fortune, and he has quietly and persistently worked out plans of far-reaching benevolence. Throughout the State he is regarded as a man of great financial ability, of cultivation, and of genuine public spirit. In politics he took the leadership of his party when no one else would take it in 1886, and by his sagacity and his systematic work a victory was won when defeat seemed certain. In that campaign the temperance issue was made prominent, and a representative farmer headed the ticket.

When Senator Palmer became tired of senatorial life, Mr. McMillan was the unanimous choice of the Republicans of the State, because he had proved a good political leader, and because it was believed that his business experience would make him the best representative the State could have when questions of the tariff, of transportation, and of the surplus should come up. On one occasion before the election, I asked Mr. McMillan if he proposed to interfere in the election of members of the Legislature, and he said: "I do not consider it necessary for me to go to the Senate; and if I cannot be elected honorably, I do not care to be elected at all." As it happened, there was not even a temptation for him to interfere, for his election was certain.

Lastly, there is a concrete case to show how far "Michigan" was from the truth in his assertions about bribery. The Democratic candidate for Congress in the Fifth District is known to have spent a large sum of money—probably $20,000—and to have had an excellent organization; moreover, he had rural communities to deal with. Hence, according to "Michigan's" theories, he should have been elected. As a matter of fact, he was defeated by Mr. Brewer, who spent little money, but who is very popular.

The fact is, that Michigan is Republican for exactly the same reason that the New England States are Republican: the sons follow in the footsteps of their fathers. C. M.

Detroit, January 7.

THE COUNTING OF THE ELECTORAL VOTE.

To the Editor of The Nation:

Sir: The adequate review of Prof. Bryce's 'American Commonwealth' in the last two numbers of the *Nation* will be of service to many who cannot at once give to the book the earnest study which the reviewer recommends. Meantime I have cut the leaves of my copy, and have "read with the fingers" a few pages. On page 44 of vol. i, this sentence caught my eye: "The Constitution seems, though its language is not explicit, to have intended to leave the counting of the votes to the President of the Senate (the Vice-President of the United States); and in early days this officer superintended the count and decided questions as to the admissibility of doubtful votes."

I write inquiringly. Is this opinion of Prof. Bryce the final opinion in the United States in a question which twelve years ago brought us to the edge of the pit? When Mr. Garfield opposed the passage of the Electoral Commission Bill his attitude was very dramatic as he spoke the words: "I pillow my head on the words of Chancellor Kent: 'I presume, in the absence of all legislative provision on the subject, that the President of the Senate counts the votes and determines the result.'" But, as was then pointed out, this is no final judgment of Kent. It only "presumes," and it acknowledges ultimate Congressional authority. The enactment of the Electoral Commission Bill by Congress, and its signing by the Executive, did not sanction, but virtually denied, the view expressed in this tentative way by Kent and adopted as conclusive by Garfield.

Mr. Bryce might hold that the Constitution

does not clearly point out who is to count good votes and reject bad ones; but it is difficult to understand how any one who has carefully studied the debates of the Convention of 1787 can hold for a moment that the members of that Convention (and therefore the Constitution) "intended" to leave the possible choice of the President to a single individual who, as President of the Senate and a candidate, might make himself President. The Constitution not merely "seems to have intended," but does say, that in case there is no majority of the electors for any one candidate, the election shall be given to the States as nationally represented in the House. Can it "intend" to leave an even more obscure expression of the people's will to one man? This construction of the Constitution, to which Prof. Bryce lends the very great weight of his opinion, some Americans have thought was put aside by the people of the United States when they accepted the Electoral Commission Act, influenced thereto largely by the masterly reasoning of Senators Conkling and Edmunds. If Prof. Bryce's opinion prevails to any extent this side of the Atlantic, is there safety outside of a sixteenth amendment to the Constitution? May I ask your opinion?

Respectfully yours, AUSTIN SCOTT.

RUTGERS COLLEGE, January 10, 1889.

[Mr. Bryce is evidently touching the point very lightly, and would hardly wish, we should surmise, that "very great weight" should be attached to this intimation. Apart from a mere question of counting, or of what the Constitution "intends" upon a topic not mentioned, we suppose it to be fairly well settled that the power of passing upon doubts raised as to the electoral votes is, in some form or other, in the two Houses of Congress, rather than in the Vice-President. That there have been doubts upon the subject from the beginning, and that the matter is quieted for the present by the Electoral Count Bill of 1887 in the sense above indicated, are facts probably well known to our correspondent. An amendment was proposed in the Senate as early as 1798, but not adopted, which gave to the Senate the settling of questions relating to the President, and to the House, of questions relating to the Vice-President. Does our correspondent know of Mr. O'Neil's valuable little book upon 'The American Electoral System'?—ED. NATION.]

THE UNION SAVED—AND DEVOURED.

TO THE EDITOR OF THE NATION:

SIR: The last number of the *Nation* contains, under the head of "The Next Pension Raid," thoughts that should arrest the attention of every intelligent citizen. It is more than a national calamity that our glorious volunteer army of the civil war should so far descend from its high estate as to demand largess for its past services, and thereby dim the record of that heroic period. The inclosed newspaper slip points out the tendency of these pension raids in sufficiently forcible terms, and is the more effective as being taken from a journal well known to be a leading Republican organ (St. Louis *Globe-Democrat*):

"Lord Wolseley not only tells the English that they have no adequate home guard and safeguard against invasion, but he jeers quietly at the United States for its enormous expenditures on military matters. To be sure, we have an army of only about 25,000 men, but our pension list is extraordinary and enormous. So far, this has multiplied on the plea of gratitude for a Union saved. It is, however, not desirable to have the Union devoured after it has been saved. The facts, not to be blinked, are that a good deal of pension money goes regularly to persons who have no decent reasons for taxing their neighbors for their support. The pension system needs to be economically handled to avoid breeding in the people a pauper sentiment. It is doing a great deal too much in the way of creating national mendicancy. It is time to go slow."

It is certain that a feeling has been aroused and fostered, that every soldier should receive a monthly largess, irrespective of condition, or length of service, or present state of health. This is simple corruption.

Very respectfully, CHARLES A. TODD.

ST. LOUIS, January 7, 1889.

THE KINSHIP OF MEN.

TO THE EDITOR OF THE NATION:

SIR: I cannot tell from your review of Kendall's 'Kinship of Men' whether the author claims originality for the discovery that every man has two ancestors in the first degree, four in the second, eight in the third, and so on to 1,048,576 in the twentieth, etc., etc.; but certain it is that Blackstone was ahead of him. In the chapter on Descent (II. Com., ch. 14) you will find the same calculation; but the wise old father of the law, after showing to what enormous figures a man's collateral relations would rise if this calculation were free from fallacy, adds: "And if this calculation should appear incompatible with the number of inhabitants on the earth, it is because by intermarriage among the several descendants of the same ancestor, a hundred or a thousand modes of consanguinity may be consolidated in one person, or he may be related to us in a hundred or a thousand different ways."

Mr. Kendall's idea that the knowledge of men that they are related to each other will have a restraining effect on their intercourse, has received a curious confirmation in the experience of a distinguished social philosopher at the tomb of Adam. "How touching . . . thus to discover the grave of a blood relation. True, a distant one, but still a relation. The unerring instinct of nature thrilled its recognition. The fountain of my filial affection was stirred to its profoundest depths, and I gave way to tumultuous emotion" ('Innocents Abroad,' ch. 53.) With so striking an illustration of the force with which the recognition of kinship will appeal to one, who can say but that Mr. Kendall's predicted millennium only awaits the general acceptation of the truths he urges? R. H. N.

PHILADELPHIA, January 6.

PARISH WORK OF SYRIAN MISSIONS.

TO THE EDITOR OF THE NATION:

SIR: In a recent number of the *Nation*, one of your correspondents, in writing of missionaries, says, "In the larger towns in Turkey, as for instance, Beirût, the missionaries live in good and often handsome houses. . . . They are far better off than country clergymen at home, because they preach but few sermons, and have absolutely no parish work."

Last year I passed five months in one of the larger Syrian villages not far from Beirût, and had opportunity to meet the mission circle, and to become in a measure familiar with their work. The impression they gave me was that of a very busy and earnest set of men and women. Dr. Jessup, pastor of the Beirût church, preaches every Sunday; and though the sermons may not require the same kind of preparation as sermons for a western audience, they demand one peculiar to the people, and one that a western preacher would find it difficult to give. When the Doctor's family flee to the mountains to escape the scorching sirocco of the plain, he remains behind to minister to his people; or if he goes up to his family, he returns to his charge the last of the week by a long ride beneath a Syrian sun from which most of us would shrink. The making and receiving of calls is a great factor in the work, and, with its tedious Oriental ceremonies, is a grand consumer of time.

The ladies do their share of this duty, besides holding women's meetings, teaching in Sunday-school, and going from house to house to read the Bible. The daughter of the missionary in whose home I sojourned made and received last year about eight hundred calls. Most of her visits were made sitting on the floor in true Arab fashion. She has a Sunday-school class of twenty-four, and from this, in the last seven years, thirteen have joined the mission church. The missionary himself was daily besieged in his own house by Arabs of both sexes and all grades who flocked to him for help and advice, making it often difficult for him to get time for his meals. Then there was the burial of the dead, and visits to the aged, sick, and lukewarm. In short, instead of there being "absolutely no parish work," there seemed to be a ceaseless and patience-wearing round.

It is true that some of the Beirût missionaries have pleasant and even handsome houses, but the inmates have private incomes, and what extra comforts they have are not supplied from the pennies "saved up by children for the purpose of enlightening the darkness of the poor heathen." From one of these homes the missionary's wife, with a sister who was visiting her, gave last summer five hundred dollars to the mission to supply deficiencies made by retrenchments of the Presbyterian Board, while another missionary and his wife went to America for three months at their own expense, allowing their salary to be used meanwhile for mission purposes. They are people who, by culture and means, are fitted to shine in the highest circles of America, but they have chosen to devote means and talent to the good of those less favored than themselves. If a man consecrates himself and his money to the cause of missions, he has done one thing more than the "poor missionary."

It may not be generally known that the college at Beirût, though an outgrowth of mission effort, is no longer a mission institution. It has been well endowed by friends in England and America. It has its Faculty, each with adequate salary, so that they are no more dependent on any missionary board than are the Faculty of Harvard. The really beautiful house in which President Bliss resides was built for the college by the late Mr. Marquand of New York. MARY GORDON.

Notes.

'THE CENTURY DICTIONARY,' which has been for seven years in preparation by the Century Co. of this city, is about to be issued by subscription in parts or sections. The total number of pages of this elaborate work is estimated at 6,500, and the complement of quarto volumes will be six. The scheme is encyclopædic, and has been executed with the aid of a large number of technical experts. Its very full vocabulary will abound in illustrative quotations, and some six thousand cuts of a high order will help out the definitions. This

important enterprise will be launched simultaneously in England and in the United States, and it remains to be seen whether the remarkable excess of sales of the just finished 'Encyclopædia Britannica' in this country, as compared with the seat of its origin, will be reversed in the case of 'The Century Dictionary.'

We have been favored, by the way, with the pretty pamphlet "Proceedings at the Encyclopædia Britannica Banquet," held at Cambridge, England, December 11, 1888, to celebrate the conclusion of the great undertaking. We observe that Mr. Adam W. Black remarked, on behalf of the publishers, that the authors' "corrigenda amounted to what was equivalent to setting up the twenty-four quarto volumes from beginning to end twice over"—a formidable showing, indeed, and almost incredible.

Mr. G. Birkbeck Hill has engaged to collect and edit for the Delegates of the Clarendon Press Dr. Johnson's Letters, and ultimately, as he hopes, Boswell's. He desires to have the loan, or very punctilious copies, of any letters by either of these personages in private hands, promising to return the originals without delay. Should such letters chance to have been published, a collation with the manuscript will be a favor, as "Johnson's handwriting is not always clear, and not a few errors have been committed by copyists." Mr. Hill's address is 3 The Crescent, Oxford, England.

The spring announcements of G. P. Putnam's Sons, in addition to 'The Writings of Washington,' to be edited by Mr. Worthington C. Ford in fourteen volumes, include 'English Wayfaring Life in the Middle Ages (fourteenth century),' translated from the French of J. J. Jusserand by Lucy Toulmin Smith, with new and elaborate illustrations; 'A Manual of Oriental Antiquities,' by Ernest Babelon; 'From Japan to Granada,' by James Henry Chapin, D.D.; 'Business: A Practical Treatise,' by James Platt, reprinted from the seventy-fifth English edition; 'Politics as a Duty and as a Career,' by Moorfield Storey; 'The Plantation Negro [of Virginia] as a Freeman,' by Philip A. Bruce; 'The Pocket Gazetteer of the World,' by J. G. Bartholomew; 'The Nursery Lesson-Book,' by Philip G. Hubert, jr.; and 'Principles of Procedure in Deliberative Bodies,' by George Glover Crocker.

Houghton, Mifflin & Co. are to publish a volume of the late Asa Gray's reviews of botanical literature during the past fifty years, selected and edited by Prof. C. S. Sargent.

Belford, Clarke & Co. issue shortly 'Janus,' a novel by Edward Irenæus Stevenson.

A preface by Mr. John Morley is enough to give distinction to any edition of a classic author, and this is what first recommends the complete one-volume edition of Wordsworth's Poetical Works (uniform with the one-volume Tennyson) just issued by Macmillan & Co. It is a masterly combination of biography and critical appreciation, and not at all the perfunctory thing that such performances are apt to be. It will satisfy all but fanatical admirers of Wordsworth, if any such remain, coming very close to Matthew Arnold's ranking of him after Shakspere and Milton—for the best of his work, of course, not the sum. This collection also includes the newly published longish autobiographical poem, "The Recluse," of which we must speak later. In all ways the volume is a desirable possession, printed necessarily in small type and in double columns, and following the poet's later (alas! not always better) readings, and preserving the notes, prefaces, and appendixes of the several editions. The cost is very reasonable.

From the same publishers we have the ninth volume in Browning's freshest edition of his Poems—the second volume of 'The Ring and the Book.'

It was during the height of the Franco-German War that Prof. W. W. Goodwin brought out his amended edition of the elder translations of Plutarch's 'Morals' (Miscellanies and Essays), to which we gave proper attention at the time. Emerson, who furnished an introduction, predicted a perpetual rediscovery and renascent popularity of the Greek author; and in fact a generation has nearly elapsed, and France is again in a crisis, when the publishers (Little, Brown & Co., Boston) undertake a reissue of the five noble volumes which we owe to Prof. Goodwin's care. The style has been somewhat cheapened, both as regards paper and binding, and the public makes a corresponding gain in price of one-third, with no essential loss. It is in this way that one with slender means, aiming to form his library of the best editions, succeeds if he will but bide his time.

Since we are speaking of new editions, we may mention the revival of Capt. Marryat in "Bohn's Illustrated Library" (London: Geo. Bell & Sons; New York: Scribner & Welford). 'Peter Simple' and 'Midshipman Easy' make a beginning. The illustrations are not very numerous, and do not count for much, but the form is acceptable, since there is no library without its Bohn. The compression into one volume makes 'Peter Simple' less readable than the companion volume.

Æsop's Fables, with John Tenniel's designs, furnish the newest (twentieth) volume of the taking "Nuggets Series" (G. P. Putnam's Sons).

A diminutive curio is J. Taylor's "Thumb Bible," "an epitome of the Old and New Testaments in English Verse," and an amusingly audacious attempt. Here is part of the Apocrypha:

> "In many places they do seem to vary,
> And bear a sense from Scripture quite contrary."

The present, published by A. D. F. Randolph & Co., follows the third edition of the 'Verbum Sempiternum' (October 6, 1693). It is forty years since the Chiswick Press gave it a new lease of life.

Cornelius Walford's 'Gilds: Their Origin, Constitution, Objects, and Later History' (London, 1888), is the reprint of a series of articles that appeared in the *Antiquarian Magazine* (1881-1886). They constitute a new and enlarged edition of an article on gilds published in the 'Insurance Cyclopædia,' vol. v., and reprinted in 1880. The author follows Brentano's essay on gilds with more zeal than discretion, seldom advancing an original opinion of his own. The work will be found useful as a repertory of the views of various writers on gilds, as a condensation of the ordinances printed in Smith's 'English Gilds,' and as a compilation of many facts relating to the subject gleaned from local histories. It is the most comprehensive and least original treatise on English gilds that we have met with. Throughout it bears the imprint of encyclopædic crudeness.

When, some eighteen months ago, we reviewed Prof. Comba's 'Histoire des Vaudois d'Italie,' we expressed the hope that a translation would soon render it accessible to the English-speaking public. That hope has been realized in the issue of a version by Teofilo E. Comba (London: Truelove & Shirley; New York: F. W. Christern). The style is naturally a little stiff, the proof-reading leaves much to be desired, and the transfer of the notes and references from the foot of the pages to a mass at the end of the volume is somewhat awkward; but the merits of the original are unimpaired, and it may safely be pronounced the most comprehensive and accurate work on the subject to which the student of religious development can refer. Although the title would seem to limit it to the Waldenses of Italy, it is in reality a history of the movement throughout Europe down to the time of the Reformation. We trust that the learned author will soon complete it with the exceedingly interesting story of the vicissitudes experienced by the persecuted sect to the present day—a story which he is probably able to treat with fuller knowledge than any other living scholar.

'Habits and Manners' is the title of a book "written originally for the students of the Hampton N. and A. Institute," by Mrs. M. F. Armstrong, and now revised by her for more general use, and printed by the Normal School Press, Hampton, Va. It gives homely and sensible advice in regard to refined deportment, suitable dress, personal and household hygiene, building and owning a modest home, etc. Even some cooking recipes are added. An excellent book for the class for whom it is intended, it is not without suggestions which might often be profitable in a higher.

It is quite as true physiologically as morally that in times past childrens' teeth were set on edge by the unripe fruit their parents ate. Attempted "hardening," imprudent diet, neglect of what now are called simple sanitary precautions, certainly made life hard and disease easy. But if not the tree of life, at least that of the knowledge of good and evil is now in perennial blossom. Among its latest fruit is Dr. Louis Starr's 'Hygiene of the Nursery' (Philadelphia: P. Blakiston Son & Co.), which may be recommended as excellent fare for the intelligent mother; but it is only the more than ordinary intelligent mother who will grasp all its directions, and it is clearly the richer class that the author has in mind. It is the climate of Philadelphia that he has before him, with Atlantic City and Cape May within reach. He is writing for his own comfortable people; but, fortunately, rich people's children and poor people's children are run in similar moulds. It is a very good book, although all children may not be able to sleep, as recommended, on "springs and a soft horse-hair mattress, protected by a gum cloth placed under a double sheet" (p. 93), nor all mothers be really the wiser for being told that in teething "there is, in other words, a condition of mild catarrhal stomatitis" (p. 46.) A very curious error of the types, making eight cubic feet (eight hundred being meant) the room space per child, repeats itself in successive sentences (p. 51), while the expression "adult boots" (p. 78) is grotesque, although intelligible. We would not have given so much space to a poor book, and this is a good one for fathers, for nurses, and for mothers to study, in order that children ultimately may profit by it.

In answer to inquiries, we are desired to say that the Secretary of the Dunlap Society is Mr. Brander Matthews (No. 121 East Eighteenth Street, New York), who will be glad to receive subscriptions.

The late Édouard Fournier had great erudition and a great love of books, but he was prone to discover mares' nests and to ride a hobby. A sketch of the history of bookbinding in France, which he wrote nearly twenty-five years ago, is not free from these defects, but it is pleasantly written, and it contains a multitude of references to original authorities and to other authors which are distinctly valuable. A new edition of M. Fournier's book, 'L'Art de la Reliure en France aux derniers siècles,' has just been issued in Paris by Dentu (New York: F. W. Christern), in which we find no

hint of the book's earlier publication by Gay in 1864.

Pending the publication of its sumptuous edition of the 'Philobiblion,' the Grolier Club has issued in a stately volume Mr. DeVinne's admirable account of 'Christopher Plantin and the Plantin-Moretus Museum at Antwerp,' originally published in the *Century*, and now reprinted at the press of the author, with a few amplifications, and with all the illustrations, chief among these being the vigorous pen-and-ink sketches by Mr. Pennell. Mr. DeVinne's most interesting description of the rise of the Plantin printing-office, and of its preservation to the present day, three centuries after it began its noble work, is printed in handsome open type on a broad and dignified page. We may doubt if Plantin at his best ever sent forth a book of better press-work. The illustrations are on separate, unbacked pages, and are printed in changing monotints, with a bizarre effect not unpleasing. The only fault we can find with Mr. DeVinne is with the author and not the printer. Why does he use the French form, *Mayence*, when there is a good old English name for the town of Mentz?

The Arts Club of Manchester, England, has recently held an exhibition of engravings of theatrical scenes and portraits, and of this a catalogue has just been issued, from which we learn that these prints were "lent and arranged by Harry Thornber," and Mr. Thornber is also responsible for the catalogue. This is a well-made and well-printed list, having brief but sufficient biographical notes; it is abundantly illustrated with woodcuts and process-blocks, most of which have seen service before in the *English Illustrated Magazine*. The one possible improvement would be an indication as to the present situation and ownership of the original pictures, in so far as it might be possible to trace them now. There are many good theatrical pictures in the National Gallery, and the collection of the Garrick Club is famous. The gallery of "The Players," the latest of New York clubs, is small but promising; it contains, for example, portraits of Garrick by Zoffany and by Sir Joshua Reynolds, and an excellent full-length of Palmer, the original *Joseph Surface*, by Gainsborough.

Westermann & Co. send us the closing instalment of vol. xi. of 'Meyer's Konversations-Lexikon,' and fourteen parts of vol. xii., bringing the whole work down to Peruzzi. Music, Napoleon, the Netherlands, New York, Austria, Persia, Peru, and North Polar Expeditions are the weightiest articles of these numbers, which are increasingly rich in plates, colored and other, maps, etc. American biographies occur somewhat sparsely. The sketch of Com. M. C. Perry misses his latest biography. Full justice, on the other hand, is done to Mr. Muybridge's revelations concerning animal locomotion (art. *Ortsbewegungen der Tiere*). It seems at this day somewhat disproportionate to give a page and a half to "Ossian." The editor's chat with correspondents is instructive and even amusing. He satisfies, or at least answers, one inquirer as to the post-Adamite superstition that man has one more rib than woman, albeit the gorilla has thirteen. He proves to another that the Mississippi-Missouri river is considerably longer than the Amazon. He names for the benefit of a third the deepest boring in the world, viz., that at Schladebach near the station Kötschau on the Leipzig-Weissenfels Rail-Road, which measures 1748 metres, or more than a mile, and has been six years in the boring.

From the same publishers we have the second volume of Renan's 'Histoire du Peuple d'Israël.'

The compact 'Allgemeine Weltgeschichte' issued in Berlin by G. Grote (New York: Westermann) approaches the end in Parts 89-102, which deal with the period from the downfall of the First to the eve of the Second Empire. Germany and France, of course, hold the leading place in this survey; but Poland, Italy, Greece, Spain—all the countries stirred by the French Revolution of 1848—and England are duly brought into view. The array of portraits is noticeably great, and includes impartially the men of thought and the men of action. We remark among the more curious the early portraits of Thiers and Bismarck, that of Charles Albert, of Guizot, etc. But George Sand, Byron, Capodistrias, O'Connell, Mazzini, Espartero, Kutuzoff, Diebitsch, the Humboldts, the Grimms, Heine, Ranke, Jahn, Hegel, Peel, Chateaubriand, Royer-Collard, Béranger, Bernadotte, Radetsky, Palmerston, Macaulay, Metternich, Blücher, Arndt, Mehemet Ali, Pio Nono, Strauss, Niebuhr—these and many others are likewise portrayed in more or less familiar aspects. There are, besides, excellent facsimiles of manuscripts, and some of newspapers. That of the *Vossische Zeitung* of March 20, 1848, rejoicing that "the press is free," should give rise to reflections in view of the treatment of Dr. Geffcken, forty years later.

Poet-Lore is the title selected for a monthly magazine "devoted to Shakspere, Browning, and the comparative study of literature," which it is proposed to issue from No. 223 S. 38th St., Philadelphia, with the imprint of J. B. Lippincott Co., on assurance of sufficient support. It appears to be an offshoot of *Shakespeariana*, or even its heir.

Some recent portraits of American literary celebrities by Miss Dora Wheeler are to be reproduced as frontispieces to the *Literary News* during the current year.

Both the Yale and Harvard catalogues for 1888-89 are at hand (New Haven; and Cambridge: Chas. W. Sever), each provided with a map of the college grounds, and otherwise filled with necessary information for whom it may concern.

Mr. F. Gutekunst, 712 Arch Street, Philadelphia, has just published a view of the Egyptian Hall in the Masonic Temple of that city, interesting both from the architectural standpoint and as an excellent specimen of the artist's phototype process.

Styles & Cash give a centennial complexion to their calendar for 1889 by a background design illustrating the homes and haunts of Washington. This calendar uses the dial form, with a movable pointer.

The (Syracuse) *Academy* offers a prize of fifty dollars for the best essay on English in Secondary Schools, not to exceed 5,000 words in length, and to reach the office of the *Academy* on or before April 15, 1889, signed with a fictitious name (the author's real name being enclosed in a sealed envelope). The prize essay will become the property of the *Academy*, as will also any papers of special merit that may receive honorable mention. All others will be returned if postage accompanies them.

—A considerable impetus is likely to be given to the excellent work of the Selden Society by a paper, emphatically commending it to the attention of the legal profession, which is signed by very distinguished and competent persons, such as the Chief Justice of the United States, Mr. Justice Gray, Mr. Justice Holmes, Professor Dwight, Professor Langdell, Messrs. R. C. McMurtrie, George W. Biddle, W. H. Rawle, J. H. Choate, and others.

"The undersigned," it reads, "have assured themselves of the great importance of the work of the Selden Society, an organization formed with a view, as one of its main purposes, to put into print certain legal records and manuscripts hitherto unpublished. . . . Such an organization cannot accomplish much unless its membership be larger. It has seemed to us that our brethren of the legal profession might be widely induced to join the Selden Society if their attention were directly called to the matter; for we are persuaded that in every way our laws will gain much from the careful historical and scientific investigations which are now going forward in many quarters, and which this Society will materially assist and promote."

It may be well to add, for the information of intending subscribers, that the subscription is a guinea a year ($5.18), and that this sum may be sent to any of the local secretaries (Mr. A. Tison, 40 Wall St., is the local secretary for New York), or to the general secretary, Prof. J. B. Thayer, at Cambridge, Mass.

—Nos. 1 and 2 of vol. xi of the *American Journal of Mathematics* are on our table. No. 1 is adorned with a fine head of M. Charles Hermite, the distinguished French mathematician, doubtless from a picture taken many years ago, as M. Hermite has just entered on his sixty-seventh year, and this is evidently the head of a much younger man. The two numbers contain ten papers, the contents of which are of that recondite character of which it is impossible, at least in a note, to convey any intelligible idea to the general reader. Two of the papers are reprints, one in French (*Mémoire présenté à l'Académie des Sciences de Lisbonne*) the other in German (from the *Berichte der K. Sächsischen Gesellschaft der Wissenschaften*). The other eight appear to have been written especially for the *Journal*. Of the ten papers, six are in English, three in French, and one in German. Only one paper is by an American author, Prof. W. W. Johnson of St. John's College, Md.; five are by Englishmen, three by Frenchmen, one by a German. Three papers by Prof. Cayley of Cambridge, Eng., give abundant evidence that, although in his sixty-eighth year, mentally "his eye is not dimmed nor his natural strength abated." A paper by another Englishman, Mr. A. E. H. Love, Fellow of St. John's College, Cambridge, suggests a question to the students of heredity. 'Love's Surveying' was a work quite extensively used by land surveyors in this country in colonial times—say, about the middle of the last century. Love is not a very common family name. May there not be some kinship by blood between the present and the earlier mathematician? The contents of these two numbers of the *Journal* confirm the opinion that, whether we look to the ability of the contributors or the importance of the contributions, the *American Journal of Mathematics* is second to no mathematical journal in the world. We sincerely hope that its subscription-list will be so large that it will not be affected by any financial embarrassments of the institution under whose auspices it is published.

—Mr. W. H. Goodyear's 'History of Art' (A. S. Barnes & Co.) is a much less ambitious book than its title would lead one to suppose. It is a manual for elementary classes in the history of art, its chief aim being to point out, in as concise a form as possible, the distinguishing characteristics of the leading styles and schools of architecture, sculpture, and painting through those countries, ancient and modern, which have influenced our own civilization, keeping constantly in mind our connection with, and dependence upon, the past in these matters, with a view to training the taste of beginners, and developing their powers of observation and criticism. The excellence of this purpose is self-apparent, and Mr. Goodyear has executed it skilfully, and with a knowledge of the subject which shows

wide and careful reading in the large field covered. In the very restricted size of the book, as compared with that of its subject, it has been impossible to give more than a record of facts, and the statement of these has necessarily been compressed to the utmost possible extent. Mr. Goodyear has shown his skill especially in the manner in which he has made his condensed sentences express his exact meaning and no more; so much so, in fact, that we fear that their full import will be lost upon all but rather advanced readers. For this reason, we believe his book will be more useful to those who teach than to those who are taught, as very likely he intended it should. The need of expansion is felt on every page; and, in the hands of an intelligent teacher, there is enough suggestion in one of these paragraphs to furnish material for an hour's talk, though on an unaided beginner it would probably make little impression. Regarding the book, therefore, as a teacher's manual, we regret only that, at an inconsiderable increase in size, the author did not double its usefulness by citing the authorities for his more important statements, so that those who wished more information on any subject than he gives might readily learn where to find it.

— The book is plentifully illustrated, its 315 pages containing no less than 216 illustrations, many of which are full-page. Between the merit of these and that of the subject-matter, there is a very decided difference. In view of the publishers' promise to "spare no pains in subsequent editions to make all possible improvement," we refrain from saying too much about them, yet certainly the result of this first edition is melancholy. Had the theme of the book been any other than art, they would have been bad enough; but its object being to cultivate the taste of young students, these grimy, mealy pictures are indeed depressing. It is true, as the publishers say, that the fidelity and veracity of photographs are now conceded to be superior to engravings in reproducing works of art; but the fidelity of poor process-work, abominably printed, in reproducing all the defects and few of the merits of a photograph, and its unhappy faculty of distorting the veracity of photographs almost beyond recognition, seem to us the points most forcibly illustrated in these plates. He would be indeed an enthusiastic beginner who could be inspired to an interest in the subject by looking at them; and we therefore wish Messrs. Barnes & Co. all possible success in their future endeavors to remedy the "shortcomings of the process," of which they seem to have encountered more than their share.

—Mr. Bigelow's edition of Franklin's Works terminates with the tenth volume (G. P. Putnam's Sons). The main portion, if we may so call it, covers but two years (1788–1790); but a generous supplement fills many gaps in the series of letters and documents, and in particular (thanks to Mr. B. F. Stevens) contains a goodly number of letters addressed to William Strahan, the London bookseller. Nothing could be more delicate than Franklin's putting this friend on his guard when introducing one Matthew Harris to him. "Only I ought to acquaint you," he says, "that he has always had a strong *penchant* to the buying of books, and that some late misfortunes have rendered it more inconvenient to him to gratify that taste than it has been heretofore." A letter of condolence to the same correspondent, on the death of his daughter, is a model of feeling expression. Twice, in writing to Strahan, Franklin uses the odd word *smouting* in the sense of a "job" (employment), though in another letter to him, and in one to Noah Webster, also in the present volume, he shows himself a purist towards provincialisms and neologisms. He cannot abide the use of *improve* in the sense of "use"—as, when a country-house has been improved as a tavern; and similarly of the substantive *improvement*. To *notice* for "take notice," to *advocate* anything, to *progress*, to say that one is *opposed* to anything—were all innovations that he abominated; and in typography he would have restored not only the capitalization of substantives but the long *s*, besides borrowing from the Spanish the antecedent interrogative sign. If in these particulars, except the last, he seems not quite like his curious inventive and improvement-making self, there are many anticipations in these pages of ideas and events of a later age. He proposes insurance against the devastation of farms by storms, blight, etc.; by his will he assures his daughter's inheritance for her sole and separate use, "whether she be covert or sole"—evidently on abstract grounds of sexual equality; he encourages the Irish patriots of 1772 to be friendly to America, "with the expectation that our growing weight might in time be thrown into their scale, and, by joining our interest with theirs, might be obtained for them as well as for us a more equitable treatment from this [English] nation." Franklin, furthermore, took a wholesome stand against the neglect of English in favor of the classics. "The still prevailing custom of having schools for teaching generally our children, in these days, the Latin and Greek languages," he regarded as "the *chapeau bras* of modern literature."

—It is highly significant, for the man and for his time, that there is more in this volume on the subject of slavery than in all the preceding nine. It was in 1787 that Franklin was made President of the reorganized Pennsylvania Society for Promoting the Abolition of Slavery, etc., whose mild methods and non-incendiary scheme of ameliorating the condition of the African race is inferrible from the fact that in 1789 Franklin was still denouncing the British for having run off slaves without compensation during the Revolution—the natural right of these poor creatures to freedom not being hinted at; nor did he in his will make any bequest to this Society, though he begged his son-in-law, Richard Bache, to "manumit and set free his negro man Bob." He signed, however, in 1790, the temperate and forcible address of his Society to Congress on the subject of slavery and the slave trade, and himself drew up an address to the public the year before. This latter Mr. Bigelow prints, and he also—with what propriety we cannot judge—puts the caption "To George Washington" over a mere copy of the systematic plan of proceedings adopted by the Society. He assigns it to the year 1789, when, according to Needles ('Hist. Memoir of the Pennsylvania Society,' p. 37) the plan was formed in 1790. About three weeks before his death, Franklin issued anonymously one of his favorite mystifications in the shape of a satire on arguments advanced in Congress on behalf of the slave trade. There was a chance for an explanatory note by the editor on the passage in a letter to his cousin, where Franklin says, London, July 7, 1773: "Upon your recommendation I went to see the black poetess, and offered her any services I could do her. Before I left the house, I understood her master was there, and had sent her to me, but did not come into the room himself, and, I thought, was not pleased with the visit"—at least, he intimates, as having been paid direct, and not by application through her master. This brief record of Phillis Wheatley's visit to England is a sharp reminder that ownership of the body meant also of the talents and souls of men; the African Terence being a parallel to his countrywoman—he with Rome for his adoptive city, she with Boston. We take leave of this important publication with a sense of the untimeliness of Franklin's death. What one of his fellow-founders of the Republic could we wish, to the same degree, to have begun life over again where he ended it, and to have taken part in the great constitutional struggle which ended in the new revolution of 1860-1865?

OUR CRITICAL PERIOD.

The Critical Period of American History—1783–1789. By John Fiske. Boston: Houghton, Mifflin & Co. 1888.

Pamphlets on the Constitution of the United States, Published during its Discussion by the People, 1787–1788. Edited, with Notes and a Bibliography, by Paul Leicester Ford. Brooklyn, N. Y. 1888.

Pennsylvania and the Federal Convention, 1787–1788. Edited by John Bach McMaster and Frederick D. Stone. Published for the Subscribers of the Historical Society of Pennsylvania. 1888.

A History of the New Hampshire Convention for the Investigation, Discussion, and Decision of the Federal Constitution; and of the Old North Meeting-house of Concord, in which it was ratified by the Ninth State, and thus rendered Operative, etc. By Joseph B. Walker. Boston: Cupples & Hurd. 1888.

In a narrow compass Mr. Fiske offers us the ripe fruit of careful studies. He has rightly judged that a clear and compact exposition of the events which attended the formation of the Treaty of Peace between the United States and Great Britain at the close of the Revolutionary War, and a discussion of the effects produced by the Revolution and by American Independence on the internal politics of both countries, deserved to be considered as an indispensable prologue to the historical drama which he proposes to set forth. The acts of this drama are five, being an inquiry into the inadequacy of the Articles of Confederation, the drift towards anarchy visible from 1783 to 1787, the germs of national sovereignty out of which the Constitution grew, the fruitage of those germs in the Federal Convention of 1787, and the final crowning of the Convention's work by the adoption of the Constitution as it came from the hands of its framers.

It is the author's aim to group the facts of his narrative in an orderly series, which shall be logical, not simply because it is chronological, but because the sequence of the events here recited can be seen to follow a natural order in the evolution of political ideas. It is true that the writer deals throughout his whole book with pragmatic history rather than with philosophical disquisition; yet each new configuration in the politics of that period is treated in connection with the moral and social processes which had prepared the minds of men to receive it.

If the reader misses in the present treatise the comprehensive generalizations which give such a fascination to the author's lectures on American Political Ideas, he will find his recompense in the solid facts of history pertaining to the formative period in our annals, and can here see those facts placed in a historical perspective which reveals at once their national grandeur and their "world-historical" signifi-

cance. Mr. Fiske does not overestimate the importance of the epoch of transition when he says that "the period of five years following the Peace of 1783 was the most critical moment in the history of the American people." Instead, however, of quoting the contrary view of Thomas Paine on this point, in order to rebut it, he might have cited the more sagacious and contemporaneous opinion of Dr. Richard Rush, in order to affirm the point of view which seems to him the true one in measuring the proportions of this crisis. Writing in 1787, Dr. Rush rebuked the error of those who, like Paine, "confounded the terms of the American Revolution with those of the [then] late American War." "The *American War*," added Rush, "is over, but this is far from being the case with the *American Revolution*." It is the very pith and purpose of Mr. Fiske in this volume to exhibit the friction of opinions which led the way to the culminating point of the American Revolution as Rush conceived it while the political ferment was seething before his eyes. However true it may be, as John Quincy Adams has said, that "the Constitution of the United States was extorted from the grinding necessity of a reluctant people," it is equally true that this "grinding necessity" was the mortar and matrix in which the Constitution took a form and pressure that commended it to the eventual acceptance of the whole country, in spite of all the relentings and misgivings of a dissentient minority.

As might be expected from an expositor of the philosophy of evolution, Mr. Fiske finds in this doctrine an explanation of some of the things that were wisely done by the framers of the Constitution, and of other things that were not so wisely done because of a failure on their part to apprehend some of the historical processes which were hidden from their political insight, acute and clear as it generally was. Among the most suggestive parts of the present treatise is the forcible presentation which the writer gives of the mistake made by the authors of the Constitution when, in conceiving the place and function of the Federal executive as lodged in the President, they supposed themselves to be following the precedents of the British Constitution, without observing that the traditional theory of the British Constitution in this respect was undergoing a transformation in the practice of that day, and that the executive power of England was slowly but surely slipping away from the King to the Premier of the British Cabinet.

Perhaps a critical reader might object that Mr. Fiske has not applied this canon of criticism with sufficient thoroughness to some other parts of the Constitution. The framers of that instrument certainly failed to observe the evolutionary processes of history in their regulations concerning slavery; for if history had taught anything with clearness in their day it was that slavery had always been an element of danger, and that with each advance in the Christian civilization of the world, before the discovery of America, it had been put more and more "into circumscription and confine." Yet they planted this fungus growth in the very framework of the Constitution. Mr. Fiske states with clearness the compromises by which slavery was "extended and fostered" under the sanction of the Constitution. He says it is difficult to read this episode "without burning indignation"; "but," he adds, "this is not the proper mood for the historian, whose aim is to interpret men's actions by the circumstances of their time in order to judge their motives correctly." He finds an explanation of the concessions that were made on this topic in the alleged fact that it was "quite generally believed [in 1787] that slavery was destined speedily to expire," and in support of this view he cites the fact that such an opinion "was distinctly set forth by many delegates in the convention." We are aware that Ellsworth and Sherman gave expression to *obiter dicta* in this sense, but it is equally true that Madison expressed the opinion that twenty years of slave importation would produce all the mischief that could be apprehended from leaving the States free to import slaves indefinitely, and that therefore the national character would be more dishonored by the express toleration given to the slave trade than if nothing were said about it. The result showed that Madison's forecast was correct. It is important to remark that when Ellsworth expressed the opinion that slavery would "in time not be a speck in the country," he was using the language of an advocate in defence of a compromise which needed, as he saw, every plausible palliation, just as the Virginian opponents of the Constitution, Mason, Henry, and others, are found inveighing against this feature of the Constitution rather by way of a *parti pris* against the Constitution than against slavery; for in the same breath with these denunciations they bemoan (for argument's sake, of course) the absence of a constitutional guarantee for the perpetuity of slave property.

We think it may be doubted whether there was any "general belief" on the subject, such as Mr. Fiske supposes. The subject had not sufficiently penetrated the popular consciousness at that time to form, with any definiteness, the basis of a "general belief" to this effect among the people. The best that could be said by Iredell and others in defence of the slave-trade toleration was that perhaps the subject might be considered with less difficulty after 1808 than in 1787. Dawes and Backus predicted in the Massachusetts Convention that slavery would "die of a consumption" after 1808, for the want of fresh supplies. The fatuity of such an optimistic opinion was sufficiently exposed in the debates of that time. Gen. Heath expressed doubts on this point in the Massachusetts Convention, and so did Joshua Atherton in the New Hampshire Convention, if we may trust the accuracy of his reported language. Madison, in the Virginia Convention, said that slave property would be better secured than before, while Edmund Randolph lamented, "in the calm light of philosophy," that there was not "a spark of hope" that slavery would be abolished "by the operation of the general Government." Of natural causes working to that end he gave no hint. "If the importation of slaves is not to be prohibited before the year 1808, slavery will probably resume its empire in Pennsylvania," exclaimed an enemy of the Constitution in that State, controverting in 1787 the roseate views of Judge Wilson under this head. It would be easy to add to the number of such testimonies. Moreover, if there had been any such "general belief," it ought to have come to the surface in the first slavery debate ever had in Congress under the Constitution. Less than two years after the Constitution had been adopted, we find William Smith of South Carolina openly proclaiming on the floor of Congress that "the best informed part of the citizens of the Northern States knew that slavery was so ingrafted into the policy of the Southern States that it could not be eradicated without tearing up by the roots their happiness, tranquillity, and prosperity," while, speaking for the Southern States, he said that Southern men found slavery "ingrafted in the very policy of the country when they were born," and that they were persuaded of the impolicy of removing it. Dr. von Holst hardly exaggerates the truth when he says that the *noli me tangere* attitude of the South in defence of slavery was as clearly expressed in 1790 as it ever was at a later day by Calhoun and Toombs.

To argue that it was "sound policy" to adopt what Mr. Fiske calls "the odious compromise about the slave trade," because it won South Carolina and Georgia for the Union in 1788, and postponed the irrepressible conflict long enough for the consolidation of a Union sentiment which, in the end, became so strong that it could quell secession and at the same time wipe out slavery "in one stupendous effort," may be a just point of view in the homiletics of history, but it assumes the whole question in issue. Perhaps the best defence that can be made to-day for the slavery compromises is to say that they *seemed* at the time (not that they certainly *were*) the best that could be done with the hard necessities of an evil situation. And perhaps the best defence that can be made for our fathers, in agreeing to those compromises when they did, is to say that they did not know what they were doing. From the moment of those compromises, says Mr. Fiske, "the American people had entered into the shadow of the coming civil war before they had fairly emerged from that of the Revolution"; and when he adds that we "ought to be for ever grateful for the sudden and final clearing of the air wrought by that frightful storm," he at least leaves some room for the query whether the gratitude which requires such a circuitous and expensive route for its perception may not have been the result of mistakes made in 1787, and is therefore better fitted for the meridian of the castle of Thunder-ten-tronckh, as Macaulay might say, than for the figure of history in this modern age. Besides, if the compromises did rest on any "general belief" as to the transitoriness of slavery, it is plain that they were founded on an error of judgment, and would not have been adopted had their consequences been foreseen. In this view, then, their "good policy" becomes a theme of abstract discussion, lying apart from the conscious purpose of their authors in the domain of concrete history.

We believe it is not strictly accurate to say, as Mr. Fiske does in his second chapter, that "in all the thirteen States the common law of England remained in force" at the close of the Revolution "as it does to this day, save where modified by statute." Dr. Wharton has shown in his 'Commentaries,' with a great affluence of learning and illustration, that many of our States, even before the Revolution, had evolved a modified common-law jurisprudence of their own by "the silent method of consuetudinal adoption and reduction." These changes were not the result of statute law, and were not even the creatures of "judge-made law." They were simple declarations of fact deepened into legal precedents by the force of a common usage in our colonial history.

It was a "happy thought" on the part of Mr. Ford to reproduce in this centennial period a select number of the pamphlets which were published for and against the Constitution while the question of its adoption or rejection was pending before the people of the several States. In the broader scope and wider circulation of the modern periodical and of the newspaper press, the pamphlet, as it was known to the fathers a hundred years ago, has doubtless lost some of the circumstantial interest which then gave to it such a value as showing the age and body of the times. Even in the small fasciculus here gathered from the wide field of political pamphleteering in 1787 and 1788, we can learn the political accent of the

living age in almost every variety of tone, and can catch, as from a phonograph, the true and the false emphasis which was then peculiar to the political dialect of the country. The pamphlets judiciously chosen by Mr. Ford to be typical of the political discussion which was waged over the adoption of the Constitution are fourteen in number, nine in favor of the Constitution and five against it. The writers of the pamphlets in favor of the instrument are Noah Webster, John Jay, Pelatiah Webster, Tench Coxe, James Wilson, John Dickinson, Alexander Contee Hanson, James Iredell, and David Ramsay, while those who here represent the opponents of the Constitution are Elbridge Gerry, Melancthon Smith, Edmund Randolph, Richard Henry Lee, and George Mason.

With much that is merely declamatory in these sibylline leaves of a former generation, there is much that is very instructive concerning that "interval and breathing-spell of the times" (to use a phrase of Tacitus) which, more than any other, gave complexion and shape to the destiny of the country. We had at first proposed to lift into relief the salient features of each of the delineations here brought to the portraiture of the Constitution by its friends and by its enemies; but we soon found that such a detail would lead to the needless multiplication of "stock arguments" on both sides. To the personnel of the Convention it is objected by Melancthon Smith of New York that some of the "characters" who composed it were men "of small consequence," and that "a number were suspected of being great public defaulters and of having been guilty of notorious peculation and fraud." Such charges are specimen flings caught up from the mud and slime of the gutters with which to bespatter at that time the reputations of men like Robert Morris and Thomas Mifflin. Even men so grave and respectable as Richard Henry Lee did not hesitate to express the opinion that the delegates from Pennsylvania were esteemed "aristocratical," and that the other ten States had appointed too many men who were connected with commerce and the legal profession. So it came to pass, argues Lee, that the farming and planting interest of the country had been pushed to the wall. The non-attendance of eight or nine men who had been appointed members of the Convention he pronounces to have been "a very unfortunate event" for the United States.

The friends of the Constitution among these writers, especially in the small States, emphasize the equality of the States in the Senate as a strong point gained for the federative principle and for the protection of separate and historical interests at the North and at the South. Noah Webster scouts the objection brought against the importation of negroes for twenty-one years as being "a very pitiful exception addressed to the Quakers." He argues that the Constitution "has wisely left each State to pursue its own measures, with respect to this article of legislation, during the period of twenty-one years," because "an immediate abolition of slavery would bring ruin upon the whites and misery upon the blacks in the Southern States"; while it is argued by Tench Coxe that in the power to prohibit the importation of negroes after 1808 "a solid foundation is laid for exploding the principles of negro slavery." As might be expected, the Northern defenders of the Constitution among these pamphleteers make light of the concessions to slavery. The Southern defenders of the Constitution either make the most of the same concessions, or touch them with a lenient hand. The Northern opponents of the Constitution (Elbridge Gerry and Melancthon Smith) ignore the topic. Among the Southern opponents of the Constitution, Richard Henry Lee admits that the representation of slaves under the Constitution is a "temptation" offered to the Southern States, while George Mason deplores the toleration of the slave trade for twenty-one years as tending to render the United States "weaker, more vulnerable, and less capable of defence." The tenor of these pamphlets on the subject of slavery would seem, therefore, to lend color to the charge of Luther Martin that in 1787 the people throughout the whole country had declined in their former sensibility to the rights of the negro. While Noah Webster was sneering in Connecticut at Quaker squeamishness on this subject, David Ramsay of South Carolina was writing in his pamphlet that, with negro representation, and with the fresh importation of slaves for twenty-one years, the "influence of the South in the general Government would be constantly increasing," and that in fifty years the Southern States would probably have an ascendancy over the Eastern. The "concession" in favor of the Southern States is pronounced by him to be "immense."

Textual accuracy was of prime obligation in a publication like that of Mr. Ford's, but it has not been always attained. For instance, the pamphlet of Richard Henry Lee is certainly the weightiest of all the utterances against the Constitution in 1787. We justify Mr. Ford in selecting the second imprint of this pamphlet as the one to be reproduced in this volume, but we cannot justify the confidence he has reposed in his copyist or in his proof-reader. The sense of certain passages as written by Lee is sometimes obscured and sometimes destroyed by pure interpolation. Sentences like the following (where we place the interpolations in brackets) will illustrate what we mean: "Acquit me, sir, of any agency in the formation of the new system; I shall be satisfied with seeing, if it shall be adopted, [with] a prudent administration." "An army is [not] a very agreeable place of employment for the young gentlemen of certain families." "It is said that when people make a constitution and delegate powers, that all powers [are] not delegated by them to those who govern, is reserved in the people," At other points whole sentences are obscured or emptied of meaning by the substitution of a wrong word for the right one, as, on page 281, by substituting "with" for "wish"; on page 283, "prosperity" for "posterity"; on page 286, "the federal State governments" for "the several State governments"; on page 301, "import duties" for "impost duties"; on page 313, "made" for "make," etc. In punctuation, also, the sins of omission and commission are not infrequent. The passage on page 321, where the writer refers to a set of men who "are called aristocrats, m——ites, etc., etc.," should have been accompanied with a foot-note explaining that in the first edition of this pamphlet the blank is filled out with the word "morrisites." It was a petty slur of Lee aimed at his political *bête noire*, Robert Morris. The passage as it stands is meaningless to the uninstructed reader.

The title of the copious volume which stands third on our list, though strictly bibliographical, is far from being descriptive of the wealth and variety of its contents. We here have in successive chapters a lively account of the struggle that was had in Pennsylvania over the Constitution; of the well-nigh revolutionary wrangle in the Pennsylvania Assembly over the calling of a State Convention to act on the Constitution; of the state of public opinion in Pennsylvania before the Convention met; of the debate in the Convention; of the public temper while the Convention was sitting and after it rose; to which are added the anti-Federal letters of "Centinel," biographical sketches of the Pennsylvania members of the Federal Convention, similar sketches of the members of the Pennsylvania Convention, and an appendix containing James Wilson's Notes of the Debates on the Constitution in the Pennsylvania Convention, and the Replies made at the time by Robert Morris and Thomas Mifflin to the hoarse diatribes with which they were assailed by "Centinel" and other pamphleteers in 1787.

In no State did the fluctuations of political opinion for and against the Constitution rise higher than in Pennsylvania, while from the comparative vivacity of the newspaper press of Philadelphia, it is safe to say that in no State was the swirl of passions at that crisis so faithfully portrayed in all its froth and foam, as well as in the solidity of the arguments which finally carried conviction to the public mind. The names of Benjamin Franklin, of James Wilson, of Robert Morris, of Gouverneur Morris, of George Clymer, and of Thomas Mifflin are inseparably blended with the great charter of government to which they set their hands. And twenty-four hours after the Continental Congress had submitted the Constitution to the judgment of the States, a crisis on the question of its adoption was precipitated in the Pennsylvania Legislature by the effort of the anti-Federalist minority "to break a quorum," and thereby prevent the call of a Convention, at least with the "hot haste" for which the Federalists were contending. The public temper was at once brought to a white heat by the flames of this angry controversy. The popular hustings and the halls of deliberation resounded with high and low debate, while the columns of the newspapers were kept in a constant state of crepitation by the political squibs and firecrackers which were lightly thrown into the air during this carnival of politics. It is alike from the grave dialectics and from the sometimes festive and sometimes sullen humors of that stirring epoch, that the editors of this volume have compiled their materials. As a picture of the times, its curious interest is exceeded only by its historical value. In turning the pages of the bulky book, which we find none too large, and in delving among the husks and shells here gathered from the kitchen-middens of our post-revolutionary era, we have often been reminded of the "recipe for an anti-Federalist essay," which we once met with in a newspaper of the year 1787. The recipe ran as follows: "Take 'well-born' nine times; 'aristocracy' nine times; 'liberty of the press' thirteen times; 'liberty of conscience' once; 'negro slavery' once; 'trial by jury' seven times; 'great men' six times; 'Mr. Wilson' forty times; and, lastly, 'George Mason's right hand in a cutting box' nineteen times. Put all together, boil or roast or fry, and dish at pleasure. After being once used, the remains of the same dish may be served a dozen times *ad libitum*."

The place assigned in that satirical quip to John Adams's famous phrase about "well-born" people does but faithfully represent the part it plays in the letters of "Centinel," as reproduced in this publication. And the place occupied by "Mr. Wilson" in the *olla podrida* above described does but faithfully represent the conspicuous place he is here shown to have held in the public eye, both among those who supported and those who opposed the adoption of the Constitution. The flavor has long since evaporated from the acrid political badinage and the harsh invective of this volcanic period; but it may still instruct the historic mind in the due proportion of things to find Robert

Morris held up to public ridicule as "Bobby the Cofferer"; to see the sedate Gouverneur Morris whistled down the wind as "Gouvero the Cunning Man"; to recognize the grave figure of Judge James Wilson under the nickname of "Jimmy" or "James de Caledonia"; and to hear the name of Franklin bandied about as "a fool by age," and that of Washington as "a fool by nature." Time, which makes all things even, has certainly wrought its revenges on the rough polemics of 1787; but no time can stale the dignity and worth of the high polemic which James Wilson brought to the defence of the Constitution in the day of its supreme trial. It is pleasant to find his work here placed in its proper historical setting, and to see the justice done to his associates which Elliot has failed to render in his inadequate compilations. And we are glad, too, to have the letters of "Centinel" in their integrity and sequence. "Centinel" is the "Junius" of his time, as well by the virulence of his rhetoric as by reason of the shadow which still veils his name.

The politicians who in the late Presidential canvass appealed so constantly to "British opinion" as entitled to decisive weight in the making up of our judgments on questions of domestic politics, will be pleased to find that they are supported in this species of peasant logic by precedents which are venerable for their antiquity, because dating from the very foundation epoch of our Government. A brief excerpt from one of the newspaper essays reproduced in this volume will show the antiquity of such argumentative humility:

"Look around you, Mr. Oswald, ask the British and other foreign agents their opinion of the new Constitution, and you will find them all open-mouthed, bellowing forth its praises. How could it be otherwise, when its principles are so similar to those of the constitutions of their own respective countries, which they have sucked with their milk? It is well known that all the foreign ministers at New York have declared in favor of this new form of government, and it is suspected that they have not been inactive in endeavoring to bring it about."—*Independent Gazetteer, Oct. 15, 1787.*

The index to the volume is very defective, and must have been made by one of Coleridge's "jelly-bag" order of readers. If one wants to know, for instance, what the volume contains in reference to the constitutional provision for continuing the slave trade till the year 1808, he will find a single reference to page 599. The other and sometimes the more important allusions made to the same topic, on pages 135, 141, 182, 278, 374, 521, etc., receive no attention. No consistent principle seems to have been followed in the digest.

Mr. Walker disarms criticism of his little book by telling the reader that its chief purpose is to provoke somebody to make a more exhaustive examination of the subject than it has yet received. Otherwise we should say that it was written to show how little is known about the New Hampshire Convention of 1788 and how much is known about the Old North Meeting-house in Concord. The history of the latter is minutely traced from the year 1726 down to "the night of Monday, November 28, 1870," when "the purifying angel wrapped her mantle about the old building, and transported it heavenward on wings of flame"; while the history of the former is lightly touched, with brief biographical sketches of the more prominent delegates relegated to footnotes or to the appendix. In the appendix, too, we must look for the report of the "speeches" made in the Convention, and the little we have under this head is rather by way of diminution rom former publications than by way of addition to them. Mr. Walker informs us that he can find no contemporary report of Joshua Atherton's anti-slavery speech as contained in Elliot's compilation, where it figures as "the only speech known to be preserved" concerning the adoption of the Constitution in New Hampshire. We now learn that the abstract of this speech was found "by accident" in 1827, and, while it is probably authentic in point of substance, as representing the known anti-slavery views of the speaker in opposition to the clause of the Constitution which countenanced the slave trade, its genuineness in point of form calls for subsidiary evidence. In some slight recompense for this loss, if loss it be, we have a few paragraphs from a speech of Gen. John Sullivan in defence of the Federal judiciary under the Constitution. It must be admitted that the State which won the honor of putting the keystone to the Federal arch by being the ninth of the States which ratified the Constitution, does not appear to equal advantage in the debates of the time. And this singular honor was gained in June, 1788, only because the Convention declined to ratify the instrument at the session of February in that year.

Mr. Walker might have given a dash of "local color" to his narrative if, in referring to John Langdon and Nicholas Gilman as the delegates of New Hampshire in the Federal Convention at Philadelphia, he had explained the reason of their late attendance in that body, and why they were not joined by their colleagues, John Pickering and Benjamin West. Mr. Madison tells us in one of his letters that it was not because of any backwardness on the part of the State to be represented at Philadelphia, but because "the State Treasury was empty," and the substitution of private resources to meet the exigencies of the case was found inexpedient or impracticable. Nothing could better mark the dead point reached in 1787 under the Articles of Confederation than this significant fact.

"Slavery," says Mr. Walker, "died a natural death in New Hampshire," and was never abolished by statute. He might have added that its abolition by statute was defeated. In 1780, when there were only three or four hundred slaves in the State, on a petition submitted to the Legislature by nineteen negroes praying to be set free, it was solemnly resolved by the House of Representatives, after argument made before it by counsel for the petitioners, "that at this time this House is not ripe for a determination in this matter; therefore, *ordered*, that the further consideration of the matter be postponed to a more convenient opportunity." The facts in the case were recalled many years ago in the *Granite Monthly* (vol. 4, p. 110), and form a subject of remark in the current number of the *Magazine of American History*. Mr. Walker explains that the Federal Constitution received a check in the matter of its adoption at the first session of the Convention, and narrowly escaped rejection at the second, because of the popular repugnance to its provisions conservative of slavery. The people saw how hard it was to extirpate slavery, and did not wish to see it fostered or extended. Yet this State, in the subsequent politics of the country, became perhaps the most stalwart of all the Northern States in defence of slavery under the Constitution. The transition from Joshua Atherton, the anti-slavery and anti Federal leader of 1788, to his grandson, Charles G. Atherton, the defender of the Constitutional rights of slavery and the famous author of "the Atherton gag" in 1838, will measure the moral and political interval between the two epochs. The moral and political change wrought in the national temper and character by the slavery compromises of the Constitution deserves to be considered in any philosophical study of the "sound policy" which dictated the concessions made in 1787 under this head.

Ancient Rome in the Light of Recent Excavations. By Rodolfo Lanciani, LL.D., Professor of Archæology in the University of Rome, Director of Excavations, etc. Boston: Houghton, Mifflin & Co.

Prof. Lanciani might well have added, as second title to his fascinating book, 'The Romance of Archæological Research,' for rarely has it happened that a work on the dry and fossilized themes of antiquity possessed so much romantic interest as this, and in no wise to the detriment of its scientific authority. Coming as it does from the man who has directed in general the most important of the recent excavations in Rome, and witnessed the resurrection of the most instructive relics of Imperial Rome, as well as traced, in the evidences of its extreme antiquity, the story of the foundation of the city, this volume possesses, together with the freshness of first sight, almost the force of the last word. But, in addition to this, the Professor has succeeded in preserving to an unusual extent the charm which early classical history has for the student of myths and mysteries. The chapter on the "Foundation and Prehistoric Life of Rome" is one of the best and most solid pieces of archæological reconstruction we have had the good fortune to see, put plainly and logically before an unscientific public. As the direct superintendent of the excavations of the Etruscan necropolis, on the discovery of which Prof. Middleton based his important (if well founded) conclusion, that Rome had before being Roman been Etruscan, and as having seen in their unsophisticated state the *pièces de conviction* of this theory, Prof. Lanciani is in a position to confirm or contradict the theory conclusively; and his declaration that "nothing has been found within the last sixteen years, either in the new or in the old quarters of Rome, which can give any foundation" to it, must be accepted as decisive. This decision, too, is in strict accordance with the opinion which must be arrived at by one who goes over the sites of Etruria, and notices the peculiarities of the civic system of defence and construction of that mysterious race which, established in Etruria long before the foundation of Rome, and to a certain extent involved in early Roman history, had not, by the evidence of tradition, extended its power so far as Rome until Porsenna led it there. The position of the city is one which does not answer the conditions of Etruscan polity. We must refer the reader to the book for the demonstration of the soundness of the ancient Roman traditions as to the foundation of their city so far as the general attribution goes, involving the interpretation of the mythological forms which the original and genuine tradition finally assumed under the universal tendency to anthropomorphism and impersonation. In the chapter devoted to this subject, the fullest fascination of archæological research is to be found.

As belonging properly to the preface where Prof. Lanciani puts it, we must, in justice to the "archæological brotherhood" to which he appeals, protest against the language he makes use of in relation to the vandalism which has characterized the operations of the Roman municipality in the extension of the city. Prof. Lanciani says:

"Coming now to our own times, and the controversy lately raised on the so-called destruc-

tion of Rome, I must acknowledge that the sensation we felt when the controversy was opened was one of disgust rather than of sorrow. These pretended revelations of vandalism, these condemnations of operations characterized at first as destruction of Rome, later on as simple transformation or disfigurement, were levelled at men who, for the last seventeen years, have been constantly on the watch to defend, inch by inch, the archæological ground against the princes of finance and speculation, against engineers and contractors, against the daily press."

It is only necessary to go a little further in the same preface, and quote Prof. Lanciani in defence of the scholars and travellers, the men of taste and the men of sentiment, who have, in common with "the daily press," excited his disgust:

"It is impossible to imagine anything more commonplace, and out of keeping, and shabby, and tasteless, than the new quarters which encircle the city of 1870. . . . The lovely districts crossed by the Via Salaria and the Via Nomentana, formerly studded with patrician villas and gardens, overlooking the Campagna, the valley of the Anio, the Sabine and Volscian mountains, have been transformed into an ugly city of five-storied, anti-æsthetic houses, looking more like barracks and barns than like dwellings for the cultivated inhabitants of the metropolis of a great kingdom. The same practice has been followed in building on the Esquiline, the Viminal, and the Quirinal hills, the plains of Testaccio and of Castello, and the outskirts of the city outside the gates S. Lorenzo, Maggiore, S. Giovanni, Angelica, and Portese. . . . It is difficult to decide who is to blame for the present state of things. . . . In my opinion, the blame must be cast especially on the Roman aristocracy, on our noble landowners, unworthy the great names which, to our misfortune, they have inherited; because no sooner did this degenerate race discern the possibility of raising a little money on the magnificent villas which their forefathers had built and laid out for the comfort, health, and welfare of their fellow-citizens, than they did not hesitate one second to sell by the yard, as it were, the glory and pride of their families. We have seen three of them sell the very gardens which surrounded their city mansions, allowing these mansions to be contaminated by the contact of ignoble tenement-houses. . . . It is impossible to give an idea of the cruel persistence with which foliage, vegetation, trees, everything which is green, are persecuted in and around Rome. Public administrations, state, municipality, and private individuals seem to vie with each other in taking the lead of the crusade against the few samples of vegetable life which the *auri sacra fames* of the Roman aristocracy has left standing. When the municipality took possession of the Villa Corsini on the Janiculum to transform it into a public promenade, they began their work by cutting down the great oaks planted by Queen Christine of Sweden, under the pretence that they interfered with the view."

Yet these are the very "pretended revelations of vandalism" which are the basis of the attacks on the Roman municipality, the only and authoritative cause of all, since it has been absolute in all its regulations and prescriptions throughout the period of reconstruction and demolition of Rome. Not a house can be built or pulled down without the approval of its assessors. Its power over the character of the new Rome was as despotic as that of a Roman emperor, and it has used it to perpetrate what can only be characterized as the greatest barbarism of the nineteenth century.

It is pleasanter to follow our author into the region of research. The chapter on the foundation of Rome cannot be epitomized, and the reader must peruse it carefully. The derivation of the name of the city from *rumon*, a stream, as the city by the running water—the etymology and derivation of the names and usages contained in the Roman myth—are matters of the highest interest, but it is difficult to follow Prof. Lanciani's reasoning when he says: "Finally, it was determined that, although the use of iron may have been known in this district before the total extinction of the craters [of the Alban Mount], no iron is to be found inside or near the cinerary urns above described. The tombs consequently belong to the prehistoric age of bronze." Now, the same hut urns of which the Professor has been speaking occur in various parts of Italy, from Vetulonia to Sybaris, from the northern extremity of the Etruscan state to the end of Magna Grecia, and we find them in connection with amber and iron in the earliest Italic tombs yet discovered, and before any samples of "Etruscan or Italo-Greek pottery," such as the Professor describes in connection with these tombs on the Alban Hills, appear. Hence, if "it follows evidently, from these facts, not only that the Alban shepherds of a well-to-do sort imported foreign earthenware, but also that local manufacturers tried to imitate the shape and the style of the imported specimens by moulding their rough cups and flasks with a certain degree of approximation," it also follows that these tombs are not of extreme antiquity; for the introduction of Italo-Greek pottery is not earlier than the seventh century before Christ, nor does the legend of Rome demand that these tombs should be earlier than that, even as expounded by Lanciani. The fact is, that there is great obscurity about the use of iron, not improbably owing to the fact that we do not make the due distinction between iron and steel. Until the method of tempering steel was known, it was of little use as compared with bronze, as it could not be brought to a useful, durable edge as bronze could. But the whole discussion of the subject of the uses of iron and bronze, the sacredness of the latter, and the profanity of the former (pp. 39-43), is very valuable.

We cannot accompany Prof. Lanciani through the whole of his entrancing volume. It is written in a style which, if sometimes inclined to be overflowery, is never obscure, and does not require a previous archæological training to enable the reader to understand it completely, or a knowledge of Rome or archæology to enjoy it thoroughly. Some faulty idioms and expressions are pardonable in an Italian, *e. g.*, "the finest libraries of the first three centuries of *Christendom*," where Christianity is meant. There is an occasional lapse like this in the contradiction between pages 241 and 301: the huge block of marble in the Colonna gardens is said in the former to be of twenty-seven tons weight, and in the latter of "upwards of one hundred tons."

Memoir of George Edmund Street, R.A., 1824-1881. By his son, Arthur Edmund Street. London: Murray. 1888. Pp. 441.

GEORGE EDMUND STREET was one of the architects in England best known to foreigners, partly because of the important buildings he erected on the Continent of Europe, such as the Memorial Church at Constantinople, the English Church at Genoa, and the American churches at Paris and at Rome, and partly because of the London Law Courts, a building whose record has filled the newspapers for many a year past. He was a designer of the more original sort, artistically-minded rather than of mechanical or engineering tendencies. He was also an ecclesiologist of great devotion and enthusiasm. An architect of such gifts and tendencies who succeeds in gaining popular favor is pretty sure to be heard of, as his works are of the sort which cause discussion and the urging of contrary opinions.

The balance of such contrary opinions would have been, however, most unusually favorable to Street but for the amazing ill-success as a practical building of his most costly and most famous production, the Law Courts on the Strand. It is quite unmatched in the way of inconvenience and clumsiness; crowded, and yet abounding in waste room; having an immense and lofty central hall, and yet awkward in communications and cramped in stairs and lobbies; badly ventilated, badly lighted, badly arranged. As to its artistic quality, there are different opinions, but assuredly hostile criticisms are invited even to the exterior when it is observed that the unusual character of its frontage on street or on courtyard, with its irregularity, its uneven sky-line, its advancings and retreatings, ups-and-downs and ins-and-outs, so strange in a modern city, and so unexpected-looking in a crowded and unpicturesque one, are all of no service at all to the plan and distribution, which remain as bad as if everything had been sacrificed to monumental uniformity and balance. One feature it has, in view of which an enthusiast in pointed architecture would forgive, if he could, all the rest—its noble hall, one of the most beautiful and impressive interiors in the European world, ancient or modern. It is so fine in proportion and in detail that it rises out of all comparison with the modern interiors that we see elsewhere, and demands a rank with King's College Chapel or the nave of a great French cathedral; and yet it is only the main corridor of a mass of building that stretches away on three sides of it, many-storied and vast.

The gifts shown in this are shown also, though not often so clearly, in his smaller buildings, especially in the very numerous churches which Street erected in England. What is often called the Victorian architecture—a modified Gothic, distinguished by a liberal grafting of Italian details upon what is mainly an English plan and general disposition of parts—is perhaps at its best in his hands. It may not be permanently classed among the true architectures of the world, and it seems to be leading to nothing better; but nothing else in European lands and in our time comes as near to being an architectural style, and therefore it is a notable phenomenon. Street's smaller churches are his best work. He excels in daily and familiar tasks: when there is need to "rise to the occasion" he perhaps always fails, in a more or less noticeable fashion, and one should study his scores of parish churches to learn to do him justice.

The bent of Street's mind was towards mediævalism. Probably he would not have become an architect, or, if started in that career, would not have succeeded greatly in it, but for the coincidence of his beginning of independent work with the second decade of the Gothic revival and its rapid advance. As a mediævalist and as an ecclesiologist, he suited the times, and the times called for him. As a designer of unusual delicacy and grace of fancy, he was able to go far beyond his predecessors, and notably the more celebrated ones, as Pugin and Scott, in recommending the revived pointed style to those who asked for art rather than archæology. It would be quite true to say of him that he was rather a student of mediæval art than an architect. We cannot imagine him as consenting, as Scott did, to design a classical building for a Committee which said plainly, "You are our architect if you will work in the Italian style; it is settled that we will not have Gothic—Lord Palmerston will not hear of it." It would be perfectly fair to say of him that he was more a high-churchman than an architect, and that he never seems at home outside of the ecclesiastical work to which he gave the most of his life.

But one gift he had which helped make of

a churchman and a dainty ornamentalist a productive builder—power of hard work. No man ever devoted himself to the fine arts more willing or able than Street to work all day, and all night too, upon occasion. The practice of an architect in a large way of business demands this more often than most other pursuits, because of the multiplicity of details incapable of being passed upon in the lump, and needing separate examination and decision. The banker, who boasts that his day's work is always done with the day, that when he shuts his portfolio at night there is never a letter in it unanswered or an order unprovided for, talks much at his ease. His work can be done in that way; it is capable of being done by employees, and needs the chief only to cut the knots of indecision here and there, and to say *how* it shall be. But the drawings for an elaborate piece of architectural ornament are never done until the work itself is begun. They cannot be made good enough, they cannot be perfected; always there are improvements that might be made. If the principal himself were able to make them all, down to minute details, that would be better. A day's work on them hardly shows: and when the drawing-boards are covered up at night, the golden hours of the day have added only here and there an additional feature, or perhaps have introduced into the design some peculiarities which require to-morrow to be spent in getting rid of them. For such a profession as this, Street was admirable. He was indefatigable; he saw to details, he considered every part of every design as his own work. The practice among busy architects of turning over to their subordinates whole branches of their general work or whole sets of drawings, reserving only their veto and the right of suggestion—this was foreign to Street's ways. It was told of him that he was commonly absent from his office during the day, that his younger draughtsmen saw little of him; but that, on coming to their half-done drawings in the morning, they would find them covered with sketched and often even elaborated modifications and written directions—more than a day's work marked out for them in advance.

In this thorough-going way Street worked from 1850 to 1881, when he died. It is on the whole an exemplary life of toil and achievement which his son had to record, and about it he has written the most ill-arranged, jumbled and rambling book that can be imagined. Nothing can be found in it by chronological order or by subject: there is a small index, but of course not opening up the whole book. Only a few of Street's buildings are mentioned in the text, and the table at the end of the book gives no dates. It is, in short, very inadequate as a biography, or as an account of the English Gothic revival, as seen from the standpoint of one of its foremost champions. Its tone of constant apology, and the uniform use of the title "my father" for the subject of the memoir, are vexatious to the reader. Thus carelessly made, it is unworthy of its subject, and unsatisfactory to any one interested in the man, his work, or his era.

About one-quarter of the volume is an appendix consisting of a series of five lectures, delivered by Street to the architectural students of the Royal Academy in 1881.

The Story of Mediæval France, from the Reign of Hughes Capet to the Beginning of the Eighteenth Century. By Gustave Masson, B.A. [The Story of the Nations.] G. P. Putnam's Sons. 1888. 8vo, pp. 454.

THE title-page of this volume contains a misprint. The story does not end with the beginning of the *eighteenth*, but of the *sixteenth* century, with the death of Louis XII. The history of France is so important, from its central and leading position among nations, the long continuance of its national life, and the picturesqueness and interest of its annals, that it well merits a divided treatment, by which mediæval France and modern France should have each a volume to itself. Even as it is, the history of mediæval France has been shortened; for the independent life of the nation may be said to begin in reality, not with the accession of the Capetian house, but with the division of the empire among the grandsons of Charles the Great.

The style of the writer is not distinguished for graphic quality, but he has enlivened his narration with a large number of incidents and of illustrative extracts in prose and verse (for the interpretation of which a glossary is added, although a translation always accompanies them). The book is distinguished, however, as the author's reputation would lead us to expect, for its scholarly accuracy, and it contains many details that every student will be glad to have in this accessible form. For example, we have not merely an excellent chronological table, in three columns—Political Events, The Church, Science and Literature—but following it a copious list of sources, a list of Chancellors, some tables of Genealogy, and a tabular view of the States-General. The text itself abounds in valuable items of unfamiliar information. We are surprised to find (p. 72) the common story that King John of England was condemned for the murder of his nephew Arthur, when M. Bémont appears to have proved (see *Nation*, December 30, 1886) that the only formal condemnation, to the forfeiture of his fiefs, was on the complaint of the nobles of Poitou, before the death of Arthur. The view taken, moreover, of the Capitulary of Kiersy (p. 5) that it sanctioned "the hereditary transmission of landed property and of all charges, offices, and positions of trust," seems to us quite exaggerated. We would not go to the extreme of some German writers, who seem practically to deny to this capitulary any influence upon institutions; but it certainly was purely temporary and local in its immediate scope, and while it is of the highest value as a landmark and an indication of the drift of events, it cannot be said to have *legislated* the hereditary transmission either of property or of office.

The illustrations are of the best type, the portraits being especially interesting, and the maps are highly to be commended. The proof-reading, however, has not been first-rate. The map of "France Before the Crusades" prints *Lgs* for *Lys*, and *Rouersue* for *Rouergue*, and places Lyons far from its true locality. On page 209 the date 1343 is given for 1363.

BOOKS OF THE WEEK.

Almanach de Gotha. 1889. New York: B. Westermann & Co.
Arm-Chair Essays. By the Author of Three-Cornered Essays. Scribner & Welford.
Arnold, A. S. The Story of Thomas Carlyle. Scribner & Welford.

The Nation.

NEW YORK, THURSDAY, JANUARY 24, 1889.

The Week.

THE action of the Senate doubling the duty on tin-plate is, on the whole, the greatest outrage of recent years in tariff legislation. It is an act to increase the price of every article that comes from the hands of the tinsmith. Almost every town has its worker in tin, who produces articles of household need—pans, pails, cups, baking utensils, cake-cutters, toys, etc. An immense quantity goes into the manufacture of cans for vegetables, fruits, fish, oysters, and condensed milk. Another large industry dependent upon tin-plate is that of roofing. To say that this industry is far greater than that of tin-plate manufacturing would be a very feeble statement, since there is not a tin-plate factory in the country. There is one establishment in western Pennsylvania whose owners would like to make tin-plate if they could have the privilege of taxing the tinsmiths, the canneries, the roofers, and their customers to a sufficient extent, they being the judges of what is sufficient. So gross an outrage will not go unpunished. The workers in tin and the consumers of tin are alive to their own interests, and will make themselves heard and felt. We should have not the least hesitation in making tin-plate the basis and groundwork of the next national election for members of Congress. We welcome the issue heartily, and we challenge Messrs. Allison, Aldrich, and the rest to enact their tin-plate duty if they can, either in this Congress or the next, and go before the country on it.

The imposition or the raising of a duty on an article for the purpose, not of encouraging an existing native manufacture but of calling a native manufacture into existence, is an absolutely new departure in American protection. Mr. Allison explained, on behalf of the Committee, why this addition to the price of the workingman's domestic utensils was made. The doubling of the duty, if the imports remained the same, would increase the revenue by about $6,000,000 annually, and this is to be done on the mere "assurance" of certain persons that they will before long begin the manufacture of tin-plate in this country on a scale sufficient to meet the domestic demand. We do not believe that the Government has ever before entered into a transaction of this sort without exacting security. Everybody else with whom it has dealings—contractors, importers, accounting officers, cashiers, treasurers, any one whom it trusts in the smallest degree—has to give approved bonds for the performance of his engagements. But here an enormous tax is imposed on the poor, in return for the vague "assurance" of certain capitalists whose names are not given, who would be at liberty to change their minds at any time, and not go into the tin-plate manufacture at all, particularly as there appears to be no steadiness in the price of the foreign article. It has been falling for years, and may fall still further so as to make the proposed protection inadequate. We imported in 1887 five times as much of it as in 1871, and the value was only twice as much, showing a decrease of more than half in the cost. The manufacturers who have persuaded the Senate to pass this bill ought to have given security in at least double the estimated amount of the tax, for the creation of the manufacture by a day named, and its regular continuance for an adequate period thereafter.

Few people have any conception of the hidden iniquities of the bill just passed by the Senate. For example, the classification of certain articles of steel, hitherto dutiable at 45 per cent. and 30 per cent. respectively, has been changed. Such changes are always open to suspicion, because it is here that the tariff cracksmen work in the dark. Following an example set by Senator Allison, who, some years ago, made a remarkable exhibit of a similar fraud sought to be perpetrated on the consumers of iron and steel by a change of classification in a tariff bill, we have obtained from an expert in the trade a translation or interpretation of sections 144–147 of the present bill. These sections embrace steel hoops, cotton ties, steel plates and sheets, and a few other articles of common use. For example, duties on steel hoops of various sizes are advanced 28, 30, 37, and 42 per cent. respectively over the present rates. On cotton ties the advance is 55 per cent., on tagger's iron (tin plates) 41 per cent., on steel sheets of various sizes 19, 21, and 26 per cent. respectively. It should be borne in mind that the natural protection due to freight, commissions, insurance, etc., is from 10 to 15 per cent. in addition to the tariff protection. This is a small, very small, part of the iniquity embraced in the bill. In the pocket-cutlery section, duties are raised in some cases as high as 330 per cent., and in the section relating to breech-loading guns, the range is from 35 to 303 per cent., the highest duties being on the lowest-priced articles used by the poorer classes. We do not know that any comment on these facts is called for, except that it is for the public interest, in the large view, that the protected classes, whose mastery over the Republican party is now so complete, should show their hand. Every step they take in the direction of higher duties forces on the battle that must and will be fought out.

The Senate has proceeded from bad to worse in its treatment of the duties on wool, and its latest action would seem to imply an intention to destroy the carpet industry entirely in order to placate the wool-growers. We cannot say that we have any serious objections to this course. The carpet manufacturers have all along agreed with the wool-growers that a system of mutual robbery was good for trade. They have joined in all the schemes up to the present time for restricting foreign commerce. They have proclaimed that the rate of wages depended on the tariff, and have supported all the other protectionist humbugs of the day. Consequently, they are entitled to no sympathy when the hot end of the poker is extended to them. So far as they are concerned, we should not be troubled if the importation of carpet wools were made an offence punishable by death. We are tending that way pretty fast. If the maxims now in vogue in the Senate are correct, why should not all importations be made criminal offences? Carpet wools are not produced in this country. If wages are made higher by restricting importations, why not prohibit them altogether, and thus raise everybody's wages to infinity? The wool schedule, as first reported by the Senate Committee, increased the duties on clothing and combing wools one cent per pound. As the former duty was ten cents per pound, the increase was equal to 10 per cent. upon the existing rate. The duty on carpet wool was left unchanged. The amendment brought forward by the Committee on Monday evening and adopted adds another cent to the duty on combing wool, and raises the duty on carpet wool from two and one-half cents to four cents per pound, so that the increase in the former is equal to 20 per cent., and in the latter 60 per cent upon the present rate.

Senator Sherman, in the course of his remarks supporting the sugar bounty, said that there was good reason to expect a large increase in the production of sugar from beets and sorghum if the proposed bounty of one cent per pound were allowed. He so inferred from the results obtained by the bounty system in Germany and France. At the same time he observed that the duty on imported sugar had been reduced one-half, in the interest of the consumer. He looked to the double stimulus of a protective duty on the one hand and a direct bounty on the other as likely to yield the happiest results in the rapid increase of domestic sugar-production. There was, as is usual in the speeches of the Ohio Senator when his reasoning will not bear close analysis, a good deal left to the imagination of the hearer and the reader. The present duty on raw sugar is 2 cents per pound, or a trifle more. The average rate of duty the past year was 2.08 cents. Since the domestic production of sugar is a mere trifle in the whole mass consumed, it follows that the present bounty on sugar grown in Louisiana, Texas, California, Kansas, Vermont, or elsewhere is exactly the amount of the duty, viz.: 2.08 cents. The Government collects this sum on what is imported, and the planter collects it on what

he produces. Now, the Senate bill reduces the duty on the imported article one-half—that is, 1.04 cent. per pound—and offers a direct bounty of one cent to the domestic producer, and we are told that this transaction is to be a great stimulus to the production of sugar. The sugar-market is to be lowered one cent per pound in the interest of the consumer, and then one cent per pound is to be paid out of the public treasury to the American producer ; and this is called a stimulus.

It appears to us that, instead of being stimulated, the domestic producer is depressed by exactly the amount of the trouble, delay, and expense involved in collecting the bounty. At present he collects the whole of the two cents per pound by the mere sale of his crop; but, under the bounty plan, he must prove his claim, and wait for his money till the Government is ready to pay. The services of a broker will be necessary, as they are in the collection of drawbacks, and such services have to be paid for. In the case of a small crop – and all individual crops of beet and sorghum will be small—the cost of collecting the bounty will be a pretty large share of the bounty itself. In any case, the two items of duty and bounty will be less than the present duty when it reaches the pocket of the producer. All the money paid in the way of bounty, except an inconsiderable fraction, will go to the Louisiana planters. Instead of being stimulated, even they will be worse off than they are now. The example of Germany is not at all to the point, because the bounty in Germany is a bounty on exportation, and not on the product consumed at home. The country produces more than it consumes. The bounty is paid on the surplus, and it is to this extent a real bounty, and not a fictitious or imaginary one.

Near the close of the Presidential campaign the Boston *Post* published the following statement, which was extensively copied in the press, but which most people have probably forgotten :

> "It has been whispered around Wall Street for several days that Tom Platt, through various agents, and particularly Mr. John Wanamaker of Philadelphia, has made many pressing appeals to four land-grant railroads for a large sum of money, to be used by the Republican managers in this city for election purposes. The railroads mentioned are the Union Pacific, Central Pacific, Northern Pacific, and Atlantic and Pacific, and the sum mentioned is $350,000. There is good authority for saying that this request was presented to President Adams of the Union Pacific for that company's share, and by him indignantly refused."

There is no suggestion here of an offer of the Interior Department to the railroads in question in return for the money asked for ; nor is there any suggestion of impropriety in the premises, except such as may be inferred from the fact that $350,000 is a very large sum of money to be used honestly in the last week of a campaign, and that corporations having close relations to the Government do not usually pay their money without the expectation of a *quid pro quo*. It has never been charged that the railroads paid this or any other sum to Platt, or to Wanamaker, or to anybody. The matter had passed out of recollection until recalled by the Platt-Bateman correspondence, in which the scandalous item relating to the Interior Department is for the first time seen in print.

The sensitiveness of Mr. Platt on the subject strikes us as remarkable, since he usually presents a very tough exterior to a censorious world. Anybody who reflects much upon the correspondence between Platt and Bateman must wonder what Platt would have done if Bateman had admitted that he did say the things imputed to him by the Cincinnati *Enquirer's* interviewer, namely, that Platt offered the position of Secretary of the Interior to the railroads for a sum of money for the Republican campaign fund. Bateman neither denies nor affirms that he said this. He merely says that some parts of the interview are correct, and some parts incorrect, and that he does not attach any credence to the story about the Interior Department. But what if he did attach credence to it ? Would Mr. Platt sue him for slander, and appeal to a jury of his countrymen ? Or would he apply to Mr. John Wanamaker for an authoritative denial ? The latter course would be the most expeditious and convincing, because Mr. Wanamaker must know all about it. Moreover, Mr. Wanamaker is an admirer of Platt on broad moral grounds. He so declared himself in Philadelphia a few days ago. It is much to be regretted that Mr. Bateman did not say squarely that he did repeat the Wall Street gossip imputed to him by the *Enquirer*. The question whether he believed it or not is immaterial. In fact, Platt did not ask him whether he believed it, but only whether he said it; and this question Mr. Bateman has not yet answered.

The *Tribune* lays it down that Judge Woods's instruction to the Grand Jury in the Dudley case "turns merely upon a construction of the statute, and has no more to do with the moral character of the Dudley letter than with the tenets of the Koran." It has this to do with "the moral character of the Dudley letter," that it withdrew the moral character of the letter from the consideration of a jury—an effect which it did not have and could not have on "the tenets of the Koran." The instruction is very unfortunate, not simply because it enables Dudley to escape trial, but because it is one of the little things occurring every now and then to shake popular confidence in the judiciary. Judge Woods decided first that Dudley, if he wrote the letter, had committed a legal offence. He then decided a few weeks later, on the same state of facts, that Dudley had not committed a legal offence. The effect of this last decision was, not to find Dudley guilty, or to inflict a penalty on him, but to prevent his being tried at all. Both opinions may have been and doubtless were perfectly honest; but popular mistrust is naturally aroused by the fact that Dudley's conviction would have great political importance, and might lead to disclosures of a very scandalous character, and that therefore a very large body of influential and rich men have an interest of the strongest kind in preventing his indictment and trial. It is, of course, unfortunate that the mass of mankind should be suspicious ; but so they are, and are likely to remain—a circumstance which doubtless first furnished the material for that time honored warning against "the appearance of evil."

The lower branch of the Kansas Legislature has adopted a resolution that will make the Cobden Club and the London *Times* quake in their English boots. On the motion of Mr. Poe, it was resolved, and carried unanimously, that "the Committee on State Affairs be directed to ascertain and report whether it is a fact that the British doctrine of free trade is being taught at the State University at Lawrence; if so, by whom; and that it be reported, by bill or otherwise, what, if any, legislation is necessary to abolish the English titles of Lord Chancellor, Dean, and Regents, and substitute in lieu thereof the American titles of Professor and Trustees for the officers of said institution, and for all other State institutions of the State of Kansas to which British titles are given by the laws of the State." There is, we think, some mistake about the title "Lord Chancellor." We feel pretty sure the head of the university is called simply "Chancellor," but this is bad enough, heaven knows. For the titles "Dean" and "Regent" we have not a word to say: they ought to go, but so ought the term "University," which is also of English origin, and is now in constant use in England as the name for a seat of learning. "Whatyoumaycallit" would be better. Against the proposal to continue the use of the terms "Professor" and "Trustee," as also British, we hereby record our respectful protest. There is only one way to avoid the corrupting influence of English terms in collegiate nomenclature, and that is to invent wholly new ones. For instance, "Thingembob" would not be a bad name for the head of the university, while "Pals" would be an admirable democratic appellation for the subordinate teachers, and the governing body might be called "Mandarins" or "Daimios," thus wholly avoiding the European taint. As to the teaching of "British free trade," we would not touch it by law, through fear of driving it underground. All civilized States have had trouble with "pernicious doctrines," and have found that persecution was the way to spread them. If free-trade teaching is prohibited in a State "Whatyoumaycallit," it would probably be carried on in the nighttime in cellars or caves, or in the recesses of the forests and mountains. Mr. Poe must remember the trouble which Bloody Mary and Louis XIV. had with the Protestants.

Archbishop Corrigan's circular, making attendance at "anti-poverty" meetings "a reserved case," has given for the moment new life to the anti-poverty agitation. Dr. McGlynn's speech was listened to on Sunday night by an immense audience, and his defiance of the Archbishop was tremendously applauded. The circular is said to have been respectfully read as ordered in all the churches, except that of Father Ducey, who is a fashionable divine of the Mgr. Capel order, and appears to be attached to the Church only by slender ligaments. He read the circular with sarcastic comments. Of course there is not any doubt as to the final result. Nothing could enable McGlynn to stand up against the Church but marked progress in the abolition of poverty. This, we admit, would, in all human probability, make him too much for the Archbishop, the Pope, and the Cardinals. The man who abolishes poverty will exert such power over the souls of men as the world has never seen in human hands, and will probably be the object of some form of worship. What makes McGlynn weak in his present struggle, therefore, is not so much the might of the Church, great as that is, as his failure to make any impression on poverty. If the attendants at the anti-poverty meetings were visibly improving in their circumstances, we verily believe the movement would take proportions which would compel the Church to surrender to him. As matters stand, the Doctor has to face every day a full exposure of his incapacity, in the empty pockets of his followers.

The news from Samoa via San Francisco represents a degree of enmity against the American flag on the part of the German sailors and their native allies that we did not suppose existed in any part of the world. According to these accounts, the Germans take the greatest delight in tearing down American flags, and making bonfires of them, while their Samoan friends, known as "Tamasese's men," actually break open houses in order to find American flags for the purpose of cutting them in pieces. An outrage of this kind, as we were informed, was sternly rebuked by the commander of the American man-of-war *Adams*, who shortly afterwards sailed to Honolulu—perhaps to make his report and call for reinforcements. It would be well, we think, while digesting these exciting incidents, to reflect that the German Government has passed the stage of barbarism, and is presumably no more inclined to insult the United States gratuitously than we should be to insult her in like circumstances.

The anxiety in France about the election which is to take place in Paris on the 27th, seems to increase as the day draws near. The last news is that the Conservatives, after much discussion and hesitation, have resolved to support Boulanger. The opinion seems to gain ground that he will win. It is generally conceded that if he does, his election will be followed by his nomination for other vacancies, and that, in short, there will be a crisis which will hasten a dissolution of the Chambers and a general election, under conditions much more exciting than that of 1878, which resulted in the final overthrow of the Monarchists. Should the Boulangists carry a majority of the seats, as they may well do, although Republican forms might survive, the Republic would be virtually at an end. Boulanger would stand in much the same relation to the Chambers as Julius Cæsar or Cæsar Augustus to the Roman Senate. No matter what bills were introduced, his will would really be the law. He still maintains stoutly that all he asks for is a revision of the Constitution, which is said to mean that he wishes to substitute the American for the English system in the relations of the Executive to the Legislature—that is, to make the Ministers' tenure of office independent of the votes of the Chamber.

Curiously enough, the same demand begins to make itself heard in Australia, where, as in England, the Ministers are responsible to the Legislature, with incessant resulting changes. An article in the last *Nineteenth Century* on "Australian and English Politics," by Mr. Beckett, an English member of Parliament, quotes the Attorney-General of Victoria, "a very able and clear-sighted man," as saying:

> "Our Parliament is threatened with that paralysis that is creeping over all English legislatures from the House of Commons downwards. Useless motions for adjournment, aimless and endless discussions, and senseless stonewalling [obstruction] too often block practical business. If the disease is not eradicated, it would seem to indicate that they are growing towards the American system, under which the Executive is taken out of the Legislature altogether, and the Legislature confined to the business of making laws only, and not making and unmaking governments."

The writer says that although "the American system is not altogether lovely and pleasant," nevertheless it must be introduced if the union of administrative and legislative functions in the same person be found impracticable. "The business of the Legislature," he says, "is to legislate, to pass laws, not to worry Ministers; to frame statutes, not to overthrow Cabinets." The French political malady could hardly be better described.

The fact that so few of the poor in French cities are legally married, and that consequently so large a proportion of the children of the poor are illegitimate, is agitating reformers in France, much as the refusal or failure of the poor to go to church is agitating them here. In considering what had better be done to make marriage easy, of course the numerous and somewhat expensive legal formalities have come under review. One of these is the obligation under which French couples labor to obtain the consent of their parents, and, if it be refused, to dispense with it by serving on them three "sommations respectueuses," or respectful summonses, proof of which must be supplied to the officer performing the legal ceremony. The amendment herein proposed will excite a smile in most Anglo-Saxon communities—that the required number of "sommations" should be reduced by two in the case of girls over twenty-one and of men over twenty-five. We presume this is based on the assumption that many couples would prefer lawful wedlock if they had not the bother of so many times summoning their parents to consent. The trouble, however, as everybody knows, lies much deeper. That marriage is the luxury of the well-to-do, rather than a condition of purity or respectability, has become a fixed tradition among the French poor. They will take no trouble and go to no expense about it if they cannot do it in good bourgeois fashion. Illegitimate unions are to them conditions, not of sin, but of poverty, very much as failure to take a wedding-trip would be here. It would take something far more serious than a reform in the marriage laws to bring them to look on marriage as a necessity.

The result of the election in the Govan division of Lanarkshire, in which the Gladstonians have won the seat from the Conservatives by a large majority, shows that the predictions which Mr. Goschen, Lord Hartington, and Lord Salisbury have all made in their recent visit to Scotland, that she was gradually falling away from Home Rule, were due rather to hope than to knowledge. All that is really known about the Scotch constituencies indicates that the hold of the Liberals there is growing stronger rather than weaker. As to the cause of this, of course opinions differ; but that Mr. Balfour's course in Ireland, however much it may satisfy those who approved of it in the beginning, is making any converts to Liberal-Unionism, there appears to be no sign. On the contrary, it is, apparently owing in part to the sneering tone both of Mr. Balfour and his chief, inflaming the temper of the Radicals and stimulating their propagandism.

The publication of the indictment found against Dr. Geffcken shows clearly enough that the attack on Sir Robert Morier was inspired by Bismarck himself, because it charges that Morier was in the confidence of Roggenbach and Geffcken as a friend of the Emperor Frederick when they were preparing the diary for publication. The indictment does not resemble our common-law indictments in containing only legal charges. In countries under the civil law, the evidence is put in as well as the charge, and the indictment becomes in reality a long narrative, somewhat resembling our campaign handbooks, in which the other side is "arraigned" for all sorts of things, of varying degrees of probability. Geffcken's indictment is probably more prolix than usual, as it has been used as a means of enabling Bismarck "to get even" with the whole of the Emperor Frederick's set. Morier has been hit harder than any one, but not harder than such a brutal old journalist as the Prince seems to be, would think legitimate.

SWORN PUBLICATION OF CAMPAIGN EXPENSES.

THE advocates of reform in our election methods reached a practically unanimous conclusion early in their discussions, that the wisest course to pursue was to proceed step by step rather than to endeavor to accomplish all that was desirable at one and the same time. They concluded that the first step was to secure a secret and uninfluenced ballot, and that the only way by which this could be obtained would be by taking the printing and distributing of the ballots out of the hands of the political organizations, and putting it exclusively in the hands of the State. This would take away the main excuse for the use of large sums of money in elections; for if the State pays all the election expenses, there will be no excuse for heavy assessments upon candidates. It was thought that, when this ballot-reform legislation had been secured, it would be natural and comparatively easy to secure, as the next step in the reform, a comprehensive law limiting the expenditures of candidates and requiring a sworn statement of all such expenditures after election.

The wisdom of confining the discussion to ballot-reform legislation has been vindicated by the results. It may be said with strict accuracy that public sentiment has already been sufficiently educated to the necessity of this part of the reform to secure its adoption by every State in the Union within a few years. Perhaps Gov. Hill realized this when he hastened to put himself on record in favor of the next step in the reform, by advocating in his message the enactment of some law requiring the publication of campaign expenses by candidates after election. At all events, his recommendation was a commendable one, and in preparing a bill on the lines of it Mr. Crosby has performed a useful public service. He has not, it must be admitted, drawn a measure which is adequate to the demands of the subject, but he has made a starting-point from which progress in the right direction is certain to be made.

Mr. Crosby's bill simply provides that every candidate for public office shall, within ten days after his election, file with the Secretary of State an itemized statement of all moneys contributed or spent by him and all debts incurred in aid of his election; and whenever such expenditures or debts are made or incurred through an agent, a similar statement of the agent's transactions shall be filed. In case of failure to file such statement or statements, the candidate is liable to a fine not exceeding $1,000, and is forbidden to enter upon the duties of his office or to receive any salary or emolument. Several serious defects are at once apparent in this measure. One is, that there is no limit placed to the expenditures by candidates. Another is, that there is no penalty prescribed for filing false statements. Still another, and the most serious of all, is, that the provision depriving a candidate of his office, in case of failure to comply with the law, is in all probability unconstitutional.

The broad, general trouble with the bill is that it attempts to deal with a very momentous and complicated question in too brief a manner. We cannot break up a system which is at once so widespead and so insidious in its ramifications as the use of money in elections, by enacting a law of only three short sections. The English Corrupt Practices Act, which abolished the use of money in elections in England, contains seventy sections and five schedules of many sections each, and no part of it has been found to be superfluous. As one of its most intelligent expounders says of it: "It is pervaded by two principles. The first is, to strike hard and home at corrupt practices; the second is, to prohibit by positive legislation any expenditure in the conduct of an election which is not absolutely necessary." These two principles are applied with the greatest minuteness. Not merely is bribery forbidden, but every conceivable form of bribery or undue influence is defined and the penalty fixed. The maximum amount of expenditure which each candidate can make is named proportionate to the size of his constituency. This sum must cover all expenses—printing, postage, room-rent, clerk-hire, every thing. All disbursements must be made by one person, either the candidate himself or his agent. If he employs an agent, he cannot disburse a farthing himself, but must leave it all to the agent. An account with vouchers must be kept of all expenditures, and returned under oath to the proper officers after election. Any person found guilty of an "illegal practice" is liable to a fine of £100 and five years' incapacity for voting, while a candidate guilty by himself or his agent loses his seat, and is disqualified for sitting for the same constituency, in the former case for seven years, in the latter during the existing Parliament. Minor offences of illegal payment, etc., are liable to a fine of £100. Any candidate whose expenditures exceed the maximum limit loses his seat.

It will be seen at a glance what a difference there is between the specific provisions of the English Act and the general prohibitory provisions of Mr. Crosby's measure. No general prohibitory law against bribery, or any other method of using money to influence elections unduly, has ever been worth the paper it was written on. We have had them on our statute-books in every State for years, and they are all dead letters. The English Act, on the contrary, has accomplished its object. It destroyed bribery at a single blow, and it so reduced the use of money in elections that the total expenditures dropped from $15,000,000 to less than $4,000,000 in the first election held under the law; and in the latest election under it the expenditures were only about one-half of the maximum allowed by law.

Of course, the worst evil we have to meet here is that of the "assessments" upon candidates. These are made, not upon him after his nomination, but before it and as the price of it. Under Mr. Crosby's bill a candidate who had been "assessed," and had paid $20,000 for his nomination, could file a sworn statement which could truthfully omit all mention of this $20,000, for it would represent no expense incurred in his election. Probably the only way to reach this assessment evil would be a provision in the law requiring every successful candidate to take an oath before entering upon office, that he had paid no assessment and incurred no debt of any kind in any way either to secure a nomination or an election. Such a requirement, with a sworn statement of expenditures, with heavy penalties for failure to make it or for false swearing in making it, would go far to break up the practice. But this, like all other provisions of such a law, requires the most careful thought and deliberation. Nothing would please the political corruptionists more than to have an inadequate law, which would be of no effect in practice, passed at this time; for it would tend to delay the passage of an adequate law, and, by its failure, to bring ridicule upon the advocates of the reform as mere "theorists" whose ideas never amount to anything in practice.

A "RIGOROUS" OHIO POLICY WANTED.

THE question of Gen. Harrison's "policy towards the South" has been much discussed by the Republican press, and there has been no little speculation as to whether it would be "rigorous" or "conciliatory," and as to what he would "insist" should be done in that part of the country. Recent events force to the front another question—What will be the new President's policy towards Ohio?

The last Ohio Legislature, more than twenty years after the close of the war, abolished the "black laws," discriminating against the negroes, which had until that time remained upon the statute-book, and thus opened the public schools of the State to white and black children alike. During this period of more than twenty years, it must be remembered, the Republican politicians of Ohio had been trying to force upon the Southern States through Congress legislation which would do away with all race discrimination, in schools and elsewhere, in that portion of the Union.

No sooner did the Ohio people discover that the action of the Legislature, which had been much praised as "abolishing a relic of barbarism," really meant that negro parents could, if they chose, send their children to schools previously attended solely by whites, than trouble broke out in a number of places. The most serious difficulty has been in a town of Clermont County, which belies its name of Felicity. The population of Felicity consists of nine whites to one negro, and until the law of 1887 was passed, the negro children attended separate schools, which were maintained almost exclusively by the whites, the school-tax paid by the negroes being only $16 to $3,600 by the whites. When the school term opened in the fall of 1887, several negro children presented themselves at a white school, and insisted upon admission. They were refused entrance, and when a negro father accompanied his children, in order to enforce their

rights, he was roughly handled by some white men. The negroes finally concluded that it was of no use to continue the struggle, and a peace was patched up by an agreement of the whites to provide two graded schools for colored children, taught by excellent colored teachers.

But the old trouble was renewed when the last school year opened in September, 1888. The graded-school system for the blacks had proved a failure, only sixteen pupils attending the two schools, and the whites decided to support only one school for the blacks. Thereupon the blacks resolved to make another effort to get their children into the white school. Three successive days the colored children applied for admission, and three successive days the white men and women (for the feeling was even stronger among the women than among the men) stood in the door and told them that they could not enter. The School Board (consisting of three Republicans and three Democrats) remained passive, informing the negroes when appealed to that they did not propose to take any hand in the matter. In the words of one of them: "Some of our best citizens said to us, 'We want you directors to keep your hands off, and we will attend to this matter ourselves. We propose that the negroes shall not go into our white school. We have made every provision for them. It would break up our school, for the majority of the white people would withdraw their children.'"

Again the negroes found that they must give up the attempt to secure their rights by their own exertions. This time they resolved to appeal to the courts. Indictments were sought and obtained against certain white persons who had obstructed negro parents when they tried to enter their children in the white school. The cases recently came to trial. Two juries refused to convict the offenders, and it being evident that public sentiment would secure the same result in any case, the trial of all the other cases was postponed.

All through this struggle, which has now lasted nearly a year and a half, the Governor of Ohio has been inactive. Not one word has he said in denunciation of the outrages or in rebuke of the law-breakers. His recent message to the Legislature was entirely silent on the most vital issue now pending in the State of Ohio.

Here, evidently, is a clear case for the incoming President. In a State of the American Union negroes are denied those rights gnaranteed by the Federal Constitution. Local sentiment sustains the injustice; the courts refuse to punish the offenders; the Governor of the State, overawed by the political influence of the law-breakers, is supine. The poor negro of Felicity is helpless in the face of a hostile State.

Obviously there must be a "policy towards Ohio," and as obviously it must be a "rigorous" one. The sun should not go down on the 4th of March before Benjamin Harrison, President of the United States, has notified the white people of Felicity, Ohio, that he will "insist" that they open their schools to the negro children, that a force of United States troops will be stationed at the door of the school-house to enforce the rights of the negroes, and that the pusillanimous Governor of the State will be lodged in the penitentiary.

THE MASSACRE AT THE CUSTOM-HOUSE.

"NINE Heads in the Basket" is the appropriate heading of the news which came from Washington on Tuesday, announcing the removal of officials in the Appraiser's Department. A cocking main in New Jersey, or a lynching affair in Texas, or a shooting affray among gamblers in Arizona could not be treated with more *sang froid* by the newspapers than is this massacre at the Custom-house. It seems to us a very serious business, and not at all an occasion for merriment. Secretary Fairchild, in the character of a Tammany sachem, adorned with war-paint, and brandishing the tomahawk and scalping-knife, is not at all an agreeable or amusing subject for a cartoon. As to the victims, we do not know one of them. We read that this one has been in the service nine years, and that one six years, and so on. No charges are made against any of them, so far as the public are aware. The worst inferences will therefore be drawn, and ought to be; for it must be presumed that if any good reasons existed for such a massacre, they would have been promulgated at once.

Being left to grope in the dark for reasons for these proceedings, we naturally turn to what is called the Byrne report on alleged sugar frauds in New York. This document was sent to the Treasury Department November 1, 1887. The Senate called for a copy of it March 1, 1888. It was not furnished. A second call was made on the 8th inst., and the copy was sent in on the 18th without the "exhibits"—that is, without the matter which alone gives it any value as a guide to the truth. If Byrne had been a man of known qualifications and character, some weight, corresponding to his reputation, would have attached to his report. The gravity of the subject on hand was such that an investigation by no less a body than a Commission, like the Jay Commission of Secretary Sherman's time, could have satisfied public opinion as to the existence or non-existence of the alleged frauds. A secret report from any source would not at all have answered the public requirement; and this is eminently a public requirement, going much beyond the beheading of a few Custom-house officials. It involves a general charge on the part of Boston that New York owes her primacy in foreign commerce, in part at least, to unfair dealings—that is, to fraud in the importation of sugar and other things. This charge is distinctly made in the Boston *Commercial Bulletin* of January 19. "The removal of Appraiser Lewis McMullen of New York," says this paper, "and a number of his assistant appraisers, by Secretary Fairchild, is a signal victory of a long struggle against discrimination and dishonesty in the customs service, in which Boston merchants have borne the heat and burden of the battle, and may justly be credited with the victory. When the Boston movement against undervaluations was started, it met with much ridicule from certain New York parties, who claimed that it was a senseless outbreak, and that there was no foundation for the belief that undervaluations and dishonest appraisements prevailed in New York to the detriment of importers in other places." The *Bulletin* adds that "the investigation of Special Treasury Agent Byrne of Boston into the practices of the New York Custom-house showed conclusively that undervaluations and frauds on the Treasury were the work of a well-defined ring of New York agents of foreign manufacturers and exporters, officials in the New York Custom-house, and American importers." If New York's primacy in foreign commerce rested on the shifty foundation of frauds in the Custom-house, it would be very insecure. We have no facilities for undervaluing sugar that might not be copied and surpassed by any other port. If we have any "well-defined ring," such as the *Bulletin* speaks of, why are not the names of the parties composing it given? We shall take pleasure in printing them whenever they are furnished by any person or newspaper.

It is scarcely necessary to remark that there is no "Special Treasury Agent" of the name of Byrne, and that no report of Byrne "showed conclusively" anything whatsoever, because the report was kept secret until a few days ago, and the testimony upon which it was based is still secret. Whatever weight might attach to a commission like the Jay Commission by reason of the reputation of its *personnel*, none can attach to that of the manager of a skating-rink who was never heard of until he became a "special employee"—that is the title given to him by Mr. Fairchild—of the Treasury Department.

Well, Byrne's report, whether worth much or little, remained in the Department thirteen months. That very little importance was attached to it becomes evident from the fact that nothing was done under it, or in pursuance of it, until Appraiser McMullen made difficulties about some changes in the Custom-house service which were clearly of a political nature. Passing over those changes, however, and supposing them to have been non-political, we are moved to inquire what the Secretary was about during the thirteen months in which the nine examiners whose heads "rolled in the basket" on Tuesday were deemed fit to pass upon the value of sugar, wool, hardware, tobacco, etc. It is not sufficient to say that he was studying the Byrne report thirteen months, or that he was making other investigations. All secret investigations, Byrne's and his own, if he made any, involving the reputation of individuals, are worthless. All such investigations involving the name and fame of the city of New York, (for this is what is chiefly concerned), are worse than worthless. It is therefore a proper inquiry, What does this new-born

zeal of the Secretary, after a slumber of more than a year, signify? He can hardly fancy that he will commend himself to excessive popularity among his fellow-citizens by putting a stigma upon them *en masse* as the last act of his official life. If the public service really demands the massacre at the Custom-house, well and good. But it is for Mr. Fairchild to show this to fair-minded men before he leaves his present position.

HALLIWELL-PHILLIPPS.

A FEW lines out of a letter from Mr. Phillipps to the writer of this notice appeared in the *Nation* on December 20, 1888. That letter must have been among the very last he ever wrote. Among the rarities which he had most recently acquired, he spoke of "the printed original music to a song quoted in 'Twelfth Night' (act ii. 3) only one other copy being known." The words, which were, "Farewell, dear heart, since I must needs be gone," now rise before us as a swan-song prophetic of his own departure as at hand. His health had long been failing; but, though faint, he was still pursuing his chosen way, and e'en in his ashes lived the wonted fires. The other recent find which he had mentioned in this last letter, was "a manuscript book of travels containing the earliest account of the interior of Shakspere's birth-room that has yet been discovered." This account must have reminded him in his age how in youth he had been among those first and foremost, about 1847, in saving the birth-house from being carried off bodily by Barnum into American captivity beyond the sea. Thanks, too, to Mr. Phillipps, the Shaksperian garden at New Place was long ago restored as nearly as possible to the appearance it had presented at the era of Shakspere's retirement and death amid its flowers. Exact knowledge regarding Stratfordian topography may be said to have begun throughout with Phillipps, nor is it easy to see how research in this direction can go further than it is carried in later editions of his 'Outlines.' His discovery of the deeds of the poet's New Place—the only ones of his time known to exist—dated 1532, 1563, and 1567, was chronicled by the *Nation* in 1886, and encourages hope of further light in unexpected quarters. Mr. Phillipps's monograph on the travels of Shakspere's theatrical company (and hence possibly of Shakspere himself), and another on "Misprints," showing how in the text of the plays we may "by indirections find directions out," are two recent specimens among scores of booklets in which Mr. Phillipps, in every way inventive love could dictate, was every year, for a generation, throwing side-lights on his favorite dramatist and his works. His only mistake lay in printing these booklets, Halliwelliana, almost all of them, for presentation among friends, and not putting them on the market at all. Recondite lore or subtle speculation has thus been hid in a corner: it should have been proclaimed on the house tops.

During less than twenty of his last years was Mr. Phillipps rich enough to indulge his Shaksperian tastes. Indeed, he never bore the name Phillipps till 1872, taking it with his wife's fortune. Born James Orchard Halliwell, his first schooling was in his birthplace, Chelsea, and Brighton. Then he was a Cambridge student for two years. But in 1840, when only twenty years old, he had already edited an edition of Sir John Mandeville. Henceforth his studies were antiquarian, and mainly in some department of English mediæval history. Some of his themes, as English nursery rhymes, the wise men of Gotham, and old inventories of furniture, seemed trivial—rather subhistoric than prehistoric: but he showed that "poor matters point to rich ends," that small matters had large relations, and he took up great things by little handles. He also dealt in more pretentious works—'Letters of English Kings,' mostly before unpublished, and an 'Archaic and Provincial Dictionary' which is still high authority. So prodigious was his literary fecundity that he had produced threescore works before he was forty years old. Several of these were altogether Shaksperian, and in 1852 he began the most monumental edition of Shakspere that has ever been published—in sixteen elephant folios, limited to 150 copies at £63, subscription-price. During the progress of this vast work, which occupied him thirteen years, his recreations were rambles in Wales, Cornwall, and the Continent as far as the St. Gothard, which furnished material for more than one book.

From his fiftieth year Mr. Phillipps has dedicated himself to illustrating Shakspere in his own way. But he had done much earlier. In 1862 he had engaged an accomplished draughtsman to make sketches of every morsel that could be found of Shakspere's England—that is, of every object that he himself was likely to have seen, following the routes taken by the poet in his various journeys, etc. This alone proved a six years' task. But after the windfall of a fortune, Mr. Phillipps at once proceeded to lavish it on selectest Shaksperiana. His house at Brompton he filled with Shaksperian books. Ere long he set up another establishment upon a hill-top 462 feet above Brighton. Here he treasured all Shaksperian rarities that money could buy, or search and research detect. His success was so great and speedy that it has long been confessed that Hollingbury Copse has the honor of sheltering more records and artistic evidences connected with the personal history of the great dramatist than are to be found in any other of the world's libraries. His motto in a hand-list of these memorials was: "But now he's gone, and my idolatrous fancy must sanctify his relics."

Nearly a decade ago, Mr. Phillipps gave public notice that his collection was open at all times to Shaksperians. He had as great delight in exhibiting as in gathering his illustrative wonders. He printed catalogues that filled volumes, describing the curiosities. No matter whether visitors came as single spies or in battalions, they all, according to their several capacities, found what they sought.

On May 10, 1888, Mr. Phillipps wrote to us: "My doctor says that I must lie fallow this summer—do as little in the way of reading and writing as possible. So it will be a capital opportunity for you to send your American friends here, and I need not say that any arriving with your introduction will be most warmly welcomed." As a help to any Shaksperian pilgrim we might send, Mr. Phillipps had formerly enclosed to us what he called "A rough sketch-plan of the way to Hollingbury Copse from Brighton." This guide covers a sheet of foolscap (17x13½ inches), and abounds in characteristic notes. One of them reads thus:

"'This local habitation and a name' derives the latter from an ancient British camp in its immediate vicinity—a fine and interesting example of a primeval earthwork fortification, which has been known from time immemorial as Hollingbury Castle. The camp is intrenched on the highest eminence in the locality, over five hundred feet above the sea-level, and the copse is situated a little distance towards the west, at a somewhat lesser elevation. Although so near Brighton, being only two miles and a half from the sea, it has an essentially different climate. Upon the day when this is being written, 24th February, 1888, although snow is scarcely visible in the town, the drifts here are several feet in depth outside the fences, and the roads impassable to any description of vehicle. Our only communication with Brighton is, just now, for some distance cut through the solid snow, and if the Hollingbury bungalow, with its present surroundings, is not a fragment of Nova Zembla, it must anyhow be a first-class imitation of it."

Two of our friends found their way to this Shaksperian Mecca on the 8th of last August. They were so received as to feel overpaid for their pilgrimage. Writing next day, they said: "Mr. Phillipps is now, he says, pretty well, and his appearance corroborates this; but he told us that a month ago he was quite ill and unable to see any one." Nor was any formal introduction needed for securing a sight of the Shaksperian jewels. One apt quotation, one intelligent remark on the dramatist, was a sufficient open-sesame. One American youth, just out of college and on a walk about Brighton, calling, as he told us, with diffidence because unintroduced, was so greeted that he felt forthwith at ease, and went away with memories of most instructive hours. Mr. Phillipps has assured us that he was more glad to see Americans than others, not only because they came from far, but because his own lucubrations had been appreciated in their country sooner than in his own.

More than four years ago, inspecting this Shaksperian museum, while the comments of its owner again and again added a precious seeing to our eye, we asked him what he meant to have done with his collection, since he could not always care for it, and no child of his inherited his tastes. His answer was that he was himself still at a loss what to do about it. We then said, speaking more than half jocosely: "Let us have it in America. 'We'll set it in a shower of gold and hail rich pearls upon it.' What a complement it would form to the Boston printed Shaksperiana, which have few superiors anywhere!" Such a disposition of his memorials he confessed had not occurred to him. It seems as if the hint were not wholly lost, for he has bequeathed to the New York Shakspere Society all his electro-plates, woodblocks, etc. His great collection he offers to the municipality of Birmingham for seven thousand pounds.

A TRIP TO DELPHI.

CAMBRIDGE, January 20.

THE conditions of travel in Greece are changing so rapidly, owing to the introduction of railroads and the laying out of highways, that we may expect that within a few years the Greek tour will be as common as the Southern Italian is now. Indeed, more Americans would visit the principal points of interest in Greece even now, but for the prevalence of misconceptions as to the danger, expense, and discomforts of such a trip. The first obstacle—danger—no longer exists. No act of brigandage has been reported since the famous "Marathon massacre" nearly twenty years ago, and that was the work not of Greeks but of Turks; the peasants are as harmless, and often as friendly, as those of the more secluded Swiss cantons. The expense, too, need deter no one; for in Greece as elsewhere it may be pretty much what you choose—from a dollar a day for pedestrians, to six or seven dollars a day apiece for those who take tents, horses, guides, and cooks with them. The discomforts are, indeed, still numerous, and in some cases almost too irksome for ladies; but every year they diminish, and before long it will be possible to take train or diligence to all the most famous spots, and to be fed and

lodged at decent hotels on the way. Perhaps the following account of an excursion to Delphi which I made with four companions in March, 1887, will show how easily one of the most interesting places in the world may be reached, and how the interest of the journey far outweighed temporary hardships.

Leaving Athens by the morning train, we reached Corinth at eleven o'clock. The modern town is laid out in checker board blocks, at a considerable distance from the site of ancient Corinth, and will be the commercial centre of the Peloponnese as soon as the canal through the Isthmus is completed a year or two hence. At one o'clock our steamer started, and we were soon in the midst of the Gulf, surrounded by scenery which can hardly be matched on Lake Geneva. Behind us rose the rocky dome of Acrocorinth, along whose summit the castellated walls of a Turkish fortress ran as a crown. To the south stretched the numberless ridges of the Peloponnesian mountains, Kyllene, white with snow, and many a sharp, bare peak or jagged crest, and, nearer the shore, plateaux on which the ruins of Sikyon and other famous cities are buried. To the north, Kithairon's rounded shoulders shut out the view; then, farther westward, the more imposing heights of Helicon; and, still farther toward sunset, the great mass of Parnassus, partly veiled in clouds. A hundred little inlets and rocky promontories diversify this northern coast, and small islands fringe it. Before five o'clock the steamer entered the bay of Salona, which cuts deepest landwards, at the apex of which lies Itea, a fishing-village of a few hundred inhabitants. This is the landing-place for the traveller bound to Delphi.

From Itea you can go by a good highroad to Salona, the ancient Amphissa, against which the Amphictyons declared war, and which Philip of Macedon razed to the ground in B. C. 338. Good quarters for the night and fair conveyance for the morrow can be had at Salona, but we preferred to proceed on foot directly to Chrysò, a wretched hamlet lying on the mountain slope, and on the shortest road to Delphi. We walked for an hour or more through a large olive plantation, darkness having already fallen, and then clambered up a rocky path to the hamlet, where we were greeted by the howling of the wolfish mongrel dogs which infest every Greek settlement, but rarely harm strangers. Chrysò offered no other accommodation for travellers except a café—a single room as dingy as a blacksmith's shop, many of its window-panes broken, and its air reeking with the smoke of the open fire on which the proprietor heated the muddy coffee which the natives delight in, and with the fumes of cigarettes. A hard-boiled egg, a glass of Greek wine flavored with resin, some bread and coffee, were all the supper we could procure; and, for sleeping, we had to choose between the wooden benches set along the walls or the floor itself. The proprietor and an Albanian in fleece capote and fustanella stretched themselves on the floor, while we settled ourselves as best we could on the benches and chairs.

By five o'clock on the following morning we had breakfasted and set out. The path rises rapidly in zigzags over the shoulder of a mountain spur, but a carriage-road (not then completed) makes the ascent more gradually in ampler curves. After a climb of perhaps three miles we reached a rocky shelf, and then, turning to the left, Delphi lay before us, only a quarter of a mile distant. Surely no site more impressive could have been chosen for the most sacred spot of a nation's religious life. Two mighty cliffs rise perpendicular to the height of about a thousand feet—those Gleaming Cliffs which the pilgrim could see as his ship sailed up the Gulf of Corinth. Once there was but a single wall of rock, but a deep, narrow cleft now cuts them midway from top to bottom. At their foot the erosion and storms of ages have heaped a thin belt of soil to which the present village of Kastri clings—I say "clings," for the slope is so steep that it seems as if the earth and the hovels upon it would, at the slightest jar, slip down into the valley of the Pleistos far below. The miserable dwellings of Kastri look like those stones with which the Swiss secure the slanting roofs of their chalets. It is but a mass of rubbish, which has buried the inestimable treasures of Delphi. "O for a spade, and free scope for digging!" is the wish of every enthusiast, as he compares the actual scene with that which his imagination assures him might once have been beheld here. Then marble temples rose, tier above tier, against the dark background of the cliffs; statues, votive offerings, and monuments were distributed along the slopes, or crowned each jutting prominence; and instead of the beggarly, dirty, idle, ragged men and women who now squat on this haunt dear to the gods, the place was filled with distinguished pilgrims from all parts of the Greek world, with the most illustrious leaders of the Greek race, with the priests and interpreters of the Greek religion.

We must not forget that Delphi was one of the three centres of European religious zeal. What Jerusalem was to the Crusaders, and Rome to later Catholics, that Delphi was, for nearly a thousand years, to the devout Greek and the devout Roman. Hither, in prehistoric times, came Œdipus and Hercules; here the Alcmæonidæ built the first magnificent temple to Apollo; here Lycurgus and Solon consulted the oracle; and here the elder Brutus heard the response which confirmed him in his resolve to expel the Tarquins from Rome. Could we call up the long procession which filed along this road seeking counsel of the Pythian priestess during the historic period, we should recognize most of those whose deeds have been handed down to us by Plutarch, and many of whose career only the scantiest mention remains. We all recall instances of the importance in which the oracular sayings were held—how the shrewd Themistocles construed the prediction that "Athens should be saved by a wall of wood," to mean that the Athenians should conquer the Persians in a naval battle; and how, when Cicero asked the Pythoness how he could attain most glory, she replied, "By making your own genius, and not the opinion of the people, the guide of your life."

From the point whence we had our first view of Kastri, the slope curves sicklewise to the village. In the rocky parapets which line the road on the left, small niches have been cut; then we pass larger chambers, perhaps intended for tombs. On the right, on a spot now partly covered by the Chapel of St. Elias, are a few indistinct ruins, presumably of the Synedrion. A few hundred yards' walk brings us to the village, through which a single narrow street runs northward. The remains of ancient Delphi which have hitherto been excavated, are lamentably small in comparison with those which may some time be unearthed. The most interesting is the foundation of the Temple of Apollo, where the lower drums of some of the columns and many fragments are collected; but most important is part of the peribolos wall, composed of slabs, on which are many inscriptions. Near by is the so-called Hellenikò, part of the wall which once bounded the sacred precinct. The position of the theatre has also been determined, but as yet few traces of it are visible. In a shed belonging to the *phulax*, or "guardian of antiquities," bits of sculpture, altars, inscriptions, and architectural fragments are piled in disorder on the ground. Descending a few rods from the Temple of Apollo, we come to that deep cleft in the Gleaming Cliffs—the seat of the oracle itself. A little spring rises at its base and flows out in a tiny rill: this is the Castalian Spring, whose waters were once dear to the Muses, and have been since the days of Ovid the symbol of poetic inspiration. When the snows melt on the mountains above, or after a heavy storm, the water is said to pour out of the chasm in a torrent; but when we saw it, it was only the little rill I have described, hurrying down into the valley and making a span-wide riband of verdure on its course.

We do not know, nor shall we ever know, the construction of the oracle and the secret of its power. Time and earthquakes have destroyed the buildings here. We are told that vapors rose from the spring, and that the Pythoness, seated on a tripod, inhaled them, and was thrown into a trance in which she uttered her prophecies. Priests took down her revelations, and, having composed them in hexameters, gave them out to the inquirer. Certain it is that no mystery founded upon tricks alone could have commanded the reverence of the keen-witted Greeks during many generations. In the earliest times, the uncultivated and superstitious may have exaggerated very ordinary wisdom, and may have believed it to have had a supernatural source; likewise, in the period of decadence, when the more enlightened became what we should now call agnostics, the old mysteries may have been kept alive to awe the ignorant—just as the Roman Church still encourages such pseudo-miraculous performances as those of Lourdes and Loreto. But we may be sure that during the period when Greek civilization was at its highest, something more than a religious tradition or a pious fraud caused the best men to respect the decrees of the oracle. Not until the time of the Emperor Theodosius, in the fourth century of the Christian era, were the lips of the Pythoness closed.

Just below the Castalian Spring, and beyond two tall platane trees, are the remains of several edifices—the Gymnasium, now built over by the monastery of Panagia; the site of the Temple of Athena Pronoia; and some others, unidentified. After visiting these, we retraced our way to the village, where we procured a guide and pack-horse, and were soon winding along the steep mountainside. Above Kastri, on a small oval plateau, we could easily distinguish the site of the stadium, or race-course, for the wise Greeks always associated health of body with spiritual health; there was no dyspepsia in their religion. Every zigzag in the path now gave us a grander view. We looked down on the roofs of the Kastri hovels, and thought of the time before earthquakes and barbarism and neglect had shaken down the beautiful temples and the hosts of statues (there were 3,000 of the latter, even as late as Pliny's day). Then the eye wandered into the valley of the Pleistos, a slender stream flowing from the vineyard-clad hills of Arachova. Just opposite, a majestic wall of cliffs, similar to those which overshadow Delphi, formed the eastern boundary of the valley. To the south lay the Corinthian Gulf and the Peloponnese. A hard tramp of two or three hours brought us to the Corycian Cave, in which Bacchic festivals were once celebrated—festivals so famous that there is a tradition that Xerxes once attended them. The place is wild and desolate enough for a Walpurgisnacht revel. Then, across mountain meadows, where the farmers were ploughing, we regained the upper valley of the Pleistos, and came by nightfall to Ara-

chova, a thriving town, where, in the Greek war of independence, Karaiskakis annihilated an army of five thousand Turks under Mustam Bey, and made a pyramid of their heads.

But of our further expedition I do not intend to speak here in detail. The day's journey from Arachova to Lebadiea took us past the *triodos* where Œdipus killed his father; and by Chæronea, where Plutarch dwelt, and where the fragments of the colossal lion, set up to commemorate the patriots who fell in the battle against Philip, still strew the ground. A good carriage-road leads from Lebadiea to Thebes, skirting the outposts of Helicon on one side and the reedy marshes of the Copaic Lake on the other; and from Thebes to Eleusis a diligence-road, equal to the best in Switzerland, winds over Kithairon to Eleusis. Doubtless the time will soon come when the whole trip from Itea to Thebes can be made in a carriage, and when one can leave Athens in the morning and comfortably reach Delphi before dark. What is needed to complete the interest of the trip is the excavation of Delphi itself. Instead of being thwarted by the rubbish-heaps and hovels of Kastri, we would see one of the most famous spots in the world cleared of these, and whatever remains of its temples and statuary and inscriptions brought again to view for the instruction and delight of ourselves and of posterity. We owe to the French the excavations already made: the chance is now offered to Americans of achieving the work. Is there no rich man among us—no body of men—who, at a comparatively small cost, will win this honor for himself, and earn the gratitude of all educated men?

WILLIAM R. THAYER.

PASTELS AT THE GROSVENOR GALLERY.

LONDON, January 2, 1889.

THE recent exhibition of pastels at the Grosvenor Gallery has attracted a great deal of attention as an attempt at reviving a lost method of artistic expression in England. That the art of pastels has never been extinct on the Continent is sufficiently proved at this exhibition by the technical skill of the drawings exhibited by Parisian artists of the Société de Pastillistes Français, by Anna Bilinska, the Polish artist, by Hubert Vos, Fantin-Latour, and others.

As a whole, the effect of a great number of pastels together is very wearisome. The material has its distinct limitations, and we should pronounce the more finished productions the least artistic. The color of flesh in pastel is opaque and chalky; there is no possibility of rendering the delicate gradations of half-tints, as in oil or water color. The same opaqueness is felt, when landscape is treated, in the want of luminous color in skies and a lack of depth and variety of tint in foliage. The material seems well adapted for hasty notes of color for the artist's own working studies. Some slight sketches of Whistler exhibited here of Venice in this vein are quite delightful in suggestiveness. We may add that the impressionists show to better advantage in pastels than in any other form, the material lending itself to the limited scale of color and decided forcing of effect through contrast.

Theodore Roussell has a romantic Pierrot, all in white against a white background; the face alone is in color, with sad gray eyes contrasting strangely with the surrounding fanciful cap and dress of pure white. "Ma fonction est d'être blanc" is its motto. The different tints of white are so dexterously managed that the head is in good relief. Anna Bilinska has several life-size studies of Polish peasants in national costume, drawn and modelled with great power, but remarkably coarse and raw in color. Among the more successful of the highly finished examples of portraiture is "A Spanish Lady" by Helleu (No. 148) lent by Mr. John Sargent. The lady is sitting very erect in evening costume, beside an elaborately-drawn harp; her black tulle, deep cut V-shaped, contrasts strongly against her white, thin shoulders; her eyes, with drooped eyelids, look meditatively out of the picture. There is a disagreeable chalky whiteness in the flesh, due, no doubt, to the nature of pastel.

Fantin-Latour has several groups of figures, all of them executed in a disagreeable, rather scratchy manner. No. 67, "Scene from Berlioz's Opera, 'Béatrice et Bénédict,'" reminds us of nothing but illustrations for music covers. It may be that this was the original destination of the design, as also of "The Dance" (No. 70), in which rather solid nymphs are wildly whirling in a circle. There is no trace of the full, brilliant color we generally admire in the works of this artist.

"Confirmation Day," by Lhermitte (No. 6), is the one work of this collection which can be called a picture, the rooms being crowded with experimental studies, portraits, and sketches. A number of young girls, in stiff muslin dresses and white confirmation veils, are waiting their turn, while the priest is giving the holy communion to one of their party. The anxious, eager faces of these village maidens are rendered with great individuality and character, although the heads are not an inch long. The priest and his acolytes, with touches of purple and scarlet in their costumes, the gray walls of the chancel with its painted glass window—all seems quite faithfully given, with ample detail and delicate drawing throughout. The same artist has another picture (No. 50) of children fishing from a wooden bridge, very cleverly drawn and agreeable in quality of touch; in this the prevailing colors are gray, blue, and green.

Among the landscapes those of Peppercorn, especially No. 66, "A Bend in the River," seem most satisfactory, probably because this artist generally chooses late evening effects, when the trees are nearly black and the sky silvery white. The landscapes of W. Stott, of Oldham, are very unlike his usual work; the same artist's "Near the Fireside" (No. 248) represents a lady sitting beside a very ungainly black-leaded grate.

Of French studies of the semi-nude, there is no lack, all very poor in workmanship, and in the worst possible taste. Machard's "Juno" is simply the undressed model with peacocks' feathers in her hand.

The contemplation of highly-finished pastels in this exhibition recalls to memory the papier-maché tea-trays of thirty years ago, and a style of art reserved for their decoration which we hoped would be by this time obsolete. But the facility of pastel seems to be a temptation to which most artists succumb sooner or later, and we have examples here of well-known names—Holman Hunt, G. Solomon, C. H. Shannon, W. F. Yeames, B. Sickert, G. Clausen, Mark Fisher, Mrs. Jopling, etc. There is no doubt that this first pastel exhibition will incite fresh enthusiasts to try their hand, and will be followed by others, since it has been so very successful from the business point of view. That the material is not very durable does not seem to deter purchasers, and that the works in question will not outlast our own time is scarcely to be regretted.

DÖLLINGER ON AMERICAN LITERATURE.

MUNICH, January 1, 1889.

LAST week, before a crowded public meeting of the Bavarian Royal Academy of Sciences, Dr. Döllinger read a paper an hour and a half in length on America's Contributions to Literature. It was a sight truly sublime to see the venerable scholar, ninety years of age, rich with the best learning of the Old World and disciplined in its combats, turning with the enthusiasm of a youth to study the intellectual conditions of the newest of the nations. Though age had won some victories on the wrinkled face and stooping shoulders, the eyes were penetrating, the voice clear if slow, and the step limber. Sign of age in the paper itself there was none, unless indeed of the ripeness of age. The style was easy, altogether free from German ponderosity, lucid, sometimes witty, every sentence and paragraph finding a predetermined place in the whole. The scientific mind was visible everywhere—the mind trained to gather evidence at the best sources, criticizing everything and forming its own conclusions, and in its exposition of results incapable of superfluity, suggestiveness, or hortation. With adequate simplicity he spoke whatever he had to say, and where he was ignorant he remained silent.

He pointed out how impossible it has become for a people any longer to dwell apart and live for itself alone. With our present means of communication, nation must influence nation as formerly citizen influenced citizen. What America is doing concerns Germany. Both belong to the same intellectual world, a world in which the English-speaking race must soon obtain such a primacy as formerly was held by Greece and Rome. No other European language is spoken by two world-powers. Let our own books be made where they may, the books of our grandchildren will largely be formed by America.

For more than the first hundred years after its settlement, America was isolated, and related its intellectual life but slightly to that of other lands. Its settlers brought with them a few books of divinity and philosophy, and these formed the starting-points of their own thought. Milton's poetry, especially his "Samson Agonistes," stirred their deeper feeling. Roger Williams's tract on the 'Bloody Tenet of Persecution' is the only piece of early indigenous writing which can be called literature. Ministers were the chief literary men of the colonies, and their printed sermons and harsh verses were but ephemeral. In the eighteenth century, however, the dominant theological tendencies rose to a form of genius in the person of Jonathan Edwards—*ein weithin leuchtendes Gestirn*. He and his followers created a distinctively American theology, which to-day has life and breath. The works of Edwards are the one large contribution America has made to the deeper philosophic thought of the world.

In the political field a parallel impulse was given by Benjamin Franklin, whose Autobiography must be classed among the books of perpetual worth. Washington, too, deepened among his countrymen the conception of what a man may be, and thus contributed something to their literary life. The separation of the United States from England, the lecturer did not regard as fortunate for either party. Had England acknowledged the necessary connection of taxation and representation, she would have been strong enough to defy Napoleon on the Continent; in both countries the monarchical principle, in a very mild type, would have been preserved; and America would have es-

caped the calamity of a civil war by freeing her slaves peaceably when England freed her own.

No literature came out of the Revolutionary War. For nearly fifty years after that struggle, the still isolated and hard-working people were too closely engaged in developing their new institutions and in earning their daily bread to write much besides political pamphlets; but as the middle of the present century approached, four men stood forth to show that American books might win the world to read them. Cooper, Irving, Prescott, Channing, are the true fathers of American literature. Cooper has domesticated his Indians in Europe. Irving's voluminous writings have stimulated the taste of his countrymen as no other books of their own have done, and still they are books which may be read everywhere and always. Prescott treats certain epochs of Spanish history better than they have been treated by any other historian. Channing is more local, more limited in range; yet his services in quickening the American conscience, especially in the matter of slavery, must not be overlooked.

These four were the only writers individually discussed by the lecturer. Whether on account of an imperfect acquaintance with the writers of to-day, or because of the size and extreme complexity of our present literary exhibit from this early point to its distant conclusion, Dr. Döllinger turned his paper into a discussion of the conditions and shaping influences which attend literature in America.

For many years the physical sciences, particularly in their connections with practical life, have been eagerly pursued in America. Already there are twenty-eight well-equipped astronomical observatories there. The historical and humanistic studies have lagged behind. For evidence on the literary status of the people at large the lecturer ingeniously resorted to publishers' catalogues. These show the favorite books to be the Bible, Pilgrim's Progress, Shakespere, and Burns The 'Vicar of Wakefield,' Macaulay, and Dickens have also been printed in more than half a dozen editions each. To a German the appearance of Gibbon's History in thirteen editions is a fact decisive in determining the low state of historical studies in America. Yet what a contrast is there between the largely-sold books of America and of France! A true Anglo-Saxon in taste and temper the American remains; and though North differs from South and East from West in culture, a common type of character, and of those social ideals which leave their mark on literature, dominates the land.

In studying this type and these ideals, we find the well-known English antipathy to speculative philosophy. The American does not trouble himself about metaphysics, though he exceeds the men of all other lands in the acuteness of his inventive power and in his passion for knowledge of a certain grade. Appletons' Biographical Dictionary (?) devotes a section to "Inventors," as one elsewhere might to soldiers or to lords. Institutions of education abound, as do those of art, charity, and mutual helpfulness; but there is no aristocracy, unless, indeed, the whole native population may be called an aristocracy. At any rate, no native American ever becomes a servant: domestic service is performed by foreigners. Distinctions of wealth remain; but these, when so obviously mutable, lose half their bitterness. Of that oppression which in other countries is exercised by a few high-placed individuals over the multitude, there is none; yet an oppression exists, and one perhaps more fatal—the oppression which the multitude itself here practises upon its more advanced members. The reverence for the mighty monarch, public opinion, is nowhere so universal and so stifling. The country must not be criticized: it will hear nothing but praise. A shallow optimism in regard to all things American has become widespread, and was noticed even by Emerson, who himself contributed to its currency. Yet, existing half unconsciously, there is also a general sense of limitation. The Americans are great travellers. They say they travel in order to see how superior to others their own country is; but something in the tone of their better writers makes us suspect that these nomadic habits are rather due to unrest at home, and to the desire to widen a range of vision too much restricted by democratic surroundings.

Social conditions like these present many hindrances to the growth of literature. Three deserve a separate notice—the popular newspaper, the absence of a learned class, the absence of an official class. The American newspaper stands on a much lower level than the English; it terrorizes and vulgarizes the community. Many a good book remains unwritten either through fear of the press or because its intending author has finally adjusted his standards to the tone of the ephemeral writing about him; and no learned class comes to his aid. America knows no *Gelehrtenstand*—no body of men securely devoted from youth to age to the pursuit of science. Specialists in the physical sciences, particularly in those departments which are connected with mechanics and the technical arts, are not lacking; but the few Americans who in Germany might be counted learned have not received their training at home, nor have they any sure position there. There is not in America an institution of higher education which can bear comparison with a third-class German university. This absence of high standards and of opportunity for high discipline works great injury to law, medicine, and pure letters.

In other countries the class of permanent office-holders affords a strong support to literature. Its men of partial leisure supply a body of discerning readers, and out of it comes not a few good writers. It forms a connecting link between the specialists and the ignorant public. Under the patronage of securely-placed officers of the state, the army, the church, the bench, and the medical profession, letters have always flourished; but in America many of these persons have a culture extremely meagre, many others hold offices which are only temporarily theirs. Political offices being newly filled with each incoming administration, the service of the State never becomes a profession. Jackson's maxim—that to the victor belong the spoils—has indirectly done serious damage to literature.

As we try to forecast the future of literature in America, we see that it must be largely affected by the solution ultimately reached of three political problems—the treatment by the State of the great corporations, the railroads especially; the management of the negro population, already admitted to the vote but not to social equality; and the power of the country to absorb an undiminishing stream of European immigration. The horde of foreigners burdens the North, fills its jails, cheapens its wages, and exhausts its charities. The South still desires immigration, and everywhere Germans are welcomed; but the old belief that America can make good citizens out of all the restless and improvident who have failed in their own lands, has received a rude shake.

The problems here indicated are not, it is true, problems merely of the New World; were they so, we need not concern ourselves about them: they are merely problems more urgent at present there than elsewhere, and they are presented there in terms of peculiar distinctness. This fact, that the questions on trial in America are world-questions, makes it important for the man who would be acquainted with his kind to study America, its government, its society, and, as an expression of all else, its literature.

In this summary, reported by memory and corrected by a brief newspaper report the next day, I am sure I do injustice to the thought of Dr. Döllinger; but perhaps enough is here given to show at least the curious psychological interest of the lecture. An acute man, singularly free from prejudice, accustomed to weighing evidence, undertakes to construct a picture of a people whom he has never visited. That people is less distant from him than Greece formerly was from Rome. It is in daily communication with his own city of Munich. Its newspapers are on file everywhere. Books, pictures, and statistics relating to it abound. Hundreds of Munich citizens have visited America; hundreds of Americans are now living in Munich. This very scholar counts Americans among his intimate friends. Under such exceptionally favorable conditions, how true a picture can be drawn of an unseen land? It was this question of descriptive accuracy, I confess, which interested me more than the critical estimates of Dr. Döllinger; for I thought the lecture might throw some light on the probable success of the efforts scholars are always making to reconstruct across thousands of years the private life of nations enormously unlike ourselves. The result was something of a surprise to me. I detected no large number of false statements; from errors of this sort the habits of the scientific historian guarded him well. There were some important omissions. But the most striking distortion was in the perspective. Even those monarchical-minded Americans from whose writings a large part of the facts stated was obviously drawn, would have acknowledged that the picture as a whole was considerably out of drawing. Proportions, relative degrees of importance, are not easily obtained at second-hand. The most diligent, the most unbiassed of scholars needs to substantiate by experience the report of books.

G. H. P.

Correspondence.

PROFESSOR LANCIANI AND THE AGE OF BRONZE.

To the Editor of The Nation:

Sir: In your review of Prof. Lanciani's charming study of 'Ancient Rome in the Light of Recent Discoveries,' you speak of the difficulty of following his reasoning when he argues that the cinerary hut-urns found on the Alban Mount belong to the prehistoric age of bronze, while the shepherds who made them also possessed foreign imported pottery which was not introduced into Italy earlier than the seventh century B. C. The trouble lies in the fact that Prof. Lanciani, although he is an expert in classical antiquities, is not such in regard to prehistoric times. He asserts that "the foundation of Rome dates from the age of bronze," and attempts to establish this from the fact that certain cinerary urns, made in the shape of a hut or tent, were discovered underneath a layer of peperino on the slopes of the Alban Mount. These contained "the remains of an incinerated body with fibulæ and other objects in amber and bronze." But he

goes on to argue that, because no iron was found with them, they belong to "the age of bronze." He might just as well have maintained that they belong to "the age of stone," since he also states that they were found enclosed in jars of an exceedingly rough kind of terracotta, "hand-made and sun-dried." Does Prof. Lanciani suppose that the shepherds on the Alban Mount had not advanced beyond the stage of culture of our American Indians, none of whose pottery which we find in the "shell-heaps" marking the site of their ancient dwellings, is "sun-dried," but always well baked—not, it is true, in a covered kiln, but upon an open hearth?

The truth is, that the hut-urns and all their contents of black Latial pottery, together with the rough jars that enclose them, belong to what is called by European archæologists the "Early Iron Age." The dispute is as to whether this period represents the earliest "proto-Etruscan" time, or a prior Italic "pre-Etruscan" civilization. The bronze age pure—that is, the time before the use of iron was known—is found in Italy only in the Terremares of Umbria, which show no traces of iron, and are contemporary with the lake dwellings of the bronze age in Switzerland and Savoy.

I quite agree with Prof. Lanciani in thinking that Prof. Middleton is wrong in arguing that the recent discovery of early tombs on the Esquiline in Rome indicates a prior Etruscan settlement there. The black pottery found in them is Latial and not Etruscan in character; but Lanciani is equally wrong in stating that "Ponzi, the late leader of Italian geologists, decided the vases [found on the Alban Mount] had *not* been buried by the lava eruptions." His opinion is exactly the contrary, as may be seen in his paper on "The Relations of Prehistoric Man with the Geological Phenomena of Central Italy" (p. 69), in the *compte rendu* of the Bologna Congress of Prehistoric Archæology, in 1871. The commission that had investigated this question in 1866—not in 1867, as Lanciani says—consisted of Profs. Ponzi, De Rossi, Pigorini, and Senator Rosa; and it was the last gentleman who held the opinion that the vases "had been introduced under the lava-bed from a Roman road which crosses the Pascolare close by." It was with the desire of settling this matter beyond a possibility of question that the late Prof. Edward Desor of Neuchâtel arranged for a reinvestigation of the question by quite a large committee, including De Rossi, who had participated in the previous inquiry. This was done on April 2, 1877, and I had the pleasure of accompanying the party by Prof. Desor's invitation. The result of our studies he communicated to the *Matériaux* (vol. xii, p. 297), and it shows that Rosa was mistaken. As the subject of the original discovery of the vases in 1817 is interesting, and the memoirs in which it is discussed are difficult to procure, I will state that a complete account of the circumstances will be found in Hobhouse's 'Illustrations to the Fourth Canto of Childe Harold' (p. 328), which was published the following year.

As stated before, these hut-urns belong to the early iron age, which the Italian archæologists call the "period of Villanova," from the discoveries made at his villa there, near Bologna, by the late Count Gozzadini. They have been discovered in five different places in Italy, besides in the cemetery upon the slopes of the Alban Mount—in tombs of the earliest description at Corneto, the ancient Etruscan Tarquinii; in others near the alum-works at Tolfa, about twelve miles east of Civita Vecchia; in the recently-discovered cemetery near Colonna di Buriano, which undoubtedly represents the ancient Etruscan Vetulonia, whose site has been so long sought for in vain; in the great cemetery on Lake Bolsena, a relic of the Etrurian Volsinii; and lastly in the one recently discovered in Rome, on the Esquiline. Probably it was the circumstance that all the sites where hut-urns have been discovered, except on the Alban Mount and at Rome, were unquestionably Etruscan, which caused Prof. Middleton to maintain the theory of an Etruscan origin for Rome. But the hut-urns are only one of the types of the pottery and other objects which mark the epoch of Villanova; and the recent discovery of tombs containing undoubted objects belonging to the period of Villanova, near the site of the old Greek city of Sybaris, in southern Italy, in a region beyond the farthest reach of the Etruscan power, has greatly strengthened the position of those scholars who believe in an early Italic pre-Etruscan civilization.

Prof. Lanciani's conclusion is, that "when Rome was founded, the inhabitants of central Italy, Etruria excluded, had only attained that degree of civilization which is called the civilization of bronze," because no iron was found in the cemeteries at Alba Longa and upon the Esquiline. But as everything else found in them corresponds exactly with what is found in tombs of the Villanova period, in the early iron age, these two arguments fall to the ground. His third argument, drawn from the abhorrence of iron manifested in the Roman religious rites, proves too much; for the same survival of old habits and traditions in religious matters is manifested in the use, down to very late times, made by the *fecialis* of a stone axe to slay the victim at the sacrifice offered on the ratification of a treaty.

So I will conclude, as I began, with the statement that Prof. Lanciani might as reasonably have argued that Rome was founded in the age of stone as in the age of bronze.

I am yours, HENRY W. HAYNES.

BOSTON, January 20, 1889.

LANCIANI AND PLINY.

TO THE EDITOR OF THE NATION:

SIR: The charge has sometimes been brought against archæologists that their classical scholarship is deficient, and Prof. Rodolfo Lanciani's 'Ancient Rome in the Light of Recent Discoveries,' just published, furnishes some ground for this charge. This book contains several remarkable statements, but there is one instance of such curious misinterpretation that it deserves to be called to the attention of your readers. The error is such that it is very difficult of explanation except as a result of great carelessness or ignorance of the Latin language. On page 113, Prof. Lanciani, speaking of the reading-room of the Palace of the Cæsars, says:

"It is probable that in this reading-room were held the sittings of the literary academies and societies described by Pliny the Younger in his letter to Sosius Senecio (I, 13), which were the delight of the Emperor Claudius, the abhorrence and the horror of literary men, who were obliged by their connection with the imperial court to lose hours upon hours in listening to silly and narcotic lecturers. Nothing could be more graphic than the description by Pliny of one of these compulsory sittings. 'We approach the hall,' he says, 'as if we were compelled by main force; many of us sit outside of the door, and try to overcome the *ennui* by discussing the gossip of the town. Messengers are surreptitiously sent in to inquire whether the lecturer has really made his appearance, whether he has finished his prologue, or how many sheets are still to be read. Then, when we hear that the moment of deliverance is not very far off, we come in slowly, sit on the edge of our chairs, and do not even wait for the end of the discourse to slip or steal away.'"

Let us turn now to the text of the letter in question (I,13). We read as follows:

"Magnum proventum poetarum annus hic attulit: toto mense Aprili nullus fere dies quo non recitaret aliquis. Juvat me quod vigent studia, proferunt se ingenia hominum et ostentant, tametsi ad audiendum pigre coitur. Plerique in stationibus sedent tempusque audiendi fabulis conterunt, ac subinde sibi nuntiari jubent, an jam recitator intraverit, an dixerit præfationem, an ex magna parte evolverit librum: tunc demum ac tunc quoque lente cunctanterque veniunt; nec tamen permanent sed ante finem recedunt, alii dissimulanter et furtim, alii simpliciter et libere. At hercule memoria parentum Claudium Cæsarem ferunt, cum in palatio spatiaretur audissetque clamorem, causam requisse, cumque dictum esset recitare Nonianum, subitum recitanti inopinatumque venisse."

The rest of the letter contains Pliny's lament over the fact that in his time the men of the most leisure did not care enough about literature to listen to the readings; or, if they did use any of their time in this way, complained that it was lost. He himself asserts that he has missed scarcely one, and expresses his pleasure in such exercises.

A moment's glance at the original is sufficient to show how thoroughly wrong the impression made by the translation is. There is no evidence in the letter that any "literary academies and societies" existed, or that they met usually in the Palace of the Cæsars. A single instance related of Claudius is not sufficient ground for asserting his "delight" in such exercises. From the language of Prof. Lanciani one might easily infer that this letter described the state of things under Claudius, and that, because of his fondness for recitations, the literary men were grievously tormented. The date of publication of this letter was probably 97 A. D., and the emperors of that time did not indulge in excessive literary enthusiasm or compel audiences to assemble to hear "narcotic lecturers." There was nothing "compulsory" about these recitations: on the contrary, Pliny bewailed the fact that so many refused to take advantage of their opportunities. It is difficult to see how the meaning of so simple a passage could be so mistaken. SAMUEL B. PLATNER.

ADELBERT COLLEGE, January 19.

DECAY OF EASTERN FARM LANDS.

TO THE EDITOR OF THE NATION:

SIR: The exigencies of argument become very obvious when men like Senators Hoar, Dawes, and Hiscock are driven to assert, as they did in the Senate on January 15, that farming property in the Eastern States has not depreciated. Senator Hoar becomes amusing when he claims that "the existence of mortgages is a sign of life and health."

Perhaps no better answer to the stock argument of the protectionists—that the farmer gains more from the local market made by manufacturing villages and towns than he loses in the increased cost of the goods he buys—can be found than a statement of the condition of some of the towns near these manufacturing cities on the Merrimac River. The Merrimac turns more spindles than any other river in the world. Within a few miles of each other, around the great bend of the river from south to east, are the cities of Nashua, Lowell, Lawrence, and Haverhill. In the farming towns of Windham, Pelham, and Hudson, N. H., situated within the bend, and so within easy access of all four of the above-named cities, we *ought* to find prosperous "protected" farming.

On one main road from Lowell to Windham, twelve miles, I count six deserted sets of farm buildings, besides several which have already

gone to ruin. Fields and pastures are growing up to wood; houses in which, a generation ago, sturdy manhood and womanhood flourished, are gone to utter ruin; in many school districts there are not sufficient children to have a school. The whole appearance is one of poverty and decay; to ride along our country roads is extremely depressing. In no part of New England with which I am acquainted is the decay of the farming interests so obvious and so complete as here by the manufacturing cities. Instead of the homogeneous population of thrifty, intelligent, self-respecting farmers and mechanics that occupied this section fifty years ago, we now have, in our cities, a few fine streets of residences for the capitalists and employers, and then our "French Acre," "Irish Acre," corporation boarding and tenement-houses, and in our country *a desert*—for it is already nearly that.

Possibly this may be "progress," and a modern, improved kind of progress—one that has not been brought about by rude, natural causes, but one that results from the incomparable wisdom of our legislators, who are so kindly taxing us into wealth. Our farming interests would have suffered enough from the inevitable competition with more favored sections; but the ruin has been precipitated by the tremendous burden of taxation that the farmer has borne. It is no small thing when a nation renders impossible the existence of a class that has been the source of so much energy, talent, and character as have the New England farmers. G. W. A.

Nashua, N. H., January 16, 1889.

HOW TO REACH THE FARMERS.

To the Editor of The Nation:

Sir: I am a farmer as well as an innkeeper, and I recognize the importance, the necessity, of educating the farmers on this great question of the tariff. Facts and non-partisan arguments are not found in the publications that reach the farmers. To reach them with the right sort of information upon this subject is the problem. Could there not be a national organization, with members in every county if possible, who would see to it that the best tariff literature was sent to the homes of farmers? The farmers of the West are intelligent and open to conviction, but partisan harangues and "campaign documents" will never educate them, or hardly change a vote. H.

Beatrice, Neb., January 12, 1889.

Notes.

It is proposed to undertake a series of facsimiles of the choicest treasures of the Bodleian Library, if adequate support is forthcoming. The works will be selected for their special rarity or for some unusual importance or interest attaching to them. Subscribers will secure lowest rates. The first three reproductions will be the Caedmon MS. (10s. 6d. per part of twelve); 'Ars Moriendi: that is to saye the craft for to deye for the helthe of mannes sowle' (a supposed unique Caxton, 1491, 2s. 6d.); a rare and perhaps unique description of the procession ordered by the Pope in thanksgiving for the St. Bartholomew massacre (1s. 6d.). Prepayment is required. Subscribers should address Mr. Henry Frowde, Oxford University Press Warehouse, Amen Corner, London. Specimens of the facsimiles have been sent out, with descriptions of the above documents.

Harper & Bros. publish directly 'The Government of the United States,' a text-book and manual, by W. J. Cocker; 'Our English,' by Prof. Adams S. Hill; 'Modern Science in Bible Lands,' by Sir J. W. Dawson; and Charles Reade's 'Bible Characters.'

A translation of Duruy's 'Histoire de France,' abridged, for the use of schools, is in the press of T. Y. Crowell & Co. Prof. J. F. Jameson of Brown University has supervised it.

Ginn & Co. publish next month 'An Introduction to the Poetry of Robert Browning,' by Prof. Wm. John Alexander of Dalhousie College.

Frederick Warne & Co.'s next issue in their "Cavendish Library" will be 'Leigh Hunt as Poet and Essayist,' being the choicest passages from his works, selected and edited, with a biographical introduction, by Charles Kent.

The production of novels continues without abatement. We are promised 'A Shocking Example, and Other Sketches,' by Frances Courtenay Baylor (Lippincott); 'Raleigh Westgate; or, Epimenides in Maine,' by Mrs. Helen Kendrick Johnson (Appletons); 'Vagabond Stories,' by Prof. H. H. Boyesen (D. Lothrop Co.); 'A Nine Men's Morrice,' by Walter Herries Pollock, and 'A Dangerous Catspaw,' by D. Christie Murray and Henry Murray (Longmans); and 'Frederick Struther's Romance,' by Albert Ulmann (Brentano's.)

Leach, Shewell & Sanborn will undertake a "Student's Series of Latin Classics," under the editorial supervision of Prof. Ernest Mondell Pease of Bowdoin College. The collaborators represent many and widely separated colleges.

Lockhart's 'Ancient Spanish Ballads' is the latest volume of the Messrs. Putnam's "Nugget Series." It is no small part of the merit of this edition that it reproduces, at a reduced scale, wood engravings of the school of Harvey which are well worth comparing with our present style, by way of correction of excessive complacency.

The same publishers send us their 'Pocket Gazetteer of the World,' edited by J. G. Bartholomew. Its 625 pages will be found sufficiently inclusive for ordinary reference, and the information generally trustworthy. Where the single-line brevity is departed from, a disproportion is sometimes observable. Both New York and Baltimore, to take American examples, are allowed less than their due space. England and her dependencies have been especially well looked after. Sir W. W. Hunter's Indian orthography has been adopted, but with cross references. A few maps of rainfall, population, races, etc., conclude the little volume.

Roberts Brothers continue their reissue of Arthur Helps's works with his 'Story of Realmah."

B. Westermann & Co. are the American publishers of the new edition of the "Porta Linguarum Orientalium," which has introduced so many students to the study of Oriental languages. The latest additions to the series are the Syriac Grammar of Dr. Eberhard Nestle, translated by Prof. A. R. S. Kennedy of the University of Aberdeen, and an Arabic Bible-Chrestomathy, with a Glossary, by George Jacob, Ph. D., of the Royal Library of Berlin. Dr. Nestle is in every way qualified for the task, and the German original of his grammar has already reached a second edition. Dr. Jacob's Chrestomathy is published as a sort of appendix to the Arabic Grammar of the series by Dr. Socin. On the theory that the Arabic Bible versions did not properly represent the language, he omitted them entirely from his Chrestomathy. For practical reasons, however, teachers of Oriental languages desired portions of the Bible in their text-books, and it was to meet this want that the Bible-Chrestomathy was published. The selection is representative, including texts from Genesis, Judges, Samuel, Kings, Psalms, and Matthew. The latter work is poorly translated. The publication of the series in English affords a striking proof of the interest had in Semetic studies in this country and England.

In this connection it may be remarked that the inaugural dissertations at the German universities generally reflect the impress of the teacher on the student's mind, and may therefore be taken as indicative of the prevailing lines of work. Among the newer dissertations in the line of Semitic research are "Rabbi Meir: the Life and Work of a Jewish Scholar of the Second Century after Christ, from the sources," by Adolf Blumenthal; "The Age of the Prophet Joel," by G. Kessner; "Syriac Version of the Twelve Minor Prophets," by M. S. Schönberger; and "The Kuteans as Observers of the Law, from Talmudic sources," by Israel Tagelicht.

The German Government is engaged in publishing catalogues of the manuscripts preserved in the Royal Library of Berlin. There have appeared recently the volumes on the Armenian manuscripts, by Dr. N. Karamianz; Persian, by Wilhelm Pertsch; Sanskrit and Prakrit, by A. Weber. The Trustees of the British Museum have just published a catalogue of their Turkish manuscripts prepared by Dr. Charles Rieu.

There has just issued from the Calcutta press the Report of the Archæological Survey of India, by Joseph Daviditch Milik-Beglaroff; from Bombay, the original Pahlavi text of the 'Dinkard' (vol. v.), the great religious commentary, with a translation and glossary by Peshotan Dastur Behramjee Sanjana; and from London (Trübner), 'Next-of-kin Marriages in Old Iran,' by Darab Dastur Peshotan Sunjana.

In addition to the £50 granted to our countryman, Mr. L. H. Mills, translator of the 'Zend Avesta,' by the British Secretary of State for India, the trustees of the Sir J. Jejeebhoy Translation Fund of Bombay have voted Mr. Mills 925 rupees towards his translation of the Gâthas, the first volume of which has been doing its work in widely-extended private circulation among specialists in Germany and elsewhere for the past four or five years.

Among the recent publications of the United States Geological Survey is Bulletin 47, containing "analyses of waters of the Yellowstone National Park, with an account of the methods of analysis employed." The investigation is the work of Dr. F. A. Gooch and Mr. J. Edward Whitfield upon the waters collected by those engaged in conducting the geological survey of the region, and gives the result of an examination of forty-three waters. It includes the waters thrown out by such geysers as "Old Faithful," "Splendid," and "Giantess," and the principal hot springs found throughout the Park. Surface waters have also been studied, including those from Yellowstone Lake and the supply to the hotels at the Mammoth Hot Springs. Estimations of the amount of boric acid, bromide, arsenic, and lithium have been made in most instances in the silicious waters; they may properly be called arsenical waters. This able research should be of value, not only to geologists and chemists, but to physicians and all interested in the therapeutic qualities of thermal waters from volcanic areas.

Against the day when the Maritime Provinces of the Dominion of Canada obey the law of their geographical position, and join our Republic, there should be a certain interest taken in the collections of the

Nova Scotia Historical Society. The volume for 1887-88 has just come to hand, and the titles of the leading papers will show that the more the Province cultivates historical studies, the more it must turn its face westward. Justice Weatherbe discusses at considerable length "The Acadian Boundary Dispute and the Ashburton Treaty," and concludes that the unfair settlement "must be rectified." The Rev. T. Watson Webb has an equally long paper on "The Loyalists at Shelburne," with much curious matter about slavery in Nova Scotia. "It was the harsh treatment of a slave by a Loyalist master who had carried him to London," he says, that evoked Lord Mansfield's famous decision, a prelude to the decisive attack on the slave-trade. A decision of Chief-Justice Osgoode's abolished slavery in Upper Canada in 1793. Ten years later it was abolished in Lower Canada. A third paper, only a little less directly international, is Mr. J. J. Stewart's "Early Journalism in Nova Scotia," a subject not without its attractions for our genealogists at least. Moreover, John Bushell, who founded the Halifax *Gazette* on March 23, 1752, was a printer from Boston, and our Bostonian Isaiah Thomas worked in the office of this journal, which was the first issued in the present Dominion, and, being continued to this day (*Royal Gazette*), is the oldest in America. No complete file exists. "King's College and Episcopate in Nova Scotia" and "Notes on the Early History of St. George's Church" complete the volume.

Mr. S. S. Rider, Providence, R. I., sends us the bound fifth volume of his *Book Notes*, a periodical having a very marked individuality, and consisting, as the editor-publisher says, of "literary gossip, criticisms of books, and local historical matters connected with Rhode Island." It is these local matters which ensure the preservation of *Book Notes*, and they are properly honored with an index which fills a page and a half. But, as our readers are aware, Mr. Rider not seldom touches topics unenumerated on his title-page, and especially our iniquitous tariff, which is, indeed, a "local matter," but only because no corner of the country can escape from it, and which deserves speedily to become "historical." We commend *Book Notes* to the class whom this description interests.

The *American Architect*, Boston, will award in June a travelling-scholarship of $500, "open to architectural students, draughtsmen, and architects, between the ages of twenty and twenty-five years, in *any* part of the country, whether they be male or female, white, red, or black." A condition previous to the required examination (oral and written) is that the applicant must have had two years' practice in offices of members of the American Institute of Architects or the Western Association of Architects, or one year in the case of graduates from a technical school.

The *Belletristisches Journal* of this city, one of the oldest and in former days most influential of German-American weeklies, has passed under the editorial control of Dr. Julius Goebel, until recently of the Johns Hopkins University. The *Journal* will, as hitherto, maintain its politico-literary character, drawing equally from German-American and European sources. We notice, by the way, in its issue of January 17, an elaborate article from the Leipzig *Grenzboten* on "The United States in the light of the last Presidential Election," which, in spite of its pessimistic views as to our moral status, and its gratuitous anti-Semitic fling at the Belmonts, instructively belies its own thesis, that "European interest in the political affairs of the United States is steadily decreasing."

Mr. R. H. Tilley, Newport, R. I., will publish his *American Genealogical Queries* for 1889 in April. It is a sort of clearing-house, in which advertisers notify each other and all readers of their wants.

The new monthly *Poet-Lore* (Philadelphia: Lippincott) is typographically well conceived and attractive. Dr. D. G. Brinton furnishes the leading paper, on "Facettes of Love; from Browning," and everything else is scrappy in comparison, Shakspere dividing about equally with Browning.

The quality of "natural science" likely to be provided by the founder of a periodical called *Greeley*, may be inferred. Published not on the Plains but in Boston (Dorchester), Mass., on yellow paper and with yellow covers containing a full-length portrait of the late editor of the *Tribune*, this new venture is a curiosity.

Another queer Boston notion is the monthly *Collegian*, launched in the present month. It opens one more medium for ambitious undergraduate writers, and has a nebulous and noncommittal programme. The editor himself writes of college journalism that "one cannot locate it antipodal to the secular press, certainly not above it, and yet not parallel"

The *Jurnal ov American Orthoepy*, published at Ringos, N. J., by Dr. C. W. Larison, is not new, but it has a perennial freshness and capacity to amuse, both by its odd phonetic spelling and type, and by its contents. The editor tells a story very graphically, and he has in the January number a frank delineation of his grandfather. This humorist, who "livd in a da in hwich fiting woz fashunabul," finding it necessary, in one of his numerous encounters, to bite off his antagonist's ear, got up "chuing it lustili. He yuzed tu lafingly sa: 'That iz the onli tim I ever tasted ro sous' [raw sousse]."

Mr. J. H. Hickcox's monthly 'Catalogue of Government Publications' (906 M Street, Washington) has, by the compiler's persistence in combination with excellent performance, weathered its fourth year, and now enters with good prospects on its fifth volume. We may remind our readers, and all librarians, that it embraces *all* the current publications of the Government, and makes "separate entry of every paper or contribution contained in reports, bulletins, or serial publications of the Government." Each volume (of about 300 pp.) is indexed.

The seventh series of the Johns Hopkins University Studies opens with a sketch of Arthur Toynbee, by F. C. Montague, Fellow of Oriel College, Oxford, with an account of Toynbee Hall by the Chairman of the Council.

The *American Journal of Psychology* for November is strong in three leading articles on "Personal Equation," by E. C. Stanford; "Memory, Historically and Experimentally Considered," by W. H. Burnham; and "The Place for the Study of Language in a Curriculum of Education," by Dr. Mary Putnam Jacobi.

Sun and Shade for January has an excellent variety of plates from very dissimilar sources, Mr. Jackson's view from nature of the cañon of the Rio Las Animas being at the front, in our estimation. Some of Mr. Muybridge's instantaneous views of horses in motion are instructively grouped with one of a horse race.

—In its issue for January 3, *Nature* has added to its series of "Scientific Worthies" a sketch of Professor Sylvester, whose fruitful activity at the Johns Hopkins University during the first seven years of its existence makes his career of special interest to Americans. The biographical part of the article is brief and rather meagre, though, to be sure, little can be expected to be said concerning the mere outward events of a mathematician's life. Apart from the record of his successive positions and honors, the most interesting point mentioned is contained in the closing sentence: "Wherever Dr. Sylvester goes, there is sure to be mathematical activity; and the latest proof of this is the formation, during the last term at Oxford, of a Mathematical Society, which promises, we hear without surprise, to do much for the advancement of mathematical science there." It is pleasant to those who came within the sphere of his stimulating enthusiasm in America to be thus assured that, in his seventy-fifth year, his ardor and activity are as unimpaired as his mental powers. The sketch of Sylvester's mathematical writings is from the pen of his great comrade in mathematical arms, Professor Cayley. It covers four columns, of which nearly two are devoted to the papers which appeared in the *American Journal of Mathematics*. The bare record of mathematical achievements, of which the very names are symbols of mystery to the uninitiated, is enlivened by several illustrations of that "adornment or enthusiasm of language" which is so marked a peculiarity of Sylvester, sometimes launching him into mere extravagance, but often full of deep significance as well as of beauty. In his account of Sylvester's work during the years 1851-4, when the great structure of what is known as Modern Algebra was being built up, Cayley is, naturally enough, silent as to the overwhelming importance of his own share in that achievement; but one is all the more reminded of the complete absence of jealousy or rivalry between these two men, whose discoveries were then so treading upon one another's heels that it is difficult to trace the exact measure of credit due to each. The steel engraving which accompanies the article is an admirable portrait.

—The initial number of the *Library* (London: E. Stock) which takes the place of the *Library Chronicle* as the organ of the Library Association of the United Kingdom, recommends itself by its neat and pleasing typographical appearance, and offers a very attractive table of contents. The place of honor is occupied by Austin Dobson's paper, "A Forgotten Book of Travels," descriptive of C. P. Moritz's 'Travels through England in 1782.' It may be questioned, however, whether a book reprinted in popular form in 1886 ('Cassell's National Library,' No. 46) can fairly be called *forgotten*. Mr. Blades contributes an interesting account of some very curious proposals made two centuries ago for the founding of public libraries in Great Britain. A. H. Bullen has a short article on W. J. Linton's "Appledore Private Press," near New Haven. H. R. Tedder's paper on the "Bibliography and Classification of French History" is chiefly devoted to a review of Monod's recently issued 'Bibliographie de l' histoire de France,' with a few words in illustration of the writer's own proposals for a bibliography of the printed sources of English history—proposals which it is to be hoped he may be enabled to carry into practical effect. "Theophrastus Junior" begins what promises to be a series of entertaining sketches, describing the characteristics of some of the more notable varieties of the species *Librarian*, the first place—"for indeed he considereth himself *facile princeps* in all things"—being given to the "Practical Librarian."

"Himself chooseth this name, and is proud when he is spoken of as a 'Jack-of-all

trades,' and observeth not that his flatterer thrusteth his tongue into his cheek and chortleth softly, as who should say 'and eke master of none.' He vaunteth himself above his fellows, and speaketh learnedly of buckram and of its virtues. The wares he deals in are the beggarly elements of books and things bookish; and if one should speak to him of the spiritual essence of books, or would fain have his opinion on a doubtful passage in Dan Chaucer, your practical librarian (God save the mark!) hath ever ready a pat quotation from an ancient author who ever loved a doubtful epigram—'The librarian who reads is lost.' His library is littered with cunning inventions, more apt to attract the wayward attention of a thoughtless student, and to amuse him by their ingenuity, than to tempt him to his book. Speak to this librarian of his catalogue, and he will presently wax eloquent on the importance of all cards being of the size prescribed by the 'Universal Emporium,' and he will straightway draw a fine metre from his pouch and triumphantly prove to you the orthodoxy of his. He disdaineth the old-fashioned ladders—fit emblems to the student of his upward path—and will peck at his topmost books with a sort of mechanic crane. The fair bindings be chipped and the goodly tomes fall about his long ears, but what of that? Is not the thing mechanic, which he misnames practical, and so also himself?"

—a sketch which reads as if drawn from life, nor is this variety unknown in America. A brief notice of the recently issued report on the progress of the Bodleian Library from 1882 to 1887, if it does not damn with faint praise, certainly pays some rather equivocal compliments to the energy of the librarian. The remaining contents of the number comprise notices of new books, library notes and news, a record of bibliography and library literature, and a letter from Walter Besant, containing an appeal in behalf of the library of the People's Palace for gifts of books, which should find a hearty response from all interested in the good work which is being done in the East End of London.

— For 'The Declaration of Independence and the Constitution of the United States in German, French, and English, in Parallel Columns' (Laidlaw Bros.), the claim, both false and absurd, is made that it is the first translation of these documents into French and German. They have, on the contrary, been translated into French scores of times, and frequently into German. Both documents were published in French in a volume entitled 'Constitutions des Treize États-Unis de l'Amérique, etc.' (Paris, 1792); and both, with many other documents in French, in a volume issued at "Nouvelle-Orléans" in 1810. The Declaration of Independence is translated into French, German, and Italian, and printed in English, in a volume (without date) probably printed in France during the Revolution. The Constitution is printed in German and English in a little volume called 'Der Deutsche in Amerika,' etc. (1851). These indications will suffice for our purpose. The present publication, nevertheless, has many valuable features. It is just the thing to put into the hands of a Frenchman or a German who wishes to understand our Government, or into those of an American who desires to familiarize himself with certain important words and phrases in German and French. The table of contents is very copious, and gives a complete skeleton of the Constitution, easy of reference. Best of all are the notes, which, though very brief, are clear, and embrace an outline of the constitutional organization from the time of the first colonies; they give the most important historical facts and dates in connection with the constitutional history, contrast the Constitution with the Articles of Confederation, and carefully explain the technical phrases and many of the clauses of the former.

—'Die Geschichte der Deutschen Universitäten' by George Kaufmann ('Erster Band: Vorgeschichte.' Stuttgart: Cotta. 1888. Pp. 442) is a work that will add much to the reputation of the well-known author of 'Deutsche Geschichte bis auf Karl den Grossen.' In the preface we are informed that he was induced to write this book by Dr. Von Goslar, Prussian Minister of Education, to whose cordial official support the author acknowledges his obligations. The volume before us is a general history of European universities down to the year 1500. As the mediæval universities were the product and supporters of scholasticism, the author discusses the latter subject in detail in chapter i. (pp. 1–97). The early history of the universities of Italy, France, England, and Spain is carefully considered in chapters iii., iv., and v. The remaining chapters (ii. and vi.) are devoted to a discussion of the origin and development of universities in general. The history of the German universities in the Middle Ages will be taken up in volume ii. The list of authorities (pp. 430-442) forms a useful bibliography of the literature relating to mediæval institutions of learning. In many important points the author differs with Denifle, though acknowledging the value of the latter's great work on 'Die Universitäten des Mittelalters bis 1400.' Dr. Kaufmann expects to publish two more volumes, concluding the whole work with "a critical view of the many schemes of university reform made since the days of Kant and Schleiermacher." The volume before us is dedicated to the University of Bologna, in honor of the latter's anniversary celebration. In this connection we may call attention to two excellent pamphlets, recently published, relating to the history of the University of Bologna: Leonhard's 'Die Universität Bologna im Mittelalter' (Leipzig: Veit. 1888), and Fitting's 'Die Anfänge der Rechtschule zu Bologna' (Berlin: Gutentag. 1888).

GOUVERNEUR MORRIS.

The Diary and Letters of Gouverneur Morris, Minister of the United States to France; Member of the Constitutional Convention, etc. Edited by Anne Cary Morris. 2 vols. With portraits. Charles Scribner's Sons. 1888.

The publication of Gouverneur Morris's diary, substantially as he left it, is a literary event of no ordinary importance. We have had glimpses of it before—first in the pages of Sparks, where, however, the reader was not quite sure how far the outlines and colors of the picture were modified or obscured by the anxious care of the editor; and then in Mr. Theodore Roosevelt's short biography, which, from its brevity, could give us little more than occasional extracts. But now we have the diary itself in its integrity. The expurgations have been few and far between, and are only such as were absolutely necessary. The editor has added a running text of comment and explanation, and has very wisely allowed Morris to tell his own story, without attempting discussion or argument on controvertible points. Of these, of course, there are a multitude, as especially the subject of Lafayette's career and Morris's relations with him.

The important thing in such matters is that we should get the whole story, and this we certainly do from one side. From first to last, from the time when in 1789 Morris makes this entry of a conversation with the French Commander-in-Chief—"I ask him if his troops will obey him. He says they will not mount guard when it rains, but he thinks they will readily follow him into action" (Vol. I, p. 156)—down to the time when, after the unsatisfactory termination of their pecuniary relations, Morris sums up his character by saying: "There is no drawing the sound of a trumpet from a whistle," we see Lafayette as he appeared to Morris—a second-rate and rather dishonest man, attempting to play a part much above him. This is not the usually accepted view of Lafayette's character, but it is the more important on that account, coming as it does from a man with Morris's opportunities of observation. One or two points the diary make quite clear: Morris at heart despised Lafayette, partly as a revolutionist, and partly as a phrasemonger; Lafayette found it difficult to get on with Morris because the latter was for ever trying to convince him how foolish all his opinions were.

Morris (who was of French extraction on his mother's side) went to Paris in 1789, at the age of thirty-seven, to superintend some business affairs, and remained abroad some nine or ten years. He thus arrived just as the Revolution broke out. He lived in Paris through most of it, and, at its most stormy period, in 1792, was made American Minister. With undaunted courage he remained at his post, the only representative of a foreign government in the city; and his diary accordingly gives us a sort of photograph of the revolutionary period as it appeared to an exceptionally intelligent and well-equipped foreigner, who had the *entrée* of French society as few other foreigners have ever had. He was exceptionally well-equipped, for he had not only every advantage in the way of education, but had already taken a leading part in our Revolution and the formation of our government. What the French were doing, or thought they were doing, he had already seen done and helped to do. The friend of Hamilton, Washington, and Jay, he approached the subject of the French struggle for liberty with a thorough comprehension of the forces at work, and without illusions. So much has been published within the last thirty years about this period that it cannot be said that Morris's picture is absolutely novel. Through the researches of Taine and the publication of innumerable French memoirs, we have become familiar with a view which is more or less that of the diary. Thirty years ago the book would have created a profound sensation. The picture of the Revolution is wonderfully complete. The King, benevolent and irresolute, the victim, in a certain sense, of his own virtues; the Queen, detested and detesting, certain only to do the wrong thing; the nobles, urging on the pitiless revolution which was to swallow them up; the army, a hotbed of treason; the Tiers-État, in the name of liberty, steadily preparing despotism and a dictatorship—of all these we get glimpses more or less picturesque, always clear and accurate, as the panorama unrolls itself. It is not Carlyle's lurid canvas, but a philosophical exhibition of a revolution by an observer who actually understands the mechanism of the disturbance much better than do most of those who think they are guiding it.

Morris's character appears very clearly in these volumes, and it is partly because of this that they are so entertaining. He is not one of the majestic shades of the Revolution who stalk through the pages of a pious biographer, an incarnation of the domestic virtues and public spirit, flawless even in the privacy of dressing-gown and slippers. On the contrary, he is a cheerful and somewhat cynical man of the world, seeing clearly what is going on about him, and with a good gift for putting down in black and white what he sees. Skeptical by disposition and habit, this half-English, half-American gentleman cuts rather an odd figure

in the midst of the enthusiasts of the French Revolution, pointing out to this patriot that they are all going, as Carlyle would say, to "the mother of dead dogs," and to the other that his scheme of reform is utterly inane and worthless; preserving through all the dangers and horrors of the time a constant cheerfulness and a power of sympathy which enables him to effect the difficult combination of the rôle of a prophet of evil with that of a popular favorite.

Morris may be said to have been English in his convictions and French in his sympathies. He liked the society of Paris, enjoyed its brightness and charm. It is evident that he enjoyed his mastery of a language which gifted him with new powers for the exhibition of his own cleverness. If there was one thing that he liked better than to write doubtfully poetical English verses in the taste of the period, it was to turn a neat phrase in French. He was very fond of women's society, to judge by the amount of his time it took up, though he himself professes great indifference; and where were to be found more charming women than in Paris? But Morris as an observer was never diverted from the truth by his likes. This interesting people, he felt, were children in the art of government, and consequently immeasurably below the race to which he belonged. Contempt, mingled with pity and sympathy, was what he really felt at the bottom of his heart for his charming and witty entertainers. In 1790 he gives an account of the Assembly and its deliberative methods which is inimitable, and which is scarcely an exaggeration of what may still be witnessed in the French House:

"They discuss nothing," he says, "in the Assembly. One large half of the time is spent in hollowing and bawling—their manner of speaking. Those who intend to speak write their names on a tablet, and are heard in the order that their names are written down, if the others will hear them, which they often refuse to do, keeping up a continual uproar till the orator leaves the pulpit. Each man permitted to speak delivers the result of his lucubrations, so that the opposing parties fire off their cartridges, and it is a million to one if their missile arguments happen to meet."

He then goes on to speak of the custom of reading these speeches beforehand to a small society of young men and women—"generally the fair friend of the speaker is one"—who of course give their approval. "Do not suppose," he adds, conscious that this method of preparing for a critical political debate will hardly be intelligible to his correspondent (Washington), "I am playing the traveller. I have assisted at some of these readings." He gives an account of one at Mme. de Staël's where

"the Comte de Clermont-Tonnerre (one of their greatest orators) read to us a very pathetic oration, the object of which was to show that, as penalties are the legal compensation for injuries and crimes, the man who is hanged, having by that event paid his debt to society, ought not to be held in dishonor; and in like manner he who has been condemned for seven years to be flogged in the galleys should, when he had served out his apprenticeship, be received again into good company as if nothing had happened."

This particular oration was never delivered, it seems, because Morris was at the pains to explain to the company that, notwithstanding the eloquence of the oration, its principles were not very solid. "Universal surprise. A few remarks changed the face of things. The position was universally condemned and he left the room." But Morris insists that Clermont-Tonnerre's speech was "of the kind which produces a decree by acclamation" (there being no Morris present to refute), and adds,

"For sometimes an orator gets up in the midst of another deliberation, makes a fine discourse, and closes with a good snug resolution which is carried with a huzza. Thus, in considering a plan for a national bank proposed by M. Necker, one of them took it into his head to move that every member should give his silver buckles, which was agreed to at once, and the honorable member laid his upon the table, after which the business went on again" (Vol. i. pp. 278–9.)

But this contempt was an attitude of the mind. Morris's sympathies were all with the people whom he so mercilessly ridicules.

The diary is a perfectly matter-of-fact record of events, such as it can hardly be supposed Morris ever could have contemplated publishing exactly as it stood. This by no means detracts from its value. The omissions made by the present editor have been slight and unimportant. Some day, perhaps, the diary will be published *verbatim*, but we certainly have the substance of it now, and, to take a single instance, it could only be a prurient curiosity that would desire to know more of Morris's relations with Mme. de Flahaut than we have here given. This whole *affaire de cœur* adds greatly to the personal interest of the book. Morris, cynic that he was, always represents himself as raised by reason or indifference above the influence of the tender passion; he even uses some such expression as that of having a "vast fund of indifference" to the attractions of women. Yet here, in the privacy of his diary, whom do we find to be the person round whom it revolves? Whose name is inscribed on every other page, whose conversation is given at length, with whom do we continually have tête-à-têtes? Whose fortunes do we follow with the same keen interest that we feel for those of the heroine of a romance? Whose views and conversations are always sensible, whose situation always touching? Mme. de Flahaut, as the story progresses, gains our warm regard and sympathy; her father-confessor, the Bishop of Autun, who is always sure to be in the way whenever Morris makes a call, who is always in the wrong whenever he attempts to advise or act, serves as a foil for Morris's own cleverness. Morris had undoubtedly a "vast fund of indifference" for the Bishop, and the figure the latter cuts in these pages is such that it really requires a footnote to remind us that he is no other than the celebrated Talleyrand. A dull fellow—we cannot help thinking—a much overrated man. He seems to be sitting in the corner, blinking in his sacerdotal way at Mme. de Flahaut, while his witty rival is scintillating on the other side, or listening with sympathetic interest to the husband's lamentation over the immorality of the times and the wrongs of married men. The whole picture is perfect. We can only wonder whether Talleyrand has left behind him in his yet unpublished memoirs as amusing a caricature of Morris as Morris has left us of the Bishop.

Morris's remarks on the condition of France during the Revolution and his prophecies with regard to the future, with which the diary abounds, are full of interest. Though not blind to the economical benefits to be derived from the Revolution, he was entirely skeptical as to political results, and foresaw almost from the beginning that the convulsion would end in a despotism, though the kind of despotism he anticipated was not quite that which the Revolution actually produced. Coming from a country of simple habits, and in which the struggle for freedom had brought out the best qualities of both people and leaders, he was shocked to find the operation of cause and effect reversed in France, and liberty produce the wildest excesses of vice, folly, and crime; and this, combined with his strong race instinct that the Revolution, from the very fact that it was French, was in bad hands, made him always a prophet of evil. In detail, his prophecies were as remarkable for their number as for anything else. He seems to have thought originally that the despot was to be in the end some one representing the royal or aristocratic party; he was entirely wrong in his predictions of disaster to the French armies. As to the assignats and other devices of French finance, he was always right, owing, not to any special gift for prophecy, but to his having had a thorough economical education and an unusually clear mind. He probably did astonish the French society in which he was living by his power of prevision, because he was particularly skilled in a matter of which they knew little or nothing—the application of common sense to public affairs.

As a diplomatist, Morris's career was striking. At a time when, as we have said, the representatives of other powers all abandoned their posts, he remained at the French capital, surrounded by dangers to which most of his friends thought it needless that he should expose himself. Had the Government or the people of Paris known his real sentiments about the Revolution, or got wind of his attempt to save the unhappy King, he would probably not have escaped alive; but Morris, in dealing with Frenchmen, whether at a dinner-table or in the midst of a domiciliary visit, was gifted with an extraordinary tact which never deserted him. Whenever he came into collision with the authorities he always managed to come off triumphant, and generally to extract an apology from them. In fact, it may be said of him in a certain sense that he was more successful in France than in his own country; for his career after his recall and return to America was a little that of a statesman *en décadence*, though this was also due to the fallen fortunes of his party, and the rise of the new Democracy led by Jefferson. The Federalists, though they laid the foundation of the Constitution, and of America as we know it, were, after all, in feeling and tradition English country-gentlemen, and felt towards the new party very much as people with property to lose now feel towards anarchists, communists, and dynamiters—or even more strongly, because its leaders were educated men, their own acquaintances and quondam friends. But Morris's period of true glory was in France, when, as a private citizen, he took an active part in the opening of the great drama of the Revolution; when, respected and trusted by all parties, he was consulted to-day by the King's friends, the next by Lafayette, again by Sieyès or Necker; when, in the midst of the gayest and brightest society of his time, he was courted and flattered by the leaders, and envied by the multitude; when he was photographing the scenes of the Revolution for posterity in his diary, and explaining with the utmost clearness to audiences astonished at his profundity and foresight, how it must surely produce disaster and sorrow—and when, it should be added, he was never weary of relieving disaster and sorrow. No foreigner in a great capital at a critical period ever played a more interesting and at the same time more creditable part.

Outside of society and politics, Morris appears to have had few interests. His diary is singularly barren of references to literature or art. In this respect he was essentially an American of his time. He differed from most other Americans of his time in being thoroughly at home in Europe. He was a complete man of the world; and, distinguished as was the part he played in American politics (on which these

volumes throw no especially new light), what he is most likely to be permanently remembered by is his curious record of his life in Paris. From a thousand other sources we know now, what we might have doubted a generation ago, that it is true to life, an invaluable memorial of the stormy dawn of republican government in Europe, an exact picture of the times, with just enough biographical interest to lend an added zest. It is not, to be sure, a flattered picture. But the very contempt with which this newly arrived American philosopher watches the struggles and intrigues of the French politicians is based on profound differences of national character and habits, which more or less justify the feeling they inspire. In reading Morris's pages, what we feel to be most strange is that the French Revolution did not turn everybody into a Conservative.

It must be remembered that in getting an impression of Morris's character from his diary we are not seeing him in the most favorable light. He scorned to make himself out better than he was, and, being of a cynical turn, there is a tone of hardness and calculated self-interest in these pages which, as we read, we feel is a little assumed. Mr. Sparks's biography has the merit of letting us see, not merely how Morris looked to himself, but how he appeared to other people; and one of the best things in it is an analysis of his character drawn by a French lady whom he had protected from some of the horrors of the Revolution —Mme. de Damas, if we remember right. This, while it lays bare several blemishes, sums up the other side with a warm encomium such as the reader hardly expects, and which certainly few of the rivals and contemporaries of his social heyday in Paris ever had said of them —"He is good." It was no doubt in accordance with the bent of his disposition that the world should find him always clever, but that his friends should know him to be something more.

TWO GLOBE TROTTERS.

People and Countries Visited in a Winding Journey Around the World. By O. W. Wight, A.M., M.D. Houghton, Mifflin & Co. 1888.

Aalesund to Tetuan : A Journey. By Charles R. Corning. Boston : Cupples & Hurd. 1888.

HERE are two large, handsome, well-printed books ; but why they were published, unless simply to gratify the vanity of their authors, is hard to imagine. Surely, the publishers could not have expected to make a profit from them, and the profit to the reader will be even less. Mr. Corning's book is by far the better and more amusing of the two. He goes over well-known ground—France, Italy, Spain, Norway, and Russia ; but he tried to see things thoroughly, and his impressions are evidently genuine. Occasionally there are remarks that are clever, as where, referring to Monte Carlo, of which he gives a good description, he says :

"You may pass the remaining hours of your stay in the innocent pleasures of the orchestra, in the reading-room, or in sauntering through the perfumed gardens, where virtue and sin meet face to face, only to disappear among the winding walks."

Or again :

"Each nation carries its gods to Nice, so that the pleasures of exile may not be embittered by the pangs of forgotten necessities. Vodka and prime cocktails may be had, and the red pyramids of Bass adorn cafés and grocery shops. Nice is a fertile field for missionary work; but neither during my stay, nor since, have I heard of its vigorous prosecution. The trouble seems to be that the climate and the surroundings are opposed to attempts tending to hard work of any but a secular kind."

His account of Russia is better and more accurate than in most books of the kind. Its chief defect—although the author has evidently fought against it—is generalizing too hastily from insufficient observation.

This defect is, if one may so speak, the chief quality of Mr. Wight's 'Winding Journey Around the World,' "made in order to observe every country in which an Aryan people has established civil government." He was assisted, as he boasts, by his previous profound studies in history and philosophy ; his book is indeed rich in long quotations, but his historical statements are of the kind found in every guide-book, and his statistics are those of the contemporary newspaper. In order to study Aryan civilization, the author left New York early in the spring of 1887, and by the first of September had seen Germany, Italy, Greece, Turkey, European and Asiatic Russia, Norway and Sweden, Denmark, Holland, Belgium, France, and Switzerland. It looks very much as if he had used a Cook's ticket. Hungary is not entirely an Aryan country ; but why should Austria, Spain, and Portugal be omitted from his studies of life on the spot, from his "pursuit of such vital knowledge," from his effort to "observe at once people and country in their intimate relations"? In these three or four months he had made such close, though necessarily rapid, observations, and had acquired such a fund of political knowledge, as to enable him to speak decisively and with the authority of a master on the present and future of Europe. As his steamer only touched at Corfu for an hour, he says : "I had no time to explore the island and seek out its many points of beautiful view. Somehow I preferred to gaze in imagination on the dark stream of Time flowing swiftly past, freighted with the débris of three thousand years of human history." And yet he is able to write half a dozen pages on the island. The Austrian Lloyd steamers stop for a few hours at the Piræus on their way to Constantinople, and thus Mr. Wight was able, like many others, to pay a flying visit to the Acropolis. "I did not stop a moment to look at the modern city of Athens. . . . It [the Acropolis] was the only thing at Athens that I cared to see." Of course, there was no time for the interesting Byzantine churches, for the Temple of Theseus and other classical remains, for the tombs at the Ceramicus, for the splendid Museum of Sculpture, for the Tanagra statuettes, or the antiquities from Mycenæ—which may not indeed have been Aryan—even had Mr. Wight ever heard of these objects of interest. And yet he was able to study the character of the modern Greeks so deeply as to say :

"The living Greeks are only a hopeless reminiscence of their great ancestors. . . . They talk politics very bravely in the coffee-houses, but are not very dangerous except as highwaymen. . . . There are people of worth and culture among the modern Greeks, but they are exceptions to the rule. The Greeks of Athens to-day are no more like the Greeks in the time of Themistocles and Pericles than gray night is like the sunny day. The people are changed quite as much as the city itself."

He was able, too, to write a good, long chapter about Greece, with the help, it is true, of a nine-page quotation from Curtius.

In Russia the author's hasty trip through the Caucasus and thence to Moscow and St. Petersburg enabled him fully to understand the present position of that country, and to refute, to his own satisfaction, Mr. Kennan's statements about the working of the exile system in Siberia. It is surprising, however, to hear him say: "Of the one hundred and fifty bridges that span the Neva, unite the islands, and cross the canals, only two are permanent; all the rest are built on pontoons and are removable in winter." He evidently misread and mistranslated his German Baedeker, to which those who wish to know the real state of the case are referred. In point of fact, all the bridges of St. Petersburg are permanent, except two of those across the Neva. A page, however, would be too small for a catalogue of incorrect statements, misspellings—even if they are kindly called misprints—to say nothing of the incorrect use of language.

Leaving England on September 1, the author sailed straight for Australia, which he reached in forty-eight days. Passing by India without stopping, although that was one of the early homes of the Aryan race, he landed at Sydney, took a flying trip by railway to Melbourne, sailed from Sydney to San Francisco, touching at Auckland in New Zealand—and this book is the result. The best part of it is the beginning, where there is an account of some earlier journeys, during which Mr. Wight met Sir William Hamilton, M. Cousin, De Quincey, Carlyle, Mme. Mohl, and a number of other interesting people; but even about them he does not say much that is entertaining, for somehow he seems not to have belonged to their set, but appears as an outsider. In spite of his intimacy with Sir William Hamilton's family, he seems to think that he was succeeded by his son Hubert, who was not the eldest son, but whom he apparently happened to meet. He tells us what he said to Carlyle at some length, but he does not repeat what Carlyle said to him. He tells, too, how he had "occasion to sharply rebuke" the American Minister at Rome, Mr. Cass, "for supercilious treatment of distinguished people from his own country"; the fact being that on some occasion, when the author was dining with a lady in the company of Mr. Lowell, Mr. Cass sent up his card, and, finding them at dinner, went away without entering, although the lady of the house had left the table to give him a proper reception in the drawing-room, "and soon returned in a state of high indignation."

MORE STATE HISTORIES.

A History of Ohio, with Biographical Sketches of the Governors, and the Ordinance of 1787. By Daniel J. Ryan. Columbus, O.: A. H. Smythe. 1888. 12mo, 210 pp.

Ohio: First Fruits of the Ordinance of 1787. By Rufus King. [American Commonwealths Series.] Boston : Houghton, Mifflin & Co. 1888.

Indiana : A Redemption from Slavery. By J. P. Dunn, jr. [American Commonwealths Series.] Boston : Houghton, Mifflin & Co. 1888. 12mo.

MR. RYAN'S rather flimsy performance was made under the inspiriting influence of Ohio's centennial. It opens with the discovery of Ohio by LaSalle in 1669, and brings the connected history of the State down to the close of the late war in 1865, and the sketches of the Governors (in the Appendix) to the present day, that is, to Joseph B. Foraker. The last sixteen pages are a reprint of the Ordinance of 1787. Historical events of the earlier days are treated from the Federalist and Whig standpoint, those of later date from the point of view of a most ardent Freesoiler and Republican. The heroes of the book are Arthur St. Clair, the first Territorial, and Dr. Edward Tiffin, the first State Governor.

The growth of Ohio during the first forty years of her statehood is extraordinary. Ad-

mitted in 1802, the State in 1820 was the sixth in rank, becoming the fifth by the detachment of Maine from Massachusetts, and in 1840 the third, a place which she still maintains. The rapid growth after 1825 is ascribed mainly to the long lines of canal which were begun in that year, connecting the Ohio River at two points with Lake Erie, and costing the State nearly sixteen million dollars for a mileage of six hundred and ninety-seven miles owned by the State, besides the Muskingum slack-water improvement of ninety-one miles controlled by the United States. Hence our author bestows his highest praises upon Ethan Allen Brown, the legislator and Governor who, following the lead of DeWitt Clinton in New York, carried the canal scheme first over all opposition in the Legislature, and next through all the financial difficulties with which it had to struggle. To raise sixteen millions of dollars was no easy task.

"The establishment of the school system of Ohio was contemporaneous with that of the canals. Neither could have been accomplished without the other. The opposition to both was widespread and aggressive, but the friends of the respective measures associated their interests and thereby succeeded" (p. 105). The first working school law was passed in 1825. "In 1886 the total expenditure for common-school purposes was $10,121,897, an amount greater than in any other State in the Union, excepting New York and Illinois."

These facts are not surprising to any reader. But, in view of the high-strung notions of humanity that have prevailed in Ohio for the last forty years and more, many may read with a little astonishment of Ohio's early days:

"The criminal legislation of St. Clair and the judges was very severe in its penalties. But the primitive condition of the people and the absolute necessity of totally suppressing crime made it imperative that no mercy should be shown to lawbreakers. The whipping-post was made a standing institution at every county seat, and was inaugurated as early as 1788. In 1792 the judges passed a law directing the building of a county jail, court-house, pillory, whipping-post, and stocks in every county. . . . The law of August 15th, 1795, provides for servitude for debt, not exceeding seven years, at the demand of the creditor" (p. 49).

And those who are wont to look upon Ohio as a model of loyalty to the Federal Union will be surprised to read this resolution, which the General Assembly passed in 1820, in its contest over the United States Bank. The State had in the preceding year tried to destroy the branches of the bank set up in Ohio, by a hostile tax of $50,000 on each. The United Circuit Court enjoined its collection (Bank of the United States vs. Osborne); the injunction was disobeyed, and the Court sent the State officers to prison for contempt. The General Assembly then resolved:

"That in respect to the powers of the governments of the several States that compose the American Union, and the powers of the Federal Government, this Assembly do recognize and approve the doctrines asserted by the Legislatures of Kentucky and Virginia, in the resolutions of November and December, 1798, and January, 1800, and do consider that their principles have been recognized and adopted by a majority of the American people."

The Miami convention of Whigs held at Dayton in September, 1840, in the heat of the Harrison campaign, is described as the largest political meeting ever held in the country. "The multitude covered ten acres by actual measurement, and at no time were more than two-thirds of the people on the ground. While General Harrison was speaking, the ground upon which the crowd stood was *measured* by three different engineers; the three estimates numbered the audience at 77,600, 75,000, and 80,000 respectively."

A pretty full account is given of the clever game of the eight Freesoilers in the Legislature of 1848-1849 who, under the lead of Morse and Townsend—one of Whig, the other of Democratic antecedents—used their balance of power so as to elect S. P. Chase to the United States Senate, and to obtain a repeal (in part, at least) of the Black Laws. Our author is mistaken when he says that there was a total repeal, putting the negro on an equality before the law with the white man. Nothing is said of the hard times from 1837 to 1843, about the failure of the Miami Exporting Company and other banks; in fact, there is not a word as to finance or banking. The writer is also silent about the temperance and no-license movements, which have played such a large part in the history of Ohio, and about the Germans in the State, the great foes of prohibition. The war period is disposed of in twelve pages, dealing largely with Vallandigham's disloyal work, his arrest, expulsion, and political defeat.

The introductory chapter of Mr. King's 'Ohio' closes with these words: "As a centenary memoir, its purpose is to set forth the foundations of the State, rather than its full growth." Indeed, the history stops short at the close of the civil war, and of its 400 pages no less than 294 lead up to the admission of Ohio into the Union. From a literary standpoint, it is superior to the other centenary books on Ohio or the Northwest that have come before us; in fact, Mr. King may be called, not a mere bookmaker, but an author.

He has his own views on some historic points. Thus, he ignores the English colonial charter as having any bearing on the title to the Northwest. The Kings of England had no lands beyond the Alleghenies to give away, either to the Virginia Company or to the Duke of York, or to the Massachusetts and Connecticut colonists. Setting aside all consideration of the rights of the native savage, the first European power that explored the Northwest was France, not England. The French posts extended as far east as Fort Duquesne, as far west as Kaskaskia, and their possession of these points was fully acquiesced in by the English to the very day when the seven years' war broke out. In fact, the correspondence about the hostile intentions of the British Government against Fort Duquesne seems to have led to that war; and in that correspondence the British Court did not insist on those claims to hold the territory south of the lakes from sea to sea which its revolted colonies afterwards set up against each other under their musty charters. The first real claim which the King of England had to the lands northwest of the Ohio River grew out of his victory over the King of France in the seven years' war, and the consequent cession in the Treaty of Paris; that is, he acquired Ohio and Indiana by the same title by which he held Quebec. The rights of France west of the Mississippi were recognized, and with them the futility of the "sea to sea" clauses in the colonial charters of the seventeenth century.

Our author follows the "British Conquest" with a chapter, "Annexed to Quebec." In this he says: "As the ceded territory embraced what is now the State of Ohio, this consequently passed to the Crown, in the same full right and dominion as the King of France had held it at the beginning of the war" (p. 83). "From this it results that the present territory of Ohio, in common with all the reservation thus made by the Crown to its own immediate dominion, has its proprietary and political basis exclusively in the Treaty of Paris and the King's proclamation of 1763." The British Parliament took the same view when, on the 22d of June, 1774, it passed an act "making more effectual provision for the government of the Province of Quebec," by which the whole country west of the Pennsylvania line and north of the Ohio was made part of the province of Quebec. To the men of the Revolution, this view was very distasteful, as it narrowed quite materially the limits of the country for which they sought independence; and the American title to the Northwest, at last, rests on the victorious march of George Rogers Clark and the skilful diplomacy of Benjamin Franklin.

We find here, as in all histories of Ohio or of the Northwest, an account of the King's proclamation of 1763, prohibiting the sale of or settlement on any western lands—that is, of any lands lying beyond the headwaters of rivers flowing into the Atlantic; the formation of land companies seeking to evade this decree; the Fort Stanwix treaty of 1768 with the Iroquois or Six Nations; Clark's attempt at an expedition against Detroit; and some mention of the few and slight skirmishes which were fought on Ohio soil during the Revolutionary war. But what we have not seen in any of the centenary histories is a pretty full account of the Moravian missions (pp. 119-160). "The villages planted by the Moravian missionaries on the banks of the Tuscarawas river in 1772 are fairly entitled to rank as the first settlements of Ohio." Going back to the "Unitas fratrum" which arose in Bohemia and Moravia during the Hussite wars, Mr. King traces it down to the days when Count Zinzendorf, on General Oglethorpe's invitation, led a band of missionaries to Georgia, whence they went, to escape the hateful duties of war, to Pennsylvania; and among these refugees was David Zeisberger, the future head of the Ohio missions at Gnadenhütten and Schönbrunn, the former being so named after an older station of the same name on the Lehigh, as this in turn had its older namesake ("huts of grace") in Germany. Zeisberger, his younger coadjutor Heckewelder, and his zealous and ill-fated Indian disciple, Glickhican, are the heroes of the most interesting chapter of our book. The story is sad. After eight years of peaceful progress, the "praying" Indians were forcibly removed by English officers and their savage allies to Upper Sandusky; in the following winter, driven by hunger, Glickhican, with a hundred or more men, women, and children, returned to their abandoned cornfields on the Tuscarawas, where David Williamson's roving band of Americans pounced upon them, and, by a vote of seventy-two to eighteen, decreed their death. They were murdered, and their bodies burned in two houses, where in 1798 Heckewelder found their charred remains, which he brought to Christian burial. The chapter thus closes: "That these missions, though not enduring, were none the less the primordial establishment of Ohio, is as true as that Plymouth was the beginning of Massachusetts. . . . The Moravians may justly be remembered and honored as the Pilgrims of Ohio."

In the next chapter, "The Northwestern Territory," we find the well-known discussion among Virginia and the other States concerning the western lands, which our author has already decided against the Mother of States by his denial of any title in the British King before the Treaty of Paris. The cessions of New York, Connecticut, Massachusetts, and Virginia, the ineffectual Ordinance of 1784, and the great Ordinance of June 13, 1787, follow in due order. While full of admiration for this latter instrument, which in importance has

shown itself only second to the national Constitution, our author is not blind to one of its demerits. It conferred too much power on the Governor, who, by his absolute veto, became a third branch of the Assembly; St. Clair's stubborn exercise of his powers disgusted the people of Ohio so much with anything like a strong executive that, in framing a constitution, they gave the Governor nothing at all to do, except, to use the words of a witty Whig of later days, to appoint notaries public and to pardon Democrats out of the penitentiary.

"Briefly stated, it was a government which had no executive, a half-starved, short-lived judiciary, and a lopsided legislature. This department, overloaded with the appointing power which had been taken away from the executive, became so much depraved in the traffic of offices that, in an assembly where there was a tie vote between the Democrats and the Whigs, two 'Free Soilers' held the balance of power, and were permitted to choose a United States Senator [S. P. Chase], in consideration of giving their votes, for every other appointment, to the party which aided them in this supreme exploit of jobbery" (p. 291).

The chapter "Progress" treats in a general way of the growth of Ohio in population, wealth, schools, libraries, churches, etc., between 1820 and our own time. There is no chronologic statement of changes in the government, of the ups and downs of parties, or of the rise and fall of statesmen. "Ohio in the War for the Union" is the last chapter; its hero is John Brough, the War Governor, who beat Vallandigham by 101,000 votes, and took the lead in the conference of five northwestern States in April, 1884, which resulted in the raising of 85,000 men for a service of one hundred days. The forty regiments and one battalion raised in Ohio for this temporary purpose were got ready in sixteen days. "The service performed by these regiments was not nominal." A short appendix follows the 400 pages of history. The subject of its last number is rather unlooked-for and sad withal, "The Grape, and its Gradual Failure in Ohio."

In a volume on Indiana, in a series of State histories, one naturally expects to find information concerning the political conditions under which such famous Indianians as Julian, Morton, Colfax, Hendricks, and Harrison prepared for and pursued their political careers. Yet this book ends with Indiana's Territorial existence: the history of the State is left untouched. It therefore seems proper to inquire, By what right has author or publisher included this volume in the "Commonwealths Series?" for if its full title does not deceive the purchaser with promises which the book does not fulfil, its classification does. This offence is aggravated by the inexcusable verbosity and extended quotation that occupy in its 450 pages the space that should have been given to, at least, an adequate outline of the political history of the State. One long chapter is almost entirely devoted to the exploits of George Rogers Clark in the Northwest Territory, though the story of Clark's unique expedition has frequently been told, and never better than by the hero himself in an account written at the request of Jefferson and Madison.

Although Mr. Dunn has failed in some important respects, he has been remarkably successful in others. Certain phases of the lives of the French pioneers seem to have had especial attraction for him, and he has described them with rare grace. After two unattractive chapters on early explorations and French posts, he surprises us with a vivid description of the first white residents of Indiana—the *coureurs de bois*. Under this title were included those Frenchmen who lived neither in a village nor at a post. Frequently they were of the best families. Revolting against the rigid piety then prevalent at Quebec and Montreal, they went to the other extreme amid the wildest surroundings. They became as reckless as the aborigines, to whom they sold brandy while borrowing their libertinism. "They discarded clothing entirely, and not only roamed the forests and went among the Indians in this airy mode, but also appeared in the settlements without addition to their raiment." The contrast between the French settlers and the American immigrants is forcibly drawn:

"The French were vivacious, noisy, and spendthrift; the Americans serious, taciturn, and thrifty. The past misfortunes of the French begot new ones. . . . They had not the patience to clear away forests. The Americans relied on agriculture. They came into the wilderness to open farms, and they pursued their purpose patiently and systematically. Men, women, and children drudged and saved, while their French neighbors gossiped and danced."

But the most prominent feature of the book, as is indicated by its sub-title, is the history of slavery in the Northwest Territory, and particularly in Indiana. The treatment of this subject is painstaking, skilful, and almost exhaustive, and gives the book its chief value. The earliest records of the French settlers show that slavery existed among them. For many years Indian slaves, known as *panis*, were the more common in the Northwest Territory, while farther south negro slaves were the more numerous. In 1787 slavery everywhere met with strong theoretical opposition. As it had never been very widely or profitably established northwest of the Ohio, the opposition to it there early took an aggressive form. Furthermore, the settlers and land-owners south of that river saw that the exclusion of slavery from the Northwest Territory would lessen the supply of those articles which were essentially the product of slave labor, and thus improve the market for them; that it would hasten the settlement of the new territory by a hardy people who would ward off the savages; and at the same time it would secure to the Southern territory all the pro-slavery settlers. This was the secret of the all but unanimous vote in favor of the Ordinance of 1787, with its anti-slavery provisions.

There is a popular belief that this Ordinance ended slavery in the Northwest Territory, but it did not. There was a clause in it guaranteeing to the French and Canadians who had already professed themselves citizens of Virginia, "their laws and customs now in force among them relative to the descent and conveyance of property." The better opinion at the time was that this protected the slave property then in the Territory. Certain it is that slavery retained a foothold and a fighting chance. Almost immediately those who were anxious to have the Territory rapidly settled, and all of those who were interested in slavery, began a vigorous movement to open the Territory to the importation of slaves for a term of years, with gradual emancipation thereafter. They claimed that the anti-slavery clause of the Ordinance unjustly interfered with vested rights, and that the scarcity and high price of free labor rendered agriculture unprofitable. After repeated efforts along this line had failed, the pro-slavery party undertook to gain by craft a position which they had been unable to carry by assault. In this attempt they were for a time largely successful. In 1803 and 1805 they obtained indenture laws which permitted the importation of slaves and the retention of them as such for two months; thereafter they might be held in qualified slavery for a term of years, and also their offspring up to a certain age. These laws, together with the provisions for their successful execution, constituted a most soulless "Black Code." Despite the increase in numbers and sentiment opposed to slavery, the slaves also increased so rapidly that there was need of a bitter struggle before the party of freedom gained the upper hand. In 1816 slavery in Indiana received its death-blow in the adoption of a Constitution that for ever prohibited it. And at this point, where the Commonwealth begins, the volume ends.

The book gives us several charming pictures of the every-day political life in the Northwest Territory, and sketches the careers of some of the leading politicians. Although Mr. Dunn devotes only a few pages here and there to William Henry Harrison, the parts, when put together, give one a more judicious conception of the man than is to be found elsewhere. He was a political pioneer, clever but honorable; a leader both brave and crafty; a "Virginia aristocrat" and pro-slavery in his ideas, but in his ordinary relations kind, upright, and admirable.

Madame Chrysanthème. By Pierre Loti. Translated by Laura Ensor. Paris: Édouard Guillaume et Cie. 1889.

It has often been said, somewhat cynically perhaps, that the exuberant admiration which appears in most of the books upon Japan is in some sense a bid for favor from the powers that be. To this end the beauties and graces of the flowery land are greatly dwelt upon, while ugly and repulsive features are discreetly hurried out of sight, or glibly explained and palliated. Whatever its other faults, this cannot be charged upon 'Madame Chrysanthème.' The writer, in his quality of French naval officer, arrives at Nagasaki, ready to be enchanted, but finds the city at first sight like any other seaport or commonplace town, with its mass of masts, steamboats, and quays; and he remarks pertinently (page 16): "Some day, when man shall have made all things alike, the earth will be a dull, tedious dwelling-place, and we shall have even to give up travelling and seeking for a change which shall no longer be found." His first landing, in a dismal downpour of tropical rain, strikes at once the keynote of his whole disillusioning experience. He announces in the first page his intention to marry immediately for the period of his stay —perhaps three or four months—and his first errand is to find a certain "matrimonial agent." At length he procures a seemly bride, and the nuptials are celebrated with much dignity and assembling of relatives, giving thereby a curious air of righteousness to the whole farcical proceeding. Indeed, this world-worn hero writes of his "marriage" with engaging frankness and innocence, and, except in this one naughty but central incident, the book is proper enough; and at all events, it is written from an interior and domestic standpoint which other and more serious writers have perhaps been unable to attain.

But, after all, he is not happy in his country-house, "almost opening upon the woods." His Chrysanthème, while she seems to have all the dainty attractiveness of her race and sex, still fails to arouse his real attachment. With unavailing regret he recalls a particular Turkish ex-wife of his, who once diffused a rosy mist of romance over all Stamboul, and compares her bitterly to his "doll" in this Nagaski suburb. The characteristic noises of Japan greatly impress him—the continual hum of the cicalas, forming the inevitable undercurrent and accompaniment of all its summer life; the

noisy slamming of shutters at night; and the endless rapping of the little pipes against the *tabakobon*, as the various fair smokers through the house knock out the thimbleful of ashes to begin afresh, making an incessant *pan, pan, pan.* One expressive illustration represents this irritating little custom in a wonderfully fine perspective of sound, if one may so speak. Another bit, with only a few tree-branches in the rain, conveys a whole tropical storm—a typhoon of vast possibilities.

The wealth of charming illustration is most perfectly representative of Japan as seen by an artist's eye. The decorative part of the book is superb. The artists, Rossi and Myrbach, have caught and retained the spirit of Japan and its inner life to a most unusual degree. The great difference between the faces of the young and the old women, which so impresses the foreigner but is generally lost in attempted reproduction, is here entirely preserved; and the illustrations come always close to the letter-press description, thus adding immensely to the pleasure of reading, without formal reference to cuts. Similarly the "remarques"—a cicala, a bronze stork-candlestick, a jug, a grotesque inkstand—are delightfully fascinating. The text, indeed, even with the aid of the translator's exquisite English, seems hardly worthy its beautiful and sumptuous setting.

The book is not bad enough to be exciting, nor good enough to be an entirely true picture, nor yet happy enough to be satisfying. Its tone is quite without sentiment or lofty feeling of any sort, and it is written apparently from a standpoint of criticism and actual dislike. Even the humor is dreary. The short chapters are alluring, but the writer's estimate of Japan may be summed up in one sentence (page 242), of which the whole book is a more or less elaborate amplification: "Little, finical, affected—all Japan is contained, both physically and morally, in these three words." Just before his final departure this supposably merry Frenchman undertakes to sketch his room as a souvenir; but although each article is shown in its correct place, and he can find no fault with his drawing, something is lacking. "It has an ordinary, indifferent French look," he says; "the sentiment is not given"—which, while undoubtedly true of his sketch, is truer still of his book. The soul, the aroma of Japan, is lost, or missed in some way, and, spite of pleasant and easy reading, the reader is left unfilled. Chrysanthème herself, in whom the author fails to find attraction, sentiment, or poetic grace (except, perchance, in the nape of her neck, which almost arouses enthusiasm), is in truth far more interesting and real than is Loti himself, even showing a little touch of pathos here and there. She is slightly disenchanting at the end, to be sure, where, instead of the sad little farewell scene which the hero might possibly have anticipated, he finds her seated upon the floor among her lately-received silver *yen*, ringing each with a little hammer to prove its genuineness. But at last this cynical gentleman finds himself moving slowly out of the harbor, bidding a permanent farewell to the land of teapots and many-ribbed umbrellas. The only touch of real strength in the book occurs here: "Now the great sea opens before us, immense, colorless, solitary—a solemn repose after so much that was too ingenious and too small."

The End of the Middle Ages: Essays and Questions in History. By A. Mary F. Robinson (Mme. James Darmesteter). 1 vol. 8vo. London: T. Fisher Unwin.

Miss Robinson, now Mme. Darmesteter, has acquired some reputation as a poet, and now turns her attention to the actualities of history. The experiment is somewhat hazardous, for the intense subjectivity and fervid imagination cultivated by the poet are precisely the gifts to be rigorously held in control by the historian. His duty is to distrust his imagination, to repress his sympathies, and to treat his subject as objectively as possible. The minute accuracy essential in modern historical methods compels him to endless drudgery and a rigid adherence to fact. He rejects all *à priori* conclusions, and strives to look upon events and personages with the eye of a judge and not of an advocate or of an artist. His sole object is to discover and proclaim the truth, and even his boldest generalizations must have a solid foundation, built up with infinite care and patience. This incompatibility of the historical and poetical temperaments receives its supreme illustration from Carlyle, who, with all his genius and power of word-painting, made a travesty of every historical study that he undertook—conceiving his personal prejudices to be eternal verities and the phantasms of his imagination to be facts, sketching characters and events with the powerful hand of an artist, and arguing his theses with the impassioned special pleading of an advocate.

On opening Mme. Darmesteter's book, we are at once struck with misgiving at finding from her prefatory dedication that her historical training has been under Mr. J. Addington Symonds, whose florid inaccuracy and habitual subjectivity render him a most dangerous teacher. We are somewhat reassured by her allusions to her palæographical studies under Prof. Paoli and her dull researches in London, Paris, and Florence, and are led to hope that the exhausting labors of the Dryasdust may somewhat check the exuberance of the poet. With such expectation we open the first essay on the interesting but complex subject of the Beguines and Beghards, one of the most obscure and intricate that the Middle Ages afford. No one is competent to its discussion who has not gone through a long and weary examination of the original sources, weighing conflicting evidence, sifting out laboriously the grains of truth from the mass of falsehood, and correcting the errors of contemporaries, which, down to the present generation, have misled almost all students. Of all this there is not a trace in Mme. Darmesteter's essay. Fragmentary scraps of information, gathered at second-hand, are welded together into an undefined and contradictory whole; crude and vague impressions, clothed with the romantic idealism of the writer, take the place of fact; old errors are summoned from their ghostly slumbers, are fitted with new and fashionable garments of the most approved modern cut, and are bidden again to parade the stage; new errors, evolved apparently from the author's internal consciousness, are brought forward with calm assurance. We are told (p. 14) that in 1224 "Blanche of Castile and the child St. Louis were ruling Paris as King Arthur might have ruled his court at Camelot, by the authority of love and gentleness"—an idyllic picture of which the chronology is as false as its conception of that cruel and turbulent period, when Thibault of Champagne was singing love-ditties to Queen Blanche and was shrewdly suspected of poisoning her husband. Of the Beguines it is said (p. 10) that they received their death-blow when Dominic and Francis founded their Tertiary Orders; but the author subsequently (p. 29) postpones their execution until 1311, at the Council of Vienne (not Vienna), from which time "Beguinism as an institution was at an end." In either case, it was a tolerably lively corpse, or, as Charles II. said of himself, it was an unconscionable time a-dying; for in the fifteenth century the Council of Constance vindicated it from the attacks of the Dominican Matthew Grabon, and twenty years later Eugenius IV. so favored it that Felix Hemmerlin accused him of having been a Beguine himself. This misty and elusive method of compiling history is not rendered more acceptable by the sentimentalism of the thought or the fine writing in which it is exhibited. The search for verbal quaintness and artificialities of expression which is so characteristic of the modern school of poetry, is singularly out of place in a work which purports to be a serious study of the past.

Histoire de la participation de la France à l'établissement des États-Unis d'Amérique. Par Henri Doniol. Tome III. Paris: Imprimerie Nationale, Alphonse Picard, éditeur.

A few weeks ago we noticed the first two volumes of this great work. The third volume is now before us. Like the others, it is largely made up of previously unpublished documents, drawn from the French archives. M. Doniol does his part of the work with great learning and discretion. It is true that we do not always get the whole of every document, and that we are perverse enough to feel that most interesting matter may lie concealed behind those annoying little lines of dots; yet it would be unreasonable to expect a more voluminous work than this, and enough, surely, is given us to make the book not only interesting but indispensable.

This history is published by the French Government in connection with the Universal Exhibition which is to take place in Paris next summer. It is the intention to make the book a specimen of the work of the National Printing Office. We must therefore consider it, not only as a contribution to historical study, but as a piece of book-making; and it is from this point of view that we find most to blame. The first question which an intelligent publisher should consider is the proper size and shape to be given to his book. If the latter is to be read, and not merely consulted, nothing but the necessity of introducing large plates should swell the volume to a size which will prevent its being held comfortably in the hand. But this book is published in quarto volumes, of which the thinnest contains more than 850 pages. No mortal grasp could sustain such a weight. Moreover, the lines are too long for the comfort of the eye, even where the type is as large and as generously spaced as it is here. The size is not justified by the presence of remarkable plates, for the illustrations are neither numerous nor important. Here, however, our unfavorable criticism must cease. The paper and printing are admirable.

The editing, although not quite perfect, is careful; and we imagine that "Walley Forge" may be a quotation from some contemporary manuscript. In the numerous papers of the Comte de Vergennes, the spelling of the original is preserved. It is a rather curious fact that the Count was very weak in orthography—that branch of education as to which Frenchmen of to-day are almost pedantically particular. This is the more striking as Vergennes was not a great lord, who might consider himself above grammar, but a hard-working diplomatist who had risen by his own exertions; yet he spells so badly that it takes a little practice to read him fluently, especially as the editor, in deference to what he considers good typography, has omitted the capital letters with which the Count made up for the

absence of apostrophes. Vergennes was of his time in his neglect of spelling, although he exceeded even the license of his day.

The third volume brings down the history of French intervention in America from the time when the treaties between the United States and France were concluded, to that of the close of an offensive alliance between France and Spain. It was well known that Spain did not during the war become the ally of the United States, a fact which deeply affected the conduct of hostilities and the negotiations for peace. The French Government was thus placed between two allies whose interests were different and not infrequently antagonistic. This may account in some degree for the languor with which military operations were conducted in 1779 and 1780. In 1778 the news of the alliance between France and the United States was received with great enthusiasm on both sides of the Atlantic. M. Doniol describes in this volume the abatement of that enthusiasm in America, in consequence of the course taken by Gérard, the French Minister at Philadelphia, and of the misfortunes of D' Estaing, the French admiral, on our coast. Gérard was, in fact, trying to prepare Congress to give up some of the interests of the United States for the sake of bringing Spain into the quarrel. D' Estaing was doing what he could, in a not very forcible manner. M. Doniol sets the conduct of each of them in the most favorable light, and relies much on the necessity to America of the aid of France.

Hints about Men's Dress: Right Principles Economically Applied. By a New York Clubman. D. Appleton & Co. 1888.

AMERICAN men, as a rule, are said to be less enlightened on the subject of dressing well than the men of a good many other modern nations. This, the author of 'Hints about Men's Dress' thinks, is because "their forefathers, immediate and remote, have not been able to give them much information about dress or manner, having always been too busy to think about the minor things of life." This explanation has been made use of to explain almost all the deficiencies of American life, from lack of "culture," and the corruption of municipal government, down to inefficiency of domestic service. The reason why we fall short—if in anything we do fall short—of the highest pitch of civilization is because our forefathers' time was so fully occupied in hewing down the forest, planting new settlements, keeping the savages at bay, etc., that they had no time to spare for the humanities and amenities. Whether defects of this sort can be remedied by manuals—even by manuals as good as the one before us—we very much doubt. The difficulty is, that the art of dressing correctly, like the art of speaking correctly, or of good manners, is part of that breeding which, while it may be more or less closely described in books, is derived in practice from inheritance and the early formation of habits.

At the first blush it may be said that, while this is true of good manners and speech, it is rather straining a point to apply it to such a purely mechanical thing as dress, and that there ought to be no difficulty in learning from a book how to dress; but, after examining the author's treatise with care and impartiality, we are more than ever convinced that there is an impalpable something about a well-dressed man which cannot be taught through the medium of print, and, worse than this, that there are here and there mistakes, even in this very manual, which show that the author is not perfectly fitted for the delicate task he has undertaken. Most of his advice is excellent. When he says that the morning "tub" is not a mere English affectation, and that a man, to be well dressed, must first be well washed; when he insists that perfumes should not be used; when he recommends white underclothing (except in cases of rheumatic tendency, requiring of course material of a different color); when he objects to top-boots for evening dress; when he warns the student against having his boots blacked at the street-corner; when he places paper collars and celluloid collars under the ban, and says of a shirt which opens behind that it is only one remove from the "dickey," than which nothing could be lower; when he says that to be well dressed is to be inconspicuously dressed; when he urges upon us that we should never be afraid to be well dressed, whether others are so or not—in all these and a thousand other matters, we are entirely at one with the author, and in all that he has to say on the subject of economy he is very judicious. Except for one fatal chapter, we should be almost ready to commend his work as a perfectly satisfactory vade-mecum of the learning on the subject; but this one chapter is so fatally pernicious, it is so at variance with the delicacy of perception and familiarity with the best usage which elsewhere marks the book, that we should prefer to believe it the work of another hand, did not its very errors tend to corroborate our theory that there is no such thing as perfect manual writing on these subjects.

In this chapter the author gives a list of clothing which he considers essential to a gentleman, and, melancholy to relate, this is what he has to advise as to shirts: Shirts with collars and cuffs attached, 2; shirts without collars and cuffs, 6; collars, 10; cuffs, 10 pairs. Here is the difference between the most careful theoretical study and the practice of dressing as a matter of early training and breeding. The author evidently does not know the great cardinal principle that the unit of shirts is one dozen—that it is not possible to have less than a dozen shirts. Nor is he aware that the custom of having collarless and cuffless shirts, with more cuffs and collars than shirts, however economical it may be, is a relic of that pioneer period when our forefathers acquired the slovenly and indifferent habits which he is now trying to eradicate. This cuts deep. It is these inadvertences and incompletenesses, these weak spots in the best teaching, which makes us doubt whether we shall ever be perfectly well dressed. Nevertheless, as a sign of the times, as an indication of the way men's thoughts are turning, and as a help to numerous well-intentioned young men who would like to dress well, but do not know how, the manual deserves notice. But to these last we say, Trust no book implicitly.

Holland. By Professor Thorold Rogers. [Stories of the Nations.] G. P. Putnam's Sons.

IF Professor Thorold Rogers, in writing this book, intended merely to give a brief and popular sketch of the most important and striking events in the history of Holland up to the middle of the eighteenth century, he has been successful in his attempt. His style is clear and graphic; he tells his story well; and, while there is absolutely nothing new or original in his book, it is a good résumé of the more elaborate works from which he derives his information. But it is not a history of Holland. If it were not for the illustrations which the book contains, and which represent, in part, views of Holland of the present time, we should hardly know, after reading these pages, that there is still in existence a people which cherishes all the glorious traditions of Holland of the seventeenth century, which has a national life based on those traditions, and more strongly developed, perhaps, than that of any other nation on the continent of Europe. Its present form of government is the result of natural and steady growth out of the institutions of the republic. There has been no breach of continuity except during a few years when the country was annexed to France, and no reason can be given why the book ends where it does except that there are no English works easily accessible which treat of the period omitted.

The omission is a grave one, particularly since the series to which the book belongs aims (according to its prospectus) at showing "the philosophical relation" between the different events and periods in a nation's history. Holland in the seventeenth century presents a remarkable instance of the states'-right doctrine pushed to its ultimate limits: there was practically no central government which had power to coerce a minority. It certainly would have been of interest to show in some detail how, after the Restoration, although a central government was established, the provincial and communal peculiarities and forms of government were to a great extent preserved, and how they were abolished by the Constitution of 1848 and the legislation under it. From a heterogeneous mass of discordant elements, Holland has become a homogeneous whole. The fact that its importance as a nation has diminished does not render this transformation less important from the point of view of the political student.

But even from a story-teller's point of view, the present age would have deserved at least a passing mention. The struggle of independence in 1813, the Belgian war in 1830, the Atcheen war, are certainly considered, in Holland at least, as forming part of the national history.

Fossils of the British Islands, Stratigraphically and Zoölogically Arranged. Vol. I. Palæozoic. 4to, pp. 468. By Robert Etheridge. Oxford: The Clarendon Press; New York: Macmillan. 1888.

THE place of this work is among books of reference. To any one working in its field it is an absolute necessity. It is a compilation that could only be made by one thoroughly conversant with the things as well as with the literature treating of them. From such works as this, in view of the amount already accomplished and of the shortness of life, the student has his greatest assurance of the possibility of traversing what has been covered and of going a little in advance. There is probably no one better fitted for the task taken up in this volume than Mr. Etheridge, and its completion is an outcome of his researches for more than twenty years. The volume includes the palæozoic species, from the Cambrian to the close of the Permian, some 6,022 in number, belonging to about 1,588 different genera. They are arranged according to their horizons, chronologically, and also in accordance with zoölogical classification. To refer the species to the particular horizons was hardly possible; consequently, the more general subdivisions were used. For example, in the Devonian the locations are Lower, Middle, or Upper; and if the fossil existed in the last, and continued in the overlying strata, it is marked "pass up," or, in the Carboniferous, the indications are placed under one or more of the following: Calciferous Series, Lower Limestone Shales,

Carboniferous Limestone, Upper Limestone Shale, Millstone Grit, or the Lower, the Middle, or the Upper Coal Measures, and "pass up" if need be. With the numerous references and cross-references to the most important descriptions and illustrations, this is sufficiently explicit. The greatest chances for criticism and for differences of opinion occur in the zoölogical classification and the nomenclature; but much may be expected, in approximation to more generally acceptable systems, from the consequent discussion. The Supplementary Appendix, about eighty pages, is both an addition and a revision; it revises the earlier portion and brings the entire volume up to the year 1887. Though it concerns itself with the fossils of the British Islands, this catalogue is invaluable to the geologist of whatever part of the world. The Delegates of the Oxford University Press, through whose liberality and consideration it has been so well published, are abundantly entitled to the gratitude of all students of palæontology.

In a note at the end of the preface, the author says he has prepared the MSS. of the Mesozoic and Cainozoic species, about 13,000 in number, bringing the complete history of British fossils up to the year 1888, but at present does not see his way to publish. It is earnestly to be desired that the obstacles preventing may somehow, in the interest of scientific advancement, be speedily removed, and that the results of Mr. Etheridge's labors may become the property of the world with as little delay as possible.

Three Greek Children: A Story of Home in Old Time. By the Rev. Alfred J. Church. With illustrations after Flaxman and the antique. G. P. Putnam's Sons. 1889. 8vo, pp. 205.

Mr. Church's stories of ancient life are always welcome, and form a useful aid to education, supplementing the dry details of historical study, which needs some such appeals to the imagination in order that far distant events may be clothed with life and reality. This knowledge is so wide and accurate that we may take for granted the substantial correctness of his portrayals, and may accept them as on the whole true to the spirit of antiquity. That he always succeeds in keeping his pictures of ancient life and character free from modernisms, we will not say; perhaps it is impossible to do so perfectly, for this would require an absolute substitution for one's mental processes of those of an age which one can know only from the outside. But it is as hard to detect transgressions of this sort as it is to avoid them, and all we can say is, that the present publication seems to us truer to Greek life than 'Two Thousand Years Ago' is to Roman life; and that, at any rate, more good is done by this spirited presentation of ancient life than the harm that may result from casual inaccuracies. Inaccuracies in matters of fact we do not find; if there are any, they consist in those subtle and intangible characteristics of society which are hardest to depict. We have here a great range of experience for the three children in the years of the Peloponnesian War, reminiscences of Marathon and Salamis, life in Sparta, and the bitter memories of an old Messenian woman.

BOOKS OF THE WEEK.

Allingham, W. Flower Pieces, and Other Poems. London: Reeves & Turner.
Bartholomew, J. G. The Pocket Gazetteer of the World. G. P. Putnam's Sons. $1.
Clemmer, Mary. His Two Wives. Boston: Ticknor & Co. 50 cents.
Daudet, E. The Apostate: A Novel. D. Appleton & Co.
Dumas, A. Un Drame de la Mer. Boston: Carl Schoenhof.

HENRY HOLT & CO.

HAVE JUST PUBLISHED:

Maine's International Law.

By Henry Sumner Maine, K.C.S.I., Late Master of Trinity Hall, Cambridge, and Member of the Indian Council. 8vo, $2.75.

Contents: International Law: Its Origin and Sources—Its Authority and Sanction—State Sovereignty—Territorial Rights of Sovereignty—Naval or Maritime Belligerency—The Declaration of Paris—The Mitigation of War—The Modern Laws of War—Rules as to Prisoners and Quarter—Relations of Belligerents on Land—Rights of Capture by Land—Proposals to Abate War.

A Stiff-Necked Generation.

By L. B. Walford, author of 'Mr. Smith.' Cloth, $1.00; Paper, 30 cents.

NOW READY.

England in the Fifteenth Century.

By the Rev. W. Denton, M.A. 8vo, 346 pages. Cloth, $4.00.

"Mr. Denton has conferred a distinct benefit on all historical students. . . . The book appears to us almost a model of its kind. . . . We will conclude with once more recommending the volume before us to all readers who care to peruse the results of much antiquarian research, put into a very readable form by a writer who has evidently taken uncommon pains to qualify himself for the task he has undertaken."—*London Guardian.*

Reliques of the Christ.

A Poem by Rev. Denis Wortman, D.D. Square 16mo, 60 pages. Cloth, $1.00.

"Dr. Wortman's poetry needs no introduction to our readers, since his shorter poems have often appeared in our columns, and for perfection of form and tenderness, and elevation of sentiment, have ever ranked with the best. The present poem in conception and treatment, in true poetic fervor and smoothness and perfection of rhythm, is an advance upon any of his previous efforts, and 'Reliques of the Christ' will, we cannot doubt, take its place among the classics of religious and devotional poetry."—*Christian Intelligencer.*

The Week.

TELEGRAMS from Indianapolis make it almost certain that Mr. Allison is to be the next Secretary of the Treasury, and leave little room to doubt that Mr. Blaine is to be Secretary of State. As to the former, it may fairly be said that, next to Mr. Sherman, Mr. Allison is the fittest man in the party to be at the head of the Treasury. His qualifications are, close acquaintance with the public finances in all departments, thorough knowledge of the underlying principles of finance, equal knowledge of political machinery in general, the confidence of his party associates, an unsullied personal reputation, and a very liberal endowment of *savoir faire*. These would seem to be all the qualifications necessary for a successful administration of the Treasury, but it must be added that Mr. Allison is not a strong man in the sense of one "having convictions." He has never had any financial policy which he would enforce against the will of the people, or what he considered to be their will. Nobody except Mr. Sherman has had greater opportunities in our time to impress himself upon the financial policy of the country. Yet he has made no such impression. The silver bill that is associated with his name is a makeshift, a device, a dodge, and it does not yet appear whether it is a better policy than the original Bland bill would have been. If the Bland bill had passed, the mischief it would have caused would in all probability have worked its own cure ere now. What the Allison bill will do, nobody can yet say.

On the absorbing question of the tariff Mr. Allison's course has been highly inconsistent. The inconsistency has not been of the kind which is allowable to statesmen, and is sometimes, as in the case of Sir Robert Peel, the mark of statesmanship; because it does not admit of explanation. Otherwise, undoubtedly, Mr. Allison would himself have attempted to explain it. When a man says, for instance, that the nation has passed, in the industrial sense, beyond the period of tutelage, and ought to reach out for a share in the commerce of the world by lowering the duties on raw materials, he is bound, when he advocates the very opposite policy, to give as good reasons for his change as he gave for his original position, or at all events to give some reasons. Mr. Allison has given no reasons. He has never answered himself as Sir Robert Peel did. His speech of March 25, 1870, was in some respects the best low-tariff speech made since the close of the war. Nineteen years have passed, and each year has given new emphasis to the facts he then pointed to and the arguments he based upon them. If we had passed the period of tutelage then (Henry Clay thought we had passed it in 1888), how much more have we passed it now! Yet we find the same Mr. Allison, in the year 1889, voting for higher duties on wool and tin plates, and for a real bill of abominations, whose effect must be, according to his own earlier showing, to still further disable us from taking our true place in the commerce of the world.

Our views of Mr. Blaine as a public character do not need to be repeated. Desiring that Mr. Harrison's Administration shall be creditable and beneficial to the country, we have hoped that he would not call such a trickster to his councils. Mr. Blaine's position in the Republican party is such that he cannot, in the estimation of the Blaine faction, hold a second place. If he is Secretary of State, he will be, to their minds, the most important figure in the Administration, Mr. Harrison not excepted. This may be an erroneous estimate, but it is likely to prove an embarrassing one. If Mr. Blaine goes in, he takes with him, in addition to all his natural aptitudes for mischief, a backing of mischief which no other man could muster.

The President, in his communication to Congress on the 16th of January, said that the war ship *Trenton*, under the command of Admiral Kimberley, had been ordered to join the *Nipsic*, already in Samoan waters, "for the better protection of the persons and property of our citizens, and in furtherance of efforts to restore order and safety." A definition of what is meant by the furtherance of efforts to restore order and safety is supplied by the instructions of Secretary Whitney to Admiral Kimberley. The latter is informed that "the German Government invites this Government, in the common interest, to join in establishing order in Samoa, giving assurance of careful respect for our treaty rights." Then the Admiral is directed to extend full protection to American citizens and property, and to coöperate with the German and British Governments in restoring peace and order. Beyond this he is not allowed to do anything except to "protest against the subjugation and displacement of the native government of Samoa by Germany." These are perfectly safe instructions, but they do not help us to understand how the proposed appropriation of $500,000 is to be used. The expenses of the navy are paid out of the regular naval appropriation. The extra appropriation, if made, must be for an extraordinary purpose. What is that purpose? Some light is thrown upon the situation by a telegram to the Baltimore *Sun*, which represents Secretary Bayard as saying:

"The question for Americans to consider is whether we shall continue to maintain neutrality as between Mataafa and the Germans, or assume the rôle of belligerents towards Germany in behalf of one of the two claimants to the throne. Thus far Germany has given us absolutely no cause for war. The flag which was burned in Samoa was not hoisted in assertion of American rights. There is no analogy between the cases of Samoa and Hayti."

This statement of the case is so exactly in accord with the facts that we must regard it as authentic.

We cannot recommend to any person of leisure more amusing reading than the "documents relating to the condition of affairs in Samoa" lately submitted to Congress, if he will only read them in connection with the Samoan articles in our morning contemporaries. Taken together, nobody could do justice to them in a summary but Gilbert and Sullivan or Offenbach. The condition of affairs in Samoa, as a basis for the warlike utterances of our bellicose contemporaries, is very good bouffe. We have no rights by treaty, by law, or by morals in Samoa which are not possessed by Holland, Belgium, or Italy. Our mercantile business there is a mere trifle. The islands are 5,000 miles away from our nearest port. The rows that go on between our Consul and the German Consul, and between our handful of American speculators and the natives, are equalled in importance every day among the ladies of a score of boarding-houses and hotels in this city. Our sole conventional right there is to keep a coaling-station, but this right we have not used. We have no coal there, and should probably rarely burn it if we had.

One letter in the correspondence throws much light on the trouble. An American named Moors had a lease of a lot from a native gentleman named Seumanatafa, whose title was disputed by the German Consul, and the lease thus impugned. The German invited him to take the case into a land court the German Government was setting up, but Moors declined, and said he would sooner defend his lease "rifle in hand"; and as a substitute for this he remarks plaintively:

"My interests in Samoa are not small and are increasing (I believe that the next assessment of property will show that I alone will then be paying one-half of all rates paid by United States citizens in Samoa). My trade with San Francisco would have doubled itself this year if the late troubles had not occurred. Could not the United States annex Samoa, Tamasese and all, and so impress upon German diplomats that they cannot play fast and loose with a country so great as ours? We surely need a coaling-station in the south Pacific. No other place remains but Samoa. Why should we not have it?"

Moors is evidently not a humorist. He seriously wants us to save his lease by cowing the European despots, and annexing a group of islands in another hemisphere; but he is sly, so he pretends that it is not on account of the lease he asks it, but because he feels deeply his country's need of a "coaling-station." If it be true, as it seems to be, that James G. Blaine is to go into the Cabinet, there will be plenty of fun got out of this Samoan affair yet. "J. G. B.'s" despatches on it will be to the German diplomats like the rumble of distant but fast approaching thunder, and we may be sure a stock company of some kind will grow out of them.

Secretary Fairchild has made to the *Times* what that journal calls an "explicit statement" about the removals at the Custom-house, but we are sorry to say that, although it may be explicit, it is not explanatory. He does not explain that the difference between the Boston and New York sugar rulings was due to a defect in the Boston polariscope discovered and reported on by a Committee of the Academy of Sciences, which report has been in possession of the Department since January, 1888. When he admits that "nearly or quite all of the removals in the sugar division were names mentioned in the report prepared by Mr. Byrne of Boston," he fails to tell how he ever came to attach any importance to a report by "Mr. Byrne of Boston" on any subject. Nor when he says that he has not "received a single protest" from sugar importers since the Boston polarization was introduced here, does he explain how he has failed to receive them, seeing that over fifty, to our knowledge, have been sent in and passed upon. Nor when he says that Byrne's report is before the Senate, and "is full of startling facts and glaring developments," does he explain that the evidence or exhibits on which Byrne based his report are not before the Senate, and that the "startling facts and glaring developments" are simply Byrne's stories, which no one who knows Byrne would allow to affect a negotiation for a peanut-stand.

On the strength of a report made by this paltry and ignorant adventurer, to whom it would have been scandalous to give an inspectorship on a steamboat wharf, the Secretary has admitted the existence in the Appraiser's Department, during nearly the whole of President Cleveland's term, of enormous frauds on the Government, and has dismissed, without charges, without a hearing and without notice, a considerable number of experienced, and, as is generally believed, faithful officers. To do this a year or two years ago, even on the strength of Byrne's testimony, would have been bad enough; but there would then have been time left to Mr. Fairchild to improve the service, if improvement was needed, by instituting reforms the carrying out of which he could have superintended. In failing to act on Byrne's stories until only six weeks of the present Administration were left, until reform by this Administration was impossible, until only confusion and discredit could be the result of change, he leaves us face to face with a great puzzle. The only explanation of the affair we have heard attempted is, that he wants "to spite the Mugwumps." This solution will not be acceptable to those who believe a Secretary of the Treasury must not only be fairly wise and just and prudent, but of mature age. It is only children who commit egregious follies in order to vex somebody.

For an Administration which has laid claim all along, in spite of many backslidings and shortcomings, to the character of a reformer, to go out of office on top of a piece of folly and cruelty like this, is, from the lowest point of view, a remarkable display of political stupidity. If Byrne had furnished Assistant Secretary Maynard, the patronage man of the Treasury Department, with materials for sweeping changes in the Custom-house two or three years ago they might have been used to curry favor with the spoils element in the Democratic party, because they would have furnished places to some of the waiting "boys," and have filled the breasts of a great many more with hope. But changes made now are, from the party standpoint, absolutely useless. They do nothing for the "party," and in fact are likely to excite the derision of the more experienced managers, who have jeered at President Cleveland from the beginning, and would not trust or reward Secretary Fairchild no matter what he did for them. We must only hope that President Harrison will, when he comes into office, promptly undo this farce as far as it can be undone, restore to their places all those Republican officers whom nobody but Byrne accuses, and have charges made by reputable persons investigated openly by a proper tribunal. We say "openly," because there is no more reason why a Custom-house officer should be tried for his place secretly than tried for his life secretly. In fact, the public interest demands public investigation in all such cases, both as an act of justice to Government employees, and as a guarantee that charges have not been trumped up in order to make vacancies for political reasons.

Since the bad character of the Senate Tariff Bill, with its increased duties on wool and tin plates, its sugar bounties and other monstrosities, became known, it has been very plain that an extra session of Congress would be necessary. Of course the House would not pass such a bill, or send it to a conference committee to be juggled with in secret. To consider it in committee and then in the House, section by section, in the five or six remaining weeks of the session is simply impossible. Therefore an extra session is not a matter of choice, but of necessity, unless the new Administration should elect to run the risk of a financial crisis. The suggestion has been made that by anticipating the payment of interest on the 4½ per cent. bonds, the principal of which falls due in September, 1891, the Treasury surplus might be shouldered along till the next regular session of Congress. But this would be a very doubtful expedient, since the surplus is a continuing and increasing evil. Getting rid of it to-day by anticipating payments only increases the evil to-morrow, and invites censure upon those who have the power to avert it altogether.

The St. Paul *Pioneer Press* is so much troubled about the Senate Tariff Bill, and especially the duties on tin plate and fresh fish, and the bounty on sugar, that it hopes the House will find a way to kill the whole thing and remit the subject to the incoming Congress. Regarding the increased duty on tin-plate, it says that this "would foster a practical monopoly, while laying a heavy tax on the multitudinous home industries to which tin plates are indispensable." It thinks that this extreme position would not have been taken by the Senate but for the extreme positions taken in the Mills bill. The positions taken in the Mills bill, being on the whole less radical than those recommended by the chiefs of protectionism who constituted the Tariff Commission of 1883, can hardly be called extreme. It is much more probable that the provoking cause of the outrageous bill passed by the Senate was something in the shape of the pillars of Hercules with a scroll binding them together thus: $. Mr. Quay and Mr. Dudley and Mr. Wanamaker could tell us the significance of this emblem in the present posture of political affairs.

Nothing is droller or more symptomatic in the present situation than the joy which some of the Republican papers are expressing over the discovery that we were wrong in saying that Wanamaker and Quay had burned their campaign accounts (Quay has not yet denied that his are burned). These journalists evidently think that if it can be shown that the accounts exist, Wanamaker and Quay's innocence is established; the fact being that, in the forum of morals, proof that the accounts could be produced aggravates the difficulties of their position. This reminds us very much of the pickpocket brought up recently in a London police court who protested loudly against being committed for trial, because the prosecutor swore he saw him throw the watch away, while a policeman testified that he found it in his boot. On this subject that amusing old moralist the editor of the *Independent* is peculiarly diverting.

Advices from the New Jersey and Indiana Legislatures indicate that the ballot-reform bills now under consideration there are likely to become laws within a comparatively short time. As the Legislatures in both States are Democratic, their action may have some effect in showing Gov. Hill how the popular mind is behaving. Hopeful reports come also about the chances of the bill which is before the Maine Legislature. A public hearing is to be held by the Committee in charge of it this week, and among the advocates who will appear are several clergymen. It is interesting to notice that Congressman Boutelle's Blaine organ, the Bangor *Whig*, which is leading the opposition to the bill, and alleging that there is no popular demand for it, is forced to devote more or less space daily to labored explanations and apologies for its position. If there were no popular interest in the measure, this daily task would not be necessary.

Ohio is the latest State to join the ballot-reform procession, which now includes nearly every State in the Union. A bill has been presented in the Senate of the Ohio Legislature which is substantially the Massachusetts law with a few changes to make it conform to the Ohio statutes. It contains

the Massachusetts provision for marking the backs of the official ballots—that is, with is a printed facsimile of the signature of the State or county officer whose duty it is to have the ballots printed. The prospects for the passage of the law appear to be good. The fact is, that public sentiment has been educated somewhat on the subject of electoral reform by the admirable working of a law which was enacted four years ago, applying to all cities in the State having 90,000 inhabitants and upwards, and providing that there should be no electioneering of any kind within 100 feet of the polls. It made it unlawful for persons to congregate or loiter within that distance, and forbade any person within it to hand a voter a ticket, or to solicit his vote, or to try in any way to influence him, and also forbade the voter to unfold his ballot or in any way reveal its contents. This simple statute has done wonders in securing honest and quiet elections, and the natural consequence is that the people of the State are now in a condition of mind to welcome further reform in the same direction.

The hearing before the Assembly Prisons' Committee on Thursday brought out some direct evidence from the prison authorities which ought to make the members of the Legislature sufficiently ashamed of themselves to take prompt action on the question of convict labor. One prison inspector said: "I say to you, gentlemen of the committee, that if you pass through the corridors of the prisons, you will hear five out of every six of these unfortunate men say: 'Give us something to do!'" Another prison official said: "If there is to be any reformatory influence exerted upon convicts, they must be worked honestly, and not made to feel that they are degraded." All the testimony agreed that the demoralization which the present lack of labor is causing is little less than appalling. On the question of competing with free labor, the testimony was especially interesting. One superintendent said that the opposition of the labor agitators was preposterous, because fully 85 per cent. of the goods which had previously been manufactured in the prisons had been sold outside the State. When it is remembered that the total percentage of the product of convict as compared with free labor is only a fraction of 1 per cent., this statement—that nearly all the convict goods are sold outside the State—ought to bring the legislators to their senses.

Each new report of the Superintendent of Education in a Southern State furnishes fresh proof that those States need no appropriations from Washington to enable them to build up a good school system. West Virginia has been among the foremost in developing that "local supervision and interest" which General Harrison years ago well said is the only thing that "will bring these constituencies that are now so backward in the race of education abreast with other States." The expenditures are rising steadily and rapidly, advancing from $1,087,674 in 1887 to $1,240,649 in 1888; and the number of schools and pupils grows with almost equal pace, the percentage enrolled in the schools to the whole number of children being now 70 per cent., which is almost precisely the same as in Maine. The length of the school-year was increased one week each year, and is now almost identical with the limit in Maine. Experience has thus fully vindicated the Republican Senators from Maine and the Democratic Senators from West Virginia in their attitude of combined opposition to the "Bill to Promote Mendicancy."

The city of Providence, under a prohibitory law, has 529 places in which liquor is openly sold. This is the total given by the Providence *Journal* in its summary published with the last of the diagrams which it has been giving, showing by police precincts each place where sales are made. It says that this number does not include drug-stores, some of which have a private drinking-place for customers, and a considerable number of other places in which liquor is suspected, but not positively known, to be sold. We believe there is nothing in Maine quite so glaring as this, although it is notorious that, in spite of the prohibitory law there, liquor is sold, with little or no attempt at concealment, in every city in the State. The defiance of law in Providence, and in many other parts of Rhode Island, is more open, probably, than it is anywhere else in the country, and a curious thing about it is that there appears to be no strong public sentiment against its continuance. Of course, under these circumstances, it practically comes to this, that the State is under a system of free rum-selling, with no income from the traffic.

It is discouraging to find two such eminent doctors of journalism as Mr. Charles A. Dana and Mr. Murat Halstead disagreeing on a question of ethics. Mr. Dana was chosen last year as the guest and orator of the Wisconsin Press Association at their annual meeting held at Milwaukee. His discourse gave general satisfaction, and was especially commended by the New York *Herald*, which was so charmed by some parts of it that they have been kept standing in its columns ever since. One of Mr. Dana's maxims was: "Never print a paid advertisement as news matter; let every advertisement appear as an advertisement; no sailing under false colors." It has been hinted repeatedly by the *Herald* that the newspaper under Mr. Dana's control has printed paid advertisements as news matter frequently since the Milwaukee maxim was promulgated. A correspondent usually well informed wrote to us some time ago, saying that the reprinting in Mr. Dana's paper of a very long article from a quarterly review, defending Trusts, was paid for by the Standard Oil Company; but we dismissed the suggestion as an idle tale. Whether Mr. Dana has followed his own maxims or not, the maxim is good in itself, and therefore we are much concerned to find Mr. Halstead taking the other side of the question in his discourse to the Wisconsin editors at Madison a few days ago.

Mr. Halstead takes issue with Mr. Dana squarely. He announces at the outset that he has tried it both ways, and is thus able to speak from experience. Perhaps he means to insinuate that Dana has only tried it one way, but which way he does not indicate. "Once upon a time," says Mr. Halstead, "I sacrificed many dollars in an endeavor to establish that great principle, and have receded from it, yielding to the material manifestation of general judgment." The "material manifestation of general judgment" is a phrase not free from ambiguity, but in its context it seems to mean cash. This interpretation is justified by a subsequent sentence, in which Mr. Halstead says that he has been constrained to associate "the advancement of great principles with pecuniary profit." (Billy McGlory has felt constrained to associate the great principle of personal liberty with pecuniary profit by selling liquor without a license, but the Mayor says he shall not allow him to do so any more.) One would suppose that this might end the matter altogether, and that further reasons for rejecting Mr. Dana's maxim would be superfluous, because, when you know that your principles are great and that they cannot make head without pecuniary profit, any form of deception must be allowable, especially if your readers are easily humbugged. "A large percentage of the people think the editor writes the advertisements," continues Mr. Halstead. "What is the objection if some of them should find out that the advertiser occasionally dictates the editorials?" No objection indeed to that; the objection is when they don't find it out. If Mr. Halstead would only begin one of this kind of editorials by saying, "The following is dictated by the Boston Clothing House," or by the Mutual Reserve Fund, or by the Standard Oil Trust, as the case may be, no harm would result, even to those simple persons who think that the editor writes all the advertisements. We shall not follow Mr. Halstead through his abundant list of reasons for differing from Mr. Dana, whom he grossly accuses of "biting off more than he can chew without facial distortion;" but we must notice one more observation which, we have no doubt, met a sympathizing response from the Wisconsin editors, viz.:

> "If one may be permitted to speak of local experience, the question of never printing a paid advertisement as news matter has not been so important as the printing of advertisements that are not paid. The notable feature of journalism for fifteen years under my immediate observation has been the printing of free advertisements."

Who knows but that the exaction of payment for these free advertisements, properly marked as such, would have supplied the pecuniary profit needful to enable Mr. Halstead to promote his great principles? Speaking from local experience, we have never found any occult influence or overpowering hand of fate moving us, against our will, to print advertisements without getting paid for them. But we suppose it is different in Cincinnati.

THE SAMOAN AFFAIR.

THE public have had great difficulty in understanding the Samoan dispute, and even now the subject is far from being clear. The statement of the *North German Gazette*—that there is no treaty between the United States, Germany, and Great Britain, guaranteeing the neutrality of Samoa, or precluding any European Power from acquiring ascendancy there—takes most of us by surprise, because the contrary opinion had been sedulously promulgated from Washington, not by or through the State Department, but by a coterie opposed to Mr. Bayard, headed by Senator Frye and Consul Sewall. It turns out that the *North German Gazette* is right. There is no treaty, protocol, or other engagement between the United States and either of the other countries, which forbids either of them to occupy the islands to-morrow. There is a treaty between England and Germany which is said to preclude Germany from taking such a step; but, of course, we have nothing to do with that, and it does not comport with our dignity to solicit England to enforce her treaty rights against Germany in our interest.

The "secret protocol" which Mr. Bayard is chided for not sending to the Senate with the other papers relating to Samoan affairs turns out to be no protocol at all, but a daily record of the proceedings of a conference with the German and English representatives, which neither party was at liberty to make public without the consent of both the others, and which the English and German Governments declined to permit Mr. Bayard to make public. There is one fact in the history of the negotiations which may perhaps be made public now without detriment to anybody on this side of the Atlantic. Very soon after Mr. Cleveland's Administration was seated, a German citizen of rank from Berlin, but holding no diplomatic position, called on Mr. Bayard, and put the question to him, in the name of Prince Bismarck, whether the United States would object to Germany's assuming the exclusive control of the Samoan Islands. The question was put bluntly, but with the utmost deference and friendliness. Mr. Bayard, having become satisfied that the questioner was really what he assumed to be, namely, an unofficial representative of Prince Bismarck, replied that the United States could not consent to any such separate control of the islands on the part of Germany. Thereupon the interview ended in the same friendly spirit in which it began, Mr. Bayard's interlocutor returning immediately to Berlin, and the impression was left that no step would be taken by Germany inconsistent with the amicable relations that had previously existed with this country. It is evident now that Bismarck had formed the design of getting possession of the islands, and that he wanted, if possible, to get an unofficial assurance from our Government that his movements would not be impeded. Failing in this, he did not desist from his purpose, but set about it in another way. As there is no written record of what occurred at the interview above mentioned, it is comparatively easy for so skilful a practitioner of "journalism" as Bismarck to interpret it in any way he pleases, or to ignore it altogether.

The scales having fallen from our eyes in this particular, we are next told that we have a treaty with Samoa, dated in 1877, which gave us the right to establish a coaling-station at Pago-Pago. This treaty was to remain in force ten years, and until notice of termination was given by one or other of the contracting parties. The ten years have expired, and we have not established the coaling-station, nor taken any steps to that end, obviously for the reason that we did not need any coaling-station there. We have no steam-vessels passing that way. If we had established the coaling-station, we could have done nothing with it except to sell coal to other people. The Government wisely kept out of that speculation. The sudden zeal of Senator Sherman to establish this coaling-station before the Samoan Government (whatever that may be) gives notice of termination of the treaty, becomes a trifle ridiculous, while the proposed appropriation of $500,000, to secure our Samoan rights in general, requires explanation, to say the least.

But, it is further urged, this treaty with Samoa, if not already terminated, pledges us to use our "good offices" to adjust any difficulty arising between Samoa and any foreign Government. This pledge was in direct contravention of our national policy, enjoined by Washington's Farewell Address, to avoid entanglements with European Powers. But, overlooking that feature of the case, there is nothing disclosed by the Samoan papers, or even by Senator Frye's speeches or Consul Sewall's interviews, which prevents us from tendering our good offices in the emergency provided for. If our good offices fail, we shall have earned the blessing of the peace-makers promised in the Sermon on the Mount, and that will be no light satisfaction.

If we have no treaty with Germany respecting Samoa, if we have no treaty rights at all in that quarter except the right to establish a coaling-station, which nothing has prevented us from establishing except our own disinclination, and the right to tender our good offices, which it would seem that we might tender even without a treaty, what is it that has raised this awful pother o'er our heads? The following paragraph, taken from an interview with an eminent New England Senator, seems to be the answer to this natural question:

> "The Samoan Islands are on the highway of commerce across the Pacific Ocean, and are of great importance with relation to the development of the trade via the projected canals across the Isthmus of Panama and across Nicaragua. To a Power whose ships are sent on long cruises, the establishment of coaling-stations is a necessity, and the location of one on the central island of the Samoan group, as provided for in the proposed amendment to the Diplomatic and Consular Appropriation Bill reported by the Committee on Foreign Relations, is looked upon as one of great importance to us."

We do not see that the right to establish a coaling-station has been or is likely to be interrupted by anything except our own supineness. As for commerce with Australia, the only commerce that anybody thinks of in connection with Samoa, we have been doing our best to cripple and curtail it for years by hostile tariffs. It was only a few days ago that the Senate put a new obstruction in the way of such commerce by adding two cents a pound to the duty on wool. To talk about the needs of Australian commerce, and about facilities for promoting it under such circumstances, is laughable in a high degree.

The Cologne *Gazette* makes the singular mistake of attributing all the pother at Washington to the Cleveland Administration. The truth is, that the Samoan party at Washington is the same which made all the difficulty with Great Britain respecting the Fisheries Treaty. Its object is to show that Mr. Bayard is not sufficiently alive to the country's honor, that he is in the habit of truckling to foreign Powers and hauling down the American flag, and all that. It is the Harrison party in the Senate, and not the Cleveland party, that is running this wild-goose chase respecting a group of islands in the South Pacific Ocean more distant from our shores than Berlin itself, and where we have no interests to speak of. The more the matter is looked into, the more plainly does it seem, on our part, an outbreak of sheer Jingoism and meddlesomeness in other people's affairs. Our Jingo contemporary, the *Tribune*, is fain to admit that there is no treaty between the United States and Germany respecting Samoan independence and neutrality, but insists that the "obligations" which Germany has assumed in respect thereto "are defined with authority in the correspondence which has passed between Berlin and Washington." This means that, although the negotiators never came to an agreement which could bind anybody, they laid down certain principles which would be the basis of an agreement if they should eventually make one.

Now, what are "obligations"? In plain language we say that an obligation *obliges* an individual or a nation to do or refrain from doing some particular thing. Supposing that Germany, in spite of this alleged obligation, lands a military force at Samoa, and actually takes possession of the islands. This is the worst that she could do, and we therefore make this a test case. The question is, What would we do about it? Would we fight Germany? If so, upon what ground? Not upon that of an infraction of treaty, because there is no treaty. Shall we fight her because she has changed her mind? The right to change one's mind before making a bargain is among the reserved rights of nations, up to this time. Moreover, it is easy for Germany to say that a change of events has caused her to change her mind. She is not "obliged," however, to explain what has led her to change her mind, to anybody to whom she is under no treaty obligation. Suppose, in the case named, we reply that we had a treaty with Samoa giving us the right to establish a coaling-station at Pago-Pago, and that Germany, as the successor of the Samoan Government, is bound by that stipulation. Very likely Germany would

agree to everything that could be urged on that point, and would tell us to go on and establish our coaling-station at Pago-Pago. Then we might urge that we had the right under this treaty to tender our "good offices." It would be very churlish in Germany to refuse us that privilege. She would open a wide door to our good offices and *pourparler* over them to any extent, and in the end accept them or not, as she pleased. What next? Would we go to war or not? This is the test that we apply to the "obligations" assumed by Germany in the premises, and we wish that some Jingo Senator or editor would tell what he thinks about it.

BOULANGER I.

THE triumph of Boulanger in the Department of the Seine, by a majority of 54,432 in a total vote of 433,708, is more complete than was generally expected. Neither his friends nor his enemies expected so large a majority. That he owes his victory to the Monarchists of various shades there is but little doubt. They have supported him *en masse*, both Bonapartists and Legitimists. The other malcontents, the people who are disgusted with the working of the parliamentary system, or with the heavy taxation, or with the attacks of the Republic on the Church, or with the dulness of trade in Paris, could not have dealt such a blow to the existing régime without the aid of the Conservatives. The order was given to the Monarchists by the Comte de Paris; and the Bonapartists—who, Paul de Cassagnac now says, are Bonapartists no longer, but anything that will overturn the Republic—fell in with the plan.

They do not attempt to conceal the fact that their designs are purely destructive. They would not have voted for Boulanger if they had believed it would result in any sort of reform. For the man himself, both personally and politically, they have the utmost contempt. He was noted when in the army for his untrustworthiness and charlatanry, and the exposure of his falsehood and ingratitude when Minister of War in denying the letter which he wrote to the Duc d'Aumale, thanking him for his promotion, made all respectable Frenchmen blush to think that such a man should be in such a place. His performances since then as a political agitator have only confirmed the earlier impression. He has produced no programme, and made no promises, beyond denying that he aimed at a dictatorship. He has risen to fame and power literally as "a pig in a poke." He has made no speeches worthy of note in the Chambers. He has simply rung changes on the faults of the Republicans, and expressed himself favorable to nearly everything—such as the Government support of the Panama Canal—which the Republicans refused.

The situation now is made humorous or horrible, according to the point of view from which one looks at it, by the fact that nobody knows or pretends to know what the result of the election will be. It is almost certain that Boulanger does not know himself. The direct effect on the strength of the Ministry in the Chamber is simply the loss of one vote. It is said that Boulanger will not sit for the Seine, but choose to remain where he is as a member for the Nord, which will necessitate another election in Paris. The political value of the election lies solely in the fact that through it Paris, by a large majority, condemns the Republic as now administered. The importance of this condemnation will largely depend on the way in which the Ministers take it. The policy of the Republicans, ever since the Commune, has been to lessen in every way the political ascendancy of Paris, and thus put an end to its power of making revolutions and setting up new governments. Both Thiers and Gambetta and all their successors have striven with all their might, through schools, public buildings, roads, canals, and harbor improvements, to win the provinces over to the Republic, and give the peasantry a sense of political power, and deliver them from their slavish subjection to the mob of the capital. That their efforts have been measurably successful there is no doubt. There is a more active political life, and a keener interest in public affairs, and a deeper sense of political power now to be found in the country districts than ever before in French history. But should the Floquet Ministry now accept the Boulanger election as the verdict of the country, before which they are bound to resign, of course all this gain would be lost. The domination of Paris over the provinces would be restored, and the Radicals of the streets would feel that the Government of France was once more in their hands. Much the same thing may be said of any recognition of the election as a serious reproof or direction. If President Carnot or Floquet in any way bows before it as a final popular deliverance, by pushing forward a project of revision or hastening a dissolution, Boulanger will at once become master of the situation to rule or ruin.

If he should be allowed to have his way, say, by giving him first his "dissolution," and then his Constituent Assembly, nobody can tell whether the Constituent Assembly, which would be charged with the revision of the Constitution, would suit him. French deliberative bodies are very uncertain. The next Assembly might quarrel with Boulanger just as badly as this one has done. He might have to resign his seat in it in disgust, as he has had to do in the present one, and begin his plébiscite over again. Or, should the revision suit him by the aboli tion of Senate and Presidency, and France be committed, for the second time in her history, to a single Assembly, elected under the patronage of a military adventurer, nobody would be able to see ahead for six months. Such an Assembly would be certain to be under the domination of its most reckless and impulsive elements, eager for experimentation in every direction, and indifferent to vested rights to a degree that would almost certainly produce an overwhelming demand for a dictatorship within a year or two. That Boulanger would furnish the dictator is not at all certain. The army would have its say about that, and what hold he has on the army nobody knows. He is said to have won the affection of the privates, but the privates are a rapidly changing body, and their affections are at best transitory and fickle. The officers, especially in the higher grades, who for political purposes really constitute the military force, are said to be generally hostile to him as a "rhéteur" and humbug, and it is not at all impossible that, if such a crisis were ever reached, the Duc d'Aumale, if he were not too old—he is now sixty-seven—might reap the harvest for his nephew which the Boulangists had sown.

THE INTER-STATE RAILWAY AGREEMENT.

THE agreement which forms the basis of the Inter-State Commerce Railway Association can be understood only in the light of the discussions to which it was subjected. The proceedings of the conference of January 8 and 10, as well as some of the papers which have since been made public, indicate some divergence of opinion among the members. In one sense, this is not a bad sign. The very earnestness of the discussion shows that the representatives of the different railroads regard the agreement as a serious and binding one, and not a mere dead letter, to be entered into lightly and as lightly broken.

One fact which was brought out by the discussions was the importance of the provisions respecting competitive traffic. This is in one sense the central point in the whole matter. As finally adopted, it reads: "The Executive Board shall from time to time, on the application in writing of an accredited representative of any company the president of which is a member of this Association, take such steps for a full hearing of all parties in interest as may be proper, requisite, and legal, to secure to each company its due measure of the competitive traffic." The object of this is clear enough. It is hoped that the good results of a pool can be accomplished without direct violation of the law. We cannot do better than to quote what Mr. Depew said on the subject—for, though the trunk lines were not direct parties to the agreement, it is obvious that his words reflected the general sense of the meeting: "The strength of this present organization seems to me to be, that, in that conference of the Committee with the Inter-State Commerce Commission, you have a committal on their part to the approval of the only scheme to get the railroads together to make the agreement upon rates and adopt the rules for their enforcement. You have also in the clause which they have amended a *quasi*-commendation of some scheme which they will assist in promoting, and afterwards interpret the law in favor of concessions to the differential lines—the means by which they can be protected, and by which their owners and managers will not, for the purpose of getting business, break the agreement; so that, while we avoid the pool so called, we do evidently, under the sanction of the Inter-State Commerce Commission and without any amendment to the Inter-State Commerce Law in general, secure some

machinery by which peace can be maintained."

We just now said that this was the very centre of the whole matter. We believe it to be so, because a company which lost business while faithfully observing the agreement, if it suspected other companies of violating it, would at once withdraw. As stated by Mr. Adams, "The idea would be, the company would go before a board of managers, and say: 'We are good faithful citizens, obeying the law. Our business is gone'"—and would have some remedy. In the absence of such a resort, we do not believe that the agreement could be maintained. The penalties provided by the Inter-State Commerce Act have, in actual practice, proved insufficient to prevent rate-cutting. Under certain circumstances, the road that obeys the law the best loses the most. The presidents' agreement provides for an organized effort to detect violations; but it is not probable that what the law has conspicuously failed to accomplish can at once be carried out by an agreement of this kind. If time is given, the irregularities can be detected and probably stopped, at least in their worst forms; but if time is not given, it is unlikely that a railroad president will passively sacrifice the interests of his own road by obeying the law, while knowing, even though he cannot prove it, that he is suffering through others' disobedience. If the Commission can so interpret the law as to allow these necessary measures of self-protection by division of traffic, well and good; if they cannot, we fear that the agreement will be worth little more than other agreements which have gone before it.

So much for the means of maintaining the organization. With regard to the system of rates itself, we find two conflicting views. One party, including a decided majority of those present, wish to leave matters with as little interference as possible, calling in the aid of arbitration only where an actual conflict between actual interests threatens to produce war. On the other hand, Mr. Stickney of the Chicago, St. Paul and Kansas City, both in the conferences and subsequently to them, thought it necessary to go much further. In an open letter, dated January 11, the day after the second conference, he says: "It is self-evident that before reasonable, uniform, and remunerative rates can be maintained, such rates must be ascertained and established. To ascertain such rates and then put them into effect is the first step. The public mind assumes that such rates have been ascertained, that they are fully agreed to and understood, and that nothing is easier than to put them into effect and maintain them; that it is merely an act of volition; that the presidents have only to order it in good faith, and it is accomplished. This is the theory of the contract of January 1, and to a large extent of the plan adopted yesterday. In my judgment, this is a superficial view."

He goes on to say that any agreement, to be more than a mere makeshift, must fix a basis of rates. He would first agree upon a full and complete classification. On questions which must arise in making such a classification, he would provide in advance for a board of arbitrators. He would have the meetings as public and open as possible, giving the fullest hearings to outside parties interested, and seeking advice and suggestions from State and Inter-State Commerce Commissioners. Having thus arranged his classification, he would adopt some one class as the standard, agree upon the percentage above or below the standard rate that the other classes should bear, and systematize the whole schedule upon this basis.

Efforts of this kind have not been by any means unknown in the history of the country. The Southern Association has done much in this direction, and the results have been at least fairly good. But the difficulties of such a project are greater to-day than they were before, on account of the opposition of certain sections of the Inter-State Commerce Law. We do not believe that Mr. Stickney does full justice to these difficulties, nor do we believe that, under the most favorable circumstances, the matter could be carried as far as he seems inclined to go. The cost to a railroad of doing any given sort of traffic depends largely upon the volume of such traffic which can be obtained. This can often only be determined by experiment. Any arbitrary mathematical standard, if placed high enough to be generally remunerative, would have a tendency to prevent such experiments. It would thus hinder reductions in rates, and stand in the way of increased efficiency in railroad service.

But from another point of view Mr. Stickney's position is much stronger. For arbitration to establish itself as a system, there must be some permanent principles developed and applied. They need not necessarily take the shape of mathematical formulas, but they must be capable of general and impartial application. In default of any such principles, railroad arbitrators have an enormous amount of work, with little prospect of lasting success. The result often is something like that of arbitration in labor disputes, where A is given about half what he wants and B the other half. If either party changes his mind a month later, the whole matter has to be arbitrated over again. The advantage of a systematic basis of rates, such as is proposed by Mr. Stickney, is that it gives a principle on which to base decisions. It takes away the chance for constant renewal of petty quarrels which can only be settled by averaging the claims of the contending parties, and where, in consequence, each party is disposed to claim as much as possible. While it is an advantage to recognize arbitration instead of fighting as a means of settling difficulties, arbitration without a principle often involves quite as much harm as good. There are two logical alternatives: either the old system of independent action, regulated by the self-interest of the contending parties, which has proved on the whole so unsatisfactory, or a system of legalized relations, where the general interests of the different parties are to be considered in laying down certain general principles, but where individual disputes are to be settled by an application of these principles rather than by an unorganized balancing of contending claims. It is a step in advance when our railroads abandon the first: it will be a more difficult, but at the same time far more important, step when they learn to accomplish the second.

EVEN BIBLES CANNOT ESCAPE.

Our readers will remember that the Mills bill, as it passed the House of Representatives, added to the free list "Bibles, books, and pamphlets printed in other languages than English, and books and pamphlets, and all publications of foreign Governments, and publications of foreign societies, historical or scientific, printed for gratuitous distribution." In the Senate substitute for the Mills bill (Sec. 12, clause 482, p. 164), this paragraph is modified to read: "Books and pamphlets printed exclusively in languages other than English." This is by no means a mere condensation of language, but is in effect a material curtailment of the saving which would have resulted to scholars and students under the operation of the clause in the Mills bill which would have permitted the free importation of all books and pamphlets printed for gratuitous distribution, as well as all publications of whatsoever kind by foreign Governments, or by foreign historical or scientific societies, if distributed gratuitously, without regard (in any of these cases) to the language used. Moreover, the insertion of the word "exclusively" in the Senate bill cuts off from free importation two kinds of publications indispensable to students, namely, lexicons and editions of texts, the latter usually containing the original text together with an English version. The production in the United States of books in these two classes is insignificant, so that the duty can scarcely be imposed for any one's "protection;" and it can hardly be that this heavy tax is proposed to be laid upon these implements of knowledge for the mere sake of revenue, in an act purporting to "reduce taxation" upon the ground that there is already a surplus revenue; nor can these books very well be classed as "luxuries" in order to justify the tariff demand, for every man of intelligence knows that to the student they are necessities. It is to be hoped that we have not yet reached the point where our Government would discourage, upon the ground of luxury, the importation of any means of education. But truly it is difficult to imagine any decent excuse for subjecting every poor citizen who thirsts after knowledge to such burdensome taxes, which are the more irksome because it is admitted upon all sides that the money thus extracted from men who are, as a class, not wealthy, is not needed to defray the reasonable expenses of the Government. No other civilized nation, be it ever so strong a believer in the theory of "protection," treats its students in this way.

It is sadly discouraging to note that this important question of free knowledge was not even deemed worthy of discussion upon the floor of the Senate. Paragraph 482 of the bill was reached and read on Thursday,

the 10th instant, and was passed by without a word of remark. On the previous day, Wednesday, the 9th, paragraph 379, imposing an ad-valorem duty of 25 per cent. upon "books, including blank-books of all kinds, pamphlets and engravings, bound or unbound photographs, etchings, maps, charts, and all printed matter not specially enumerated or provided for in this act," was read without a comment. But later in the day Senator Vance moved to insert at the end of this paragraph the words, "Provided, that Bibles printed in any language shall be admitted free of duty," which amendment was voted down by 22 nays to 18 yeas. The few remarks made upon this proposed amendment afford no reasonable explanation of the negative vote. Senator Vance pointed out that Americans who speak a foreign tongue would be allowed, under paragraph 482, to import Bibles free, while native-born citizens would be obliged to pay a heavy tax upon theirs. And while a donation from the London Bible Society would not be taxed, provided the Bibles sent were in other languages than the English, if printed in our mother-tongue their acceptance would impose a payment of duty. The only reply to these arguments was a statement that the work of the American Bible Society practically made Bibles "not only free of duty, but free of cost." But if this statement has any value as an argument, it applies with equal force to the Bibles printed by the same Society in foreign languages. Then why remit the duty on one class of Bibles and retain it on the other? Moreover, if this Society furnishes Bibles "gratuitously" (more strictly, we suppose, it should be "at cost"), it certainly has no need for tariff protection. For what reason, then, is this tax of 25 per cent. to be levied upon English Bibles?

If any one will take the trouble to examine the first page of the catalogue of the American Bible Society, he will find printed thereon: "This Society can supply *only* the Holy Scriptures without note or comment." If, therefore, a Bible student wishes to possess a copy of the sacred text made more useful and valuable by reason of learned annotation and the addition of other explanatory matter, it is clear that he must go elsewhere for it than to that Society; and if he ventures to attempt to satisfy this not unreasonable desire by importing a foreign edition, he is promptly taxed a quarter of its value—that is to say, if he happens to be a native-born citizen who desires his Bible in the English language. If he is a naturalized foreigner, or an alien residing here, our Government exempts him from the payment of such tax upon Bibles printed in his native tongue.

The negative vote recorded above, if the Senate act becomes law, will seriously burden a large class in this country who may certainly claim some consideration at the hands of the Senators who defeated Mr. Vance's amendment. In order to satisfy an easily recognized want, the great Bible publishers of England have issued editions of the Scriptures which have become widely known and justly celebrated under the designation "Teachers'" Bibles. These contain, besides the text, supplied with every possible convenience and help in the way of annotations and references, a great fund of compact information, prepared under the supervision of men of high authority in Biblical learning, and intended to answer all the needs, more especially, of Sunday-school teachers. So varied and valuable is this added matter that one clergyman speaks of it as containing the "essence of fifty expensive volumes by men of sacred learning." These Bibles are not cheap. It is impossible that they should be, for no expense has been spared in perfecting their mechanical production. They are perhaps unrivalled as examples of books most perfectly adapted to their purpose, combining compactness, legibility, portability, and durability, together with beauty of finish, in a very unusual degree. Bishop Vincent of the Methodist Episcopal Church says of one of these Bibles, "It is one of the most perfect editions of the sacred Scriptures I have ever seen. *I wish we could place a copy in the hands of every Sunday school superintendent and teacher in America.*" Nothing at all approaching these books is produced in the United States. One can sympathize with Bishop Vincent's feeling as he reads over the names of the twenty-two Senators who voted to retain a tax of from $1 to $4 upon every copy of these Bibles brought into our country. It must strike him as a remarkable way in which to aid in the diffusion of Biblical knowledge among our people, or to encourage the intelligent study of the Bible.

Our tariff legislation in regard to books has had the lamentable effect of putting the United States at the very bottom of the list of civilized countries in respect to the encouragement given to the diffusion of knowledge. The act of 1883, however, at least possessed the grace of treating books as literature; but in the eyes of our present Senate, it apparently makes no difference whether a book consists of blank pages or contains in print the wisdom of the ages, and accordingly we find the second clause of schedule M of the above act, which provides for a duty upon blank books, incorporated into clause 379 of section 12 of the Senate bill, by which adroit "editing" the duty upon this kind of stationery, which was fixed at 20 per cent. by the law of 1883, is increased to 25 per cent. in this remarkable document entitled "An Act to *Reduce Taxation.*"

AN EXPERIMENT IN PROHIBITION.

CAMBRIDGE is chiefly known as the seat of Harvard College. It is a city, however, of great manufacturing interests, and its population of 60,000 includes a large foreign element. In 1886 there was one license for the sale of intoxicating liquor for each 181 inhabitants. The saloons sought and obtained control of the Licensing Board, and not only did earnest efforts of the best citizens to secure the imposition of a high license fee fail, but the Licensing Board announced in a case of local celebrity that the moral interests of the community did not deserve its consideration in the administration of the license system. A large part of the people, especially the professional and business men, had no belief in or sympathy with the doctrine of prohibition; but the condition of affairs was no longer to be tolerated, and in a burst of indignation, fostered by an ably edited campaign paper, the city voted at the annual election under the Local-Option Law to refuse licenses for the ensuing year. This election was held in December, 1886, and the licenses then in force did not expire until the following May.

The local branch of the Law and Order League was practically dead, and efforts to form an organization on similar principles met with opposition. There was found to be a strong feeling against any organization of citizens that undertook to do police duty, or was likely to give the civil authorities a feeling that their work was to be done for them; and, moreover, the methods necessary to the detection of offences by any such organization were repugnant to many, especially in view of a late experience with corrupt detectives. The situation was serious if neither the police nor the citizens were likely to secure an enforcement of the law.

It seemed, however, that all good citizens of whatever opinions as to the law could find a meeting-ground in an organization which should limit its action to urging the enforcement of the law and arousing public opinion to demand it by means of a printed publication. The association finally formed on these lines declared itself organized "to keep the citizens informed as to the working of the laws regarding the sale of intoxicating liquors in the city, and the efforts of the city authorities in enforcing them; to keep alive by the dissemination of accurate information a healthy public interest as to the best means of dealing with the sale of intoxicating liquors, and to support and encourage the city authorities in the enforcement of existing laws regarding such sale." This plan was regarded by extreme Prohibitionists as lacking in "ginger," and by extreme high-license men as an attempt to support an unrighteous system; but the broadest possible basis of membership for the association was sought, and about a thousand men of all classes and opinions sent in their names as members. An honored professor in the University was chosen president, and the details of the work were intrusted to a secretary under the supervision of an executive committee composed of professors, lawyers, physicians, editors, and business men.

By the time the licenses had expired, the association was fully organized, with a considerable sum of money in its treasury, and had succeeded in giving the authorities the impression that a large body of citizens demanded a fair trial for the experiment. The Mayor of the city, on his inauguration, had announced his intention to secure a thorough enforcement of the law, and later issued imperative orders to the police. Thus supported, the police began active prosecution of violators of the law, and the saloon-keepers found that they had mistaken the extent of

their influence as conviction followed conviction. No discrimination was made, for the proprietor of the largest hotel fled from the city to avoid imprisonment, and later several students of the College were heavily fined for membership in drinking-clubs. This vigorous action practically put an end to the sale of liquor; but little liquor was sold in the saloons, and no new places had sprung up.

The results of this action began to appear at once in a decrease of disturbance in the streets and an improved condition of the poorer classes. The *Bulletin* of the association, published at intervals during the summer and fall, gave publicity to the action of the police and the courts. It secured the enforcement of certain provisions of the law that had been neglected by calling public attention to the delinquency, and it gave, so far as possible, the observable results, whether making for or against the success of the law; and all in a fair and dignified manner.

This novel method fixed public attention on the experiment. Prior to the election, a thorough investigation into the results of prohibition was instituted. The physicians, employers of labor, owners of tenement houses, and those having to do with the poor, were seen and asked for their personal observation, and the information obtained in these interviews was printed and mailed to every voter. The reports generally showed a very remarkable change in the condition of the poorer classes. Physicians noted improvement in the homes; more and better clothing for the children, and more and better food on the tables; the wives of laboring men were anxious for a continuance of "no license." Employers reported better work done in the shops, with more promptness and regularity in attendance, especially after pay-days. Landlords found greater promptness in the payment of rents, and less trouble with tenants. This mass of testimony, given in each case upon authority, went far to arouse popular interest in a continuance of the experiment. The liquor-dealers made every effort to secure a vote for license, but they found a new spirit in their opponents. The large campaign committee included enthusiastic converts to "no license." A campaign fund of two thousand dollars was easily raised, much of it from men who had hitherto voted for license. The clergymen of the city of every denomination united in public services, and held a mass meeting presided over by Dr. A. P. Peabody, and addressed by the Plummer Professor in the University and the priest of the largest Catholic church in the city. The contest brought out the largest vote ever cast, except at a Presidential election, and the city again voted against license by a decided majority, and reëlected Mayor Russell, who had so faithfully enforced the law.

After this election the saloon-keepers began to move out, and at the end of the year all but nineteen of the original saloons were either vacant or occupied by other business. "Kitchen" bar-rooms now began to appear, but it was found that the police, under the stimulus of public opinion, were able to cope with this evil. Repeated convictions were made, and it was demonstrated that liquor could not long be sold in any place without the knowledge of the police.

It must be remembered that Boston, with one liquor license to each 263 of the population, is separated from Cambridge by the Charles River, so that liquor is always obtainable by the people of Cambridge, but, nevertheless, the arrests for all causes have fallen from 1,699 in 1886 to 1,469 in 1888; the arrests for assault, a crime frequently due to liquor, have fallen from 250 in 1886 to 163 in 1888; while the arrests for drunkenness, which were 723 in 1886, and rose to 805 in the first year of prohibition, have fallen to 653 in 1888. The number of tramps lodging in the police-stations has fallen off a third. In November last, after eighteen months of prohibition, there were only 36 arrests for causes other than drunkenness, while in the same month of 1886 there were 74 such arrests.

The investigations of last fall showed still greater improvement among the poor. Coal-dealers reported sales of coal by the quarter-ton where they formerly sold by the basket. A baker in the worst section of the city reported a large increase in the sales of milk. Dealers in furniture on the instalment plan found an increase of trade and prompter payment of instalments. It is said that it is now difficult to give away second-hand garments. Employers reported continued improvement among their men. The poor, especially the Irish, showed their appreciation of prohibition by voting for it in large numbers; in one voting precinct of workingmen, a vote of 96 for no license in 1885 has risen to one of 265 in 1888. The captains of police report less than forty places under suspicion for the illegal sale of liquor, and a freedom from disturbance both in the streets and houses of the city.

THE CAR STRIKE.

THE street-car companies in this city and Brooklyn are again confronted by a problem which they will probably have to face periodically hereafter. The ostensible ground of the strike in New York is that the companies refuse to confer with certain persons entitled "The Executive Committee of Division District No. 1," with the view to "entering into an agreement" for the ensuing year. We hardly need to go over the ground, so well beaten two years ago, as to the consequences to the companies of surrendering to requests of this sort. The greatest difficulty of the labor problem in this country, in all but the highly-skilled trades, is the low character of the men who manage the unions and try to negotiate on their behalf with the employers. The difficulty is peculiarly great in dealing with the employees of street railroad companies, who are not really skilled laborers at all, or a very good class of unskilled laborers. The bulk of them are very ignorant men, and peculiarly liable to deception at the hands of the cunning adventurers who organize and take charge of their unions.

What kind of adventurers these are may be guessed from the fact that the most prominent figure in the strike of 1886 was a man who had, while janitor of an apartment building, completely stripped one of the apartments under his charge of its furniture during the owner's absence in Europe, and then fled. He was very active in pushing the Third Avenue strike until he was recognized by the police as a fugitive from justice, when he again disappeared. Magee, the Chairman of "Executive Committee Division District No. 1," who is directing the present strike, is an ex-convict who has served a term in the penitentiary for robbing the mails when a letter-carrier. About his colleagues less is known, but they cannot be men of very good repute, or they would not be his colleagues.

To enter into any agreement with a body of this kind would be a breach of trust on the part of the directors, both towards the stockholders and the public: towards the stockholders, because it would be admitting outsiders of bad character to a share in controlling the property, and towards the public, because it would be the surrender of a franchise to unauthorized and irresponsible persons. And there would be the additional and, of itself, fatal objection, that no agreement with such men would stand very long. It would be sure to be broken soon with a view to fresh exactions on the part of fresh "Chairmen" and "Master Workmen." The managers of these organizations of unskilled labor, like the car-drivers and stablemen, and coal-heavers and 'longshoremen, are a shifting body. They get up strikes because it is through strikes that they secure their best chance of making money. The "assessments" for the support of the strikers all come into their hands. The total amount of these contributions is large. No account of them is kept or rendered by anybody, and the contributors are generally too ignorant to exact one, or understand it if rendered. Consequently a good strike means a small fortune to each of the leaders, and having got it he is apt to disappear in order to enjoy it without observation or criticism. For instance, the men who were prominent in the strikes of April, 1886, were O'Donnell, Best, Graham, Downing, and Hughes. Not one of them appears in this. Before the last one was over, O'Donnell was to be seen strutting about with a gold-headed cane and gold badge, and exhibiting a roll of bills said to contain $3,000. The others probably fared proportionately well. The turn of Magee, Glennon, Hamilton, Smith, and Grady has now come. They, too, want to "make their pile" by some shorter method than driving cars or grooming horses. The companies, we are glad to say, now appear to understand the game thoroughly, and show no disposition to allow it to be played again on them, or on the poor men in their employ. The cars will probably not run with any regularity for a few days, and the public will have to suffer some inconvenience; but we shall be saved the scandalous spectacle of the payment of blackmail in a great city, by the holders of public franchises, to a parcel of notorious rogues and impostors.

Happily, too, we have in New York a police which knows how to give security on the public highways to people abroad on their lawful occasions. In Brooklyn the inhabitants are less fortunate. The spectacle presented there during the last few days of a uniformed force hobnobbing and exchanging quids with rioters and murderers in the streets, is as shameful a one as was ever witnessed in a civilized community within this century. The cause of such humiliation is a subject too large to be discussed at the end of an article, but we cannot help hoping that it may serve to give the Brooklyn people the kind of shock we got here from Tweed's Ring. Brooklyn municipal politics have been of late the despair of reformers. Perhaps the revelation that the police in a time of disorder is simply an undisciplined horde, may do what argument and entreaty have failed to do. And we hope the pathetic story of the poor man who was murdered for trying to get work after two months of idleness, may do something to cool the heads and soften the hearts of the "friends of labor."

BONAPARTE AT ELBA.

PARIS, January 10, 1889.

GREAT names like the name of Napoleon Bonaparte are, so to speak, centres of crystallization. You could already fill a library with the volumes which have been written about him. The Bonaparte "Literatur," as the Germans would say, is daily increasing. Much has been added to our knowledge of the man during late years. The Memoirs of Madame de Rémusat have been perhaps the most valuable contribution to our stock of documents on the most extraordinary, and in some respects enigmatic, personage of our time. While history tends to become merely documentary, and nobody can criticise the search for truth, we must be very careful not to accept all documents as if they had the same value. The historian must also be a critic. The recent publication of M. Taine on the French Revolution and on Bonaparte is perhaps not critical enough. The same may be said of a volume just published by Marcellin Pellet, under the title, 'Napoléon à l'île d'Elbe.' The author has used documents hitherto left in a corner and which circumstances brought to his notice. He has had the curiosity to study, on the island of Elba itself, a most singular episode in the life of Napoleon, to consult the local traditions of the place; he has found the reports of an agent of the secret police of Louis XVIII. who remained in the island while Napoleon was there. This agent was a sort of reporter, who noted everything with the most minute details. His journal is full of mistakes; it mentions the most idle rumors; but it is nevertheless very interesting, as it makes us, so to speak, lead the life of Napoleon at Elba, and enter into all the passions, hopes, and illusions of the people who surrounded him. This document was found in the archives of the French Consulate at Leghorn.

Article 3 of the treaty signed at Fontainebleau on the 11th of April, 1814, gave to Napoleon the island of Elba, "to form, during his lifetime, a separate principality, which will be possessed by him in full sovereignty." The allied Powers gave him a revenue of two millions of francs, guaranteed by the French treasury, besides two millions and a half of dotation for the members of his family. Napoleon left Fontainebleau on the 21st of April. It is well known that in Provence he had to travel in an Austrian uniform. He saw on his way, on April 26, his sister, Pauline Borghese, who was then staying in a villa near Orgon. Pauline would not embrace him at first, when she saw him dressed as an Austrian; she offered afterwards to accompany him to Elba. Napoleon was accompanied by four commissioners. The English commissioner, Sir Neil Campbell, left a journal, which was published in 1869, 'Napoleon at Fontainebleau and Elba.' The Prussian commissioner, Count Waldenburg-Truchsen, published in 1815 a relation of the itinerary of Napoleon.

Napoleon embarked on the 28th of April at Fréjus on the English frigate *Undaunted*. He only arrived five days afterwards, amidst the applause of the poor population of the island, who looked upon him as a demigod. He immediately began to organize his miniature kingdom, to form a court. Bertrand was made grand marshal, Drouot military governor of the island, Cambronne commander of Porto Ferrajo; he chose chamberlains among the most important inhabitants; he organized the veterans who had been allowed to follow him, the Corsicans who came to offer their services, into battalions. He soon had an army and a navy and a treasury, he began public works. He chose for his residence the Mulini, a house which is high above the town, gave receptions and dinners, and received visitors, chiefly English visitors who were drawn to Elba by their curiosity.

A mysterious visitor came to see him soon after his arrival; it was the Countess Walewska, whom he had first known in Warsaw in January, 1807. The Countess had afterwards joined him at his quarters, and had stayed with him for three weeks. In 1809, after Wagram, he saw her at Schoenbrun. She went to Paris, where she became the mother of a child whom she now took with her to Elba, to show him to his father. All these details were not well known at Elba, and many people thought that the mysterious lady with the child was the Empress Marie-Louise with the King of Rome. When the Countess Walewska left Elba, she went immediately to Naples with a confidential message from Napoleon for Murat.

In reality, Marie-Louise never thought of joining Napoleon again; she astonished all Europe by her attitude towards her husband and her conduct afterwards at Parma, where she had several children by General Neipperg, during the lifetime of the Emperor. Napoleon learned at Elba of the death of Josephine at Malmaison, and he was moved by this news as much, says M. Pellet, as he was capable of being moved, as he had always felt a real affection for the woman who had been the origin of his fortune. Napoleon invited his sisters, Caroline and Eliza, to come to Elba, but they both refused. Pauline and his mother Letitia came to join him. Letitia embarked at Leghorn, with Campbell. "Madame mère," says Santoni in an inedited journal, "though her attitude did not mark any joy, showed, notwithstanding her age of sixty-five years, the admirable remains of an extraordinary beauty." The populace of Leghorn hissed her. She arrived at Porto Ferrajo on the 2d of August. Pauline arrived later, as she had to fulfil a mission to Murat; she remained with her brother till he left for France.

Pauline Borghese was then thirty-five years old. She was so beautiful that Canova had taken her for the model of the "Venus Victrix" of the Villa Borghese, and of the "Venus Bathing" of the Pitti Palace. M. de Sémonville called her "the greatest and most seducing *coquine* that could be imagined." Taine cites this passage of some inedited and anonymous memoirs (they are probably the memoirs of Duke Pasquier): "No woman since the wife of the Emperor Claudius has surpassed her in the use which she dared to make of her charms." There have been many dark sayings on the relations of Bonaparte and Pauline; it is necessary to go back to Cæsar and to Lucretia Borgia to find such a complete contempt of human and divine law. Mme. de Rémusat repeats these words of Bonaparte: "I am not a man like another, and the laws of morality are not made for me." Pauline, if she did not feel superior to the rest of humanity, professed a blind and absolute obedience to her brother. (See, as to this, 'La Corte e la Società romana nei secoli XVIII.-XIX.,' by David Silvagni. Rome, 1883. Vol. iii, p. 57.) I believe, however, that at Elba Pauline acted chiefly as a political agent for her brother, and the insinuations of M. Marcellin Pellet can be answered by arguments drawn from his own book. The state of health of the Emperor which he describes, and which continued till Waterloo (all military writers have insisted on the bad state of Napoleon's health at Waterloo, which prevented his keeping on horseback) is somewhat inconsistent with Pellet's accusations. These accusations are founded only on some letters written by the French refugees at Elba, which were always opened at Leghorn and sent in extracts to M. de Talleyrand, who was then at Vienna. Whatever may be the value of these communications, which were sent by M. de Jaucourt (and not verbatim, but improved by Jaucourt), one thing is certain: Pauline was a most active political agent of her brother.

Napoleon never thought for an instant of remaining quietly at Elba. He entered immediately after his arrival into secret communication with Prince Eugene, who remained in Milan as Viceroy, and with Murat, who was still in Naples. The Cavaliere Mariotti, French consul at Leghorn, organized a complete system of observation; but he could not hinder a crowd of visitors, chiefly English, from going to Elba. During the first months of 1814, a sort of Italian movement sprang up in favor of Napoleon. The great warrior was lost to France: the Italians claimed him as a compatriot. Could he not make a new, a strong Italy? These dreams of unity were still vague, but they haunted many imaginations. Could not Napoleon be made King of Italy, with Prince Eugene, perhaps Lucien, as his successor? Many Italian emissaries were sent to Elba. Let us say at once that Napoleon did not discourage, but he never entertained, the project of becoming an Italian sovereign: his thoughts were chiefly turned on France. He only looked upon Eugene, Lucien, Murat, as allies who could help him in his French enterprise. He did not like the Italians nor Italy, though his wars in one sense assisted Italy and helped to shake her apathy.

Napoleon had his counter-police, and his own agents, who kept their eyes open on Mariotti, and on the Court of Tuscany, which was entirely under Austrian influence. He was in daily communication with Paris (see the 'Mémoires de Lucien' by Colonel Jung); he was informed of all the mistakes of the Royalists, of the sentiments of the army. He resolved to return to France, prepared munitions of war, arms, provisions, almost ostentatiously. Such was the state of public opinion at the time that on the 8th of February, 1815, Count Jaucourt could write to Talleyrand, who represented Louis XVIII. at Vienna: "It would be quite possible that you should be in this *diablerie*." Napoleon learned from Murat of the rupture of the

Congress of Vienna, he received an emissary of Maret, Duke of Bassano (this emissary left an account of his journey, published in 1819, in England). "You will say to Bassano," said Napoleon, "that you have seen me, and that I have decided to run every risk to answer the wishes of France. I shall start on the 1st of April with my guard." The little fleet which bore the fortunes of Cæsar was composed of ten ships, and started in the evening of the 26th of February. M. Pellet tries to prove that the expedition was favored by the English Government; he believes in the complicity of Colonel Campbell. His chapter on this subject deserves to be read, but did not in the least convince me. The idea that England prepared indirectly the terrible events which followed the return from Elba, seems to me simply fantastic.

Little remains at Elba to show the trace of the passage of Napoleon. On his departure, he left his library to the city of Porto Ferrajo. The house of the Mulini now belongs to the Italian Government, but nothing remains in it. The little house at San Martino was bought by Prince Demidoff, the husband of Princess Mathilde (the daughter, still alive, of Jerome Bonaparte, and the sister of Prince Napoleon Bonaparte). Prince Demidoff made of it a Napoleonic museum, composed of objects which had belonged to the Emperor. These objects were afterwards transported to San Donato, and, in our time, all the pictures and relics of San Donato have been sold at public auction. Some frescoes only remain at San Martino. One represents two pigeons which are tied by a string —the further apart they move, the stronger the knot becomes: this was an allusion to Marie-Louise. We read on one of the walls "Ubicumque felix Napoléon." These words were dictated before the return to France, a few months before Waterloo.

THE NEW CONSTITUTION OF SERVIA.

ALASSIO, January 10, 1889.

ON the 27th of next June five centuries will have elapsed since that Vidovdan, so famous in legend and ballad, when the old Servian Kingdom fell a prey to the Turks on the battlefield of Kosovo, where both the Servian King Lazarus and the Sultan Amurath met their deaths. It is well that the Servian King and people should commemorate this date by a great step in their history as a liberal and civilized nation. If the Servians were among the first Christian peoples to fall under the power of the Turk, they were also among the first to rise against him. The opening years of this century were taken up with their struggles for liberty, first under Karageorge and then under Milosh Obrenovitch. They gained the right at last to manage their own affairs without Turkish interference, though still subject to tribute and to garrisons. But the land was one of patriarchal simplicity, where every one was equal—the old noble families having all disappeared, because, unlike their brothers in Bosnia, they had refused to change their religion in order to keep their lands—and the rule of the Prince, whether he was an Obrenovitch or a Karageorge, for they changed at frequent intervals, was an absolute one. The Prince, it is true, had a Council of State, who, according to the Turkish *Hatt*, "must be men possessing the entire confidence of the people and having public opinion in their favor," but they were merely creatures of the Prince, whose despotism had therefore to be tempered with revolutions. Finally, in 1862, a Turkish garrison could no longer be endured at Belgrade, and it was expelled. Prince Michael Obrenovitch, who was then on the throne, had no sooner arranged matters with the Porte than he was murdered, as the result of a plot concocted by Alexander Karageorgevitch. He was succeeded by his nephew Milan, then a boy not fourteen years old, during whose minority the government of the country was confided to a regency of three, of whom Mr. John Ristitch is the only one still living. This was in 1868. In accordance with the spirit of the time, a constitution was made—equally in accordance with the spirit of the time—of the merits of which something may be said later.

The twenty years' reign of Milan Obrenovitch naturally falls, as he himself said before the Skupshtina, into two periods. The first ten years were devoted to asserting the entire independence of the country from Turkish suzerainty. In this came the war against Turkey of 1876, caused chiefly by the outbreak in Bulgaria and the subsequent outrages committed by the Turks. It so happened that I had arrived for the first time at Belgrade the day before war was declared, and was witness of the enthusiasm which it caused. Although the Servians behaved themselves remarkably well, and were supported by Russian volunteers commanded by General Tchernáyeff, the case would have gone against them had it not been for the interference of the Powers, who were anxious to avoid a general Eastern war. Finally, through the mediation of the English Minister at Belgrade, now Sir William White, the English Ambassador at Constantinople, a peace was concluded, leaving both parties *in statu quo ante*.

It was scarcely two months after this peace before the Russians had declared war against Turkey, and the Prince of Servia, on going to the Russian headquarters, made some sort of an arrangement as to his eventual action. When the Russo-Turkish war was over, the Servians were dissatisfied with the peace of San Stefano, claiming that the conditions which had been agreed upon had not been fulfilled. If so, they were themselves perhaps partly to blame, as they had long delayed their active hostilities. The Treaty of Berlin, while it gave them more than did that of San Stefano, did not entirely satisfy their desires, and their ambitions were thwarted by the Austrian occupation of Bosnia and Herzegovina, inhabited by Servian populations. Nevertheless, what Servia obtained at Berlin was through the mediation of Austria, and in return Austria demanded very much, in the shape of a commercial treaty, which necessitated building railways and placing the country practically under the commercial preponderance of Austria-Hungary. Mr. Ristitch was still Prime Minister, and it was owing to his views and convictions about the necessity of keeping Servia aloof from foreign intrigues, and also to the fact that up to that time Russia had been the only great Power which had befriended Servia, that it was difficult for him to carry out the engagements, not taken by, but imposed upon, Servia under the Treaty of Berlin. It was necessary to change front and follow the path marked out by Austria. A so-called Conservative Minister therefore came into power. The commercial treaties were signed, the railways were built, and Servia acquitted her indebtedness to Austria. But in doing so she naturally placed herself, owing to the force of circumstances, in opposition to Russia. This is the second period of Milan's reign.

This sudden change from a patriarchal and simple-minded agricultural people to a modern state could not occur without friction. Before this all citizens had been equal. There were no poor, and inequalities of wealth had somehow been concealed and were not noticed. Now, with the influx of foreign capital and of foreign labor—for the railways were built chiefly by Italians—with the mania for concessions and large Government enterprises, the distinction between classes, which had only existed in the largest towns, became visible, with its natural consequence on politics. The radical element became developed, a thing unknown before, and Servian politics took an entirely new turn. It was soon seen that the old Constitution was utterly unadapted to the changed state of affairs, and prevented the proper development of the country. In fact, it added to the elements of discontent within it. But the difficulties in the way of amending the Constitution were so great as to cause delays, and although the question was mooted at once, yet even when the principality was raised to a kingdom it was thought better not to propose any except merely formal changes in the wording of the Constitution. In addition to all the other difficulties in the way, there were plots for the assassination of the King, the unfortunate war with Bulgaria, the necessity of deposing the Metropolitan on account of his intrigues with Russia, and the family troubles which finally resulted in the divorce of the Queen. Once these difficulties all removed, the King returned to his own original idea of remodelling the Constitution. He had learnt by experience that it is much easier to govern as a constitutional monarch than as an autocrat, which he was not, or as a semi-autocrat, which he was.

King Milan is a very remarkable man, whose faculties would be at once recognized had he the opportunity of exhibiting them on a large scale in a great country. To all the solid qualities of a Servian he adds what Servians rarely possess, a certain poetic faculty of idealism, derived probably from the Latin blood in him coming from his Rumanian mother, who was one of the Catargi family, distinguished in Rumanian history. He had been little in Servia, and from boyhood had been educated in France, being brought back after the murder of his uncle, Prince Michael. When I first met him, twelve years ago, he was only twenty-two years of age, and had been ruling independently only four years. But even then he seemed to know his country better than any of his Ministers. At the present time he is without doubt the most astute politician in Servia, and his fund of general information, which is constantly growing, has, on each interview, increased my respect for him and for his abilities. The leader of the old party, Ristitch, is by no means the selfishly ambitious man, of retrograde instincts and decided leanings in favor of Russia, that he is generally made out to be. He was one of the Regents during the minority of King Milan, at a time when the admission of foreign influence into Servia, as into any other of the Balkan States, seemed to mean its subserviency to a foreign Power. He believed in Servia for the Servians, and although at that time and since he may have leaned towards Russia as the country which was most likely to help the Servians, he was at the same time indisposed to modern improvements which would bring the country under the influence of the Austrians, and especially under the preponderance of financiers, chiefly Jews, having their headquarters at Vienna, Berlin, or Paris. He was therefore not a fit instrument during the period of transition following on the Berlin Conference; but now that the *volte-face* has been successfully made without too great a surrender of Servian rights, he is as ready as any one else to accept accomplished facts and begin anew. The demands of Austria-Hungary for

the fulfilment of certain conditions inserted in the Treaty of Berlin—which, by the way, was not signed by Servia—for the completion of railways and the conclusion of a commercial treaty were put in such a brutal manner, if the expression may be allowed, that a change of Ministry was absolutely necessary, and a party came into power calling themselves at first Conservatives, simply because the party of Ristitch called themselves Liberals, and afterwards, as now, taking the name of Progressives.

This party has been best represented by two men, Mr. Garashánin, the son of the old Regent, a man of western education, and a westerner also in manners and politeness, and Mr. Miyátovitch. The latter was educated at a German university, married an American lady, and is one of the most learned and most highly cultivated men in the country, being now President of the Academy of Sciences. Although he has been several times Minister of Foreign Affairs, as well as Minister in London and Paris, his strong point is finance, and it is to him that Servia owes the placing of its financial affairs on a sound basis. The only other leader of importance at the present time is the head of the Radical party, General Savva Grúitch, a very charming man, with an amiable and perhaps not too strong character, which enables him easily to be put forward as the mouthpiece of the Radical party, which represents nothing unless discontent, fostered as it has been by the semi-education given to the children of the Servian peasants in the high schools and university. Two foreigners should be mentioned as important factors in Servian politics, Count Bray, the German Minister, a personal friend of the King, and Mr. Persiani, the Russian Minister, who has been in Belgrade since 1875, and who, during his long residence, has very properly made friends and exercised influence wherever he thought it would be best for his own Government.

Servian affairs not long ago came prominently before the public in a disagreeable, sensational way, in consequence of dissensions in the royal family, which resulted in the divorce of Queen Natalie. Sovereigns always find difficulty in the annulment of their marriages, as witness Henry VIII., Napoleon I., and George IV., sometimes owing to religious and sometimes to sentimental reasons. In this case nothing was alleged against the personal honor of the Queen, but she so far forgot what she owed to her husband and to her station as to meddle in politics, and to have views opposite to those of the King. Even when she was living separated from him, and protested that she engaged in no political intrigues, she did not at times conceal the fact that she was greatly interested in politics. At last it became almost a question of the duration of the King's reign and of the Obrenovitch dynasty, and, as divorce is very easy in the Eastern Church, it was finally pronounced by the Metropolitan, from whom, as he is the head of an independent church, there is no appeal. The Queen, unfortunately, not only then, but in all her previous conduct, had forgotten that, although she was connected with princely houses in Rumania, she was not a Servian by blood, and could not count on the entire sympathy of the population, and that she was not of royal family, and would therefore have no supporters among the governments of Europe. Much as the friends of the Queen, and even those of the King, may regret the divorce, yet, as it is now an accomplished fact, and is perfectly legal, nothing more can be said.

On the heels of the decree of divorce came a proclamation asking for a revision of the Constitution. Although it may be thought that this was simply a method of diverting public attention from the King's domestic affairs, yet I at least can bear witness that this idea was in the King's mind fully eight or nine years ago. Fortunately a loophole was found in the old Constitution by which all the delays could be avoided. A commission of seventy members was appointed by the King, including clergy, former ministers, and members of the Council of State, the rector and six professors of the university, two generals on the retired list, and thirty-one members from the community at large—merchants, agriculturists, lawyers, bankers, and priests. The King himself took the presidency—not merely nominally, for he was present at nearly every meeting of the commission—and the three vice-presidents were Ristitch for the Liberals, Garashánin for the Progressives, and Grúitch for the Radicals, although the last was not in favor. What the King desired was not a constitution drawn up by a majority of the members, but a fair compromise between the different parties, and such was the result. The Constitution was to be submitted to a great Skupshtina, or assembly elected for the purpose. The first elections were annulled in consequence of complaints brought of undue influence, the King having promised that the election should be perfectly free. As might have been expected, the Radicals returned a very large majority, and, on the strength of that, the draft Constitution not having yet been passed, they demanded the insertion of various provisions on which they had been previously outvoted. On this occasion the King did not take part in the commission, in order that a compromise might be arrived at without suggestions of his influence. That once done, he informed them in a very telling speech that as all the leading members of all parties had been represented, who were responsible in one sense for the votes of those whom they had elected as members of the Grand Assembly, the Constitution must be accepted or rejected without amendment or discussion. He expressed himself very plainly, much more so than American statesmen would be inclined to do in a similar case, because he was willing to use current political terminology, as, for instance, "Mugwumps" (though in Servia they are called "Savages"); and although he did not say it outright, he gave the politicians to understand that the choice was between accepting the new Constitution or no constitution at all. Naturally he carried the day, and the new Constitution was voted by a tremendous majority—494 to 73.

On comparing the new Constitution, the definitive text of which lies before me as I write, with the old one and with other constitutions of Europe, what strikes one is the great advantage it has over the old, and then that it is one of the most liberal constitutions in Europe. One might have perhaps a hesitation about accepting all its good qualities, were it not that the Servians are an honest, straightforward, conservative, and law-abiding people, who have done so well under an imperfect constitution that they may be fairly trusted to work this one rightly. The statement of the rights of Servian citizens is very clearly expressed, and they are fully equal to those of Americans or Englishmen. No one can be arrested without warrant, except when caught *in flagrante delicto*. Exile from the country is forbidden as a punishment; domiciliary research is forbidden without a warrant, and in no case can be allowed at night; confiscation is forbidden; religious liberty is guaranteed, though proselytism from the state religion is forbidden (this being copied from the old Constitution); instruction is free, primary instruction being obligatory and gratuitous; the press is entirely free; the right of public meeting and of association is guaranteed, as well as of petition and of accusation against all public officials who infringe the law in any of these respects. The extradition of political criminals is forbidden, and the right of expatriation is allowed to every Servian who has fulfilled the duties to his own country incumbent on him at the time of his emigration.

One of the greatest changes is that in the formation of the representative Assembly. There is only one house, as formerly, but the number of members is lessened by having only one member in the country districts for every 4,500 taxpayers, instead of one for every 3,000, as formerly. The cities and large towns, however, are given each a representative, Belgrade, however, having four, and Nish and Kraguyevatz having two each. The commune, including the village, of Takova, where Servian independence was first proclaimed, and that of Dobrine, the headquarters of the Obrenovitch family, are also, for honor's sake, to be allowed a special representative. With the usual exception for loss of rights by judicial process, every Servian, twenty-one years old, who pays three dollars a year direct taxes, is allowed a vote. The members of the Assembly are not to be elected by districts, but by general ticket (*scrutin de liste*) in each province, of which there are to be ten, and at least three of the deputies from each province must have taken a degree, either at the university at Belgrade or at some corresponding university abroad. One of the great difficulties with the old Constitution was that no person who had ever been a Government official could be elected to the Assembly, and the same restriction was imposed on lawyers. The result was to throw the whole representation into the hands of the peasant and uneducated classes. This is now entirely abolished; but, with the exception of Ministers, members of the Council of State, diplomatists, judges, professors, and officials who have retired or are not in active service, no person in the service of the state can be a deputy. Should a deputy become an official after his election, he must retire from the Chamber and submit to a new election, except in the case of Ministers. These exceptions, however, with the provision about three members for each province who have obtained university degrees, are sufficient to secure the representation of the educated classes, and provide against revolutionary intrigues, by allowing the real heads of parties to be members of the National Assembly. The deputies are to be paid, and, in accordance with French rather than English constitutional law, no deputy can be arrested, except when caught *in flagrante delicto*, without the permission of the Assembly, during the whole of his term, and even then a trial cannot take place without the authorization of the Assembly. The term of the Assembly is fixed at three years, unless it be sooner dissolved. One-half of the Assembly is required to be present to form a quorum as usual, but it is to be regretted that in this case the Servians did not adopt the useful provision of the Constitution of the United States that a smaller number can adjourn from day to day, and that the Speaker is authorized to compel the attendance of members sufficient to make a legal quorum. It has been one of the great difficulties of European parliamentary governments that when the Opposition is numerous, and not all of the Government members are present, business may be delayed for days and even for weeks in consequence of there not being a majority of the members of the House present, and of there be-

ing no method of compelling their attendance. Another feature which is common throughout Europe, but which seems to Americans and Englishmen very absurd and is productive of much delay, is that the Speaker and all the officers of the Assembly are not elected for the whole term, but only for the session, whether ordinary or extraordinary.

By the old Constitution, which was the first attempt of the Servians at representative government, an effort was made to strengthen the royal prerogative by allowing the King or his Ministers for the time being to appoint a number of deputies equal to one-third of the number elected. The object of this was of course to give the party in power a working majority, but it did not succeed well in practice, and was omitted from the new Constitution on the King's own proposition. The Assembly, therefore, is now entirely a representative one. As before, the National Assembly consists of only one house, but by the side of this there is a Council of State. That institution existed in Servia before, the members being appointed by the King. Now the members are to be appointed for life by the King and the Assembly conjointly—sixteen in number, one-half elected by the Assembly from a list given by the King, and the other half appointed by the King from a list elected by the Assembly. This, of course, was the result of a compromise. Among the attributes of this council is that of supervising and revising every bill brought into the Assembly, whether by the King or his Ministers, or arising in the Assembly itself, except the laws relating to the budget. Everything, to speak broadly, relating to finances is in the power of the National Assembly. The Government can make no debt without its sanction, and although the King has the right of declaring war and making peace, no treaty can be made which affects in any way the rights of individual Servians or the finances of the state without the sanction of the Assembly, and no treaty can be made by which a foreign army can either enter Servia or pass through its territory without the consent of the Assembly. The budget is voted for only one year, and it is a sign of the development of the country that a provision is inserted in the Constitution that all mines and all monopolies belong to the state, although they may be rented to private persons. The judiciary is independent and irremovable, except by impeachment, and no extra-judicial function can be imposed on judges, even by law, without their consent.

The new Constitution has already gone into effect by its proclamation, but there are certain transitory provisions for the electoral law and the Council of State which are to prevail until the meeting of the extraordinary session of the National Assembly on October 13, 1889, which is to pass laws regulating the electoral law, the arrangement of districts and communes, and all else to put the Constitution entirely into force. EUGENE SCHUYLER.

ATTIC AND OTHER GREEK DIGGINGS.

ATHENS, December 27, 1888.

THE close of the year affords a fitting opportunity for reviewing the results of recent excavations in Greece. The work of the Greek Archæological Society upon the Acropolis has continued under the competent direction of the general Ephor, Mr. Kavvadias, without interruption up to the present time, and by the end of the Greek year the work on that site will be finished. The summer was spent in excavating the area between the Parthenon and the south wall of the Acropolis. The wall between the substructure of the Parthenon and the Acropolis wall, which was first met with in the spring, continued for nearly the whole length of the Parthenon, and in the space between this central wall and the Acropolis wall were found several cross walls of similar construction and apparently intended for the purpose of support. It is supposed that the area between the central wall and the Parthenon was a terrace for the support of the Parthenon substructure, and rose simultaneously with it, while the other portion, between the central wall and the Acropolis wall, was filled in afterwards. Near the west end of the Parthenon the central wall meets a part of the old Cyclopean wall, in which is an interesting stairway; this has been left visible by the excavators by means of supporting walls. By far the most important find in the line of sculpture was a marble relief representing Athene clad in a long sleeveless tunic, with helmet upon her head, leaning upon a spear with her left hand and resting her right upon her waist. She is facing to the right, and looking downward with a melancholy expression. In front of her is a stele, probably ornamented with painting. Mr. Kavvadias considers that it belongs to the times immediately before Pheidias, but Dr. Waldstein, who has just arrived, and whom Kavvadias has invited to publish this relief, says that it belongs to the last part of the fifth century, and is to be connected with the famous Velletri Athene of the Louvre, which has given archæologists so much trouble to explain. He believes that it will show that the Velletri statue goes back to an early original, and will be of service in its restoration.

A large Triton's head of *poros* and brilliantly painted, similar to the two found during the spring, was another important result of the summer's excavation. Herr Brünckner, a member of the German Institute, obtained permission to study these three heads and other *poros* fragments found at various times, and succeeded in combining them into a three-bodied Triton, in which form they are now set up in the Museum. There has been considerable discussion recently about better measures for preserving the colors. The painted objects are eventually to be placed in air-tight glass cases; but while these are preparing, much of the color may be lost. For example, the colors upon the two Tritons' heads when unearthed last spring were of extraordinary brilliancy, but now are quite dingy and faded. The coloring matter seems to be of a powdery nature, and the careless way in which the attendants dust off these monuments is anything but preservative.

During the autumn the work has been chiefly in the space between the Parthenon and the Propylæa, though some excavating was also done beneath the floor of the present Museum, and resulted in the finding of portions of the old Cyclopean wall. The excavations upon the site usually ascribed to a temple of Athene Ergane were watched with interest, as the finding of any considerable substructure walls would disprove Dr. Dörpfeld's hypothesis that such a temple never existed upon the Acropolis; but no temple remains were found. Dr. Dörpfeld claims to have identified here the Chalkotheke. A few weeks ago was found another of the archaic female statues which form such an important and interesting feature of the Acropolis Museum, the chiton in this case being of one solid color, a beautiful light green. Many fragments of statues, all of the archaic period, and exhibiting plentiful traces of color, have been recently found—one a very good male head with the beard colored a very dark blue. It was reported in one of the papers here a short time ago that an inscription of the artist Endoios, the question of whose date has given rise to so much epigraphical discussion, had been found; but the last letters only of the inscription are of a date corresponding to that of the already known Endoios base, whereas the first line, which contains a portion of the name Endoios, is plainly of a later period. It may, however, be a reinscribing of the name.

The most important find of the whole year was made within the last week. In that portion of the southern wall of the Acropolis which was built up above the Kimonian wall—whether in Frankish or Turkish times, no one knows—was found a fragment of a relief representing a female head with a very peculiar treatment of the hair and a portion of a hand grasping it. To the right of the head was a flat raised surface, which was at first taken to be the hind part of a horse. The style and character of the work instantly revealed to the Greek archæologists, Messrs. Kavvadias and Staïs, a connection with the Parthenon frieze, but they were considerably disconcerted by the treatment of the hair, which is unlike anything to be found in the Parthenon sculptures. Dr. Waldstein, being invited to look at it, was almost instantly able to assign it to its correct position, namely, as the missing head of the Iris in the group of divinities a little to the left of the centre of the eastern frieze. On the original slab, which is in the British Museum, are Zeus and Hera seated, with the headless form of Iris standing beside them, the left wing and arm being visible. The fragment just found supplies the head, the right wing (which at first glance appeared more like the rump of a horse), and the hand of the left arm. Mr. Kavvadias has invited Dr. Waldstein to read a paper upon this fragment at a public session of the school at which it is thought likely that the King will be present.

The work on the top of the Acropolis is practically finished already, but the demolition of the Turkish walls and modern guardhouses which disfigured the west side is not yet completed. The walls of the Turkish bastion, through which has been the ordinary entrance to the Acropolis for some years, are torn down, and visitors now enter by the Beulé gate. As soon as all work on the Acropolis is finished, the Greek Society will begin to clear away the débris on the northern slope, where they are almost certain to meet with satisfactory results.

Dr. Schliemann went to Pylos during the autumn, but found nothing but Turkish buildings, and soon withdrew. The German School has undertaken no excavations this season, and, so far as I know, is not projecting any. The French excavated again in Bœotia at the temple of Ptoon Apollo during the month of September, and found a couple of heads of the archaic Apollo type. In the town of Karditza, near the site of the excavations, M. Holleaux discovered a long inscription containing a speech of Nero. The stone was in the interior wall of a church, and the deciphering of the letters cost the finder much labor; but he was well repaid by the very important character of the document. The inscription is divided into three heads: the first being a proclamation of the Emperor Nero, inviting the inhabitants of the province to assemble at Corinth on a certain date; the second being the speech delivered on that occasion; and the third a vote of thanks to him and a decree to set up an altar to Nero Zeus, the Liberator. The second portion, the speech proper, begins by stating that the gift about to be bestowed on the people is something entirely unexpected, although there is nothing which they might not hope from his

magnanimity. All the Greeks inhabiting Achæa or Peloponnesus are to receive their freedom, which they have not enjoyed even in the most prosperous times, since they were always slaves to others or to each other. The address closes magniloquently with—"Other rulers too set cities free, but Nero a whole province."

On October 1 the French transferred the scene of their operations to Thespiæ, from which place they returned only a few weeks ago. They pulled down a Byzantine church situated upon the site of the Temple of the Muses, which was shown to be a simple cella without dividing walls, having its entrance at the north. Excavations were also undertaken in the theatre, where the Greek Ephor Stamatakis made a beginning several years ago. The stage arrangements, as far as they have been disclosed, are similar to those of the theatre at Epidaurus, but none of the orchestra-chairs were found. A considerable number of inscriptions, including many dedications, were brought to light. Work at Thespiæ is to be resumed in the spring.

Work at Ikaria was carried on for several weeks by the American School, the chief object being to clear away a mass of earth which was left last year within the sacred precinct. A deep trench was cut through this part last spring without striking anything, but it seemed advisable to remove the whole mass of soil there and clear the entire precinct. This was done at the outlay of some time and expense for which the results were not commensurable with last year's, but still were of no mean importance, especially when we remember that every stone *in situ* is of the greatest value in making out the general plan. One wall, which runs not far in front of some massive marble seats *in situ*, was supposed last year to be the front wall of some structure, but the excavations this year have shown that the wall curves inward towards the line of the seats at each end for a distance of two metres, and then terminates. This shape of the wall, taken in connection with the marble seats and the eminence in the background, seems strongly suggestive of a theatre structure, though it must be acknowledged that it could not be brought into any connection with any known form. The seats are in a straight, not a curved line, and it looks as if the audience had moved down into the very orchestra, if orchestra it was. In fact, there are so many difficulties that one cannot be sure that the notion of a theatre in this connection is more than a pleasing fancy, excusable, however, on the ground that many of the rural theatres were of too primitive a nature to be judged by the usual standards.

A subordinate object of the work this season was to follow up a rough sort of platform, which seemed to extend indefinitely from the north peribolos wall of the precinct. One edge was found, but it extended to the west into a terrace where the deposit of soil was over two metres deep, and the work here progressed so slowly that it seemed best to give it up, at least temporarily, in order to be sure that nothing should be left undone within the precinct. In clearing a passage along this northern wall, there was found a huge hollow stone broken at one end, but having about the edges five mysterious objects, the explanation of which is no easy task. A corner-piece with a similar object upon it was found last year, and was a complete puzzle to every one who saw it. Crocodile feet, birds' tails, shells, bunches of grapes, etc., have been suggested, and give an idea of the lack of definiteness in the form of the objects. The idea that they are to be explained as fragments of some creature is ruled out by the fact that one of these objects shows itself absolutely intact. Dr. Waldstein thinks that, owing to the pyramidal form of one side, the whole piece must be a portion of a roof with a representation of shells on the under side; but I am very loath to give up my own theory that it was a huge basin for offering sacred cakes to the god Dionysos, and that these objects are representations of cakes made with a sort of pine-cone mould. A wall-painting from Pompeii represents a statue of Dionysos, and before it a huge hollow basin in which there is, besides several fruits, a cake made in the form of a pine-cone. This is not the place for a detailed discussion, however, and, besides, no one can have a clear idea of the appearance of these strange objects without some visible representation before him. Among the other sculptures found this season was a bearded portrait-head of the Roman period. An overhauling of the débris also yielded a few fragments which had been overlooked last year—one of great importance, namely, the left thigh of the archaic draped torso found last year, which shows beyond a doubt, as had been conjectured, that the statue was seated.

As has been already remarked, the results of the excavations this fall were not as great as last spring, but this was not expected. Up to this time the entire sum spent in Ikaria has been about $400. It must be rarely indeed that an equal outlay can produce results so important as these. We have fixed beyond a doubt the site of the deme of Ikaria, in reference to which there have hitherto been the most diverse opinions. We have not merely fixed the site in the sense in which other deme sites are known, but, what is unique, we have discovered the actual deme seat, the political and religious centre. Architectural, sculptural, and epigraphical remains combine to show the existence of two very important religious cults, those of Dionysos and Apollo. The first was naturally the most important, and was inseparably connected with the history of the locality. The Apollo cult, which can be shown by epigraphical evidence to have existed in the fifth century, is of great importance in the consideration of the introduction and spread of Apollo worship in Attica, and thus bears indirectly on the question of the early race or tribe relations within Attica. The proximity of Ikaria to Marathon makes the presence of an Apollo cult especially interesting in connection with Curtius's theory of the Ionian migration.

The architectural remains, comprising three buildings, are of considerable importance and interest, and a unique feature is the manner of "labelling" the Apollo temple on the door-sill, though on the door-sill of the Isis temple at Pompeii is an inscription in reference to its restoration after an earthquake. The sculptural remains extend from the earliest period of archaic art to the Roman period, and include some fine specimens of the best period. The colossal head which Mr. Kavvadias last year considered archaistic, is held by Dr. Waldstein to be genuinely archaic.

The inscriptions, most of them belonging to the fifth or fourth century, but a few of late Roman times, furnish a large amount of material of great historical importance, and, it is hoped, will throw much light upon the political and religious life of a country deme, about which comparatively little is known. The very insufficiency of our knowledge, which makes inscriptions of this kind the more interesting and important, also makes the restoration and interpretation of fragments the more difficult. Not by any means the least interesting point in reference to Ikaria is the name Dionysos, by which the whole region is at present called. This is probably a reminiscence of the old cult of Dionysos in this place, which has been transmitted through the tongue of the people for so many centuries.

While at Ikaria in the autumn I devoted a day to exploring with a friend the region about Stamata, a small village lying just beyond the ridge which shuts in on the north the valley leading in to Ikaria. Some have placed at Stamata the deme of Semachidæ, though no ground for this could be given at the time. Others, including Lolling in the last edition of Baedeker's 'Greece,' believe that Stamata may be upon the site of Hekale, a deme which must have been situated on the road from Athens to Marathon. Now, the present village of Stamata was settled in this century, and there is no reason to believe that it is upon the site of any deme centre. But about half an hour's distance to the north, and not five minutes' walk from the present road to Marathon, are the ruins of three churches, each of them built largely of ancient materials. May not this be the seat of the deme of Hekale? To the south of the present village lay the old Stamata, which was only deserted in this century. Here also is a ruin of a large church with two apses, and containing in its walls many ancient blocks. Near this place the owner of the property found a female statue of the Roman period a few years ago. I feel strongly inclined to believe that here lay the deme of Semachidæ. The vicinity of this deme to Ikaria has been maintained by several on account of the similarity of the myths. Its vicinity also to Plotheia is shown by the fact that Semachidæ and Plotheia are two of the three villages of the Epakria, one of the original Ionic "cities" or confederations which, like the Marathonian tetrapolis, continued after the reform of Cleisthenes in the form of a religious community. I also believe that Ikaria was the third village of the community; but as there is no direct proof of this, we cannot use it as a further evidence for the vicinity of Semachidæ to Plotheia. Now the site of Ikaria is absolutely fixed, and that of Plotheia can be placed with a very strong probability at the entrance of the valley leading in to Ikaria. This church ruin is northeast from Plotheia and northwest from Ikaria, about equally distant from each, so that no place seems to be better calculated to meet the topographical requirements of Semachidæ.

Still, we cannot put absolute faith in combinations of this kind, and it is to be hoped that within a short time some more definite evidence may be obtained. The friend who explored the place with me, Mr. Washington of Yale, '86, was so much interested that he offered to make trial of both places near Stamata at his own expense, and has begun work this very day.* The School has also obtained permission to excavate in Bœotia, at either Thisbe, Platæa, or Anthedon, and Drs. Waldstein and Tarbell, with some members of the School, are to make a trip to all these places to see which is most promising. There is no doubt that there are plenty of sites which would be well worth excavating if sufficient funds were at hand to be devoted to this purpose. The great excitement now, of course, is Delphi: but everything is still in a state of uncertainty.

The work of the School in Athens has been going on smoothly, Mr. Tarbell having proved

* While our correspondent's letter was getting into type, we received news that Mr. Washington had within a week found, at old Stamata, besides various fragments of sculpture, an unusually well-preserved female torso of more than life size, and several inscriptions which establish this as the chief centre of the deme Plotheia, which may have extended into the valley as above described. Clearly, the spade can hardly be put into the soil in Greece without bringing to light new facts and old treasures.—Ed. Nation.

a most accurate and discriminating guide to the students in all branches of their study. Dr. Waldstein arrived December 15, and has taken hold of his work here with great energy, having already given several lectures at the School library and the museums. He is also laboring to make the School take its stand as an archæological institute for advanced research, and to establish a prestige for it here. He is about to institute a series of public meetings, to which members of the other archæological schools and the Greek archæologists will be invited. At these meetings papers will be read by the directors and members upon special subjects, manifesting original work and containing some contributions to science. He also hopes to begin the publication of reports in Athens in order to avoid the delay inevitable when papers are published in America. Many objects which might in this case be given to the School for publication are now withheld, owing to the great delay necessary before the article appears.

The hospitality of the other schools has been very marked. Dr. Dörpfeld of the German Institute has been especially kind in inviting all the members of our own School to his peripatetic lectures, which are models of clearness and accuracy, and teeming with the most brilliant *Kombinationen*. The regular meetings of the German School were inaugurated on Winckelmann's birthday, and papers were read by Dörpfeld, Wolters, and Brünckner. Dörpfeld's paper was especially interesting, being a comparison of the palace remains of Tiryns and Mycenæ with those of Phœnician construction, especially Solomon's temple.

Correspondence.

DECAY OF MASSACHUSETTS FARM LANDS.

To the Editor of The Nation:

Sir: Your correspondent "G. W. A." need not have gone so far as New Hampshire for examples to refute Senator Hoar's curious proposition that the existence of a mortgage on a New England farm is a sign of life and health. The writer has spent the last three summers in an attractive farming town in the very heart of Massachusetts (Holden)—a town immediately adjoining Senator Hoar's residence (Worcester), and connected with it by five daily railway trains. In this town there is, as I was assured, a larger amount of woodland and a smaller amount of cultivated land than forty years ago; the men whom one sees working in the fields are almost always past middle life; and some of the best farms are in the hands of Swedes or Irishmen.

I found the subject of mortgages always a fertile theme among the farmers, and never encountered one who took the view of them taken by his neighbor, Senator Hoar. On the contrary, the view always taken was that they were almost an unmixed calamity, and that the farmer was lucky who, having once incurred one, paid it off during his lifetime. Very little money passes directly through a New England farmer's hands, and on that little the mortgage has the first claim; and the needs of a sick wife, or a child demanding education, have to be made secondary. If his house or barn is burned, the existence of the mortgage may make rebuilding impossible, and this was named to me in explanation of several abandoned farms. I was sometimes urged to take farm property off the farmer's hands for the bare amount of the mortgage; being once offered about fifty acres of mortgaged woodland, within a mile of the village post-office and railway station, for $1,000. This offer being declined, the owner afterwards sold off the timber for $500, thus paying off half the mortgage; and he must, to all appearance, pay interest and taxes for thirty years until the lot is sufficiently grown up in timber to be cleared again. Meantime he loses his firewood, which was the only advantage he derived from that part of his farm; and he also loses the beauty of the pine wood, which was the chief thing that made his farm attractive to summer boarders. It seems to me that there can be no better illustration of the strange logical results of the high protective system than that it should lead a Massachusetts Senator seriously to assert that a mortgage on a New England farm is a sign of health.

Cambridge, Mass.

GETTING AT THE FARMER.

To the Editor of The Nation:

Sir: Mr. Mills Whittlesey, in No. 1229, proposes to win the farmer to tariff reform by giving him a "sound library of political economy" to read during the "long winter evenings." Reforms of all kinds for the farmer are frequently based upon the presumed leisure of the long winter evening. (I don't believe in that kind of reform myself—I mean class reform. What is wanted is a tariff reform that will interest all classes.) There are as many kinds of individuals among farmers as in other callings. There are also many kinds of farming. In some kinds the farmer is as busy in January as in July. If he reads, he reads at all seasons of the year; if he doesn't, all the leisure of all his life will not give him time enough to read five books on political economy. If he is intelligent and bookish, he is likely to say when the five-book subject is broached to him: "I have more reading material now than I get time to look at. There is So-and-So, he is an educated man; he pretends to know. If your books convince him, I'll think about it." In general terms, the farmer is moved and acted upon chiefly by local men, local causes. The editors of the country papers, the lawyer-politicians of the county town, and also the local clergymen are his main guides on the subject of the tariff as in many other things.

"Knowledge is of things we see,"

and the farmer sees the men who are nearest him. Their opinion is of a vast deal more consequence to him than is that of Francis A. Walker. If he has accidentally heard of Taussig, it is only to be prejudiced against him as a "literary feller," a "doctrinaire" in some "down-East college," whose opinion on the tariff sinks into insignificance when compared with the boundless knowledge of the Hon. James G. Buncombe, as displayed in that speech of his in the town hall just before his election to the State Legislature. He knows "Jim" is a "smart feller": he has his doubts about Fawcett.

While the preacher is seldom an active force in politics now, how he votes is well enough known, and carries with it the force of an acknowledged leader. I do not know of any statistics on this point, but I venture to suppose that 65 per cent. of the clergymen in Republican States vote that ticket and advocate the protection idea.

The farmer, I hold, is to be reached better by indirect influences than by direct. What is desired is to reach the three classes enumerated, to whom he delegates his political thinking. These latter are unquestionably more intelligent, and more likely to weigh and act upon book evidence, than the former. If these can be converted, then the conversion of the farmer is a foregone conclusion. To them the books could be sent with some faint prospect of their being read.

But this brings us logically to the question of where do the editors, and lawyers, and politicians, and preachers get their tariff ideas? While they are derived to a large degree from inherited prejudices and circumstances of environment, they also depend in turn upon the influences emanating from the half-dozen large cities—the papers, magazines, journals, the speeches of men prominent in public and business life. So long as men of eminence favor and uphold protection, and so long as many newspapers of wide circulation urge its claims from week to week and day to day, so long it is bound to continue. To this last group of citizens, then—the editors of protection papers (not the organs, but the papers which uphold protection because they believe in it), the distinguished advocates and jurists, the clergymen of high degree in the great cities—to the men who stand upon the heights—would Mr. Whittlesey still better appeal than to any others. Convince any considerable number of them, and again the cause is won. The local papers, the petty politicians, the faithful clergymen on small pay, would follow, and in their wake would our farmer friends appear rolling up the majorities of certain victory.

If, for instance, the five books could be read by the Rev. Dr. Storrs, who said during the last campaign that he believed "there was something in the protective idea," it might be the means of convincing, not one man only, but a host of his admirers and friends. If, likewise, the editors of a non-political paper like the New York *Independent* could be persuaded to take a course in economics at Columbia, and simply announce that they thought protection a robbing game, it would stir up in a decisive way intelligent men in every considerable town in the land. And lastly, if each protection-upholding Congressman could have his every economical utterance subjected to analysis by a person well versed in sound economical literature, and this scattered as widely among his constituents as the speech—whether delivered or not—is by means of the *Congressional Globe*, then the farmer constituent might become interested in a subject which his own Congressman seemed to find opposition in.

In closing, allow me to call attention to three popular movements which have in view "good government by aiding in the training of intelligent and independent American citizens." First are the Political Economy and Political Science Schools of Chautauqua University; second is the American School of Politics (Chicago); third are the Reading Clubs of the Tariff-Reform League.—Very respectfully,

Theodore Jessup.

Baldwin, Wis., January 20, 1889.

THE FARMER'S LOCAL NEWSPAPER.

To the Editor of The Nation:

Sir: Please allow me, first of all, to thank those who have contributed suggestions in answer to my letter of recent date, published in your columns.

Let me add to the suggestions I then made a less expensive and a more interesting and promising plan. Many country towns have one local paper of each prominent political faith. These sheets are read by the farmers of the near neighborhood. It is probable that the subscription list of each Republican newspaper,

even of this limited circulation, contains the name of one Republican who is dissatisfied with the course of his party with reference to the tariff. Indeed, perhaps one Mugwump in each neighborhood reads such a paper for the local news.

These papers are filled largely by voluntary contributions from subscribers. This presents a good opportunity for opening a discussion and inviting replies. A farmer who might be unwilling to be educated, would possibly enter the lists to annihilate our audacious adventurer with a few—to him—self-evident facts. Then, if our champion were a thorough student of "maxims" and "markets," an opportunity would be afforded him of giving these supposed facts that examination which they will rarely bear, with that accompanying interpretation which should operate to correct the false notions of the whole neighborhood.

It is the difficulty of exciting discussion, rather than any doubt as to its eventual outcome, which is the discouraging thing. In one way or another, in all feasible ways, discussion must be stimulated. It is on appeals to prejudice and on the absence of sound discussion that private interests rely to perpetuate their privileges. Let the opposite side use the same means if they choose; the more they court discussion the better we shall like it. One difficulty is that a single speech of McKinley's can set afloat a greater fog of unreason and misconception than any brief discussion can dispel. There is no place in such an arena for jaunty confidence. It would be the best possible school for training in power of concise statement. Months of careful study of the best authorities might well precede such a debate. This plan is also applicable to the case of laborers in the smaller manufacturing towns.

One of the letters which I have received regrets the speedy dismemberment of organizations to promote tariff reform. In an organization not every member is a worker. What is everybody's business is nobody's. It is conceivable that the work of fifty men, each singly leavening the intimate circle that knows and has confidence in him as a neighbor, might turn the scale in Michigan in 1892, and so in other States of the Northwest. Of course, I hope that organizations to promote tariff reform may live and thrive. We can hardly have too many really active agencies in this good work.

Jevons says: "If people do not understand a true political economy, they will make a false one of their own." Now that this false one, fully made, confronts us, almost more than finite pains and patience will be needed to eradicate it. When it is considered that one lapse of patience may suffice to confirm a deluded victim of selfish interests in his prejudices, the need of "sweetness" as well as "light" will be obvious.

I see that the *Independent*, in its issue for January 24, proposes to class the teacher of free trade, in certain institutions, with traitors, heretics, and Anarchists. Perhaps we are risking thumb-screws, the rack, etc., in advocating free-trade principles. Certainly discussion does not exactly seem invited. Can the last campaign have made so deep an impression on the strongholds of protection that discussion is feared? I hope this will not be taken as an expression of impatience. Really, the *Independent* should consign such editorials to its "Pebbles" column. That has not contained anything so funny in twenty years.

MILLS WHITTLESEY.

LAWRENCEVILLE, N. J., January 24, 1889.

[We have grave doubts whether in ordinary times the partisan local newspapers will show hospitality to opposing views for the sake of free discussion. In campaign times we have known of a price being asked (and paid) for a "Mugwump" column in New Jersey papers.—ED. NATION.]

THE EFFECT OF FRAMING UPON A PICTURE.

TO THE EDITOR OF THE NATION:

SIR: A fashion has grown up in Boston of late years which I presume prevails more or less in other cities. There is a legion of dining-clubs, meeting periodically, and based upon all sorts of considerations of profession, trade, locality, society, art, music, etc. As, besides material entertainment, they wish to be instructed and amused, they make a practice of selecting some subject, and inviting persons supposed to have a special knowledge of that subject to be their guests and make them after-dinner speeches. As, so far from hiding their candle under a bushel, they are quite willing that their light should shine before men, they frequently have a shorthand reporter, and the remarks of the speakers are taken down verbatim. It is to be supposed that, as the papers print these reports in full, they supply, or are believed to supply, a public want, and form a curious contrast to the summary way in which the proceedings of city councils, State Legislatures, and the national Congress are passed over.

At the annual dinner of the Boston Merchants' Association, on the 8th inst., there was present no less a personage than the Hon. T. M. Cooley, who, besides being a judge, a lawyer of eminence, and one of the profoundest political thinkers and writers in the United States, is a member of the Inter-State Commerce Commission—a body which, perhaps, commands at this moment a more widely spread and practical interest than any other in the country. Passing by for the moment the substance of Judge Cooley's speech, I wish to point out how completely that, like a recent similar one of Mr. Charles Francis Adams of the Union Pacific Railroad, was fired in the air. They may excite sympathy and interest at the average breakfast-table, but everybody knows that their influence upon Congress, the only place where influence is of any use, will be absolutely nothing. Even if any measure could elbow its way through the crowd of pension, river-and-harbor, and private bills, that measure would be framed upon entirely different considerations, such as the lobby brings to bear upon committees. Let us suppose that a Secretary of the Interior, after full consultation with these and other gentlemen, and hearing all their views and plans, should himself bring into Congress a bill calculated to give the highest efficiency to the Inter-State Commerce Commission; that Senators and Representatives, duly prepared by their constituents, should discuss this bill in public session, and that the vast interests dependent upon railway management could be convinced that some serious and genuine effort was making to straighten out their complex affairs—what an interest and excitement would pervade the country! And this we could easily have if Congress could only be persuaded or compelled to give up its jealousy on behalf of the power of committees.

This view of things is greatly strengthened by the character of Judge Cooley's remarks, which were simply a defence of the law. It would have been useless to point out to a dinner company the defects of the law, as that would have only been fouling his own nest, without the slightest effect in getting the law amended. So he set himself to show that if the law did not work well, it was because railroad managers did not conform to it; that pooling, which the law prevents, is a very difficult process, at any rate; that too many railroads are built; and that something else needs reforming besides the law (which, by the way, is quite true). But what is the use of a law which depends for its success upon the coöperation of those against whom it is aimed—of a law against burglary and murder which relies upon the voluntary abstinence of thieves and murderers? I suppose the object of a law is to protect those who do wish to obey it against those who do not; and if it fails in that, it has no reason of existence. Of course, the guests at the dinner-table could not cross-examine Judge Cooley as to the provisions of the law; and if they had, he might have replied that he did not care to discuss them, as he was not responsible for them. What is wanted is somebody who *is* responsible for the law subjected to the public criticisms of those who are dissatisfied with it.

The argument is clinched by your article this week upon the annual report of the Commission. You show what a vast work in statistics and information has been done and is promised by the labors of such men as Messrs. McCain and Adams. But the only use of all this work is to get the law either justified or amended, or repealed and some substitute provided. Yet all the information in the world will not be of the slightest use unless there is some agency for carrying it into practical effect. At present the only agency available is one or more committees of Congress, and they are, for any good purpose, absolutely useless. The man who could procure and put into effective administration a law that would relieve the anarchy which threatens the great railroad interests of this country, would stand on a pinnacle with Lincoln and Grant. And there is a plenty of men of first class ability who would devote their lives to the work for little or no pecuniary reward if they could see a chance of the prize. Many such a man would work himself to death for the chance of such a position in this country as Mr. Gladstone holds in Great Britain; and Mr. Gladstone won it by his management of the national finances.

Suppose there was such a man in this country, and he did such work. It would never come before the world as his; it would be that of a committee of which he was only one member, nor even that—it would be the work of the first session of the Fifty-first Congress. If we expect to get first-class work from first-class men under such conditions as these, we are doomed to eternal disappointment. When any measure comes before a committee, every member asks himself what he is to get out of it, either in material advantage or reputation. This is perfectly natural, and we have no right to calculate upon anything else. But experience has long since demonstrated that nothing in either way is to be gained by devotion to the public interest; and so the member turns to a much more promising resource—the favor of his most influential constituents—in other words, of the lobby; while this, again, tends to fill the seats in Congress and the positions on committees with men who are much better fitted for the service of the lobby than for that of the public.

If we ever expect any good work upon the Inter-State Commerce or any other law, we have got to open some road for honorable individual ambition, and the only way to do this is to give the executive branch some public share in the guidance of legislation, and to

make Cabinet places not merely the means of giving honor through office to small men, but of glorifying office by the presence and influence of great men. G. B.

BOSTON, January 19, 1889.

UNPROTECTED CLASSES IN PENNSYLVANIA.

TO THE EDITOR OF THE NATION:

SIR: It is a little odd that Pennsylvania, the stronghold of protection for manufacturers, should be the one great manufacturing State of the Union which leaves the women and children employed in manufacture absolutely without protection. Pennsylvania has neither factory inspectors nor truant officers. Its Bureau of Statistics of Labor has made no investigation of the labor of women and children. The city of Philadelphia has not even a census of its school-children, and the City Councils have refused to make one, though the Superintendent of Public Instruction, Mr. McAllister, and the Board of Education insistently urge the need of an annual census. Mr. McAllister estimates the number of children for whom no schools are provided, at ten thousand.

The Society for the Prevention of Cruelty to Children cannot enforce the meagre provisions hitherto enacted for the protection of working children, because its agents would be ejected for trespass if they should presume to enter the sacred precincts of manufacture upon notice which empowers them to enter a home at any hour of the day or night. The law provides that no child under twelve years of age shall be employed for wages at any occupation, and that none under thirteen shall be employed in any cotton, woollen, silk, paper, or bagging mill. In the absence of provision for the enforcement of these clauses, and of school registers, showing the actual age of children, the Philadelphia cash-boys and cash-girls are appallingly small, and the number of children admitted to the hospitals by reason of injuries received while at work is appallingly large.

While Commissioner of Labor Statistics of Connecticut, Prof. Hadley stated, as a result of one of his investigations, the proposition that long hours, monthly payments, and child labor go together. Here in Philadelphia certainly long hours, low wages, and child labor are inseparable. While New York, New Jersey, and Ohio, the neighbors bounding Pennsylvania on the north, east, and west, have all appointed factory inspectors, thus placing themselves in line with New England, Old England, and the more advanced nations of the Continent, Pennsylvania ranks with its southern neighbor, Maryland, and indeed with the whole South, in its callousness to the need of wages-earning women and children for protection.

Governments proverbially help those only who help themselves; and as the toiling children of Pennsylvania are incapable of helping themselves, the national Government helps their employers instead, while the State and municipal governments reinforce this help by declining to interfere on behalf of exploited childhood. The women of the State, however, can help themselves and the toiling children (though they are seriously hampered in their efforts by the lack of the ballot), and they are proceeding to do so effectively. Mrs. Leonora Barry agitates for the abolition of child labor. The Workingwomen's Society proposes work in two distinct directions. It will organize workingwomen after the manner of the eminently successful parent society in New York, and it will also undertake legislative work for instituting factory inspectors, truant officers, sanitary inspection, the abolition of child labor, and the shortening of the hours of labor for women and girls.

Will the protected manufacturers appeal for protection against the disenfranchised women of the commonwealth? F. K. W.

PHILADELPHIA, January 23, 1889.

RELIABLE ONCE MORE.

TO THE EDITOR OF THE NATION:

SIR: What with ignorance, prejudice, and other conservative agencies equally potent, if not respectable, vulgar errors, as we all know, proverbially take a great deal of killing. Of this truism, in the province of our vernacular philology, the still frequent onslaughts on *reliable* are noticeably exemplificative. In the United States, the word has repeatedly been reprobated; its reprobaters, only echoing, however, as if they conceived themselves to be quite secure in so doing, the censure of it persistently reiterated on this side of the Atlantic. Nor, other arguments apart, answerable for the disapproval of it which has here been expressed, is that to be ignored which is found in the recurrently fabled assignment of its birthplace. Again and again, on mere sinister conjecture, it has been spurned by Britons as an Americanism; and the conviction of its being one has, without doubt, in the minds of many, been accounted a sufficient reason for eschewing it and for counselling others to eschew it. Just so, to adduce a parallel instance, the verb *advocate* was formerly supposed to be of American origin, and was, accordingly, stigmatized as barbarous and intolerable. Even Southey, with all his multifarious reading, held it, on this ground, in patriotic contempt. Similarly misimpressed, as it seems, with regard to the nativity of *influential*, Coleridge, who once hazarded it, feeling that an adjective of *influence* was indispensable, went the length of contenting himself, thenceforward, with *influensive* and *influencive*, monstrosities which died at birth. And like-circumstanced with the objects of Southey's and Coleridge's aversion are many other vocables on which I might appositely descant. British Aristarchs no longer, however, deride *advocate* and *influential*, now that they have brought themselves to put up with *lengthy*, *loafer*, and *outsider*. By slow degrees, Englishmen are beginning to acknowledge, that, in the matter of enriching our language, a good thing may, by happy possibility, come out of our Nazareth.

A friend has called my attention to a recent issue of the *Saturday Review*, in which, under the heading of "Idiom-haters," occur the subjoined specimens of indisputably good sense:

"All students of English know the kind of critic who, with a little learning and a great amount of ignorance, from time to time endeavours to put a 'thus far and no further' to the growth of his mother-tongue. . . . To attempt, at any time, to set a final circumscription to the expansion of the empire of the English tongue, to say that you must not use this phrase, or that, unless it be found in some good writer of ten, twenty, or two hundred years ago, is to obey the silliest of all possible superstitions, and not the least mischievous."

Yet the person who can write thus is pleased to illustrate, not the unwisdom of others, but his own, by a tilt at *reliable*. To change the metaphor, weighed, by him, in an untried balance, the expression is pronounced to be "an indefensible solecism"; though, in the presence of facts, his "indefensible" should be altered to "harmless," and one must read, instead of his "solecism," "bugbear." Apparently authorized by the editor of the *Saturday Review*, he goes on to tell us of the measures which that journal has taken with intent to devitalize, or at least to sterilize, so far as it has the power, the odious pest which harrows so cruelly his capricious sensibility:

"It is not because good writers have not used *reliable*, but because the word is useless and superfluous, to begin with, bastard, in the second place, and nonsensical, in the third, that we, like all good writers, never use it, and give our printers orders to strike it out if any misguided contributor does use it."

The first objection here taken to *reliable* is, that it is "useless and superfluous." The answer to this is obvious. As well might it be contended that *rely* is "useless and superfluous," since we have its approximate synonyms *confide*, *depend*, and *trust*.

That it is "bastard" is the second objection urged for discarding *reliable*. Whether it is so, or not, is, however, open to doubt; inasmuch as it may, very possibly, still be traced to the French. But, even on the assumption that the last syllable of *rely* is *lie*, from the Anglo-Saxon, we have *eatable*, *drinkable*, and so on, matching *reliable* in its mainly essential characteristics. For the rest, our standard vocabulary teems with formations generically akin to it, as being hybrids.

But it is far from unlikely that I have mistaken the critic's "bastard." The epithet, as he boldly applies it, is of the vaguest. Taken figuratively, it imports, according to Dr. Murray's *Dictionary*, "illegitimate, unrecognized, unauthorized," and also "not genuine; counterfeit, spurious; debased, adulterated, corrupt." The critic, as we have seen, maintains, indeed, that, for us, the word lacks practical authority; but he leaves us quite in the dark as to whether, in branding it as "bastard," he intends "hybrid," "counterfeit," or what. Was he apprehensive that explicitness would be fatal to his contention?

By way of a third objection, *reliable* is ambiguously said to be "nonsensical." In favour of the objector, let it be presumed that his "nonsensical" stands for "void of signification," or the like; seeing that every one is perfectly clear as to what *reliable* denotes. He must, then, of necessity, allude to its relation to its verb; his position being that only a transitive *rely* would justify the adjective as now in vogue. Yet we have *accountable*, "capable of being accounted for," *disposable*, "free to be disposed of," and the still more anomalous *available*, in its latest sense, with *appealable*, *indispensable*, *irrecoverable*, as in "*irrecoverable* calamity," *unsearchable*, etc., etc. Analagous, too, is the *dependable* of Pope, the Rev. G. S. Faber, Sir J. F. W. Herschel, and the *National Review*, Vol. II., p. 864 (1885); and so, of course, is the *undependable* of the *Saturday Review*, Vol. IX., p. 303 (1860). *Laughable*, with Hallam's *demurrable*, as not being demonstrably based on a verb, one can well afford to discount. To this paragraph much might be added from *On English Adjectives in -able*, a monograph which I published in 1877.

Hitherto I have been commenting on mere random denunciation. But at last we come to something definite and satisfactorily tangible.

While it is indirectly admitted, in what has been quoted above, that good writers have, in the past, used *reliable*, it is there directly asserted that they "never use it"; the inevitable implication being, that they never use it at the present day. To this assertion I shall return. Meanwhile, it may be serviceable, in the interest of those to whom any fuller discussion of the term is unknown, to say something of its history, and to enumerate sundry authors, among the dead, who considered it as worthy of adoption.

So far as I am aware, *reliable*, as Miss Mabel

Peacock pointed out in 1877, is first met with in a letter, bearing the date of 1624, from the pen of the Rev. Richard Mountagu, who eventually developed into a Laudian bishop. But the letter was not published till 1869; and Coleridge, when he originally ventured *reliable*, on the eighteenth of February, 1800, following it up with *reliability* and *unreliableness*, was, therefore, the author of a virtually new creation. From Coleridge, presumably, *reliable* was accepted, immediately or mediately, by Sir Robert Peel, Mr. J. S. Mill, Abp. Longley, Bp. Samuel Wilberforce, Dean Mansel, the Rev. Dr. J. W. Donaldson, the Rev. H. B. Wilson, the Rev. J. S. Brewer, Dr. W. G. Ward, Dr. W. B. Hodgson, Mr. Charles Dickens, Mr. Charles Reade, Mr. W. R. Greg, Mr. James Hinton, Mr. Walter Bagehot, Mr. J. C. Morison, Mr. Anthony Trollope, Mr. R. A. Proctor, and Miss Harriet Martineau, with many others, and, to pass to America, by Washington Irving, Daniel Webster, Edward Everett, and G. P. Marsh.

To come to the living, such, among them, as, with or without resipiscence, have admitted *reliable* to their pages, are, to name a few, Cardinal Newman, Mr. Gladstone, the Duke of Somerset, the Rev. Dr. James Martineau, the Rev. Dr. F. G. Lee, the Rev. S. Baring-Gould, the Rev. W. W. Shirley, the Rev. George Rawlinson, Sir G. O. Trevelyan, Sir Monier Williams, Mr. Leslie Stephen, Dr. Henry Maudsley, Mr. W. Noel Sainsbury, Mr. Henry Sweet, Mr. Robinson Ellis, Mr. Thomas Arnold, Col. George B. Malleson, Mr. J. W. Sherer, and Mr. Henry Morley.

Though this list be weeded ever so liberally, there will still remain a fair share of what any one whose judgment is worth listening to must allow to be "good writers." And who can know that these would no longer use *reliable*, or that they actually do not continue to use it? Is it not the case, then, that the latest impugner of the word grounds his ostracism of it on, for one thing, a pretension to a fulness of knowledge which nobody but a patient booked for a trip to Anticyra would, ordinarily, claim to possess? It may relevantly be noted, that, shortly before 1880, it was used by Mr. Sweet, Mr. Proctor, Sir Monier Williams, Sir G. O. Trevelyan, Col. Malleson, and Mr. Morison; in 1880, by Mr. Ellis and Dr. Lee, in 1886, by Mr. Sherer, and, in 1887, by Mr. Sainsbury. And who does not every day come upon *reliable* in well-written contributions to the best English newspapers? At the lowest, as the expression was reputable, past contradiction, twenty or thirty years ago, and has by no means come to be peculiar to the unrefined, how can it have grown to be disreputable? Lord Macaulay generally has "to pore *on*" and "it *should* seem," and rarely the modern "to pore *over*," and, "it *would* seem"; but, if any one, in our day, elects to employ the older phrases, is he reasonably liable to severe reproach? At most, assuredly, he cannot be said to do worse than give a preference to archaisms.

Diagnosis has thus revealed that the criticule whose callowness I have scrutinized is simply suffering from acute whim, more or less bilious, complicated with defective information, not to speak of an asthenic condition of the logical faculty. To bear him out in his antipathy, almost equally little with the versifier about Dr. Fell does he produce anything that can, even by stretch of courtesy, be complimented as a reason. And now he may be released.

All along in the sixties, *reliable* was, practically, a special favorite with the *Saturday Review*; it showing itself there, during that decade, at least fifty times, as could be proved by references. In 1861 it was first animadverted on, in that journal, as being obnoxious; and, since then, it has been assailed, in its pages, over and over again, and sometimes with diverting irritability and rancour. Some two years since, the *Saturday Review* thought fit to rule that any user of it was "a donkey and a vulgarian." Much at one with this verdict, another London paper, nearly a generation ago, insisted that it was unendurable to any scholar or gentleman. And yet it may confidently be questioned whether a hundred repudiators of it could be mustered, if one were to poll all England. In conversation I have frequently heard it canvassed, and invariably with the result, that, in the end, it was agreed, on all hands, to be quite permissible.

It has not at all been my object to extol *reliable* as a thing of great price. After looking over what has here been set forth, the candid reader, who either has patronized it under protest, or has half-regretfully shrunk from patronizing it, will, however, it may be surmised, find his soul at rest, on discovering that his benevolence in its behalf has the warrant of multiplied precedents, unimpeachable in point of respectability. All things considered, it is not a whit worse than hundreds of current expressions which are occasionally challenged, but which, in the estimation of the most authoritative stylists, are, for literary purposes, flawless and immaculate.

Your obedient servant, F. H.

MARLESFORD, ENGLAND, January 10, 1889.

CYCLIST.

TO THE EDITOR OF THE NATION:

SIR: In the *Nation* for December 27, 1888, in reviewing Mr. Steven's journey 'Around the World on a Bicycle,' your reviewer uses two or three times the word *cyclist*. The use of this word in the *Nation* will probably be cited as a precedent for its substitution for the American word *cycler*. Neither of these words expresses the sex of the rider on a cycle, but no more does *swimmer*, for example, express the sex of one who swims. Nobody would think of speaking of a *swimmist*, a *boatist*, a *cricketist*. We are quite well aware that your reviewer has for authority the *Cyclist*, a trade journal of England, but the persons who bestowed this name upon the paper were a small local job printer and paper-hanger, and a country school teacher. When we consider that we have a good, euphonious, easily pronounced word, *cycler*, we see no reason why an almost unpronounceable and certainly pointless term should be borrowed by Americans simply because it is English. It is English, but English of the poorest sort.

Yours truly, J. and E. R. PENNELL.

LONDON, January 10, 1889.

[Why *cyclist* is a "pointless term," any more than *cycler*, we are unable to discover. We have no objections to the latter word if any one wishes to use it; but we stand by *cyclist* (κυκλίζω) on the analogy of *botanist* (βοτανίζω)—to seek no further. Patriotism has nothing to do with building words correctly from the Greek.—ED. NATION.]

THE ROYAL BERLIN LIBRARY.

TO THE EDITOR OF THE NATION:

SIR: A communication on the Royal Berlin Library having appeared in the *Nation* for December 20, 1888, perhaps you will allow one who really knows the Library to say a few words about it.

The Berlin Library is the largest of its kind in the world. The British Museum and the Bibliothèque Nationale contain more volumes, but are simply consulting libraries, the books not being allowed to leave the building. In Berlin, on the contrary, any person who is properly vouched for may draw three works—regardless of the number of volumes—at a time, and may keep them for a month. Manuscripts, however, must be consulted in the reading-room. This has been the rule ever since the fire in Mommsen's house, wherein many valuable codices were destroyed—codices which not even the large sum raised by Mommsen's admirers could replace to the Library.

Under the present Director, Wilmans, a number of reforms have been introduced which render the Library most accessible. The Catalogue, which has been preparing for years, has at last been thrown open; it occupies a whole room on the left of the entrance. The names and works of the authors are written in great folios—three or four volumes to every letter. The Catalogue is not as much used as those in our American libraries, for the reason that, if the title, author, date, and place of publication are known to the student, he may order a book without further ceremony. As all references in the academic lectures are provided with these data, much searching is spared the University men. The labor of the attendants is considerable, however, for they must in every case look up the shelf-marks of the books ordered.

A very great reform is that which makes it possible to order and receive books on the same day. Books ordered at nine are now delivered at eleven o'clock; those ordered at eleven may be called for at one. There is a third delivery for use in the reading-room at three P. M.

Besides the books that one takes home, one is permitted to collect and reserve quite a heap of books in the reading-room. On leaving, the student has the books stored away on a shelf under his initial; for a month he may have the exclusive use of his collection. The walls of the reading-room have lately been provided with shelves, and are stocked with thousands of volumes on all subjects. One can browse at will among these treasures, and can remove them to the tables without notice. Every one entering the room, however, must show what books he has with him; their titles are written down by a man at the door, and no one can leave with more books than he brought in.

On the whole, the greatest kindness and liberality is shown to students, and I cannot understand why your correspondent of December 20 chose the Royal Berlin Library as a butt for his raillery. ERNEST HENDERSON.

BERLIN, January 5, 1889.

TO THE EDITOR OF THE NATION:

SIR: I am surprised that your correspondent "X.," writing in the *Nation* (No. 1225) of the Old Royal Library in Berlin, enthusiastic as he is in singing its praises, should omit to mention what seemed to me to be the most striking of the advantages which lift this favored institution above those of less civilized communities.

In the first place, he did not emphasize the extreme advantage of a little confusion and poor writing (printing, of course, being out of the question) in the folio Catalogue. By this means a principle of selection is set at work which in the end saves the books for those whose zeal and time are sufficient to put them to good use. Then the facts, with their great attendant advantages, were omitted, that ladies are not allowed in the reading-room (thus insuring quiet and good order in the place), and that the use of fiction is permitted only when the management is assured that it is to be used for

scientific purposes. This rule is contained in the copy of the regulations for the use of the Library given to students of the University. Its advantages are obvious. In fact, viewing the many merits of this great institution, one can scarcely be grateful enough to Mr. "X." for bringing them to the notice of a too unappreciative world. R. M. B.

VIENNA, January 4, 1889.

A TYPICAL UNION-DEVOURER.

TO THE EDITOR OF THE NATION:

SIR: The last number of the *Nation*, under the head of "The Union Saved—and Devoured," calls to my mind a case thoroughly illustrative of the length to which otherwise respectable men will stretch their consciences in their efforts to reach the surplus. We have in this city an ex-Governor of the State, living in a fifty-thousand-dollar residence built by and owned by himself—a hale and remarkably vigorous man, not over fifty-five years old, president of a bank with a capital stock of two hundred and fifty thousand dollars, actively engaged in attending to his duties in the bank and in a savings bank or trust company in which he is interested. A conservative estimate of his assets would be from two hundred and fifty to three hundred thousand dollars, and yet this man makes application for a pension of thirty dollars a month.

His application recites that while a member of the ——th regiment of the Missouri State Militia, commanded by Col. ——, and in the line of duty at White River in the State of Arkansas, October, 1862, he was greatly exposed on the banks of the White River, and thus contracted rheumatism, which settled in his left knee; that he has several times been laid up on account of this disease for a week or more at a time; that he is now totally disabled from obtaining his subsistence by manual labor, by reason of his injuries above described. Accompanying this affidavit is another made by the colonel of his regiment, at present a District Judge of the Federal Court, verifying the facts set forth, "as the ex-Governor had employed no physician, but depended on home remedies."

Now, the ex-Governor has no intention of earning his living by manual labor. He is a first-rate bank officer and an intelligent gentleman, fully able to earn the large salary he receives. Why is it that a man in this position will stoop to be a beneficiary of a fund to which he is neither legally nor morally entitled, and of which he can only receive the benefit by a strained interpretation of the law and facts? W. J. S.

JANUARY 21, 1889.

Notes.

CUPPLES & HURD, Boston, will shortly begin to issue by subscription 'The Eggs of North American Birds,' by C. J. Maynard, with colored plates drawn on stone by the author. The same publishers have just issued a second edition of Bandelier's 'Archæological Reconnoissance into Mexico,' in response to a gratifying demand.

Houghton, Mifflin & Co. announce for March 1 'Profit-Sharing between Employer and Employee: a Study in the Evolution of the Wages System,' by Nicholas P. Gilman, editor of the *Literary World*.

Bourrienne's 'Memoirs of Napoleon Bonaparte,' in four volumes, following the latest English edition, will be published soon by T. Y. Crowell & Co.

Mr. Andrew Lang's 'Letters on Literature' to the *Independent* during the past year or two will be collected in a volume bearing the imprint of Longmans, Green & Co., who also announce 'Colloquies on Preaching,' particularly on the defects of the modern pulpit, by the Rev. H. Twells; and 'The Last Journal' of the late Lady Brassey, giving an account of the trip of the *Sunbeam* to India, Borneo, and Australia, elaborately and very diversely illustrated.

Chas. Scribner's Sons announce the late Lester Wallack's 'Memories of Fifty Years,' with an introduction by Laurence Hutton; 'Among the Cannibals,' of Northeastern Australia, namely, by Dr. Carl Lumholtz, of the University of Christiania, Norway; and a new edition of Col. Blunt's 'Firing Regulations for Small Arms.'

The seventeenth volume of Leslie Stephen's 'Dictionary of National Biography' (Macmillan) nearly finishes the letter E. Chance supplies it with an extraordinary number of lives of sovereigns, the Edwards alone consuming nearly a quarter of its pages. Queen Elizabeth is disposed of in twenty-eight pages. Noticeable, too, are the extensive families of Eliot (in all manner of spellings), Ellis, Elphinstone, and Erskine. The literary flavor of former volumes is almost wholly wanting. Three names have a special connection with America—the Apostle Eliot, Gov. John Endecott, and Thomas Addis Emmet; but of this Irish refugee it is erroneously recorded that he lies buried in the churchyard of "St. Mark's" on Broadway in this city, where "St. Paul's" should be read.

All the changes indicated as having been made by Mr. Marcus B. Huish in his annual, 'The Year's Art,' for 1889 (London: J. S. Virtue & Co.) will commend themselves to the patrons of this most excellent record, which has just finished its tenth year. The geographical rearrangement seems sensible and an aid to ready reference. Portraits of the Associates of the Royal Academy are scattered through the volume, and form a very attractive group (photographic, by the way, engraved by process). Mr. G. H. Boughton's is the largest of these, and is given the place of honor at the front. The short section devoted to Art in the United States is a mere list of the principal art institutions, as to which fuller details have been given in the issue for 1886. The publishers will be glad to have any deficiencies in this list pointed out to them. The leading British exhibitions have select memoranda engraved on a diminutive scale from the pieces themselves (in most instances). In the same way we have samples of the publications of the Fine Art Society, of a dealer in engravings, and even of the illustrations in the *Art Journal* for 1888. The report of a committee of experts on the action of light on water-colors will be eagerly read and taken to heart. It is on the whole very encouraging.

Mr. E. Garnett's 'The Paradox Club' (Scribner & Welford) is one of those books which some people call dainty; that is, its paper is heavy, its page small, its margin wide, its type choice, its binding tastefully æsthetic. It is, in short, a pretty book, and the matter and style are pretty too. There are two lovers, whose love is of an old-fashioned kind, while their surroundings are quite modern. The Paradox Club, an eminently *Londonian* institution, talks about women, socialism, Zola, and a variety of the fashionable problems with no little heartiness, no little humbug, some wit, a good deal of tedium, and quite enough descriptive writing of a cross between those of the novelist just named and William Black. There is no harm in the book at all, nor is it goody-goody. It cannot show any very strong reason for its existence; as we judge from the dedication, its writing was the only way of giving utterance to emotions which those who felt them "could ne'er express, yet could not all conceal." It makes, however, pleasant reading for a lazy afternoon, and may set some to thinking.

'Arm-Chair Essays' (Scribner & Welford) is a series of not very deep outpourings by an accomplished Englishman, who has done a good deal of travelling and a good deal of reading, and has let his memory and experience dispense their treasures in a gentlemanlike and lively way. His experience makes much better material than his reading. The latter is anything but recondite, and, in the essay on Dining, shows itself peculiarly hackneyed, whereas the essay on the Pyrenees and their watering-places will be a real addition to the knowledge as well as the amusement of most readers. The paper on the "Ethics of a Postage Stamp" has some excellent rebuke to those who fancy that the mere fact of writing and sending a letter entitles one to an answer. There is a singular blunder in describing the purchase of Belgravia—an event referred to more than once. The author says Lord Grenville refused George the Third the money to protect his palace from being overlooked, by buying up a few fields. It was George Grenville, as may be seen from the second Essay on Chatham by Macaulay—an author whom the Arm-Chair essayist loves to quote. The mistake is equal to saying that John Quincy Adams appointed John Marshall.

The author of the article "Political Economy" in the last edition of the 'Encyclopædia Britannica,' Mr. John Kells Ingram, has reproduced his matter in the form of a separate volume entitled 'A History of Political Economy' (Macmillan & Co.). This is a history, not of the actual facts of economics, nor of economic measures, but of the best-known books that have expounded economic theories. Whether the author has constructed a history of the *science* of political economy admits of some doubt, for he seems hardly competent to grapple with the real difficulties of such a subject. We should say that he reflected very well the common judgment of the theories which he describes, but that he did little more. It is, of course, almost impossible, in a book of these dimensions, not to be dogmatic; but to assume, for example, that the vast development of trade and manufactures in Colbert's time was due to his policy of governmental regulation, is to beg a very important question. So, to lay it down that Ricardo led political economy "into the mistaken course of turning its back on observation, and seeking to evolve the laws of phenomena out of a few hasty generalizations by a play of logic," seems to be a mere outburst of the author's spleen against the orthodox school. Still, we must say that there is perhaps no sketch of the course of thought upon economic subjects that is at all to be compared with this, and as a bibliography of the leading works it is very satisfactory. We may add that two pages are all that are devoted to American economists, and that Henry George receives no mention.

D. Appleton & Co. send us a translation (English-made and printed) of Karl Marx's 'Capital,' by Samuel Moore and Edward Aveling. It makes an inordinately thick 8vo volume of more than 800 pages. As the nature of Marx's theory is well known, it does not call for further mention.

'The Alphabet of Economic Science,' by Philip H. Wicksteed (Macmillan), has nothing alphabetical about it except an abundance of algebraic symbols. It is really a mathematical

treatise of the stiffest kind, and can be understood only by those who have mastered the theory of "functions." The basis of the book is Jevons's theory of political economy, and the author makes no claim of novelty for his opinions. He meets with much ingenuity the common objections to Jevons's theory, and we may say of him in general that he is not only enthusiastic but lucid. Still, the unsubstantial results of this theory will probably prevent it from ever being anything more than a mathematical exercise.

The Leonard Scott Publication Co. has removed from Philadelphia to New York, bringing with it its English periodical reprints and *Shakespeariana*, which will hereafter be conducted under the auspices of the New York Shakspere Society.

In our recent notice of the *American Journal of Mathematics*, we mentioned a paper which the *Journal* simply designates as "by William Woolsey Johnson." The elaborate work on the Differential Calculus, the joint production of Professors Rice and Johnson, to which we often refer, happened to be upon our table, and, after consulting its title-page, we spoke of him as "Professor of Mathematics in St. John's College, Md.," the position which he held when that work was published. We have since been reminded of the fact, which for the moment had slipped from our memory, that Professor Johnson's connection with St. John's College ceased in 1881, since which time he has been Professor of Mathematics in the Naval Academy.

The new year brings its customary crop of new periodicals, some of which we have already noticed. We are glad to receive the first number of the *National Geographic Magazine*, published by the National Geographic Society of Washington, an organization only a year old, of which Mr. George Kennan, No. 1318 Massachusetts Avenue, is the Corresponding Secretary. We have long been of the opinion that a live and learned geographical society worthy of the country could only be established in Washington, for very obvious reasons. The term "American" having been "preëmpted" by the well-known society in this city (of whose aims and collections one must speak with entire respect), "National" remained the only alternative designation. The number before us contains the introductory address of the President, Mr. Gardiner G. Hubbard; and papers on "Geographic Methods in Geologic Investigation," by Professor W. M. Davis, "The Classification of Geographic Forms by Genesis," by W. J. McGee, "The Great Storm of March 11-14, 1888"—our Eastern "blizzard"—by Gen. Greely and Professor Everett Hayden, accompanied by colored charts; "The Survey of the Coast," by Herbert G. Ogden, and "The Survey and Map of Massachusetts," by Henry Gannett. This is a very substantial beginning, but we will call the Society's attention to the need of a high degree of typographical accuracy in a publication of the kind they have undertaken. We ought not, for example, to read, as we do in Mr. Hubbard's address, that "the fecundity of fish is so great . . . that it may now be possible to feed the world from the ocean, and set the laws of *Matthews* [Malthus] at defiance."

Germania, a quarto fortnightly journal for the study of the German language and literature, comes to us from Manchester, N. H. The editor is A. W. Spanhoofd.

The Century Guild's *Hobby Horse* is new to our table, though the twelfth of the quarterly numbers is dated October, 1888. White & Allen, 32 Great Jones Street, are now the American agents of this handsome but singular periodical. The Century Guild of London "seeks to emphasize the Unity of Art" by "dignifying Art in all its forms," by rendering "all branches of Art the sphere no longer of the tradesman but of the artist." The *Hobby Horse* is its means of expression. The literary portion of the October number—a social essay, some poems, and a paper on certain obsolete musical instruments—is not of much consequence. The two illustrations are a drawing of "King Réné's Honeymoon," by Ford Madox Brown; and an unpublished woodcut, of admirable quality, of Frederick Sandys's design, "Danaë in the Brazen Chamber." These two prints, and the accompanying letter-press, are well worth the subscription price. Typographically the *Hobby Horse* is sumptuous.

New is the *Author*, "a monthly magazine for literary workers," just started in Boston, and a companion to the *Writer*. It is eclectic, and the scheme and utility of it are not yet quite apparent.

Miss Marie A. Brown's notorious contention that Columbus was a humbug, and that the Norsemen discovered America, is now to be reiterated in a *weekly* paper, *Leif Erikson*, published at Chicago. The "unmasking" of the Genoese navigator and the prevention of the Columbus celebration of 1892 are the avowed aims of this extraordinary venture in journalism. A fund for the "Leif Erikson cause," which includes sending Miss Brown to Iceland and Rome to search the archives, is solicited.

President Patton of Princeton College has chief editorial charge of the *Bulletin* just begun to be issued quarterly, under the auspices of the Faculty. It combines the functions of a college record and a learned review. The new Biological Laboratory is depicted on p. 14.

"The Establishment of Municipal Government in San Francisco" is the subject of the current issue of the Johns Hopkins University Studies in History and Political Science. The author is Prof. Bernard Moses of the University of California.

The President of Michigan University remarks in his annual report that "a larger proportion of women than of men are taking by choice the full classical course," for the practical reason that there is a demand for their services in teaching Greek in preparatory schools.

The Bordin Prize "for perfecting the theory of the motion of a solid body" has just been awarded by the French Academy to Mme. Sophie Kovalewsky, Professor of Mathematics in the University of Stockholm. This is the first time that the Academy has given one of its mathematical prizes to a woman since the days of Mlle. Sophie Germain. It looks as if the name of Sophie had the power to confer peculiar wisdom upon its owner.

No. 22 of the *Bibliographical Contributions* of the Library of Harvard University is a Calendar of the Sparks MSS.

Bulletin No. 78 of the Boston Public Library begins a bibliography of the official publications of the Continental Congress, 1774-1789, by Paul Leicester Ford—a task which was nominally anticipated by the perfunctory 'Descriptive Catalogue of the Government Publications of the United States, September 5, 1774—March 4, 1881' (Washington, 1885).

A chapter from 'La Vie Mondaine de Mignet,' by Édouard Petit, exhibiting the relations of the French historian with the Princess Belgiojoso, is the most interesting feature of *Le Livre* for November, 1888. The December number opens with a rather fantastic article on "Le Livre Harmonieux," or the true proportions of the printed page, and is distinguished, in the way of illustrations, by an exquisite copy of a Levant binding in photogravure—the raised gold ornamentation even gaining a little by having the appearance of ivory. In the January number M. Octave Uzanne announces editorially the intention, of necessity, to make this periodical less inclusive, and henceforth to pay attention only to what emerges from the flood of current literature. At the same time some typographical changes in the direction of greater legibility still further diminish the capacity of *Le Livre* to cope with the fecundity of the press. It does not appear to us as to M. Uzanne that these changes enhance the beauty of the magazine.

The Proceedings of the Architectural League of New York 1881-1889 have just been published in good style, and will be found very interesting and profitable reading.

A meeting of persons interested in the variations of English as spoken in this country was held last week in Cambridge, and about thirty names were secured as the nucleus of a society for the investigation of American dialects of English. It is hoped that there are many persons in all parts of the country who will be glad to join in this undertaking. The details of organization have been referred to a committee. Professor E. S. Sheldon, Cambridge, Mass., may be addressed by any who are interested in the enterprise.

We regret to record the death at Wiesbaden, Germany, on January 24, of Mr. Bernhard Westermann, the senior and founder of the bookselling firm which bears his name. He was born at Leipsic seventy-five years ago, a brother of the well-known German publisher and of the philologist Anton Westermann. His book-importing house in New York was established in 1848, with the active coöperation of August Buechner, until his death (in 1881) Mr. Westermann's partner. After that time he withdrew gradually from the active pursuit of business, but continued as senior of the firm, the management falling to Mr. E. Lemcke, his partner since 1875, and Mr. Buechner's oldest son, Oscar, who entered the firm two years ago. Early in his American career Mr. Westermann became acquainted with most of the prominent men in literature and science. Joseph Henry, the Whitneys, Agassiz, Henry Barnard, and many others were patrons of his from the first. In many instances, the second generation of his first customers are now succeeding their fathers. Mr. Westermann leaves a widow, a son, and two married daughters.

—The February *Harper's* opens with another of those papers on out-of-the-way things and places in Paris which Theodore Child writes out of his abundant stores of knowledge and with so facile and engaging a style. This time it is the Hôtel Drouot to which he takes us, the great auction-room of Paris, where curios and rarities from the ends of the earth are brought to find their surest appreciation and best sale. The heavy artillery of the number is found in Dr. Waldstein's article on Ruskin. It is really a small treatise, filling thirty-six solid pages, or at least one-third of the entire letter-press of the number. We must think it rather lumbering, with all its preliminary squaring of elbows and extensive surveying of mankind from China to Peru; this seems certain to impair, for the average reader, the real force and just criticism of the article, which anticipates but a little what we presume will soon be the general verdict as to Ruskin—that he is a man with a divine gift of language, often divinely used, though his theories of art are as much askew as might be expected in a writer without the

historic sense, while his political economy is near allied to madness. Dr. Waldstein's closing contrasting of Ruskin's literary life and manner with Darwin's is both happy and striking. Foreign description and travel are well represented in Verestchagin's "A Russian Village," the first of what is to be a series of papers on "Norway and its People" by Björnstjerne Björnson, and Henry Ballantine's article on Nepaul. Miss Woolson's serial distinctly gains in interest and promise, while the short story by Edward Bellamy is an ingenious attempt to do the impossible, and make a seamless garment out of patches of Rider Haggard, Swift, and Hawthorne; his art, however, is purposely subordinated to his psychology and his morals, and both these are excellent.

—Story-telling is at the fore in the February *Atlantic*. In addition to the serials of Prof. Hardy and Mr. James, Sarah Orne Jewett presents another of her miniature portraits of New England life (a rather broader dash of humor appearing in this one than in many from the same hand), and H. P. Robinson contributes a remarkable short story, "The Gift of Fernseed." The theme of the last-named writer is, as his title implies, in the cloudland of impossibilities, but he treats it with a tenacity of grip on matter-of-fact details and an apparent devotion to common sense which are worthy of Defoe. So fascinating is the continuation of Harriet W. Preston's studies in the life of Cicero—the title of the present instalment, "Under which King?" alluding to the necessity of a choice betwen his two friends, Cæsar and Pompey—that it, too, might be classed with the story-telling; though the labors which the historical delver has delighted in would be pain to most romancers. "Butterflies in Disguise" is a short but thorough paper on a branch of the subject of animal mimicry. Its closing sentence, "The more we contemplate so strange and perfect a provision," etc., reads just like a Bridgewater treatise, up to the point where it names natural selection in the place where one would look for some more theological term—a divergence which witnesses to familiar changes, while it is certainly justified by the entirely new understanding, since Darwin's day, of what was before a complete mystery. We can barely mention Agnes Repplier's "Plea for Humor," which so frequently exemplifies what it pleads for, Mr. H. C. Lea's specimen sufferer at the hands of the Inquisition, Brianda de Bardaxi, and C. W. Clark's "The Spirit of American Politics as Shown in the Late Election." The last subject could not be handled satisfactorily in the four pages allotted to it, and it is not. The number as a whole is in keeping with the *Atlantic's* best traditions.

—The current *Scribner's* has a table of contents both highly varied and interesting. The opening article is a good account of the literary methods of Sir Walter Scott, with several exhibits of proof-sheets in facsimile, showing both Sir Walter's corrections and the suggestions of his publisher. Austin Dobson has a paper on the Vauxhall Gardens of a century ago, in which art, archæology, and historic manners strive with each other for predominance of interest. "The Picturesque Quality of Holland" is the taking title of an article by George Hitchcock, pleasantly written and well illustrated. A chapter of art which is only beginning to be written, the painting of the Greeks, is alluded to by T. S. Perry in his remarks on the Græco-Egyptian portraits recently unearthed at Fayum; illustrations from photographs accompany the contribution. Dr. Sargent writes on the physical development of woman with an abundance of statistics and a vigor of inference which are enough to make all the corset-makers at once discontinue their advertisements in *Scribner's*. In another instance the publishers show a recklessness which no politician would ever be guilty of, and that is in printing the Irish story of Mr. Jessop, which gives the landlord's side of boycotting and agrarian outrage. Mr. Brander Matthews's "A Family Tree" laboriously gathers together the elements of a tragedy, only to make the thing miss fire at the end, the writer's good nature towards the reader leading him to bundle the Greek chorus unceremoniously out of doors just as it was preparing to sing of Nemesis. The "end paper" has all along been a sort of synonym for a sermon, so that its being turned over to a professional sermonizer, Bishop Potter, is but natural, and must be agreeable, also, to the readers of the magazine.

—Learned periodicals spring up so rapidly in Germany, and the number now in existence is so enormous, that a new venture in this line can hardly expect to be greeted as an event by anybody but the specialists to whom it immediately appeals; indeed, it is fortunate in these days if it attracts attention from them. But one enterprise of literary scholarship which has recently been launched in Germany has some special claims to general interest, and deserves more than a passing mention in these columns. We refer to the *Vierteljahrschrift für Litteraturgeschichte*, edited by Bernhard Seuffert, with the coöperation of Erich Schmidt and Bernhard Suphan. The new journal was begun in March last and has just completed its first volume. It is printed, and very handsomely printed, at Weimar, the publisher being Hermann Böhlau, already known for his connection with the new edition of Goethe. When this fact is noted in connection with the names of the editors, it is seen that the *Vierteljahrschrift* is an outgrowth of the Weimar renaissance which began in 1885. The brief prospectus issued by the editor a year ago was very attractive; it set forth that the most important feature of the new journal would consist of articles relating to modern German literature; that besides this it would offer comparative studies in modern literatures, and would endeavor to combine historical philology with æsthetic interpretation. Finally, it was to "serve the great ideals of literary history as conceived by Herder, Goethe, and Schiller," and supplement the *Beiträge* of Paul and Braune, as well as the *Archiv für Deutsches Alterthum und Deutsche Litteratur*, both of which devote themselves mainly to the earlier stages of the language. It thus appears that this journal represents, to some degree, though in no belligerent spirit, the reaction that has lately begun to set in against the one-sidedness of German philological scholarship. In the main the editors have kept well the promise of their prospectus. Every number has contained interesting matter of high scientific value. The subjects treated cover the whole period from Luther to Heine. The last half of the eighteenth century receives, naturally enough, more attention than any other period of equal length, and Goethe, in spite of the *Jahrbuch*, more attention than any other author.

—The Patho-Biological Laboratory of the University of Nebraska, under the direction of Dr. Frank S. Billings, a veterinary surgeon of repute, has published its second report—a volume of more than 400 pages, octavo, with twelve plates. This is upon the Swine Plague, and as the capital invested in hogs in the United States is nearly $45,000,000, it represents a matter of much practical importance. The author believes the disease to be an infectious septicæmia, and to be propagated through excreta from sick animals developed outside of the body "in the earth and earthy materials," and not to be contagious in the sense that smallpox and scarlet fever in man and glanders and farcy in the horse are. He believes that the microbe upon which the disease depends has been discovered, and that security against it is to be found in the direction of preventive inoculation, but that successful inoculation without danger to other healthy animals has not yet been reached. Meantime, he advises as restrictive and hygienic measures the isolation of the well, and especially the avoidance of places infected by the immediate or former presence of diseased animals. Besides demonstrating what he believes is the swine-plague microbe, the author is concerned with overturning the work of Dr. Salmon, the Chief of the Bureau of Animal Industry in the Department of Agriculture. A violent contention against him rages all through the report, showing itself in furious sentences, forests of exclamation points, and the confusion of construction and violence of expression that are the literary indications of scorn and anger. The assault also includes in its object the biological laboratories of the East, which are thus summed up: "They are nepotistic hot-houses!" It is a misfortune that what probably represents much industrious and intelligent observation is obscured and diluted by so many irrelevant pages; and the stock-raisers, in whose interest the work has been done, will have much difficulty in selecting their gold from the controversial dross. The University of Nebraska is amiable in its expenditures for printed paper.

SHERIDAN'S MEMOIRS.

Personal Memoirs of P. H. Sheridan, General U. S. Army. C. L. Webster & Co. Two vols., 8vo, illustrated, pp. 500, 486.

As a book for general reading, Sheridan's Memoirs have attractive features that will insure success. The narrative is clear and lively, the events described are important in themselves, and the personality of the hero is always interesting. While none of the books of this class are likely to approach the extensive sale of Grant's Memoirs, on which they are evidently modelled, it is probable that Sheridan's will prove so popular as not to disappoint his hope that it would be to some extent a provision for his family after his death. For purposes of permanent history, one could wish that the aim had been less popular and more critical; but a long narrative by so distinguished an officer in a great war cannot lack value, even when the narrative is cursory and superficial. We cannot be in contact with the writer's mind through a thousand pages without learning more of him, his ways of thinking and acting, his prejudices, his likes and dislikes, than we could learn in any other way. The fact that so eminent a soldier could compose so long a memoir without anything approaching a critical or comprehensive judgment of a campaign, must be in itself a curious revelation of his military character. He sees clearly and vividly the thing immediately under his eye, he acts with great vigor his own part in the struggle, but he seems to have little disposition to frame an intellectual conception of the problem as a whole, and he acts upon his instinctive rather than his reflective judgment. The very intensity and vigor of his action seem to depend upon this, and he probably would not have been the thunderbolt of war he was if his mental habit had been one of greater and more conscious reflective analysis of military situations. The combinations of different intellectual quali-

ties with masterful force of will in Grant, Sherman, and Sheridan make one of the most instructive of personal studies.

Sheridan's frank and unaffected story of his early life and education shows that he never took to study. Strong physical action seemed to be the necessity of his nature, and his class standing was below the average. It is plain from the Memoirs that he never found time for theoretic study, even of his military profession, after leaving West Point. The rough frontier life of a subaltern, whether on the Rio Grande in Texas or on the Willamette in Oregon, gave no opportunity for study of books, though it was full of physical training in self-reliance, in courage, and in prompt action in danger. His success as a soldier may fairly be taken to show that excellence in student life is by no means necessary to eminence in war. The very highest rank as a commander can only be reached by an extraordinary combination of mental and physical qualities; but eminence closely approaching the highest would seem to be within reach of men whose most marked traits are those of energy and ordinary good sense, backed by high courage and self-reliance.

Sheridan's military career divides itself into four parts: his service as a subordinate for six or seven years before the civil war, his career in the war, his politico-military service in Louisiana during reconstruction, and his observation of the Franco-Prussian War from the headquarters of the German King. The first of these is by no means the least valuable to history. The contact of our civilization with the aborigines has not been too well illustrated. Army officers were almost the only educated men who had much opportunity of studying it, and whenever they have left records of their experiences, these are full of instruction. McCall's letters from Florida during the Seminole War, Marcy's adventures west of the Mississippi, and some others, give us invaluable material for the study of phases of American history now for ever vanished. Sheridan's chapters of his own experience from 1854 to 1861 will seem to many a student of history more valuable than his story of his Shenandoah campaign. The latter could be reconstructed from official reports and from unnumbered public and private sources; the former is so utterly gone that every page which throws light on the gradual extermination of the red man is a grateful and unexpected addition to the world's historical knowledge.

The episode of Sheridan's service in reconstruction in Louisiana contains new matter also. He claims to have been the real cause of the downfall of Maximilian in Mexico by forcing the hand of our national Administration. He asserts that upon his own motion, and contrary to his instructions from Washington, he made demonstrations of hostility against Maximilian and of support for Juarez, which were decisive in turning the scale against the Austrian aspirant to empire. From his own point of view, no doubt this seemed so to him; but a broader consideration of the effect of Mr. Seward's diplomacy, first upon France in determining Louis Napoleon's recall of Bazaine's army, and afterwards upon Maximilian by the indication of a purpose to favor the Republicans of Mexico, will probably show that Sheridan attributes too great effect to his frankly confessed insubordination. Military demonstrations of a comparatively small kind along the Rio Grande would not have created great terror if the astute statesman in charge of our foreign diplomacy had not held threateningly over the scale the whole weight of our restored national power.

In the Louisiana business Sheridan attributes his bad relations with President Johnson to a personal dislike of the latter towards him. It is more simple and natural to find it in the fact that Congress was making use of Grant and his military subordinates to thwart Johnson in his policy, and to impose that of the Republican leaders upon the South. No matter which was right, the result could not fail to be a most uncomfortable one when the Commander-in-Chief found his subordinates obeying other orders than his. The rapid change of Sheridan's own ideas at that time is shown by his proclamation that he would give the opportunity to vote to all whom the Attorney-General might declare entitled, and his unexplained refusal to do so when Mr. Stanbery declared that the bulk of the white citizens had the right under the law. His original judgment of the knavery of men of the Madison Wells class is reaffirmed in the Memoirs, as is his opinion that the reassembling of the members of the Constitutional Convention was illegal and revolutionary, though it could not justify the horrible street massacre which followed.

Gen. Sheridan's story of his observations of the campaigns of Gravelotte and Sedan from King William's headquarters does not lack in vivacity nor in telling points of personal and local description. Bismarck's strong personality comes out in a picturesque way, and the portraiture is, on the whole, that of a more genial and approachable man than the great Chancellor is commonly credited with being. The scene when Louis Napoleon came out of Sedan to yield himself a prisoner is a very vivid one, especially the startled change in the French Emperor's countenance when Bismarck gave a brusque military salute, without uncovering, standing in the road at the carriage-step. The reader must feel, however, that the attractiveness of a personal diary hardly atones for the absence of instructive criticism of the organization and quality of the rival armies and their leaders, and of the strategy and tactics of the great campaigns. We had a right to expect that a general so near the head of the American Army would write with his young subordinates in mind, and make his book permanently useful to them by a full garnering of the fruits of his ripened experience as a strategist and a soldier.

The same criticism must apply to that which was, of course, the chief purpose of the book, viz., the personal narrative of his career in the great civil war. Like Grant's, it seems to be based upon Badeau, or at least to accept Badeau's 'Military History' as a sufficient authority for the current of events. This is most noticeable, of course, in the campaigns of 1864–65, when Sheridan's relations to Grant were closest. A really exhaustive reëxamination of original material was hardly to be expected, but the evidences of the danger of trusting too implicitly to memory are not hard to find. In controverted matters, personal memoirs are necessarily apologetic, and we cannot complain if they set out the view most favorable to the writer; yet we could wish that such thoroughness of review might be used as to show that conclusions are at least freshly tested, and are not the repetition of habitual assertions which have been sharply challenged by other actors and other investigators.

In reference to some mooted points of discussion relating to the Army of the Potomac, we get additional light. Sheridan tells us that his first interview with Meade was an irritating one, in which a sharp antagonism was developed. We are left to infer that the men were antipathetic, and that Sheridan's opinion of the military judgment and ability of Meade was not high. Nothing in the later part of the Memoirs is inconsistent with this. Nothing indicates that the relations grew any pleasanter. On the contrary, the chafing seems to have continued, and to have been quite as great, if not greater, during the very last movements of the pursuit of Lee's army to Appomattox.

As to the "Trevillian raid," on which Sheridan was sent immediately after the terrible battle of Cold Harbor, he does not correct the sins of omission and commission found in the narratives of Badeau and of Grant. It is assumed that the failure to coöperate with Gen. Hunter in the valley of Virginia was Hunter's fault, when, if history can prove anything, it is proved that Hunter's part of that campaign was well and ably carried out. He was not and could not be informed of new orders which Sheridan was carrying to him, because the latter never reached or came into communication with him. Sheridan was ordered to proceed first to Charlottesville. He was stopped thirty miles short of Charlottesville by the Confederate cavalry at Trevillian, and had been outmarched, not only by Hampton's horse, but by Early's and Breckinridge's infantry. This unique experience of his shows that he could not have had that confidence in results which inspires energy. The enemy were thus enabled to oppose Hunter at Lynchburg with infantry which left Cold Harbor after Sheridan's cavalry started, and Hunter was forced over the mountains to the Ohio without any fault of his own. There was a superabundance of glory in Sheridan's later career, so that he might well have afforded to accept the responsibility for this, instead of following Badeau in the claim that his own part of the combined movement was perfectly performed and the fault was Hunter's. Any careful comparison of dates and movements must reverse this judgment.

On the controversy over his relieving Gen. Warren from command of the Fifth Corps, Sheridan says but little, except to emphasize his right to enforce promptness by the most strenuous means. He says, however, that early in the day of his engagement at Five Forks, when he was urging Warren to haste by saying that delay was giving Lee time to make combinations to thwart them, Warren replied with indifference that "Bobby Lee was always getting people into trouble." This has a certain resemblance to the saying which Grant quotes as being, at an earlier time in the campaign, current in the Army of the Potomac relating to himself, namely: "He hasn't met Bobby Lee yet." How far a settled conviction of Lee's superiority over their own leaders had permeated that army is a troublesome and vexed question of fact. It may fairly be admitted that if it had gone so far as to be an important factor in the *morale* of the army, Grant would have been quite justified in a sweeping reorganization or even an exchange of troops with other armies. It is difficult after so long a time to be quite sure, and even the survivors of the Potomac Army may reasonably have doubts as to a sentiment for which memory alone must be the authority. Yet there is an issue between both Grant and Sheridan and that army as to this sentiment and its effect, and our judgment of the campaign of 1864-65 in Virginia cannot be finally made up till it is settled.

The points above touched upon are those in which Sheridan's Memoirs are open to more or less criticism. There remains, however, a splendid record which makes a few blemishes only seem a foil for a brilliant career. The striking feature of his life is the steady growth from moderate talents and modest doubt of his own capacity, to a series of striking and im-

portant successes which showed that a very high order of military ability had been developed. Step by step he had learned to have confidence in his own judgment and to trust the inspiration of his own courage. The campaign of the Shenandoah may be said to have revealed him to himself as well as to the country. The battles and marches from Five Forks to Sailor's Creek and Appomattox were the culmination of his peculiar powers and of his fame. Nothing that he tells us of himself can lack value; it is only for us to use it discriminatingly, and to build up a true notion of the man, not as a superhuman hero, but a very human, passionate, energetic, patriotic soldier.

FRANKLIN AND THE TREATY OF PEACE.

Franklin in France. From original documents, most of which are now published for the first time. By Edward E. Hale and Edward E. Hale, jr. Part II. The Treaty of Peace and Franklin's Life till his Return. Boston: Roberts Bros. 1888. Pp. xiv., 470.

THE papers and letters comprised in this second and concluding part of the Messrs. Hale's collection cover the period from 1781 to 1785, with a few supplementary chapters devoted to the five remaining years of Franklin's life after his return to this country. Their interest is even greater than that of those contained in the first part of the work. From one point of view, indeed, this accession of riches must be regarded as an embarrassment, since, preëminent as must ever be the significance of the diplomatic history here outlined, the attention is nevertheless to some extent divided and dissipated by the commanding interest of Franklin's brilliant career in France as a man of letters, a man of society, and a savant, on which these pages throw so abundant light.

As a diplomatic episode in our history, the signal importance and far-reaching significance of the measures here described can, no doubt, be far better appreciated to-day than by the men who were nearest to the event. And for this there are several good reasons. One of these is to be found in the unsettled and distracted condition of affairs on this side of the Atlantic. At the moment of concluding the treaty of peace, and indeed for not a few weary years afterward, this country was passing through what was preëminently its "critical period," to use the fitting phrase of a recent writer. Whether it would outlast the decade seemed problematical. Whether the "rope of sand" could hold together the discordant league of States long enough to admit of carrying on a general government, even should the European Powers decide to recognize that government, was to many men's minds the dominant question. Small wonder is it that, in the face of exigent situations like these, the magnitude of the results accomplished for us at Paris should have in some measure failed of recognition. To an American citizen, the ever-present topics of reflection were found in a Congress not commanding popular respect throughout the country, nor even sufficient interest among its members to secure a decent attendance; a central authority which was almost a negative quantity; and a financial situation perilously near complete ruin. On the external phase of this financial situation, indeed, the volume before us furnishes eloquent testimony, not only in successive letters of Franklin to Morris and others in this country in 1782, but in his letter of an earlier date to John Adams in Holland. In characteristic language he writes: "My faith is only that of which the Apostle speaks, the evidence of things not seen. For in truth I do not see at present how so many bills drawn at random on our ministers in France, Spain, and Holland, are to be paid." And he adds: "If you should not in the meantime be provided, and if these endeavors fail, I shall be ready to break, run away, or go to prison with you, as it shall please God." By the side of this may be put the words of Washington, a few years later—words whose bitterness is emphasized by his almost habitual reserve of language: "Do not let us sink into the lowest state of humiliation and contempt, and become a by-word in all the earth."

Another and perhaps still more potent reason why, to the men of that day—even the more thoughtful among them—the efforts of Franklin and others at European courts were not seen in their due proportions, is to be found in the fact that they seemed to strive with too little unity of purpose. To the lover of his country it was only an additional weariness to the flesh that most of the able men of America had crossed the Atlantic only to pull apart, instead of pulling together. The list is a strikingly distinguished one: John Adams, Arthur Lee, Silas Deane, Henry Laurens, John Jay, Benjamin Franklin. Yet how much of the record of the relations of these men with each other is a story of personal malignity and ambition, of efforts at thwarting the influence of a colleague, and of vehement recklessness of speech or manner, well calculated to bring their common efforts to naught! Perhaps no man possessing abilities of the first order was ever more free than Franklin from the pettiness of vision and inability to see from the point of view of another, which have been too commonly found united to preëminent talents, and which were conspicuously illustrated in all of Franklin's colleagues except John Jay. Franklin's philosophical mind, his unrestricted outlook upon the world, his habitual serenity of temper, his constant subordination of the ideal which he personally held important, but saw to be impracticable, to the large interests of the greater number—all these were likely to preserve him from errors like the above. To these, moreover, should be added his really phenomenal tact, which seems to have made a strong impression even on those opposed to him, if we may judge from the humorous *Edinburgh Reviewer* who regretfully characterizes Oswald as not "fit to cope with a consummate philanthropist like Franklin"!

It is, therefore, a veritable curiosity of history that, in relation to that one of the links in the chain of events leading to the treaty of peace, which, as it proved, was the decisive one—the Vaughan commission—it was so eminently reasonable a man as Franklin who was unalterably opposed to the measure, and without whose consent the conclusive step was taken by Jay. It was, however, a situation in which much was to be said on both sides; and, looking at the matter from the point of view of both Franklin and Jay, as our authors say, "it is impossible not to admire the firmness of" them both. By any natural and obvious view, it was the business of these diplomatic agents of the infant republic to treat with one nation at a time; and but for the signal ability of Vergennes, who, as our authors well say, "had not at this time, nor had he ever had, any sentimental ideas concerning America," and who had succeeded in a measure in shaping affairs to the single end of advancing French interests, the duties of the American agents would have been to this extent simplified. Article 8 of the treaty of alliance between France and the United States in 1778 had contained two provisions which stood in the way of unrestricted action, namely, that "neither of the two parties shall conclude either truce or peace with Great Britain without the formal consent of the other first obtained"; and that "they mutually engage not to lay down their arms until the independence of the United States" shall be formally recognized. In Jay's view, the perfect understanding and unity of action which this language contemplated had already in 1782 been infringed on, and that by the act of Vergennes. This Minister was now not only urging on the English and American negotiators the acceptance of the Oswald commission, from which the above specific acknowledgment of independence was absent, but was, through secret emissaries, intriguing with Great Britain for the annulling of American interests in the Mississippi Valley and in the matter of the fisheries. Believing, as was indeed the case, that this was the critical moment of the negotiations, Jay despatched to Lord Shelburne's government one Benjamin Vaughan, then in Paris, as confidential agent, with a definite message. This extreme measure—for such it was, and as such Franklin refused it his approval—was meant to counteract both of the ends which Vergennes was intriguing for, and it did not prove ineffectual. We may not perhaps characterize it, as Mr. Hale does, as "a bold, ill-advised, and perfectly successful stroke"; but, on the authority of Townshend, "it was at once agreed [by the Cabinet meeting] to make the alterations in the commission proposed by Mr. Jay." The "alterations" referred to involved, as it proved, the proceeding on the part of the English and American negotiators to terms of treating without the formality of securing the consent of France. Barely two months elapsed before the signing of the "provisional articles" of November 30, 1782, and September of the following year brought the "Definitive Treaty of Peace."

The accomplished President of the American Association for the Advancement of Science, Professor Langley, in his inaugural address in August last, in some very forcibly presented suggestions, casts doubt on that theory of the progress of science which compares it to the advance of an "army which obeys an impulse from one head." In his view, the far more accurate analogy is that of "a pack of hounds which, in the long run, perhaps catches its game," but individuals of which "bring many to follow them, nearly as often in a wrong path as in a right one," and "the entire pack even has been known to move off bodily on a false scent." Who shall say that the analogy is not equally appropriate in any scientific view of history, or even that it has not some direct bearing on the episode we are now considering? Certainly, if Jay's mission through Vaughan in September, 1782, had proved anything other than the success it was, we should not only have heard nothing of the "provisional articles" and the "definitive treaty," but in all probability Vergennes's disposition to countenance American interests, already strained to a dangerous degree, would have been exchanged for uncompromising hostility. Could we read Franklin's remonstrances at the time, the case would not lack for forcible arguments.

An undue stress has at times been placed on the personal merits and talents (or lack of them) of the individual, Vaughan, who became in Jay's hands the agent of producing the English Minister's change of base. Mr. Bancroft writes him down as "an inferior and casual agent"; Mr. Jay introduces foot-notes, even in his recent chapter on the treaty, to corroborate his view of him as exceptionally fitted "for the delicate task"; while Mr. Hale regards him as "a well-meaning man of very great vanity." Though

somewhat various, these judgments are by no means wholly inconsistent with each other, nor is it, in any event, of exceptional importance that Vaughan be proved this or that. The one significant fact is that Jay's case was urgent, he had little time for choosing men, and he needed at once an agent to pass between him and Shelburne. Since Vaughan was apparently the only one available, it is scarcely decisive of Jay's superior judgment, or the reverse, that he made use of this man.

To a scholar of scientific tastes like Franklin no other portion of the civilized world could have had more attractions than France during the last quarter of the eighteenth century. A mere enumeration of the directions in which scientific investigations are incidentally referred to in the volume before us as in progress, would be exceedingly suggestive. It would include, among many others, the subjects of lightning-rods, phosphoric matches, the weight of the atmosphere, ballooning, animal magnetism, and various applications of electricity; but quite as fascinatingly attractive to a mind like his was the ferment at that time going on in France which manifested itself in a universal discussion of political theories. Between the date of Franklin's departure from French soil in 1785, and the storming of the Bastile, only four years elapsed, and the ideas of the Revolution were even then in the air. Mr. Hale, in some very just remarks on this subject, cites the recent noteworthy work of the English historian, Stephens (his type-setter both times making this name "Stevens"), to the effect that "the influence of the American Republic is hardly to be seen at all among the [French] republican leaders of the revolutionary period." In his acute analysis of Franklin's character and influence, Sainte-Beuve approaches the same subject with a species of wondering hesitation. After declaring that "Franklin possessed influence among us," he adds that "when, towards the end of his life, he learned the first events of July, 1789, he conceived as much mistrust and doubt as hope respecting them." To Franklin, as to so many others, the French revolution was a surprise and its true significance dimly understood. His own great services to mankind, along the lines of political development, we must regard as almost wholly rendered in connection with the English-speaking race.

Life of Lamartine. By Lady Margaret Domville. London: Kegan Paul, Trench & Co. 1888. Pp. 398.

THE reading public have of late been offered so many so-called biographies which are in reality little more than political histories, that it is with great pleasure that we call attention, in the 'Life of Lamartine' by Lady Margaret Domville, to a work which is a biography in the true sense of the word, *i. e.*, a history of a human life. The birth, the peculiarities of family environment and early surroundings, the struggles against lack of appreciation, the thoughts, and the final triumphs of one who may truly be called a genius, are given in this book with such fulness that the reader feels, on throwing it aside, that he has made the acquaintance of a living man. Every page evinces a comprehension of the character described, every chapter marks a step in the formation of a great spirit. But at the same time Lady Domville does not burden her narrative with unnecessary details regarding Lamartine's domestic life. All that are given seem to be necessary to explain his political attitude; all lead up to that terrible 24th of February when he stood upon the steps of the Hôtel de Ville, and, relying alone upon his matchless eloquence, faced and conquered the wildest of European mobs.

Lamartine was, during the greater part of his life, what his biographer justly calls a political "free lance"—what in the United States, sometimes with approval, sometimes with contempt, we term a "Mugwump." Prevented by family influences from offering his services to the great Napoleon, he was too much a believer in constitutional government to sympathize altogether with the views of the Legitimists. His political aspirations had therefore to content themselves with criticism, and the critical attitude which he was thus early compelled to assume he seems never altogether to have abandoned. On this account the task of his biographer in describing his political career is in a measure a thankless one. Never prominently connected with any government until 1848, his influence could only be an indirect one, except when it appeared to be absolutely revolutionary. Never quite in sympathy with any of the political parties in the Legislature of which he was for so long time a member, his career as a politician could hardly be a "practical" success. He could do little but win from his fellow-members a reputation for eloquence at a time when eloquence was especially characteristic of French public men. Notwithstanding these disadvantages which Lady Domville labors under, she is still able, by dwelling on Lamartine's conscientiousness and on his real political sagacity, to leave upon her readers a most pleasing impression of a career which, after all, was singularly barren of direct results.

Only once does Lamartine give his biographer an opportunity of arousing enthusiasm for his public actions, for only once did he rise above the level of criticism to the formulation of definite political principles. This was in the last days of the July monarchy, with whose policy he became more and more dissatisfied. The regimen of Louis Philippe was in his opinion political stagnation; and the 'History of the Girondists,' which he published at this time, contributed largely to its destruction. Lamartine carefully refrained from joining in the agitations which directly occasioned the Revolution of 1848, but when it came he did not shrink from assuming the share of responsibility which he seems to have recognized was his. Not only was he able to control for a time the spirit which he had raised, but his courage was so heroic, his influence so extraordinary, as to focus upon him the attention and admiration of the civilized world. The chapters devoted to this part of his public career are the finest in the work before us, and read like a romance. As everything that has gone before leads up to them, all that follows gradually sinks away to Lamartine's quiet death in the peaceful hills of his native place. The few months during which Lamartine directed the republic, saved France from anarchy, and Europe perhaps from a great war, were the most important in his life. To perform adequately the duties roughly and unexpectedly thrust upon him, long years of preparation were necessary, and above all it was necessary that there should exist in the people a perfect belief in the sincerity of the man who attempted to control them. As Lamartine afterwards said, with that belief in the goodness of the people so characteristic of him, "The first, almost the only, quality which it [the mob] demands from you is sincerity." That Lamartine was sincere his whole political career had gone to prove. Lady Domville shows us most clearly that, whatever may have been his defects as a practical statesman, his sincerity was beyond question, and to this may be attributed his most remarkable triumphs in the early months of 1848.

Lamartine was a poet in politics. His love for the people, his belief in the purity of their purposes, caused him to exercise the power he briefly possessed with too little force to command respect; and the Government which he helped to form owed its short lease of life, in part at any rate, to this quality in its principal founder. It is therefore quite in order for Lady Domville to intersperse her narrative of Lamartine's life with selections, analyses, and criticisms of his poems, which are for the most part treated in the chronological order of their production. It is to her credit that she has recognized his limitations and defects. She has not tried to make of him a great statesman: she has succeeded in demonstrating the nobility of his character. She has also an appreciative and generally accurate knowledge of French habits. Especially pleasing is the opening chapter, descriptive of French home life in the rural districts. Lady Domville seems to have imbibed some of the spirit of Lamartine's own pastoral poems. In her description of public life and of French institutions, however, she reveals at times a lack of exact information. Thus in one case she refers to the French *Conseil Général du Département* as similar to the English Grand Jury. Had she compared it with the County Quarter Sessions of the Peace before the late Local Government Act, she would have been more nearly correct. Again, she speaks of the Mayor of Paris when she means either the Prefect of Police or the Prefect of the Seine. But outside of these minor inaccuracies, of which there are but few, her book gives, in addition to the life of Lamartine, a very good picture of French political conditions during the fifty years succeeding the Revolution.

The Popes and the Hohenstaufen. By Ugo Balzani.—*The English Church in the Middle Ages.* By William Hunt. [Epochs of Church History. Edited by Professor Mandell Creighton.] A. D. F. Randolph & Co.

THE making of "Epoch books" has in these days become an especial department of historical composition. The ideal of such a task should be to bring before the reader's mind with absolute clearness the great moving forces and the leading personalities of the given period, especially to exhibit the development of institutions—in a word, to show why the period in hand is an "epoch." Yet the number of these books which come within hail of this ideal is very small indeed. Most of them err in the direction of too much narration of events. The desire to tell the whole story runs away with the writer, and, before he is aware of it, his space is full, and he has put together a more or less readable mass of events over which the ordinary reader glides with a certain sense of "getting information," but without any real grasp of the peculiar character of the special period treated.

The two books before us do not form any exception to this rule. Mr. Ugo Balzani is the prospective author of a great work on the Popes and the Hohenstaufen, of which the present little volume is an earnest. He professes to write from original sources, but tells us nothing as to what these sources are. He acknowledges his obligations to preceding writers on his subject, but gives no reference to these writers by which the student might be guided into further study. He deals with events which carry the reader over enormous stretches of country, but he does not help him along by any maps whatever. The narrative runs along

with monotonous smoothness, so that one gets very little idea of what points in detail are important and what are not. For example, in describing the magnificent struggle of the Lombard cities against the imperial prerogative, the author loses a brilliant opportunity to sketch the new and wonderful life of these trading and manufacturing communities.

The "epoch" treated in the second book is a period of nearly eight hundred years, the history of the English church from Augustine to Wiclif. The very extent of this period prevents the error of too much narration, for any pretence at a complete narrative would have been absurd. The book may be regarded as the defence of a thesis, namely, that the English Church was a national institution from the beginning. It consists mainly of illustrations of effort on the part of patriotic Englishmen to prevent the entire control of the English Church by the Papacy. Like the numerous other efforts in the same direction, however, it suggests more than it means to do—that, as a matter of fact, England was pretty much under the control of the Papacy during a very large part of its existence. If one should select from Mr. Hunt's book—to go no further—the statements as to the extent of foreign influence in the English Church at various times, one would be pretty well supplied with arguments for the Roman position. This volume, like the other, has no references to authorities, either contemporary or modern, and no maps. Both have very complete indexes.

A Thousand Miles Up the Nile. By Amelia B. Edwards. With upwards of seventy illustrations after drawings executed on the spot by the author. Second edition, revised. Geo. Routledge & Sons. 1889. Pp. xxvii., 449. 8vo.

It would be difficult for one who wished to spend a winter on the Nile intelligently and profitably to find a more excellent companion and guide than this account by Miss Edwards of her journey made in 1874 and first published in 1877. In some respects, this second and cheaper edition is preferable to the original, as it is easier to handle, being smaller; and, while the narrative remains untouched, the parts relating to the ancient history of the country and the interpretation of the inscriptions have been revised and corrected so as to conform to the latest conclusions of the Egyptologists. The illustrations, also, which are admirable specimens of wood-engraving, are nearly as good in this as in the first edition, though printed on inferior paper. We regret, however, the omission of the maps, while the absence of an index in a work of this character is both irritating and inexplicable.

Miss Edwards was well qualified for her task by an early enthusiasm for and considerable knowledge of Egyptian art and history. She spent nearly six months on the river, going as far south as Wady Halfeh, and making a careful study of some of the most interesting ruins, and, after her return, gave two years' labor to writing her narrative. While especially interested in attempting to discover traces of the ancient life, she takes careful note of the varied scenes which meet the eye of the traveller at every bend of the river. The little events of the daily routine; the vivacious crew of the dahabeeyha; the picturesque groups of fellahin with their spurious "anteekahs"; the villages with their fields of waving grain; the creaking water-wheels; the limitless desert, with its wonderful and ever-changing color; above all, the silent and majestic ruins—all are described in such an effective manner as to bring them vividly to the reader's mind. Mingled with these word-pictures are chapters which only the Egyptologist can intelligently read, such as that on the history of Rameses the Great, and the one relating to the paintings in the rock-cut chamber at Abu Simbel discovered by Mr. Andrew McCallum. It should be said in closing that Miss Edwards carefully abstains from touching upon recent Egyptian history and politics.

BOOKS OF THE WEEK.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 7, 1889.

The Week.

THERE appears to be no doubt that the present phase of the Samoan trouble is due to a treacherous attack by Mataafa's forces on the German boat's crew who had come ashore to protect German property. The very large number of German dead and wounded, nearly half the force, shows that the attack was unexpected, and that no preparation had been made for it. To expect that the German Government would allow an outrage of this sort to pass unpunished is to expect forbearance which Americans, under similar circumstances, would be the last to show. If any savages or semi-barbarians made a similar attack on an American force, we doubt very much whether the demand for reparation or punishment would not be far louder and deeper than has yet been heard in Germany. In seeking satisfaction from Mataafa and his men, Prince Bismarck is clearly in his right; but in covering everybody on the islands, neutrals as well as belligerents, with martial law, the German authorities on the spot, as the Prince now acknowledges, went too far. "War" with Mataafa could only be made an excuse for establishing German military rule over the whole territory if all living in it acknowledged Mataafa's authority. But the English and Americans there have been living under their own consuls, and enjoying privileges of which no follies or crimes on Mataafa's part can deprive them. In repudiating the action of the German commander on the spot, therefore, Prince Bismarck has acted like a sensible man. It is unfortunate for the Republicans in the Senate that he should have done so under a protest and remonstrance from Mr. Bayard, but these little mishaps are unavoidable.

The amusing information is sent by the Washington correspondent of the *Times* that Steinberger, whose Samoan experiences during President Grant's Administration we describe elsewhere, has sent a letter to Congressman Cox suggesting that his advice would be of great value in settling the present controversy with Prince Bismarck. He suggests that he be called to the capital and asked "to set forth more in detail the particulars of the policy" which he himself sought to impress upon the Samoans during his sojourn there. As the fruit of that policy was a request from the United States Consul and all the missionaries in Samoa that Steinberger be removed by force in order to put a stop to the demoralization which he was causing in the islands, there does not seem to be much necessity for advice about details.

It is much to be regretted that Senator Allison has seen fit to decline the position of Secretary of the Treasury tendered to him by the President-elect. We have stated the reasons why we considered the selection of Mr. Allison for this place a very judicious one on Mr. Harrison's part. We do not see where his equal is to be found, or one approaching him in qualifications for the office—always supposing that Senator Sherman is out of the list. Not the least of the troubles is, that Mr. Allison's declination opens the door to a lot of more or less disreputable "claimants," such as Tom Platt, Billy Mahone, etc. We trust that Gen. Harrison will, as regards this office at least, look upon all claimants as *prima facie* disqualified. Here is one office which should seek the man, not the man the office.

It is a gratifying announcement that President Cleveland intends to resume the practice of his profession as soon as his term of office expires. It is especially gratifying to the people of New York city that he will make this metropolis his home and the scene of his future activity. It is known that Mr. Cleveland is not rich enough to live without work, and even if he were so, it would not be best that he should. He is still in the prime of life, and although honored as highly as any man can be under our form of government, he still has a career of usefulness before him, which will be watched with eager and affectionate interest by his countrymen in every State of the Union.

The choice of Col. Aldace F. Walker of the Inter-State Commerce Commission as Chairman of the new Inter-State Railway Association at Chicago is an excellent one, and, if he accepts the place, the public may fairly expect to see the roads held to substantial compliance with the Inter-State Law. Col. Walker is a first-rate lawyer, with long experience of contested railroad litigation, and he is also a man of excellent executive ability, still under fifty years of age. It is well known that Judge Cooley, Chairman of the Commission, is determined to bring the roads into full compliance with the law, peaceably if he can, forcibly if he must. Since their association on the Inter-State Commission, a friendship has grown up between Judge Cooley and his younger colleague, and the presence of the two men at the head of the Commission and of the roads would undoubtedly insure good faith and harmonious action between the bodies.

The renewed activity at the Stock Exchange noticed during the past three or four days seems to have impressed everybody as something more than a "spurt." Those who are at the focus of speculation can tell very readily whether a demand for securities is artificial or real, whether it has its springs among the habitués of the Exchange or with the public. They can even distinguish between different classes of the public so as to judge whether a buying movement is likely to be sustained or not, and whether it is of a discriminating sort or not. The opinion seems to prevail that the present movement is real, that it is not transitory, and that it is founded in reason. The pre-existing depression has lasted as long as depressions usually last that are not veritable panics and commercial crises. Among the causes pointing to a change in the temper of the market, probably the most important is the evidence that railway managers have at last recognized the necessity of peace, and have adopted means adequate to secure it, and that bankers have recognized the necessity of getting a fair return on railway capital already invested before putting any more at risk.

We have at last received a copy of the report of "Mr. Byrne of Boston," on the "sugar frauds." It is very voluminous, 174 pages of small print. It will take some time to analyze it, but we cannot resist the temptation to reproduce the following tidbit from the introduction :

> "I will say, at this point, that, prior to taking up this subject as a journalist, I had acquaintance with no person directly or indirectly engaged in the importation or refining of sugar, neither did I assume the work at the request of any person so engaged, nor have I received or had promise of emolument or benefit of any kind made me during or subsequent to the completion of this work of investigation from such source.
>
> "Purely from a journalistic standpoint did I undertake the work, prompted by those aims which stimulate honest, fearless, honorable newspaper enterprise, namely, to secure truthful news, ventilate proven wrongs or injustice imposed upon a community, in order to give deserved publicity to said wrongs, and, if possible, assist in securing such wholesome relief as honest administration of law and equity contemplates in behalf of law-abiding citizens and communities.
>
> "If, therefore, I have been charged as a prejudiced investigator, by reason of being a citizen of Boston, from whence the complaint emanates, or that the journal which I have the honor to represent has assumed the cause of Boston sugar merchants, right or wrong, I can and do deny said charges without hesitation."

He doubtless had no promise of pay before he began, because no sensible man outside of "journalism" would think of hiring him as an investigator of any subject. He probably did the job on speculation, and, in fact, tried to sell his stuff to a newspaper in this city before he was permitted to dump it into the Treasury.

When the Chace Copyright Bill was introduced into the Fiftieth Congress, it contained a provision which seemed to us to embody a principle as radically bad as the principle of international copyright was good. We pointed this out in an article printed January 5, 1888, and that our point was well made is proved by the fact that the bill was amended in this respect and passed by the Senate after such amendment was made. Yet some anonymous opponent of international copyright has reprinted, without authority, the article referred to, and laid a copy upon the desk of every member of Congress. The dis-

honesty of this proceeding is made manifest when it is pointed out and emphasized that the provision then objected to, the *absolute* prohibition of the importation of foreign copyrighted books, *no longer exists in the bill.* It is sincerely to be hoped that the opponents of literary honesty will not be enabled, at the eleventh hour, through contemptible and dishonest means, to influence a single vote in preventing the House of Representatives from granting a fair discussion of this measure, which—be its shortcomings what they may—will at least serve to put us in the ranks of honest nations.

The schemes for the admission of Territories as States have got into such a tangle between the two branches of Congress that it is generally accepted as settled that nothing will be done in the matter before the expiration of the Fiftieth Congress. This outcome will not be regretted by the country. The policy of admitting Territories by wholesale, as proposed by the "Omnibus Bill," is bad in itself, and the inclusion of New Mexico among the projected States is without possible defence. That only half-American community ought to wait a long time, while the others have waited so long that they can easily stand a little further delay. Partisanship must be expected to affect the decision of even so essentially a non-partisan question as the creation of States, but it is much better that it should be applied under circumstances which enable one of the parties to be held to account, than in a compromise measure which balances a New Mexico against a Washington, and causes both parties to unite in defending an act which each by itself would hold quite indefensible.

The Granger Meat Bill now pending in the Pennsylvania Legislature is having a fine run as a new device in the way of protection. The same measure has been introduced in the Legislatures of Ohio and Tennessee. It provides that no meat shall be imported into the State unless the animal, before it is killed, shall have been inspected and pronounced sound and healthy by an inspector of the State within the limits of the State. As the only satisfactory and scientific inspection of meat is that which is made upon the meat itself, an inspection of the animal being merely a diagnosis leading to uncertain results, we suggest that chloroform be administered to the animal and a piece cut out of him and submitted to microscopical tests before he is slaughtered. If he is found to be diseased, the wound can be sewed up, the proper remedies applied, and the animal's life saved. After the meat bill is passed, we shall have further suggestions to make. It is well known that the danger to health from canned meats and vegetables is greater than from fresh meat that is exposed on the butcher's block, because the eye of the practised buyer can generally detect a bad piece of meat, while nobody can tell what is inside a tin can till it is opened. A bill to prohibit the sale of canned corn, tomatoes, etc., unless the articles are inspected within the State before the cans are sealed, would be a much more rational measure than the Granger Meat Bill, and would be equally effective for the purposes of protection.

The Chicago Board of Trade has taken notice of the Granger Meat Bill in the Pennsylvania Legislature, and has passed resolutions on the subject declaring that "the pretence that dressed meats are diseased, advanced by the adherents of these bills, is a sham; that the sole purpose and design is to cripple and impair one of the great industrial enterprises of the country, and the false charges made by the supporters of such legislation will injure the reputation of our meat products at home and abroad, and damage the cattle-raising industry of the entire country"; also, that the proposed legislation is "unwarranted, and without precedent, and calculated to provoke retaliation." Touching retaliation it might be well to consider the subject of shoddy. During the Presidential campaign it came out that a dozen shoddy mills are in active operation, competing with the wool-grower in the production of cloth for the poor man. The owners of these mills were highly indignant over the Mills bill, because they said it would ruin their trade by making wool almost as cheap as shoddy. Now why should not Illinois adopt measures to prevent the sale of any woollen cloth or carpets in that State unless the materials composing them have been first inspected within the State? Why not apply the same rule to confectionery, which we all know is very liable to adulteration with noxious coloring matter? Then there is a long list of patent medicines, of which Pennsylvania furnishes a goodly supply; why should not Illinois require an inspection of the ingredients of these by a State officer within her own limits before allowing any to be sold there? We can see a widely expanding vista of possible retaliatory measures if the Granger Meat Bill becomes a law.

People with muddled ideas as to the causes of the car strike, and the "rights of labor" generally, should read the lucid and vigorous letter which Mr. Scribner, President of the Belt Line Road, has addressed to Mayor Grant. The whole matter is set forth there in terms so clear that no man can fail to understand it. Mr. Scribner says that ex-Convict Magee's Executive Committee of Division District No. 1 waited upon him in December last with a complete plan in detail for the management of his company and the running of his road, and requesting him to bind the company to follow the rules and regulations laid down therein for the ensuing year. His signature was demanded on or before the 7th of January following. He had never heard of the Committee, or the Division District No. 1 before, or of any of the men belonging to either. Because he refused his signature to the document, the strike was ordered, the stables and buildings of the company were surrounded and put under siege, the company's tracks were barricaded by boulders and torn-up pavements, and the company found itself compelled to guard its few employees who remained with it with a force of police, and to convey by "stealth and stratagem" food for the support of both men and guard. After enumerating these and many other similar vicissitudes of the company, growing out of its refusal to allow an unknown body of men to manage its business for it, Mr. Scribner says that the company pays the city about $150 a day in taxes, and he wishes to ask aloud what it is paying them for.

The *Tribune* says:

"It is overstrained and unreasonable to say that the street-railroad companies would surrender their franchises into the control of an irresponsible body, and prove false to the rights of their stockholders, if they should come to any agreement with the officers of the labor organization. If what the men demand is reasonable, they have a right to appoint a committee to represent them, and the appointment of such a committee is not an excuse for refusing to grant the reasonable demand. As to the organization, also, it may be, and the *Tribune* believes that it is, exceedingly injurious to the interests of the employees, and eminently calculated to prevent the attainment of the most favorable terms in the relations with the companies. But the workers have the right to organize, and unless the organization makes unreasonable demands, public opinion will not sustain the companies in refusing to consider demands made for the men by such a body."

The real point is missed here. The question is not whether the companies shall allow a representative committee to make a statement of grievances on the part of the men and communicate through the committee with the men. It is whether they shall make a contract or agreement with such a committee binding themselves to manage their business in a certain way. Even if it were fair to the public and the stockholders to make such an agreement with anybody touching the management of a business carried on under a franchise in the public streets — which we deny — it would be impossible to make it with any organization which offered no guarantees of permanency, of good character, and of ability to carry out its part of the contract. Magee's Committee offered no such guarantees. It had no real control over the men. It was itself liable to disappear at any moment, and it was composed of persons whom few would trust around the corner with five dollars.

The ludicrous figure which the members of the State Board of Arbitration have been cutting during the recent strike has probably furnished them less amusement than it has the public. They are compelled by law to hasten to the scene of a strike and offer their services—that is, open a headquarters and hang out a sign, "Arbitrating Done Here." The absurdity of the performance becomes apparent when a board of rational men is compelled to request a president of a great corporation to "arbitrate" on such a series of "demands" as Mr. Scribner shows were made upon his and other companies in this instance. One of the most zealous members of the Board hired a horse and buggy and started out to urge the car companies to accept the Board's services, but he got so

brusque a refusal from the first one he asked that he went back to the headquarters and resumed the passive rôle. After three days of fruitless waiting the members of the Board left town, satisfied that they could do nothing to help forward a settlement. This is the usual outcome of their labors, and we may add that their success in practice is about the same as characterizes all Labor legislation. They cost the State $11,000 a year in salaries alone—$3,000 for each of the three members of the Board, and $2,000 for the Secretary. Of course, they get their travelling expenses and hotel bills paid also by the State, so that in one way or another they cost the taxpayers quite a pretty little sum—all in Labor's name.

It is to be hoped that Mr. Crosby's bill, authorizing a detailed report by the authorities of the various prisons on the effects caused by the Yates bill, will be passed. Such a report would be of great value in showing the people of the State the almost incalculable harm which that bill has done by stopping labor in the prisons. It would be likely to raise such a storm of indignation as would not only ward off the danger of such another demagogic measure this year, but might also arouse the Legislature to the necessity of some kind of rational action on the convict-labor question. It might also become a precedent for authorizing similar reports upon the effects of other laws. There are hundreds of measures made laws at Albany each year whose effects, if set forth in detail a year or so later, would cause great astonishment in the public mind. Some of them are introduced with full knowledge of their mischievous character, but many of them do harm because of the ignorance in which they have been conceived and passed.

The advocates of prohibition in Kansas find more and more evidence all the while to justify their contention that the policy is proving a success. In his message to the Legislature Gov. Martin, the retiring Governor, declared that prohibition had abolished the saloon, and that its abolition had not only promoted the general prosperity, but also enormously diminished crime, as proved by the facts that, notwithstanding a steady increase in population, the number of criminals in the penitentiary is steadily decreasing; that many of the jails are empty, and the rest show a marked falling-off in the number of prisoners; that the business of police courts in the larger cities has dwindled to one-fourth its former proportions, while in cities of the second and third class the occupation of police authorities is practically gone; and that the dockets of the higher courts are no longer burdened with long lists of criminal cases, not a single such case being on the docket in the capital district, containing a population of nearly 60,000, when the recent term began. The Governor held that these facts had reconciled those who doubted the success, and silenced those who opposed the policy, of prohibiting the liquor traffic, and his view is shared by Judge Johnston of the Supreme Court, who, in his recent annual address as President of the State Bar Association, declared that prohibition "may be said to be as much a part of our political system as the right of trial by jury or the freedom of speech."

The prohibition law in Iowa went into operation July 4, 1886, although months elapsed before it was applied in many localities. In December, 1886, the number of convicts in the State penitentiary was 316; in December, 1887, it had fallen to 286; in December, 1888, it had sunk to 227, although during these two years there has been a perceptible increase in the population of the State. The Prohibitionists naturally "point with pride" to these figures, and it must be confessed that such a showing justifies their claim that prohibition pays in Iowa. The Nebraska Legislature has passed a resolution for the submission to the people of a prohibition amendment. Nebraska was one of the first States to introduce a high-license system, which has proved successful in materially reducing the number of saloons and increasing the revenues of the chief cities and towns. This has served to delay the crystallization of sentiment in favor of prohibition, but, as the State, like Kansas and Iowa, is mainly composed of small agricultural communities, it has seemed inevitable for some time that the Legislature would submit a constitutional amendment. It appears probable that the people, like those of Kansas and Iowa, will ratify it now that they are to have the chance.

There seems to be a growing suspicion in Pennsylvania that there is more "politics" than temperance in the sudden zeal of the Republicans of the State for prohibition. The passage of the prohibition amendment to the Constitution by the Legislature, under "Boss" Quay's inspiration, and its approval by the Governor, have set many people to thinking, and there is clearly going to be a good deal of discussion before the people come to the polls to vote upon it. The State has at present an excellent high-license law which is working well; there was no strong demand for a change from that, and no apparent cause for the sudden action of the Republicans in the Legislature. It is suspected, therefore, that there is some political trick in the movement, and one theory is that the Republican managers think a prohibition law would work for their benefit in Pennsylvania as it has in Rhode Island. In the latter State it is well known that the liquor-dealers pay little attention to the law, and that they pay regular assessments to the Republican managers with the understanding that they shall not be interfered with. This has been found to be so valuable a source of income to the campaign funds that Republican managers in other States than Pennsylvania are said to be casting longing eyes upon it.

The woman-suffragists have been counting with much confidence upon Dakota, but the rejection of a bill giving women the suffrage, by the decisive vote of 28 to 17, in the lower branch of the Legislature, shows that they must wait some time yet for their victory. A similar measure has failed of passage in the Ohio Legislature. Unusual interest in the matter is manifested in Maine this year, and the petitions of some women for the ballot are accompanied by the remonstrances of others. In Massachusetts the friends of the cause are hopeful of securing municipal suffrage, but it is not yet clear whether a majority of the Legislature are converted.

Mr. George W. Smalley telegraphs to the *Tribune* from London the following, in an account of the American Minister's departure for America on Thursday:

"If, however, there be in America any who wish the people of the two countries to be enemies, they, and they only, have cause to reject and resent these manifestations of good-will to the American Minister. They, and they only, are entitled to condemn Mr. Phelps's four years of honorable service abroad. He has, from beginning to end, done his country honor as well as service, and no small part of the honor offered him here is because the English know him, respect him, and admire him as one of the most American of Americans."

But how does this coincide with the same Mr. Smalley's account, sent by cable to the *Tribune* on November 6 last, of Mr. Phelps's conduct as the leading figure in an international negotiation, which the *Tribune's* headlines characterized as follows?—

"Mr. Cleveland's Bargain with the British Premier—Trading His Country's Honor for Electioneering Purposes—The Whole Shameful Trick Disclosed—A Secret Understanding with Lord Salisbury—The President did not Dismiss Lord Sackville until He had been Assured that England would not be Angry—Lord Salisbury Agreed to His Envoy's Dismissal for the Sake of Having Cleveland Reëlected—If Cleveland is Reëlected He will not Forget His Obligations to the British Government."

The death of the heir to the Austrian throne comes at an unfortunate moment in the affairs of the empire, as the Hungarians are violently excited over a new army bill introduced in the Hungarian Parliament, reorganizing the military force of the kingdom somewhat on the German model. Many things in the measure have excited alarm, as tending to efface the marks of Hungarian nationality in the military organization, but the principal thing is the exaction of a knowledge of the German language for officers of the reserve. The bill has had to be carried through by a threat on M. Tisza's part to resign if it failed, and in the teeth of great popular agitation, somewhat favored by a letter of protest from the aged Kossuth, now living in Italy, and hating the Hapsburg dynasty apparently as cordially as ever. It is unfortunate that at such a crisis the line of transmission of the Crown should be suddenly changed to the Emperor's brother, of whom, and of whose sons, but little is known. The only bit of political comfort in the situation is to be found in the fact that the late Prince Rudolph and the Emperor of Germany were at loggerheads, and never likely to be any better friends—a matter of some moment between States in which the monarch counts for so much.

THE GENESIS OF OUR SAMOAN TROUBLE.

We presume hundreds of thousands of American citizens have been asking during the past fortnight how we come to be in any degree responsible for the peace or prosperity of the Samoan Islands in the South Pacific any more than for any other islands in the same ocean—the Gilbert Islands, for instance, or the Ellice Islands, or the Phœnix Islands, all of which are nearer to us than the Navigator or Samoan Islands. The Samoan Islands are about 5,000 miles away from the nearest port of the United States. They are not even within our hemisphere, as they lie 15 degrees, or 900 miles, south of the equator. They do not belong to the American world, either geographically or politically, any more than does Sumatra, Java, or the Philippine Islands. In fact, they belong geographically to the Australian system, and are sure to be absorbed eventually into the great Australian Republic, which is slowly but surely rising in the South Pacific. The Samoan Islands are only 1,200 miles from New Zealand. They are only about 1,500 from the port of Sydney, or about five days' sail, which must, if they ever become civilized and commercial, be their principal market. In truth, unless all the signs by which the future of states and nations is forecast, fail us, they are as certain to become part of Australia as Washington Territory is to become an American State. The fact that they lie on our road to New Zealand and Australia will not save them for us, because we cannot possibly claim every place, however distant, which it is convenient for us to touch at in our voyages.

Moreover, our public policy as defined by the party coming into power is opposed to foreign traffic. We ought not, it is said, to have any trade or intercourse with New Zealand or Australia, in which we accept the products of those countries in payment for our goods, or accept anything but cash; and neither of them is now, ever has been, or is ever likely to be able to carry on a cash business with us, or any business but barter. Consequently we do not need, and are not likely to need, a stopping-place on the road to New Zealand, or anything more than a coaling-station for such passenger ships as we may subsidize for the purpose of encouraging American shipbuilders.

How, then, did we become interested in Samoa at all? Well, in this way. In 1872 Commander Meade of the Navy entered into an agreement with the Chief of the Bay of Pago-Pago for the exclusive privilege of establishing a United States naval station in that harbor. Then certain "highly respectable commercial persons" called President Grant's attention to the importance of our growing trade with the islands in the South Pacific, and he determined to send one Steinberger, who was doubtless one of "the highly respectable commercial persons," out on a voyage of discovery to see about it. In fact, Steinberger solicited the mission himself, and was strongly recommended for it by Gen. Horace Porter. Who Steinberger was, does not appear in the official reports. It was in the very noon of the Grant régime, and everybody in Republican politics was happy and hopeful, and few questions were asked. Parson Newman had started round the world already, as an "inspector of consuls," in the other direction. Steinberger was to inspect the Samoans. It is right to add that before this, to wit, in 1872, some of "the highly respectable commercial persons" had already got "the kings and rulers of the Samoan Islands" (names not mentioned) to send on a petition to President Grant asking for the annexation of the islands to the United States. Here is the petition, which displays a very remarkable acquaintance with our political literature, and especially the Declaration of Independence, for gentlemen whose habitual costume was a neat tattoo and a breech-cloth:

(Translation.)

Apia, Upola, Samoa.

To His Excellency the President of the United States of America:

May blessings from the Almighty rest upon your Excellency; this is our letter to your Excellency.

We, the chiefs and rulers of Samoa, deem it necessary for our future well-being and better establishment of Christianity, free institutions, fellowship of mankind, protection of life and property, and to secure the blessings of liberty and free trade to ourselves and future generations, to petition the President of the United States of America to annex these our islands to the United States of America.

Given under our hands and seals this ninth day of April, in the year of our Lord one thousand eight hundred and seventy-two.

The mention of "free trade" shows, however, that the minds of these cultured savages had been already poisoned by the British missionaries, or by the emissaries of the Cobden Club.

Steinberger started in June, 1874, with $2,000 of United States money in his pocket, in a schooner yacht chartered by himself, and on the 6th of August sighted the field of his investigations. He found an "American Polynesian Land Company" already established on the islands, which was "contracting with the natives for immense tracts of land at nominal prices," paid partly in powder and lead, as civil war was raging, and partly on two years' credit. This was probably not remotely connected with that petition of the "kings and rulers" already cited. He made a long report on the scenery, fauna, flora, products, and geography, climate, and people of the islands, ingratiated himself with the chiefs and people, revised their laws and Constitution, made peace between the warring tribes, delivered them long addresses in answer to their clamorous demands for American protection, and encouraged them to hope for it, and came home early in 1874. He soon had to report to Mr. Fish, however, that the Samoans could not get along without him. They insisted that he must come back to rule them, to carry on the Government he "had been mainly instrumental in creating." So he proposed that our Government should extend its protection to the islands, and send him (Steinberger) back in a man-of-war as Governor, with "a secretary, equipments for say 100 men, as a native guard, clothing, muskets, a battery of four field-pieces (brass), with ammunition, a botanist, a taxidermist, a photographic artist, a surgeon, and microscopist." He also drew up a proclamation to the Samoan people, full of religious and moral advice and promises of his coming back to take care of them, and asked Secretary Fish to endorse it. This Mr. Fish was too prudent to do. The President, however, did agree to send him back again as a "special agent," with a free passage in a man-of-war, and a present of some old arms and ammunition for the Samoan Government from the Navy Department, then presided over by Mr. Robeson. He was not long on the islands before he got himself made "Premier" by King Malietoa, and soon became such a meddlesome infliction that in October, 1875, the American Consul had to write, at the request of all the missionaries in the islands, to ask whether the United States Government was really responsible for him, and had "authorized him to form a government here in Samoa, because if not, and if the United States would not keep him in the islands by force," they would get the chief to expel him to prevent the "demoralization of the natives then going on"; the Consul heartily endorsing their request. Soon afterwards, Steinberger sent in his resignation as "special agent," while "believing that he might ever retain the confidence of his country." The State Department answered in January, 1876, that Steinberger was no longer in the public service in any capacity, and that his two visits to the islands had "no diplomatic or political significance whatever," and that "he was not authorized or empowered by the United States to form a government in Samoa, or to pledge the United States to sustain in any way, directly or indirectly, any government that he might form or assist in forming." And so the windy but amusing adventurer vanished from the scene.

THE APOLOGY FOR TRUSTS.

The truth of Adam Smith's observation, that one had only to support every proposal for strengthening the monopolists in order to acquire great popularity and influence and the reputation of understanding trade, has recently received a striking illustration. Mr. George Gunton, whose volume upon the philosophy of the eight-hour movement, published two years ago, failed to gain for him even rank as a "theorist," is now warmly applauded and widely quoted as a "scientific" authority, gifted with practical insight, because of an article which he has contributed to the *Political Science Quarterly* in defence of Trusts.

Mr. Gunton was predisposed to take a favorable view of these combinations by the fundamental principles of his social philosophy. One of the more striking of these he repeats at the outset of the article before us. The charge that Trusts tend to build up monopolies, and drive small capitalists out of business, is dismissed with the broad assertion that "the only economic and social interest the community can possibly have in either the diffusion or concentration of capital (tools) is, that it shall be so employed as to produce

considerable wealth most cheaply." In other words, it makes no difference to the nation whether the interest upon its capital shall go to promote the comfort and the culture of the many or the luxury and idleness of the few. The only advantage which this nation derives from the ownership of its agricultural land by 4,000,000 farmers instead of 40,000 landlords, as in England, is the cheaper production secured thereby. The ruin of small competitors which has marked the advance of the oil monopoly is not even a matter to be considered. The only question which concerns the public is the effect of the monopoly upon prices.

Here Mr. Gunton falls in line with previous defenders of Trusts, and maintains that there is no difference between a Trust and a corporation except in the size and complexity of its organization. Were Trusts responsible instead of irresponsible, and were corporations ever chartered, even in West Virginia, to restrict the production of wealth, instead of to increase it, to raise prices instead of to lower them, this proposition would need as little argument in its behalf as Mr. Gunton furnishes. What is said about Trusts "raising the plane of competition" and minimizing profits is a matter to be judged by experience. Where industries are in the hands of individuals, there are frequent instances of extortion, as every one knows who has looked into the subject of State contracts. The question to be settled is, Does the formation of a permanent combination tend to promote extortion or to restrain it?

In considering the influence of Trusts upon prices, Mr. Gunton naturally makes the record of the Standard Oil Company bear the brunt of his argument. He dwells at length upon the economies which the concentration of capital always secures, and which the managers of the great oil company deserve the highest praise for having instituted, upon a most magnificent scale. In addition to the reduced cost of administration and the common use of improved methods which have been made possible by every Trust, and actual by most of them, the Standard Oil Company has engaged in the manufacture of its own barrels and cans, and above all has constructed pipe lines to New York, Philadelphia, Baltimore, Buffalo, and Cleveland, and is now constructing another to Chicago. In emphasizing these economies, however, the unscientific character of Mr. Gunton's examination betrays itself. He tells us, for instance, that since the company began to manufacture its own tin cans in 1874, their cost has been reduced nearly 50 per cent., and in this way an annual saving of $4,500,000 has been effected. We are apparently asked to credit this result entirely to the combination, in exactly the same way that during the campaign, when we were told that the price of iron bar had been reduced more than 50 per cent. during the same period, we were asked to attribute that result entirely to protection. The saving which has been effected through the pipe lines stands upon a somewhat different basis, but the benefit which these have conferred upon the public in the way of cheaper transportation is either carelessly or shrewdly exaggerated. Mr. Gunton states that in 1872, when oil was transported by rail, it cost $1.50 a barrel to ship it to New York; to-day it costs but 50 cents. The saving upon transportation is therefore estimated at 66 2 3 per cent. Turning to Poor's Railway Manual, we find that since 1872 the average reduction of freight rates on the Pennsylvania Railroad has been 52 per cent. As this average includes local as well as through freights, it is evident that the public gets its oil transported at but little less than if the pipe lines had never been laid.

Setting aside, then, the question of the economies due to the concentration of capital, we come to the point in which the public is vitally interested. What has been the effect of the combination upon prices? Mr. Gunton shows that in 1871, the year before the Standard Oil Company was organized, the price of crude oil at the wells was 10.52 cents per gallon; the price of refined oil at New York was 24.24 cents. In 1887 the price of crude oil had fallen to 1.59 cents per gallon; the price of refined oil to 6.75 cents. Mr. Gunton substantially admits, though he does not distinctly state, that the Standard has nothing to do with the production of crude oil. Saying nothing of the percentages of reduction in the prices of the two commodities, he calls attention to the fact that the aggregate reduction in the price of refined oil has been almost twice as great as that in the case of crude oil, amounting to over 17 cents per gallon. Inasmuch as one thousand million gallons of oil were refined last year, he estimates the saving to the consumers at $174,000,000!

The one question of scientific interest—How much of this reduction in prices has been due to the existence of the Trust?—Mr. Gunton completely ignores. Fortunately, in the *Quarterly Journal of Economics* for January this very question is treated by Prof. E. Benjamin Andrews of Cornell University, whose article upon "Trusts According to Official Investigations" is neither an arraignment nor a defence of these institutions, but a remarkably clear and judicial examination of their workings. The result of Mr. Andrews's investigation of the effect of combination upon the prices of oil is as follows:

From 1861 to 1872, inclusive—*i. e.*, before any Trust whatever existed—the net average annual percentage of *decrease* in the price of refining oil and carrying it to tide-water was.....	10.4332
From 1873 to 1881, inclusive, the Trust's infirm and formative period, the figure was.....	7.3897
From 1882 to 1887, inclusive, the years of its full maturity and vigor, it was..	2.2879

Mr. Andrews is not disposed to deny the economies in production which the Trust has introduced. What he does deny is, that these economies are turned to the benefit of the consumers. From the official investigation he finds that the Standard Oil Trust, upon its enormous capitalization, has earned dividends averaging between 12½ and 13 per cent. Supposing "water to have mingled with oil to the extent of but one-third of the original certificate capital, the old stock must have been bringing its possessors 18 or 20 per cent. yearly." The Standard Oil combination was formed for the express purpose of securing a rise in profits by resisting a fall in price. It has succeeded in accomplishing its aim.

Such being the effect of combination upon prices in the refining of oil—a commodity which is being produced at the wells in rapidly increasing quantities and must be sold or lost—it is scarcely worth while to direct attention to the doubling of prices by the Cotton-Bagging Trust in our own country, the Salt Trust in England, and the Copper Trust in France. The important question which remains to be considered is, Can we look to competition for relief from the present evils of combination? Upon this point Mr. Gunton repeats an old proposition, which should be stricken out of the political economies, while Mr. Andrews states a new one which, with some qualification, perhaps, should be inserted in its stead. Mr. Gunton, with easy optimism, maintains that excessive profits are impossible, since self-interest will dictate to invested capital that it is much better to reduce prices than to risk competition. Upon this question no new evidence need be cited. The fact that for years past most of the gas companies of New England have been capitalized at $15 per thousand feet of gas sold, whereas a capitalization of $5 per thousand is admitted to be sufficient for medium-sized works, shows conclusively that where monopoly is possible, attempted competition is apt to result in a waste of capital without relief to the public; each successive paralleling of lines or duplicating of works rendering reduction of rates more difficult and the danger of further competition more remote. The proposition stated by Mr. Andrews is of exactly the opposite tenor. It is that, in order to establish monopoly prices in any business, it is not necessary for the syndicate to control the entire production. "Immediate mastery of a decided majority is practically the mastery of all." The Canadian Trust Committee finds that the twenty-five mills which are outside of the Oatmeal Millers' Association invariably "avail themselves of whatever advantage the combination gives them to keep up prices." Mr. Andrews believes that the principle in such cases is similar to that of rent, or the fixing of prices by the dearest cost of production. The inference which he draws must be accepted as at least a most important suggestion regarding the future of industrial combinations. "Unless," he says, "the small producers, who pretend to compete with the Trusts, can so enlarge their capacity as to supply the market—of course, an impossibility—it will remain, as heretofore, for the Trusts to say what prices shall be."

THE TARIFF ON WORKS OF ART.

The Mills bill as it was presented to the House of Representatives contained a clause putting upon the free list "Paintings, in oil and water colors, and statuary not otherwise provided for"; the latter term to include the "professional productions of a statuary or of a sculptor only." But when the bill came to be discussed by the Committee of

the Whole in the House, this provision was stricken out without debate, upon the motion of Mr. Breckinridge of Arkansas, and the existing tariff provisions in regard to these productions were, therefore, left unchanged.

In the voluminous document issued by the Senate as a substitute for the Mills bill—from which it differs in being, not merely a bill amending the present law, but an attempt to recodify the existing tariff legislation—the provisions now in force relating to the importation of works of art are set out in full, and certain alterations proposed. Upon paintings and statuary, as described above, there is an ad-valorem duty of 30 per cent.—the act of 1883 having trebled the former rate of 10 per cent.; and during the twelve months ending June 30, 1888 (according to the Treasury Department's "Summary Statement of the Imports and Exports of the United States"), there was imported $1,679,807 worth of these two articles, upon which duty was collected at the above rate, while for the preceding fiscal year, 1886-'87, the value of the dutiable importations reached $2,332,436. Paintings, statuary, and other works of art, the production of American artists, are allowed free importation, and under this head the Treasury Department reported importation to the value of $473,562 during the fiscal year 1886-'87, and $531,654 from July 1, 1887, to June 30, 1888.

A number of other separate provisions relate to the free importation of works of art, but art productions proper are so mixed up with scientific apparatus, instruments, fountains, "collections," regalia and gems, pottery, photographic pictures, and similar articles, and the various clauses are for the most part such inconsistent repetitions of each other, that it is by no means easy to summarize them. It is a pity that in an elaborate bill attempting to codify the revenue laws, care was not taken to unite these various provisions into a single harmonious paragraph; but above all it is to be regretted that these carefully hedged provisions for a very limited free importation of the only means through which a large part of our citizens can participate in the art culture of Europe, should remain in the bill at all. The niggardly spirit in which they are framed would only be justifiable in a revenue measure intended to replenish a bankrupt treasury, and is ludicrously out of keeping with the title of the bill, "An Act to Reduce Taxation."

The provisions of the bill permitting free importation of works of art—set out as concisely as possible, and with the deviations from the present law indicated by italics—are as follows: (1.) The productions of American artists *residing temporarily abroad*. (2.) Statuary, casts of marble, bronze, alabaster, or plaster of Paris, paintings, drawings, and etchings imported for the use of any society or institution incorporated or established for religious, philosophical, educational, scientific, or literary purposes, or for the encouragement of the fine arts. (3.) Statues, statuary, and specimens of sculpture imported for any society as above, and also for the use or by the order of any college, academy, school, seminary of learning, or public library. (4.) Paintings, statuary, fountains, and other works of art imported expressly for presentation to a national institution, or to any State or municipal corporation, or incorporated religious society, *college, or other public institution*. (5.) *Works of art, drawings, engravings, and photographic pictures, brought by professional artists for use by them temporarily for exhibition*. (6.) Paintings, statuary, and photographic pictures for exhibition by any association duly authorized under the laws of the United States, or of any State, for the promotion and encouragement of science, art, or industry; provided, that in cases of importation under "5" and "6," if the articles are not exported within six months, *or, at the discretion of the Secretary of the Treasury, within twelve months*, duties must be paid. (7.) Works of art, photographs, works in terracotta, parian, pottery, or porcelain, and artistic copies of antiquities in metal or other material, imported for permanent exhibition at a fixed place by any society or institution established for the encouragement of arts or sciences; and (8) like articles imported by any society or association for the purpose of erecting a public monument—in either of which cases bonds must be given for the payment of duties should any of the articles be subsequently sold or transferred, etc., "*and such articles shall be subject, at any time, to examination and inspection by the proper officers of the customs.*" (9.) Engravings, *photographs*, and etchings when more than twenty years old at the date of importation; and (10), the same articles *when imported for the use of the United States, or for the use of the Library of Congress*. Finally (11) fashion plates, whether "engraved on steel, or copper, or wood; colored or plain."

Of the changes proposed to be made in the present free list, that indicated in "five," permitting the free importation of works of art by artists for temporary exhibition in this country, together with the clause extending the time during which such exhibits shall be exempt from the payment of duty from six months to one year, were borrowed from the Mills bill; whereas, the other changes marked seem to have originated in the Senate Committee. The latter are of no importance, but they are not, unhappily, the only alterations proposed by the Senate bill affecting the duties upon works of art. Neither photographs nor lithographs are mentioned in the tariff act of 1883, but the lynx-eyed Treasury officials, who truly seem to display an abnormal acuteness for discovering provisions for taxing "protection"-ridden Americans, have ruled that these two articles are subject to the same duty as engravings, under the drag-net provision concerning non-enumerated articles which "bear a similitude" to any article enumerated; and in the Senate bill the word "photographs" is inserted in paragraph 379, which relates to books and engravings, and imposes a duty of 25 per cent. ad valorem. We do not wish to seem factious by finding fault with a single addition to the free list, but certainly one might not unreasonably have expected that an argument for encouraging the distribution among our people of photographic copies of the masterpieces of Old World painting and sculpture would have appealed to the good sense of the Senate of the United States, and that the untaxed importation of Braun's beautiful prints of the Sistine Madonna, or of the Venus of Milo, for example, would have been deemed of equal importance with the free importation of those marvellous Parisian productions known as fashion plates. As regards lithographs, the Senate bill (sec. 382) provides that "lithographic prints from either stone or zinc, bound or unbound (except illustrations in printed books), and all articles produced either in whole or in part by lithographic process," shall pay an import duty of 35 per cent. ad valorem, thus not only distinctly including this article among the enumerated dutiable articles, but increasing the rate of duty 10 per cent. above that now in force under the rulings of the Treasury Department. Moreover, whether inserted for that purpose or not, the words "and all articles produced either in whole or in part by lithographic process," will, apparently, increase the duty by 10 per cent. upon all lithographed or partly lithographed music, which now pays duty at 25 per cent., under the Treasury Department's decisions.

The provision establishing the duty upon paintings and statuary is contained in paragraph 424 of the Senate bill, which reads as follows: "Paintings in oil and water colors, and statuary, not otherwise provided for in this act, 30 per cent. ad valorem; but the term 'statuary' as herein used shall be understood to include *only such statuary as is cut, carved, or otherwise wrought by hand from a solid block or mass of marble, stone, or alabaster, or from metal*, and as is the professional production of a statuary or sculptor only." The words italicized indicate the substance of the alteration proposed to be made by the bill in the present law. Just what importance or value should be attached to the attempt to define more explicitly than is done in the law now in force, the term "statuary," we do not feel competent to say; but by the insertion of the word "alabaster" in this clause, this clever measure to "reduce taxation" succeeds in making yet another increase of duty. The act of 1883 (first paragraph of schedule N), provides for a duty of 10 per cent. upon alabaster statuary, but that clause is omitted from the Senate act, and paragraph 424 is made to include this article, thus increasing the duty upon it by 20 per cent.

This paragraph of the bill came before the Senate for consideration on Thursday, January 10, when Senator Vest pointed out that, according to the provisions of the bill, artistic, hand-made statuary in alabaster would be required to pay a higher duty by 5 per cent. than manufactures of the same material, and he protested against this discrimination, which was unfavorable to the work of the artist, but he suggested no amendment of the text of the bill. Senator Hoar deserves credit as the single member of the Senate who had the courage to speak a word in favor of free art. He expressed the hope that before the bill

had passed from the final consideration of the Committee that body would conclude to put all works of art on the free list. "I do not believe there is any American artist," he continued, "who desires to have his work protected as against the free competition of all mankind. It does not come at all, it seems to me, within any argument which is advanced in favor of a protective tariff. The genius of an artist is neither developed nor encouraged, nor in any way helped, by a policy which gives him any advantage which does not belong to him as a matter of pure superiority and merit. I do not propose to make any motion. I desire to defer to the Committee in regard to the bill; but I trust the Committee will come to that conclusion, which I believe is the desire of every American who is engaged in the production of works of art, either of painting or of sculpture, without any considerable exception." It was not to be expected that so gentle a remonstrance would have any effect on the Senate Committee. The very indefensibility of this tax makes it certain that a decided protest must be made against it before it will be done away with. No consideration seems to have been given to Senator Hoar's recommendation, but to the American who realizes the insular and disgraceful position occupied by his country in this respect, in comparison with other civilized nations, it is some satisfaction that at least one member of the Fiftieth Congress has given voice to proper convictions regarding the matter.

COME-OUTERS AND STAY-INNERS.

THE prolonged litigation over the Andover professors already resolves itself into a manœuvring for position in the contest of the American Board with the theory of future probation. Upon the denomination at large the effect of the final decision, whatever it may turn out to be, cannot now be great. The new view is strongly intrenched in many prominent churches, and they will continue to hold it, even if those who teach it in Andover should have to quit their chairs. There seems to be no likelihood of a split in the Congregational body over the question. This is really the most surprising aspect of the whole affair. Here is a large denomination with its peace disturbed by a group of innovators, who show no signs of abandoning their obnoxious tenets, yet no effort is made to cut them off, nor do the offenders ever appear to have thought of setting up for themselves.

All this is a striking testimony to the great dulling of the instinct of religious separatism in the past seventy-five years. Such a state of things simply could not have been at the beginning of this century. Every one familiar with the histories and biographies relating to the condition of the churches at that time in this country, will remember how constant a note in that literature is the willingness, almost the eagerness, of the men of those days to embody their separate religious ideas in separate religious organizations. They were afraid of schism neither as word nor as thing. If a man had a new social conception, he not only broached it but worked it—if, indeed, it could be made to work. If a man got beyond his sect, he did not wait to be put out—though if he had waited he would have been put out surely enough—but went out. It was a time of intense individualism, and it almost seemed as if society would cleave down to its ultimate atoms. It was the day of the come-outers. To it has succeeded, apparently, the day of the stay-inners.

And it is not, of course, in the Congregational Church alone that this wedding of opposites may be observed. That denomination is, from its principles and authority, peculiarly weak against perverse views from within; it cannot move against them with direct and swift ecclesiastical authority; nor has it the happy knack possessed by some other sects of repressing or concealing doctrinal differences existing within it. Still, divergences as broad as those from which it suffers can easily be detected in any of the leading Protestant bodies. They all have their "schools," their left, centre, and right. In all of them the traditional broad shield of toleration has to be made as elastic as Dido's bull's-hide to cover the range of doctrinal and ecclesiastical opinion. Yet, so completely has the petition of the Litany directed against the evils of schism been answered, that in none of them, any more than in the Congregational Church, is there a sign of disrupted creeds taking form in disrupted churches.

Nor does this argue a great falling off in religious earnestness, or inquiry, or speculation. These all go on as before. The difference is that they do not now lead men, as they once did infallibly, out of one sect and into another, or to the formation of an altogether new sect. The new fashion of tolerance has, in fact, led to a new kind of sect, what may be called the inter-sectarian sect. This is referred to in Dr. Holmes's recent letter to the Unitarian Club of Boston, where he says: "We have seen large bodies of those whom we have been accustomed to regard as our theological opponents, silently wheeling to our side, *without breaking ranks or changing colors.*" In other words, there are opinions and tendencies of thought stronger and more distinctive than any sect, and running through all the sects. Many men find their closest theological affinities outside the religious body in which they were born; they give way to these affinities and are marked by them; yet they do not leave the inherited form of faith. That form may have become, in its main positions, positively distasteful to them, yet they stand by it, giving to it their influence and activity, while they give their thought and affection to the inter-sectarian sect to which they really belong. In everything but organization, of course, such men actually have formed a new sect. They have their recognized organs of opinion; they have their shibboleths; they enjoy the freemasonry of a good understanding with those of like mind.

Some years ago, a Baptist clergyman woke up to find himself holding views which were, to say the least, novelties in his denomination, though not absolutely unknown in it. He fell to corresponding with the men in the different denominations whom he knew to be of his way of thinking. Between him and them there existed that intellectual agreement and sympathy of aim which once were the bond of every sect. But now this Baptist minister found his mental intimates and religious affinities in the persons of an Episcopalian lecturer, a Congregational pastor, and a Presbyterian professor! We should have added a Methodist preacher, had not the latter subsequently left his denomination.

And of course this sort of liberal inter-sectarian sect has its counterpart on the conservative side. The theological stiffeners-up of the various religious bodies themselves constitute a religious body most definitely marked. Their most secure sense of solidarity is experienced in connection with movements and sympathies wholly independent of any one sect. We can think of no better illustration of this than the recent course of the *Independent*. But a few years ago, that paper was the synonym for the liberal, if not the radical, in religion. For reasons best known to its proprietor, it suddenly took the other tack, and took it with the customary vehemence of a convert. What the effect was upon its liberal patrons we cannot say, but the effect upon its former enemies, the conservatives, was unmistakable. They almost wept over this brand plucked from the burning. Mr. Bowen was flooded with commendatory letters from the conservative leaders in all the denominations. There need be no hesitation in speaking about this, for he at once showed that it was precisely what he was after, and published columns of them as a capital advertisement. That is a small matter; the important thing is the evidence the circumstance afforded of the existence of a great conservative sect within the sects.

There is nothing strange about this. It was inevitable that the accidental classification of religious opinions, shown in the denominations as we know them, should eventually be broken down and overridden by a classification based on what seems to be the system of nature, the division of men into liberals and conservatives. Here we get true genera, while the sects constitute species at the most. And if the idea of the variation of species is a modern idea, that of the variation of sects is at least as old as Bossuet.

VOLAPÜK, OR WORLD-SPEECH?

WITHIN the first decade of its existence Volapük has made, in comparison with all earlier or later attempts at devising a universal language, extraordinary progress. Its adherents now number, according to their own estimate, upwards of a million (the opponents of the system place this figure as low as 200,000); twenty-two periodicals, published in Germany, Spain, France, Austria, Denmark, Sweden, Italy, Switzerland, Belgium, Holland, England, China, Japan, Porto Rico, and the United States, are exclusively devoted to its dissemination; the seat of the Central Committee is established in the very place whence a superficial observer might have expected the most strenuous opposition—in Paris; clubs for and

courses of instruction in Volapük are to be met with in all civilized countries; neither Spelin, Pasilingua, Lingva internacia, nor the nine or ten remaining opposition schemes for a universal tongue have yet been able to hold the attention of any considerable portion of the public; the dissensions among the Volapükists themselves are generally hushed; the first scientific work in Volapük (and German), 'Abbildungen von 6 Schädeln, mit erklärendem Texte,' has just made its appearance. In short, Volapük would seem to be triumphant at all points.

Nevertheless, Father Schleyer's scheme has succeeded in developing not only numerous rival methods, but likewise deep-seated opposition in his own camp. Many of his earliest disciples, convinced, after long trial, of the undesirability of the Volapük method, have turned their backs upon it, and are engaged in searching after a more practical expression of the common need. Their opposition up to the present time has been spasmodic and disconnected, expressed chiefly through the medium of occasional pamphlets. It is now to take definite and organized shape. Karl Lentze of Leipzig, one of Schleyer's first disciples and foremost champions, is about to initiate a new movement through the publication of a periodical* in the three chief European languages (English, French, and German). This monthly review will furnish to the learned and unlearned of those nations most nearly interested in the success of a world-language a neutral ground—*forum linguarum*—where all parties can be heard and disputes settled without costly internecine strife of dubious outcome.

What are the most weighty objections to Volapük, aside from those brought forward against the idea of a world-language in general? (1.) The complicated character of the verb. (2.) The mutilation beyond recognition of word-roots, and the uncalled-for disregard, necessitated by Schleyer's entire method, of words universally accepted. (3.) The disagreeable and difficult pronunciation, caused by the profusion of long and modified vowels, monotonous accent, and too frequent employment of certain consonants. The first and third of these difficulties have already been commented upon at length in the *Nation;* a few examples will serve to give an idea of the second, and to throw light upon the evolution of the Volapük vocabulary. Europe is in Vp (Volapük) Yulop. Wherefore? (*a*) The Chinese, old people, and children cannot conveniently pronounce *r;* this consonant is therefore either dropped, or replaced by *l*, in forming Vp roots from known words. (*b*) Rule: No declinable word shall begin or end with a vowel. Away with *e* final and *r;* initial *E* is transformed to final *Y;* grand total: Yulop. Good! But observe the advantages of a "system." *Yul* may be looked upon as *root* of our new word, *op* as universal suffix designating "continent." A vista opens. *E. g.*, A-mer-ica: *mer* is *root; r=l* gives Mel; clap on the universal op—Melop! Aus-tral-ia; *tral*, *tal*, Talop! A-fri-ca; *fric*, *fik* (*k* phonetic)—Fikop. Asia—Hm! inconvenient; no proper *root* there. So let us take the French form with article, l'Asie; *lasi*, *las*—stop! Rule: No substantive shall end with a sibillant; we must turn it round: *sal;* no, that "root" has been taken before for *salt.* Happy thought: we had an *i* in *lasi;* let us take that instead of *a*—presto, change!—*sil*, Silop! The unprejudiced observer might ask: "Why change these well-known names at all?" Schleyer would answer: "The System demands it, the System is fixed and unalterable, without a System all is chaos; if you once learn what the System requires, you will reach the end and aim of World-Language: to make yourself understood by everybody everywhere."

One more example. In choosing a "root," Schleyer goes through his fifty-five languages to find the shortest and (for the System) most convenient one. *E. g.*, Eisenbahn—chemin de fer—railroad; the last appears on the whole the best, and from it is accordingly evolved *lellod*, and, to avoid the doubled consonant, *lelod* (vowels long, if you please). So far, so good. But presently he needs a new Vp "root" for *iron.* For Eisenbahn he already finds in his German Vp Vocabulary, *lelod;* what more natural (or *spirituel*) than to take *lel=iron*—and how logical, too! Here we not only see the *shape* (rail, regel (Sw.), Riegel) converted into the *substance*, but are called upon to admire the ingenuity of the process.

Alexander J. Ellis, F.R.S., Vice-President of the British Philological Society, in his politely sarcastic response to the invitation of the American Philological Soiety (calling a Congress for the consideration of the world-language), praises Vp as a speech based on non-Aryan principles. He is entirely right, both as regards its grammatical construction and word-material, which latter is founded on roots so mutilated that, although 80 per cent. are avowedly from English, Latin, Italian, Spanish, French, and German, they can no longer be recognized as Aryan. Now, the memorizing of the vocabulary of any wholly artificial language is, after the grammatical construction has been mastered, a matter of undeniable difficulty. In the case of Vp this difficulty is aggravated by the really arbitrary transformation and "swapping round" of roots.

But, whatever be the merits or demerits of Vp, its author has succeeded in awakening and keeping alive the interest of the world-public to an unprecedented degree; which goes far towards proving that a real world-speech is a thing desirable and desired, if not yet absolutely necessary. Just now the main difficulty would seem to be, that "das Gute der Feind des Besseren sein mag"—that the friends of Vp, who still include but an insignificant fraction of the hundreds of millions eventually to be reached by the "one speech for one humanity," may succeed in blocking the way for the introduction of an easier, because simpler and more intelligible, system of language. Mr. Ellis, while admitting (pp. 90-1, 96) the decided superiority of Spelin (the world-speech invented by Prof. Bauer of Agram) over Volapük, declines further discussion of the subject, on the ground that the latter tongue has already met with a favorable reception. Unfortunately (or otherwise), Mr. Ellis's own deliberate judgment in favor of Spelin, together with the much more attractive form of this latter as compared with Vp, must, it seems to us, aid in creating a current of public opinion adverse to the spread of Volapük. For why should all the world learn a more difficult system merely to please at the utmost a million of its friends? We have reached the most dangerous stage on the highway of universal speech, where the admittedly better is deliberately set aside by the partisans of the (moderately) good.

What does the new movement, headed by the *Interpretor*, offer as a substitute for, or advance upon, Volapük? As appears from the advance sheets, the founders of the undertaking assume the position that a world-speech cannot, and ought not to, be the work of any individual, however highly gifted. They declare, furthermore, that they, as former zealous adherents of Vp, are satisfied that this method does not afford a really practical solution of the problem. The Vp vocabulary they consider to present great and utterly needless difficulties to the student—all the difficulties, in fact, with the exception of grammatical simplification, presented by a new language. It is their aim to render available the mass of word material common to the languages of western Europe. While presenting a simple grammatical system of their own, the editors desire and request the active coöperation of all persons interested in universal language, in order that the question may be treated and illumined from every point of view. The *Interpretor* desires ostensibly neither to enter into a conflict with Vp or any other system, nor to present any similar scheme, but will exert its influence towards settling the many disputed points respecting world-speech in a way at once satisfactory and final. In regard to the vocables, no doubts are to be left unsolved as to the material which the world-speech shall have at its disposal. As long as a dozen or more different world-languages exist, each with its own partisans, no clear public opinion can be formed regarding the nature of world-language. The editors propose to show that, by taking natural and linguistic laws, more especially those touching the evolution of language, into account, a world-speech can be framed from which invention pure and simple, and consequently individual idiosyncrasies, shall be completely excluded. They propose that from the languages of western Europe the best known, shortest, and most euphonious words of clearest meaning shall be selected, preserving form and pronunciation as far as possible (the spelling is of course to be phonetic); also, that the best rules and principles shall be adopted in all cases; "then," say the editors, "the relatively best language must result, which will deserve to take precedence of all others."

Without filling space unnecessarily with details of the new departure, it may be said that it invites the earnest attention of all, whether adherents of Vp or no, who believe in the theory of a world-speech, and desire to see it put into a practical shape. It is altogether unlikely that the *Interpretor* will accept Vp or any modification of it, for Vp admits of no radical modification. The *Interpretor* shows in some particulars a leaning towards Spelin. But all views worthy of attention, whether favorable or unfavorable to the editors' scheme, will receive due notice in the *Interpretor*, whose motto seems to be "Principle above party." It is hoped that the many rival systems may crystallize about the *point d'appui* here offered.

* *Interpretor:* International Review for Universal Language. Karl Lentze, Editor, Leipzig.

THE YOUTH OF CALVIN.

PARIS, January 23, 1889.

M. ABEL LEFRANC is the author of a 'History of the City of Noyon and of its Institutions to the end of the Thirteenth Century.' He has now applied himself to the study of the earliest part of the life of Calvin, who was, as everybody knows, born at Noyon. His 'Jeunesse de Calvin' is an important contribution to the Calvin literature. Historians have hitherto neglected the early part of Calvin's life; they know the smallest circumstances of his career only from the time when he left France and began his apostolate in Geneva. But who has ever well explained how the great reformer was himself reformed, under what influences he became what he was afterwards in Switzerland? Did his conversion take place in Paris, in Orleans, in Bourges? We really knew little about the first act of the drama which ended out of France.

The documents which M. Abel Lefranc has

used are in the first place the "Registers of the Deliberations" of the city of Noyon, in which are related the smallest incidents of the life of Noyon, and which had been completely unexplored. He has made some use also of the accounts of the "Rôles des tailles" of the "Livre des bourgeois." He found in the National Library at Paris an analysis of the "Registers of the Chapter" of Noyon, by one of the canons (the original registers have unfortunately been destroyed). I do not mention many works containing notes and researches on Noyon and its inhabitants, nor the more ancient biographies of Calvin, well known to all historians.

The ancestors of Calvin were all fishermen, who lived on the river Oise. His father Gérard became a bourgeois of Noyon in 1497; he was promoter of the chapter in 1500, inhabiting a house, not far distant from the fine cathedral, afterwards demolished during the League by the enemies of the great reformer. Gérard Calvin (or Cauvin) married the daughter of one of the most notable bourgeois of the town, Le Franc, who had a good fortune. Jeanne Le Franc was handsome, very pious, and used to take her son, John Calvin, when a child, to the pilgrimages of the neighborhood. Calvin, in his 'Treatise on the Relics,' speaks of the relics of the famous Abbey of Ourscamp. Jeanne Le Franc died young, and Gérard Calvin married again, but we know nothing of his second wife. He himself died in 1531, leaving four sons and two daughters.

At the age of twelve years, May 19, 1521, John Calvin received his first "bénéfice," consisting in a rent of some church property lying at Eppeville ("Eppeville" is one of the pseudonyms afterwards used by the reformer). On the 29th of September, 1527, he became curate of Saint-Martin de Martheville, and on the 5th of June, 1529, he exchanged this living for another and better one at Pont-l'Évêque. We must evidently abandon the legend, too long credited, of young Calvin educated by charity in the shadow of the cathedral of Noyon. His father was a man of some importance, and obtained church preferments for his sons, in his capacity of *procureur*, or clerk of the chapter. He gave them a very good education in a college of Noyon called after the "little caps" of the scholars. John Calvin was there the companion of the children of the seigneur of Montmor. He went with them to Paris, where he stayed at the house of his uncle Richard, near Saint-Germain l'Auxerrois. This journey took place in August, 1523.

A quarrel arose between Calvin's father and the chapter of Noyon. "At the bottom of it," says M. Lefranc, "are money difficulties. Gérard Calvin was embarrassed in his affairs, refused to render his accounts to the chapter, and put himself in complete opposition to it. The influence of this quarrel on the mind of the future reformer must have been considerable." Gérard was excommunicated by the chapter, and fell ill; his son John returned from Paris and saw him die. The chapter was not disarmed by his death. Charles, the eldest of the Calvin children, was persecuted by the chapter, and was excommunicated in his turn, though he was chaplain of the cathedral and curate of Roupy. He was suspected of heresy, and when he died on the 1st of October, 1537, without being reconciled with the Church, he was not interred in consecrated ground.

John Calvin was thus not the first member of his family who was opposed to the Church. He was probably much shocked by the proceedings of the chapter of Noyon, first against his father and then against his brother Charles. The religious beginning of Calvin is, however, to be found, not only in his feelings for his family, but also in the state of his native country. Picardy was open very early to the ideas of the Reformation. Pierre Robert, who was known under the name of Olivetan, was a Picard; the inhabitants of this part of France are proverbially known for their love of contention. At Noyon, there was a perpetual quarrel between the Bishop and the chapter. It seems highly probable that Olivetan, who had been attracted to the ideas of the Reformation at Orleans and afterwards at Strasbourg, was the initiator of Calvin and the cause of his religious evolution. Olivetan had become in Strasbourg a pupil and a friend of Martin Bucer. Lefèvre d'Étaples, the Roussels, Vatable, Olivetan, and Calvin all belonged to Picardy. We can, therefore, not look upon Calvin's conversion as an isolated fact; he was drawn along in a current, with many others; he belonged to a sort of class, which received the new ideas chiefly in the universities. Calvin's conversion was determined by a chain of reasoning; he does not seem to have suffered from any doubts, to have felt the same sort of anxiety as Martin Luther. He resigned his livings, and provoked in the cathedral a public manifestation which was followed by his immediate arrest. He was put in prison on the 26th of May, 1534, and he remained in it for about five months. This arrest was the origin of the legend which afterwards represented him as having been marked with a hot iron on the shoulder for an abominable crime (a legend which has found its way into some historical books).

M. Lefranc has attempted to throw more light on the various peregrinations of Calvin, and on his life at Paris, at Orleans, at Bourges. Some parts of the time which he spent in these various places as well as at Noyon are extremely obscure, and I must say that M. Lefranc, by not following an exactly chronological order, has added somewhat to the obscurity and confusion. Calvin's journeys become almost enigmas. We have to follow him from place to place, and we cannot follow him from year to year. We are presented to his acquaintances, to the friends he makes in the universities, without any regard to time, and the impression received becomes confused and almost irritating. Did Calvin meet Rabelais in one of these journeys in the province of Saintonge? It is a question which cannot well be answered; what is certain is, that in 1533 Calvin denounced 'Pantagruel' as an obscene work, justly condemned by the censure. Rabelais, on his side, did not spare Calvin (see the famous passage in the third book of 'Pantagruel'). From Angoulême, he went to Nérac, where he visited Lefèvre d'Étaples, the translator of the Bible, and the patriarch of the French Protestants, who was living quietly at the Court of the Queen of Navarre. Calvin visited Poitiers, Orleans, gaining everywhere adherents to the new idea by his propagandism and his eloquence. We find him again in Noyon in 1534. We have said already that he was thrown into prison at that time; when he was free, he went to Paris. He led there a very quiet life, preparing himself for his great work, in communication with the ardent Farel, with Gérard Roussel, with the leaders of the Reformation. Persecution had begun, on all sides the heretics were threatened. Marot fled to the Duchess of Ferrara in Italy. Calvin took the road into exile, going first to Bâle, and stopping at Strasbourg on the way. At Bâle he was hidden under the name of Martianus Lucanius, and led a life of complete retirement. He was working at his first great work, the 'Institution Chrétienne,' which he finished on the 23d of August, 1535. His great mission really began with the publication of this book, which is equally remarkable in a literary and in a religious sense.

I will not dilate much on the further movements of Calvin. They are better known than the first part of his life. From Bâle he reached Italy, and went to Ferrara with Dutillet, who travelled under the name of Haulmont. In 1536 he came back to France, and stayed some little time in Paris and in Noyon, in order to settle some family business. He was stopped on his way back to Bâle, and went to Geneva, where he was detained by Farel and remained.

I have said that Calvin was not, so to speak, an accident, that in his birthplace of Noyon, in his earliest infancy, there was a party inclined to reform. This ecclesiastical centre was not, in the sixteenth century, the quiet and sleepy place which it is now; the Protestant group became stronger and stronger with time, and a sort of municipal civil war raged in it for as much as thirty years. The division became well accented when the persecution began; on one side were the Huguenots, on the other the future members of the Holy League. The chapters which M. Lefranc has written on the divisions of Noyon are perhaps the most interesting in his book; he shows how the city of Calvin, though Calvin was there no longer, became a sort of headquarters for the reformers of all the region of the north of France. Laurent de Normandie, a friend of Calvin, became lieutenant of the bailiwick of Noyon, and through his influence the Protestants of the region enjoyed more liberty than in the rest of France. But he was, after a while, obliged to leave the town with his friends, and took refuge in Geneva. An inquisitor-general of the Faith was sent to Noyon. The Parlement of Paris interfered and began prosecutions against the heretics. Then came a period of calm: the Maréchal de Montmorency tried to preserve a sort of neutrality between the Protestants and the Catholics. But neutrality cannot last long in civil wars; the Catholics triumphed completely in the end, and at the time of the death of Calvin (May 29, 1564), it may be said that his partisans had been completely vanquished by the partisans of the League, which now was beginning to organize itself. The chapter spoke of him as the Antichrist.

How can this total extinction of the Reformation in Noyon be explained? Persecution and force had done their work; moreover, the Catholic clergy of Noyon had fought with the greatest energy. The most aristocratic inhabitants were inclined to the new ideas, but the people had remained all along faithful to the old doctrines. Thirty years after the death of Calvin, Cardinal Alexander de Médicis passed by Noyon. He wished to see Calvin's house. It was shown to him. He then asked if there were any Protestants in the town; the answer was, "Not a single one." This was an exaggeration; but it is true that Catholicism had finally triumphed in the place where the greatest reformer was born.

SHELLEY WITH BYRON.

Este, August, 1888.

The little town of Este lies at the foot of the last of the Euganean Hills, just where they gradually subside into the plain, and from the little river which washes its side the Battaglia Canal carries the water to Padua. The villa called I Cappuccini, now belonging to the Künkler family, which Byron in the autumn of 1817 hired as a summer residence for two years from the English Consul-General Hoppner, who had then a lease of it, is just above the town on the hillside, immediately over the great ruins of the

old Castle of Este, the home of the ancestors of the Queen of England. It is a plain, square house, with commodious, airy rooms, in the midst of a large, pleasant garden full of trees and flowers and plots of grass, with a vineyard extending behind the house up the hillside. You are still shown the room which Byron habitually occupied, and the table on which he wrote; but the battlemented wall on the steepest side of the garden is so arranged and filled in as to form a high terrace, on which is a pavilion which tradition points out as the favorite resort both of Byron and of Shelley. The view extends far over "the waveless plain of Lombardy." From the top of the hill the view is wider and finer, for there you can look back into the Euganean Hills. "We see before us," Shelley wrote to Peacock, "the wide, flat plains of Lombardy, in which we see the sun and moon rise and set, and the evening star, and all the golden magnificence of autumnal clouds." This was the house which Byron lent to Shelley when the latter came on with Jane Clairmont, who had been seized with a sudden desire to see again her own and Byron's child, the little Allegra. Here the Shelleys spent, with the exception of visits to Venice, the months of September and October, 1818; and here Shelley, under the renewed influence of the excitement of Byron's talk, did some of his best work.

In looking over the manuscript diary of the Cavaliere Mengaldo, who was afterwards a General in the Revolution of 1849, I find that on September 21, 1818, he drove from Padua to Este to see Count Cicognara and other friends. He adds: "Visit Lord Byron's little girl. Embarrassment of the people who received me. Conversation awkward on both sides." And on the next day: "They tell me that the English family living in Lord Byron's house has suddenly gone away." Mengaldo probably drew some strange inferences; for at that time he did not know that Shelley's little Clara was very ill and had been taken to Venice in search of a doctor, but only to die. On the 24th, Mengaldo returned to Venice, and in the evening visited the Hoppners, where the Shelleys had just arrived. His journal says: "In the evening, sad presentiments while going to Mr. Hoppner's, which were verified by the death of the little girl of Mr. Schelling." On Monday, September 28, Mrs. Shelley's diary says: "Go with Mrs. Hoppner and Cavaliere Mengaldo to the library"; a statement curiously confirmed by Mengaldo, who on the same date wrote: "With Madame Hopner and Madame Scheling to the Ducal Palace to see the library [*livrerie*, he writes, in his odd French]. I am ashamed to know so little about all these rarities."

Shelley had not seen Byron for fully two years since they parted in Switzerland, and "really hardly knew him again; he is changed into the liveliest and happiest looking man I ever met." There had been, however, some correspondence about the little Allegra, and the task of negotiating an interview between mother and child, which Shelley had then undertaken, was not of the pleasantest nature. Byron's reception of Shelley was so warm and cordial that the latter at once surrendered himself to Byron's influence; and though at various times he tried to shake it off—especially when urged and badgered by the complaints and recriminations of Jane Clairmont, or Claire as it is easier to call her—it affected him at times very strongly throughout the remainder of his life. The first result was to excite Shelley's poetical faculty, which had been slumbering during these two years, or had exercised itself only on political themes and on trifles. "Julian and Maddalo," written in the summer-house at Este, reflects strongly the impressions left on Shelley by his first visit to Venice; for it gives idealized portraits both of himself and Byron, and a picture of their relations, as well as a charming sketch of the little Allegra, on account of which, in deference to her mother's feelings, he reluctantly withheld the poem from publication during his lifetime. The "Lines among the Euganean Hills" were written, the poet himself tells us, "after a day's excursion among those lovely mountains which surround what was once the retreat, and where is now the sepulchre, of Petrarch." The compliment paid to Byron is thought by Mr. Forman to be an afterthought; but the evidence does not seem very convincing, as that passage forms an integral part of the poem. The poetic faculty once awakened, Shelley was able to begin work on a subject which had for some time occupied his mind, the "Prometheus Unbound," of which he wrote the greater part of the first act at Este. The stimulus given by Byron lasted throughout the ensuing winter, and, in spite of the troubles which beset him at Naples, he was able to finish "Prometheus," and to write the "Cenci."

"It was one of the infirmities of Shelley's character," says Dowden, "that, from thinking the best of friend or acquaintance, he could, of a sudden and with insufficient cause, pass over to the other side and think the worst." As before, there had been a "violent outbreak of vituperation" about Miss Hitchener, as was a little later the case with the Gisbornes. Shelley, notwithstanding the pleasant intercourse at Venice, and the mutual services—for Mrs. Shelley had transcribed "Mazeppa" for publication—perhaps indignant with himself for being so easily influenced, when he had arrived at Naples, when he had listened again for two months to the complaints of Claire, and had been greatly worried by domestic troubles and by others, the nature of which we can only conjecture, burst out into an invective against Byron. There is no need to quote his letter to Peacock of December 22, 1818, where, after speaking harshly of Byron's mode of life, and feeling that for his sake he ought to hope that his present career must end soon "in some violent circumstance," yet admits Byron's greatness as a poet. It is very difficult, however, to see what he could mean after reading, as he had done, in the manuscript, the fourth canto of "Childe Harold," by saying: "The spirit in which it is written is, if insane, the most wicked and mischievous insanity that ever was given forth. It is a kind of obstinate and self-willed folly, in which he hardens himself." And yet this letter is relied upon as one of the testimonies to Byron's "depravation" in Venice! So much has the temper of the times changed that acts like those of Byron's would nowadays hardly be thought worthy of remark even in London.

Again, for three years, the two poets had no communication with each other except by letter, and then generally on the unpleasant subject of Claire and her wishes about Allegra. Meanwhile, Shelley's poetical faculty had again become blunted by domestic troubles, by financial straits, and by the interest which English politics excited in his mind. It was only when he could get away from home for long days in the pine woods about Pisa, in the mountains, or floating down the river in his boat, that he could write those short poems by which he is best remembered, the "Ode to the West Wind," the "Cloud," the "Skylark," the "Boat on the Serchio," and the "Letter to Maria Gisborne." In the "Indian Serenade" he has an interesting reminiscence of "Lalla Rookh" in the lines,

> "The champak odours fail
> Like sweet thoughts in a dream."

In the general bewilderment about this mysterious plant, it seems to be forgotten that it is more than once mentioned by Moore, who had crammed himself with several volumes of *Asiatic Researches* for the purpose of giving local color to his poem. The champak is a shrub or tree of the magnolia family—*Michelia Champaca* of Linneus—whose golden flowers are used for adorning the black hair of the Indian women, and are sometimes strewed on the temple floors; their odor is so strongly aromatic as to be thought offensive to bees, who do not frequent the plant. The sambac, which has so nearly the same name and is equally fragrant and beautiful, is a shrub of the jasmine family, and is not unfrequently cultivated in Europe. There used to be specimens of it in the Botanical Garden at Pisa.

But let us return to Byron. Miss Clairmont was constantly worrying herself and others about little Allegra. She had given up the child to Byron, in order that it might receive a better education and be better provided for. She knew that she could not herself support the girl, and that to ask the Shelleys to do so would be asking too much, as her presence would in the end have caused annoyance to every one. Claire besieged Byron with letters on the subject, asking for at least a visit from Allegra; protested against her staying "in unhealthy Venice," "with its stinking canals and dirty streets enough to kill any child," and when it was proposed to send her to a convent, as she had outgrown the servant's care, Claire protested still more. Byron refused to have any intercourse with her, and was evidently annoyed at Shelley's letters on the subject, although the latter professed not to know what was contained in the letters of Claire which he enclosed. There seemed to be an idea in this atheistical family that a conventual education rendered Italian women "licentious and ignorant, bad wives and unnatural mothers"; but after Shelley had discussed the matter calmly with his wife, he fully upheld Byron's decision as being in every way just and proper, and could not discover that he had acted in any way unworthily towards Allegra. There was, however, a reason for Byron's conduct which Shelley found out—apparently to his surprise—when, in August, 1821, at Byron's request, he visited him at Ravenna. Byron had heard that Claire had been living as Shelley's mistress, that a child had been born when they were in Naples in December, 1818, and had been sent to the foundling hospital; and therefore he did not consider Claire a proper person to have the care of the child—not only for its own sake, but also for that of his own reputation. This story had been told by some servants whom Shelley had dismissed, and as there seemed nothing intrinsically improbable in it, it was believed by both Byron and the Hoppners without difficulty. Miss Clairmont had already committed one fault; Shelley was very fond of her, and so much under her influence as to give his wife many pangs of jealousy, so that at last she could not have Claire in the same house with her; Claire had been ill some time in Naples, and a child had certainly been born there to some one and intrusted to Shelley's care. Shelley's moral character was really no better than Byron's; but one was a cynic, and the other a sentimentalist who perhaps did not always carry his feelings into action. Without going back to Shelley's former life, it is sufficient to study his relations to Emilia Viviani, to Jane Williams, and, indeed, to all the women whom he met frequently, or to read his poem, "Epipsychidion," which inculcates

the necessity of loving more than one woman in the interest of art and of the higher spiritual culture.* Nor did there seem to Byron and his friends anything particularly shocking in this accusation. Claire, though called Mrs. Shelley's sister, was in reality no relation at all, being her stepmother's child by a previous marriage.

Byron would have thought it absurd to be jealous of Shelley, and therefore wrote to him and invited him to Ravenna, and received him warmly. Mrs. Shelley, on hearing from her husband of this accusation, which he thought she only could "effectually rebut"—referring, apparently, to the charge of cruelty, as that about Claire he seemed to think only "a great error"—was very indignant, and wrote a long letter to Mrs. Hoppner, denying the whole story, which all are willing to accept for true so far as she was cognizant of the facts. This letter was sent to Shelley to be forwarded; he, however, gave it to Lord Byron, who engaged (he says) to send it with his own comments. The fact that this letter was found among Lord Byron's papers after his death is used by Shelley's biographers "to witness against the baseness of the man who thought to spare his own vanity at the cost of the honor of his friend." This, however, proves nothing of the kind. We do not know that what Byron said really amounted to a promise, for Mr. Dowden has shown over and over again that it is unsafe to trust literally to the statements either of the Shelleys or of Claire. Lord Byron may either have written to Hoppner on the matter, or have sent him a copy of the letter, reserving the original for his own use; or he may have intended to read the letter to Hoppner with comments, not knowing then that they would never meet again; or he may have taken the extremely sensible view that it was one of those subjects about which the less said the better.

As Byron had laughed at the story as absurd and ridiculous, Shelley soon thought no more about it, looked at the antiquities of Ravenna, though he could not interest himself in them as they were only Christian, rode with Byron in the pine forest, talked with him all night on poetry and politics, and generally adopted his mode of life during the ten days of his visit. It was a delight to him to have again some intellectual conversation, although they, "as usual, differed, and even more than ever." Shelley could not agree with Byron's system of criticism; thought that he recognized the pernicious effects of it in the "Doge of Venice," and said: "It will cramp and limit his future efforts, however great they may be, unless he gets rid of it." To Leigh Hunt he wrote: "Lord Byron—I suppose from modesty, on account of his being mentioned in it—did not say a word of 'Adonais,' though he was loud in his praise of 'Prometheus,' and, what you will not agree with him in, censure of the 'Cenci.' Certainly, if 'Marino Faliero' is a drama, the 'Cenci' is not—but that between ourselves." While Shelley, with great good judgment, thought Byron on the wrong road in following the lead of the French tragedians and Alfieri, he added, in a letter to Horace Smith: "But, genius-like, he is destined to lead and not to follow. He will shake off his shackles as he finds they cramp him. I believe he will produce something very great, and that familiarity with the dramatic power of human nature will soon enable him to soften down the severe and unharmonizing traits of his 'Marino Faliero.'" As for Byron's other poems, Shelley had nothing but unbounded admiration.

"He has read to me one of the unpublished cantos of 'Don Juan,' which is astonishingly fine. It sets him not only above, but far above, all the poets of the day; every word is stamped with immortality. I despair of rivalling Lord Byron, as well I may, and there is no other with whom it is worth contending. . . . There is not a word which the most rigid asserter of the dignity of human nature would desire to be cancelled. It fulfils, in a certain degree, what I have long preached of producing—something wholly new and relative to the age, and yet surpassingly beautiful. It may be vanity, but I think I see the trace of my earnest exhortations to him to create something entirely new."

Comparing himself to Byron always put Shelley into a despondent mood, and at this very time he said of himself:

"I write nothing, and probably shall write no more. It offends me to see my name classed among those who have no name. If I cannot be something better, I had rather be nothing. My motive was never the infirm desire of fame; and if I should continue an author, I feel that I should desire it. This cup is justly given to one only of an age—indeed, participation would make it worthless; and unfortunate they who seek it and find it not."

Renewed intercourse with Byron had immediately dispelled the black ideas which Shelley had formed of him during their separation, and he writes:

"Lord Byron is in excellent cue both of health and spirits. He has got rid of all those melancholy and degrading habits which he indulged at Venice. He lives with one woman, a lady of rank here, to whom he is attached and who is attached to him, and is in every respect an altered man." And again: "L. B. is greatly improved in every respect—in genius, in temper, in moral views, in health, in happiness. The connection with la Guiccioli has been an inestimable benefit to him. He lives in considerable splendor, but within his income. . . . He has had mischievous passions, but these he seems to have subdued, and he is becoming what he should be, a virtuous man. The interest which he took in the politics of Italy, and the actions he performed in consequence of it, are subjects not fit to be *written*, but are such as will delight and surprise you."

One of the reasons why Shelley had been invited to Ravenna was that he might try to dissuade the Countess Guiccioli from seeking refuge in Switzerland; as he, being independent in the question, and one who himself had suffered, could represent to her in forcible terms the straightlacedness, the petty gossip, and the unpleasantness of Swiss society, as well as the curiosity and even the malicious calumnies of the English residents and visitors. In this negotiation he succeeded, and Byron decided to try some place in Tuscany, which ultimately turned out to be Pisa. Nothing was positively decided at the time about the little Allegra, except that she was to be kept temporarily at Bagna Cavallo. Shelley went to see her at the convent, and convinced himself that the arrangement was in most respects a good one; that she was well, and kindly treated, and even petted, although he added: "Her intellect is not much cultivated. She knows certain *orazioni* by heart, and talks and dreams of *Paradiso* and all sorts of things, and has a prodigious list of saints, and is always talking of the Bambino. This will do her no harm, but the idea of bringing up so sweet a creature in the midst of such trash till sixteen!" The description of Allegra given in this letter is interesting to compare with the one of her at Venice three years before in "Julian and Maddalo."

Shelley was not without misgivings about Byron settling at Pisa, as he himself had had somewhat the idea of passing the winter at Florence. First of all, Claire must be got out of the way. She had indeed been already separated from the family, to appease Mrs. Shelley's jealousy; but she had to be kept out of the way to prevent any disagreeable scenes with Byron. Then there were personal questions, for Byron and Shelley differed too much in character and habits to make constant intimate intercourse always agreeable. Occasional separations are of use even to the best of friendships.

"We are excellent friends," Shelley had written to his wife from Ravenna, apropos of helping Leigh Hunt, "and were I reduced to poverty, or were I a writer who had no claims to a higher station than I possess, or did I possess higher than I deserve, we should appear in all things as such, and I would freely ask him any favor. Such is not the case. The demon of mistrust and pride lurks between two persons in our situation, poisoning the freedom of our intercourse. This is a tax, and a heavy one, which we must pay for being human. I think the fault is not on my side; nor is it likely, I being the weaker. I hope that in the next world these things will be better managed. What is passing in the heart of another rarely escapes the observation of one who is a strict anatomist of his own."

At the same time Shelley thought that Lord Byron's presence at Pisa would afford them a certain amount of security and protection which they might not have at Florence; and after they were all settled there—Byron in the Lanfranchi Palace, and the Shelleys and the Williamses in the Tre Palazzi just across the Arno—Shelley wrote to Peacock: "Lord Byron is established here, and we are constant companions. No small relief this, after the dreary solitude of the understanding and the imagination in which we passed the first years of our expatriation, yoked to all sorts of miseries and discomforts." Byron persuaded Shelley to see something more of society; and insisted on his weekly dinners, which Shelley attended, though he professed to be bored by them. He was made, too, to take more exercise; rode daily with Byron, and became almost his rival in pistol shooting, to the great advantage of his health. His cousin Medwin, on seeing him after an absence of some months, had found him an altered man: "His health had sensibly improved, and he had shaken off much of that melancholy and depression to which he had been subject during the last year." Shelley wrote to one friend about his tranquil life, his better health, and his lighter cares; and to another: "What think you of Lord Byron now? Space wondered less at the swift and fair creations of God, when he grew weary of vacancy, than I at the late works of this spirit of an angel in the mortal paradise of a decaying body. So I think—let the world envy, while it admires as it may." And again, with regard to Byron's latest volume: "In my opinion, it contains finer poetry than has appeared in England since the publication of 'Paradise Regained.' 'Cain' is apocalyptic: it is a revelation not before communicated to man." In urging Horace Smith to assure Moore that he had not the slightest influence over Byron on religious subjects, he says, "If I had, I certainly should employ it to eradicate from his great mind the delusions of Christianity, which, in spite of his reason, seem perpetually to recur, and to lay in ambush for the hours of sickness and distress. 'Cain' was *conceived* many years ago, and begun before I saw him last year at Ravenna. How happy should I not be to attribute to myself, however indirectly, any participation in that immortal work!"

Shelley's company and conversation were to Byron a solace, a resource, and an amusement. Each friend did good to the other; but the demon of mistrust came in again, in the persons

* One cannot help recalling a passage in George Sand's 'Valentine,' where Jacques says: "I have never worked on my imagination to light up or reanimate in myself a feeling which did not yet exist, or had come to an end. I have never imposed on myself consistency as a duty. When I have felt that love was dead, I have said so without shame or remorse, and *I have obeyed Providence who attracted me elsewhere.*"

of Leigh Hunt and of Jane Clairmont, especially just before and just after the death of Allegra. The perpetual money troubles of Hunt and his establishment in Pisa caused apprehensions of difficulty, which induced Shelley to write to him: "Particular circumstances, or rather, I should say, particular dispositions in Byron's character, render the close and exclusive intimacy with him in which I find myself intolerable to me." This was at the time when Claire had written another ill-advised and senseless letter to Byron about Allegra, and when Shelley and his wife had, almost in spite of themselves, taken up her quarrel. Mrs. Shelley, wishing for a "lone sea-girt isle," wrote to Mrs. Gisborne: "Shelley is entangled with Lord Byron, who is in a terrible fright lest he should desert him"; and to Claire: "You say great sacrifices will be required of us. I would make many to extricate all belonging to me from the hands of Lord Byron, whose hypocrisy and cruelty rouse one's soul from its depths. . . . To get a furnished house, we must go nearer Genoa, probably nearer Lord Byron, which is contrary to our most earnest wishes." Shelley about the same time wrote to Claire:

"It is of vital importance, both to me and to yourself, to Allegra even, that I should put a period to my intimacy with Lord Byron, and that without *éclat*. No sentiments of honor or justice restrain him (as I strongly suspect) from the basest insinuations, and the only mode in which I could effectually silence him, I am reluctant (even if I had proof) to employ during my father's life. But for your immediate feelings, I would suddenly and irrevocably leave the country which he inhabits, nor ever enter it but as an enemy to determine our differences *without words*. . . . I shall certainly take our house *far* from Lord Byron, although it may be impossible suddenly to put an end to his detested intimacy."

What Shelley feared was a duel, although in all probability none of his expressions were literally meant, as he wished only to produce a strong effect upon Claire, for he writes a few days later:

"Your late plan about Allegra seems to me in its present form pregnant with irremediable infamy to all the actors in it except yourself; in any form wherein *I* must actively coöperate, with inevitable destruction. . . . I *could not* refuse Lord Byron's challenge, though that, however to be deprecated, would be the least in the series of mischiefs consequent upon my . . . intervention in such a plan. I say this because I am shocked at the thoughtless violence of your designs, and I wish to put my sense of their madness in the strongest light."

Yet when all this was going on, and there was no need of thinking about Claire, Shelley could write that 'Sonnet to Byron' which must needs be quoted here:

"[I am afraid these verses will not please you, but]

If I esteemed you less, Envy would kill
Pleasure, and leave to Wonder and Despair
The ministration of the thoughts that fill
The mind which, like a worm whose life may share
A portion of the unapproachable.
Marks your creations rise as fast and fair
As perfect worlds at the Creator's will.
But such is my regard that nor your power
To soar above the heights where others [climb],
Nor fame, that shadow of the unborn hour
Cast from the envious future on the time,
Moves one regret for his unhonoured name
Who dares these words: the worm beneath the sod
May lift itself in homage of the god."

We all know what happened next. The Casa Magni, near Lerici, was hired for the summer. All that Byron could do was to perform the last sad offices to his friend on the seashore, near Viareggio. Claire could always console herself with the revengeful thought that she had embittered the last years of two great poets.

Correspondence.

THE IMMIGRATION BILL.

To the Editor of The Nation:

Sir: I am aware that the *Nation* does not claim to have any great direct influence over the present House of Representatives, but I venture to believe that it is a powerful organ of that public opinion which, Prof. Bryce tells us, really governs the United States. I therefore ask you to allow me to appeal to your readers against certain provisions in the bill on immigration as reported by the Committee of the House of Representatives.

It is unsafe to rely upon telegraphic reports, but Reuter can hardly be mistaken in describing the bill as excluding, not only convicts and polygamists, but also "Anarchists, Socialists, and persons afflicted with any loathsome disease." It is, moreover, undeniable that if the bill is really thus expressed, it represents not unfairly the hasty desire of many specimens of the "average American."

The words "Anarchist" and "Socialist" are at present so unpopular in the United States as to be little better than vague terms of opprobrium. But even members of the House of Representatives might be expected to know that they are the avowed designations of thousands of reputable European political economists, historians, and students of sociology. The "acute outbreak of individualism, unchecked by the old restraints, and invested with almost a religious sanction by a certain soulless school of writers," from which Prof. Foxwell asserts England to be still suffering, may be considered in the United States to be the only possible basis of social organization; but socialism is daily accepted in Europe as the social creed of more and more competent observers.

Do the people of the United States really desire to exclude Socialists from "the land of liberty"? They would find the result a little unexpected. English political economists could seldom land in New York, for a large majority of them would be found to profess themselves Socialists. One who is perhaps our present leader, Prof. Marshall of Cambridge, has at various times publicly proclaimed himself a Socialist, and Cambridge turns out annually a good number of socialist-economic students. It was computed two years ago that out of thirteen courses of political economy being given in London, eight at least were being delivered by avowed Socialists. And would the United States have excluded John Stuart Mill, who proclaimed in his autobiography (pages 231-2) his emphatic adhesion to the Socialist views?

American students resort in annually increasing numbers to German universities. How many of their professors could they invite to visit them in the United States if this bill passes? It may safely be said that a good majority of German economic professors are Socialists of one type or another.

If "Anarchists" are to be excluded, you would shut out half-a-dozen men in the very first rank of European science. Does America not care to hear Élisée Reclus on Geography or Prince Kropotkine on Prison Reform? It is time that even Americans learned that "Anarchist" does not mean a worshipper of anarchy, but a believer in a particular tendency of social evolution, for which there is admittedly much to be said. Indeed, if you desire to keep the "land of liberty" free from Anarchists and Socialists, you will have to export some of your favorite citizens, beginning with one of your greatest novelists, and going on to one of your best economists.

Of course, it may be said that the law would not be enforced against such persons as I have mentioned; it is only the disagreeable class of immigrants whom it is desired to exclude. Whether it is expedient or fair to legislate only against the steerage passenger, may be open to question; but I desire to draw attention to the serious danger that such legislation would operate merely as an instrument of foreign tyranny. Any opponent of the system of the Czar is styled a Nihilist, and Prince Bismarck would be able to deny the "right of asylum" in America to any opponent whom he might denominate a Socialist.

For what is an "Anarchist" or a "Socialist"? Is the customs officer at Castle Garden to put test questions to the Bohemian and German immigrant, as, for instance, "Do you consider it just that the whole annual advantage of superior land (known as economic rent) should go for ever to the individual descendants of the first occupant of that land?" The exclusion of persons of lower standards of comfort is, no doubt, a legitimate economic corollary from Malthusianism, but any attempt to set up a new shibboleth in New York harbor *as to opinions* is not only unworthy of America, but practically impossible.

I am, etc.,

Sidney Webb,

Lecturer on Economics at the City of London College, England.

January 22, 1889.

[This seems a difference about names. All Anarchists of whom the United States have had any experience avowedly propose to reorganize society by violence, and the same thing may be said of the bulk of the European "Socialists" who come to this country. But we have already pointed out in the *Nation*, long ago, that any attempt to exclude either denomination by law would be futile, because they could not be recognized on landing. Anarchists and Socialists outwardly are not different from Conservatives, and they would only have to keep their opinions to themselves in order to be allowed to go where they pleased. Mr. Webb is unnecessarily alarmed.—Ed. Nation.]

SUGAR, TIN PLATE, AND TEA.

To the Editor of The Nation:

Sir: In the debate in the Senate on granting a bounty on sugar made in this country, the statement was made that Germany, France, and Austria had adopted this policy and found it of advantage. The sugar laws of France and Austria I have not at hand, but the German law, approved July 9, 1887, and taking effect August 1, 1888, is very different from the law proposed by the Senate.

Section 2 of that act provides that a tax of 0.80 marks per 100 kilograms shall be paid on the beets used, and section 6 that on every 100 kilograms of sugar, raw or refined, containing not less than 90, nor more than 98 per cent. of sugar, a rebate equivalent to the tax paid on the beets shall be allowed when the sugar is *exported*. This rebate is fixed by the act at 8.50 marks per 100 kilograms. For the season of 1886-'87, the latest figures at hand, 843 kilograms of beets produced on an average 100 kilograms of raw sugar; the tax on the beets, therefore, was 6.75 marks, making a bounty for export, and for export only, of 1.75 marks per 100 kilograms—say $\frac{2}{10}$ of a cent a pound, as

against the Senate proposition to pay the manufacturers 1 cent a pound on all sugar made in this country. The other taxes laid by this law are, on sugar imported, 30 marks per 100 kilograms, and on domestic beet sugar 12 marks per 100 kilograms when entered for domestic consumption.

In discussing the duty on tin plates it was admitted that there are no manufacturers of tin plates in the country to be protected, and that the consumer must pay the enhanced price caused by raising the duty; but, continued the high-tariff members, this increase in duty will cause the establishment of tin-plate factories, and the competition that will result will in the end reduce the price to the consumer.

Following the logic of this argument, I want to put in a plea for a duty on tea sufficiently high to start the business on a firm basis, when domestic competition will reduce the price below the present, and the large amount of money or goods we now pay to China and Japan will be kept at home. As evidence that, even without a duty to help it, tea culture is still in advance of the tin-plate business, I quote the following from the monthly report of the Department of Agriculture of South Carolina for July, 1888:

BUCKVILLE, S. C.

Col. A. P. Butler, Columbus, S. C.

DEAR SIR: I will mail you a sample of tea grown and made by myself here on my farm. I have at least 100 plants four to six feet in diameter and height. Have made all the tea used by my family for years, besides giving away many samples each year. I have no trouble growing the plants. Seldom have one die in transplanting. Obtained seed from United States Government six or seven years ago. This spring made eighteen pounds dry tea at one picking. All who have tasted it speak in highest terms of its flavor, and can and do make two drawings from same leaves, the second drawing about equal to that of first of store tea. I am satisfied that Commissioner Le Duc was correct, and that tea can be made a profitable article of growth in our dear old State, where it only requires proper soil and care. I have given mine comparatively little care, indeed. But the soil required is a deep light loam. I have over 100 acres of such. I am satisfied from my trial will make as good tea, I think, as can be grown in China. Yours truly, B. L. BEATY.

If, then, a part of the business of the United States Government is to build up home products and home markets, let us have a duty on tea. W. S. A.

BOSTON, January 29, 1889.

THE *INDEPENDENT'S* "REVERSION."

TO THE EDITOR OF THE NATION:

SIR: One of the most curious developments of protectionism is the theory, propounded by the *Independent*, that no doctrine may honorably be taught in a public institution unless the practical application of that doctrine be allowable under present laws. Of course, no man who has any respect for the necessary laws of thought can stop here. Almost all colleges receive the aid of the State in the remission of taxation; and hence, any one of them which teaches free-trade doctrines is guilty of base ingratitude and dishonesty, so long as freedom of trade is not possible under our laws. But we must go still further. Every individual receives the inestimable benefits of Government in the preservation of his right to life, liberty, and so much of his property as certain classes of protected manufacturers can do without. The conclusion is self-evident: no man can honorably attack the present tariff laws until after they shall have been repealed. But how shall the *Independent* effect its own escape from the pit which it has digged for the unhappy free-trader? Has not its able voice been lifted up against an 85-cent dollar? Its editor is surely aware that the coinage of this dollar is required by law, and that no college professor, editor, or private individual can, by its own logic, honorably advocate any other so long as this law shall remain.

Perhaps, however, it is not fair to call up the checkered past of this able journal. This new principle which it has enunciated may be the beginning of a new era, in which the infallibility of the Republican Machine will be consistently maintained. We say "new principle" only with reference to the present era of enlightened civilization. The readers of the *Nation* are well enough acquainted with the history of the Bourbons to recognize the fact that we have in this vagary of the *Independent* only an extreme case of what the science of heredity calls "reversion." W.

A KANSAS JOKER.

TO THE EDITOR OF THE NATION:

SIR: Your editorial regarding the anti-British resolution introduced into the Kansas Legislature by Mr. Poe does that body, and possibly Mr. Poe, a great injustice. The resolution was introduced, but not adopted, much less "unanimously adopted." On the contrary, it has been the occasion for much merriment with the members; and some of them begin to think that Mr. Poe, who is represented to be a sane person in most respects, has been making game of them and laughing in his sleeve at their discussions.

However, Mr. Poe may be in earnest. Not many years ago a member of the House objected to an appropriation for increasing the library of the State University. "What do they want of more books?" said he. "I don't believe there's a man in the institution who has read all the books they now have." Another member objected to the increase of the Faculty, declaring that they had in his county a man and his wife who could teach "the whole lot" of the students.

But these are merely amusing phenomena—not representative of the Kansas Legislature, any more than Henry James's specimens are representative of American womanhood. If any one wishes to get a fairer notion of the real quality of that body, let him consider at Lawrence the noble beginning it has made for a great university. In addition to the splendid material "plant" characteristic of the West, there are two hundred and fifty legitimate college students, a Faculty of thirty, containing men from Berlin, Harvard, Johns Hopkins, Yale, Williams, and Dartmouth, and from which, within five years, Princeton, Harvard, Cornell, and Williams have drawn professors; and collections of great value—those in certain lines of natural history unexcelled in America.

Senator Moody has introduced a bill, which has been favorably reported, providing for a government of the University more like that of Ann Arbor, and which will remove the institution from danger of attack by Anglophobists or the others above mentioned.

Very respectfully,
W. H. CARRUTH.

CAMBRIDGE, MASS.

BALLOT REFORM IN CALIFORNIA.

TO THE EDITOR OF THE NATION:

SIR: The ballot-reform wave has reached California, and we hope to adopt the Australian system as adapted in the Saxton bill of last year, with certain amendments. The Young Men's Democratic League, a tariff-reform organization, has been active in the matter, and has been working on a bill already introduced before our Legislature by the Federated Trades Organizations. During our discussions some new ideas have been suggested. One, which has been adopted, is to have the ballot-paper water-marked with a design to be changed at each election, and to be kept secret until election-day. The ballot is to be so folded that the water-mark shall appear on the outside. This was preferred to the plan of endorsing by initials, because the latter are so easily counterfeited. Another plan was to have adhesive stamps, to be prepared by the Secretary of State, with the same provisions as to change and secrecy. One of these stamps was to be affixed to each ballot before being given to the voter. A third proposal was to number the ballots and stubs consecutively, the number on the ballot to be surrounded by a perforated line, in order that it might be separated from the ballot just before the latter was placed in the ballot-box. We have good reason to hope that the bill will become a law at this session of the Legislature. F. I. V.

SAN FRANCISCO, January 23, 1889.

THE ELECTORAL VOTE.

TO THE EDITOR OF THE NATION:

SIR: Since the election of President, either by the direct vote of the people or by the vote of Congressional districts, seems objectionable, a third method may be worth consideration.

Let each State, as at present, have a certain number of electoral votes; but let these votes be divided among the candidates for President in proportion to the popular vote for each. To illustrate: Indiana has 15 electoral votes. At the recent election the State cast 536,949 votes, or 35,796 to each electoral vote. The votes were distributed as follows: Harrison, 263,361; Cleveland, 261,013; Fisk, 9,881; Streeter, 2,694. It is obvious that Harrison is entitled to 8 of the electoral votes, Cleveland to 7.

An examination of the entire vote cast in November shows that, if this method had been employed, Cleveland would have received 205 electoral votes; Harrison, 188; Fisk, 5; Streeter, 3. This result, of course, represents the vote of the whole country much more accurately than the method in use. (If the 401 electoral votes were divided among the candidates in exact proportion to the entire vote for each, they would stand, Cleveland, 195; Harrison, 192; Fisk, 9; Streeter, 5.)

If this method were to be adopted, the machinery of the Electoral College might be abolished. The executive authority of each State, instead of issuing certificates to the electors chosen, would send to Washington a certificate to the effect that the State had cast so many electoral votes for such candidates. If, however, it were thought best to retain the electors, the requisite number of each party could be appointed, either by naming those having the most votes (there is always some scratching of electors) or by taking the names from the head of the several tickets—as is done in the simplest form of proportional representation, the "free list."

It is true that this method is to some extent open to one objection raised against election by direct vote—that the result would not be reached so promptly as by the present method. But the delay, even if considerable, would not be excessive; and it would be a small price to pay for a result which should remove the injustice of the present method. C. P. W.

DRESDEN, January 22, 1889.

BENJAMIN WEST OF NEW HAMPSHIRE.

To the Editor of The Nation:

Sir: In your paper of January 17, and the account of Mr. Walker's book 'A History of the New Hampshire Convention,' etc., I find the following:

"Mr. Walker might have given a dash of 'local color' to his narrative if, in referring to John Langdon and Nicholas Gilman as the delegates of New Hampshire in the Federal Convention, he had explained the reason of their late attendance and why they were not joined by their colleagues, John Pickering and Benjamin West. Mr. Madison tells us in one of his letters that it was not owing to any backwardness on the part of the State to be represented at Philadelphia, but because 'the State Treasury was empty' and the substitution of private resources was found inexpedient or impracticable."

This, as far as my great-uncle Benjamin West (Lawyer West, as he was usually called) is concerned is a mistake. His brother, my great-grandfather, the Rev. Samuel West of Hollis Street Church in Boston, left a manuscript record of the West family which lies before me, and I copy this reference to his brother:

"As evidence of his not coveting but even feeling an aversion to publick office, it is sufficient to mention the numerous appointments which he has received from the State to which he belongs, and his uniform refusal to accept them. He was chosen a member of Congress under the old or first Confederation, a member of the Convention which formed the present Constitution, and of the State Convention which ratified that Constitution, and of the first Congress after it was put into operation; he was appointed Attorney General and Judge of Probate, all which, against in many instances the urgent intreaties of his friends, and so as sometimes to excite their resentment at his obstinacy, he resolutely declined. This can be accounted for on no other principle than his extreme aversion to publick life and equal fondness for domestic peace, the enjoyment of which appears to have been his first object through every stage of life."

I have only to add that members of the family to-day regret as deeply as did the relations and friends of his own day, that Mr. West did not take a different view of his public duties. L. W. R.

Millbury, Mass., January 28, 1889.

[In cheerfully giving a place to the foregoing communication, we beg leave to say that our statement on the point in question was expressly limited by the authority given for it—"Mr. Madison, in one of his letters." Writing to Jefferson on the 6th of June, 1787, three weeks after the date fixed for the assembling of the Federal Convention in Philadelphia, he said: "New Hampshire has appointed deputies, but they are not expected, the State Treasury being empty, it is said, and a substitution of private resources being inconvenient or impracticable. I mention this circumstance to take off the appearance of backwardness, which that State is not in the least chargeable with, if we are rightly informed of her disposition" (Madison's Works, vol. i, p. 331). Mr. Fiske mentions that John Pickering and Benjamin West were "appointed as delegates, but never took their seats." He does not seem to have known that Mr. West "refused" the appointment, and we were not ourselves aware of the fact until advised of it by our correspondent.—Ed. Nation.]

MARRIAGES AMONG THE FRENCH POOR.

To the Editor of The Nation:

Sir: Your interesting remarks on the rarity of marriage among the French poor lead me to ask two questions: (1.) Are the unions they form, as a rule, permanent, and are the rights and interests of children at all respected, or is it practically a system of free love? (2.) Do you mean, as you seem to suggest, that property is a prerequisite to marriage, as, in fact, it so often is to (Protestant) church membership?

Respectfully, W. M. S.

January 29, 1889.

[It would be impossible to answer the first question with any approach to accuracy. (1.) As far as we can learn, the unions are as permanent and the rights of children as much respected as among the corresponding social class in any European country. (2.) We mean that legal marriage is in France a somewhat expensive and complicated form, with which a poor couple dispense easily in order to save the money, finding that an illegal union does not lower them in the eyes of their friends and neighbors.—Ed. Nation.]

SHAKESPEARIANA.

To the Editor of The Nation:

Sir: In your issue of the 17th, you speak of a new magazine as "an offshoot of *Shakespeariana*, or even its heir." We beg to inform you that *Shakespeariana* is now in its sixth year, a longer period than any yet reached by any Shaksperian journal, and that at no time have we even considered its discontinuance.

The magazine to which you refer has no connection with us, and we trust that you will correct the impression you have made that *Shakespeariana* has been discontinued.

Yours very truly,

Leonard Scott Publication Co.

New York, 29 Park Row, January 29, 1889.

Notes.

Three hundred years ago (winter of 1588-89) Christopher Marlowe's "Dr. Faustus" and probably his "Tamburlaine" were first produced upon the stage, and this anniversary has given an impetus to the desire of his admirers to raise a monument to the "creator of English drama in all its principal branches." A work in sculpture is contemplated, of such size and rarity as the fund raised will warrant; and Canterbury, the poet's birthplace, has officially laid claim to the memorial, which will accordingly be set up there. Lord Coleridge is the chairman of the committee having the matter in charge, with Tennyson, Browning, Swinburne, Leslie Stephen, J. A. Symonds, and other lights of poesy and letters for his colleagues. Prof. F. J. Child of Harvard, Mr. J. R. Lowell, and Mr. Horace Howard Furness of Philadelphia, are named as of the "American Committee," concerning which we have no other particulars.

Something will no doubt be added to the Marlowe fund from this country. To the Darwin fund which resulted in the statue by Boehm, now in the Central Hall of the Museum of Natural History at South Kensington, in a bronze medallion for Westminster Abbey, and in a residue of some $13,000, now held in trust by the Royal Society to promote biological studies and research, the United States contributed about $675, the largest sum from any foreign country save Sweden, which gave about $1,900. The final report of the Darwin Memorial Fund has just been published.

It has been proposed by the Society for the Publication of Old Norse Literature (*Samfundet til Udgivelse af gammel nordisk Litteratur*) in Copenhagen to publish in phototype reproduction the parchment MS. of the Older Edda. The Danish Ministry has recommended the sum of 4,500 kroner (about $1,600) for this purpose, and it is likely that the work will be commenced this year. The MS. is at present lodged in the Royal Library at Copenhagen, and as the building is not fire-proof, it is of special importance that a facsimile of this priceless work be secured as soon as possible. Only a few years ago, at the burning of Christiansborg, the Royal Library had a very narrow escape from total destruction. The importance of this codex, certainly the most valuable diplomatic treasure in Denmark, need scarcely be commented upon, but it may be of interest to note that this is the only old parchment copy of Saemund's Edda in existence, and that on it all modern editions of the poems have been based. The publication of this monument is an enterprise that appeals not alone to Scandinavians, but to all Germanic peoples that preserve any feeling of reverence for the old religion of their race. Students of language and religion in Europe and America will welcome the appearance of this great work, and the Society is to be heartily congratulated on its scholarly and patriotic attempt.

Chas. Scribner's Sons have in press 'French Traits,' by W. C. Brownell, a collection of essays some of which have appeared in print in the magazines; and the second volume of the Rev. Marvin R. Vincent's 'Word Studies in the New Testament.'

M. Henri Doniol's 'Histoire de la Participation de la France à l'Établissement des États-Unis d'Amérique,' with which we have recently made our readers acquainted, is to be translated by Miss Ruth Putnam and Mr. Alexander Arbuthnot, and published (probably in a limited edition) by G. P. Putnam's Sons. They also announce as in press a work by Theodore Roosevelt, on the early history of our Western territory, entitled 'The Winning of the West and Southwest, from the Alleghenies to the Mississippi,' in two volumes, the first of which will cover the period 1769-1783, or to the close of the Revolution.

Lee & Shepard, Boston, will shortly issue a volume of 'Essays, Religious, Social, Political,' by the late David Atwood Wasson. It will include an autobiographic sketch, and a biography of Mr. Wasson by his friend O. B. Frothingham.

There are some books of which it is only necessary to mention their appearance in print to insure a demand for them. Such is the timely work, by Mr. John H. Wigmore of the Boston bar, on 'The Australian Ballot System as Embodied in the Legislation of Various Countries' (Boston: Charles C. Soule). It is seldom that what we may call the contagiousness of our Federal system is manifested as it has been since November last, in the direction of ballot reform, one State following the lead of another with an almost unanimous rapidity. Mr. Wigmore provides an historical sketch of the Australian ballot, and then appends the needful text of statutes in South Australia, Queensland, Great Britain and Ireland, Belgium, Massachusetts, Kentucky, New York; with summaries of those of the Dominion of Canada, Quebec, Tasmania, New Zealand, Victoria, New South Wales, and West Australia—all this with

notes, model ballots, even diagrams. Moreover, Mr. Wigmore invites the sending to him of copies of drafts of bills as soon as introduced, and of laws as soon as enacted, or any pertinent information which may perfect subsequent editions of his work.

Mr. A. Patchett Martin's 'Australia and the Empire' (Edinburgh: David Douglas) is a disappointing book. There is no country which, in its main lines of political development, so closely resembles our own as Australia, while the rate of its development has been still more rapid than our own. Its history is full of most instructive comparisons, and its present problems are almost the same as those with which we are confronted. We need only refer to the system of recording titles to real estate and to the Ballot Act to show that we may receive valuable suggestions from this quarter; but we are obliged to say that nothing of the kind is to be derived from this book. It is singularly aimless and futile. It does not indicate what the relations of Australia to the Empire have been, are, or ought to be; and it appears to have been written merely to allow the writer to relieve himself of a quantity of miscellaneous reflections of the most pointless character. We may dimly discern that the presence of the Irish in the Australian colonies raises difficulties concerning government, education, and religion of a kind with which we are familiar; but this discovery is of little service to us. Possibly Australian readers may find somewhat of interest in these pages; we do not see how they can profit the inhabitants of any other quarter of the globe.

Mr. Albert Shaw has taken the pains to make "a collection of papers by American economists" and issue it under the title of 'The National Revenues' (Chicago: A. C. McClurg & Co.). We are tempted to make the old distinction between an economist and a professor of economics, for the professors, it must be admitted, do not shine in this collection. With the exception of three or four of the papers, the writing and the reasoning are both feeble and confused, and the assumption of *ex-cathedra* airs by men of obviously limited capacity and knowledge produces an effect that is both ludicrous and painful, and is only intensified by their attempts to make up for weakness of argument by appeals to one another's authority. Nor can we attach much value to Mr. Shaw's efforts at critical exposition.

Of a very different character is Mr. John Watts Kearny's 'Sketch of American Finances, 1789-1835,' published by G. P. Putnam's Sons. It is a very careful and scholarly account of the nature of the indebtedness incurred during the Revolution, the manner in which it was funded, and the successive measures by which the payment of the interest and the principal was secured. The causes which affected the debt, its increase and decrease, and eventual discharge, are enumerated, but, in our judgment, are not sufficiently explained. The author's materials are too valuable to be wasted upon a mere sketch of this kind, which is so condensed as to be hard reading, and we are inclined to think that he would do well to expand his work to three times its present size, and, indeed, to continue it down to recent times. There is room for a really good financial history of our Government, and the measures adopted during the civil war have never been made to yield the instruction of which they are full.

'The Stock Exchanges of London, Paris, and New York,' by George Rutledge Gibson (G. P. Putnam's Sons), is a comparative account of the methods of dealing in stocks and bonds in the three great markets of the world. It is written in a pleasant enough style, but is too superficial to be instructive and too general to be entertaining. Many works on these subjects have appeared, and we do not understand the necessity of making this addition to their number.

'Leaders Upward and Onward' (Thos. Whittaker) consists of twelve brief biographies of noted English and Scotch clergymen, all of whom, with two or three exceptions, were of the Broad Church school. It is edited by Henry C. Ewart, who contributes the chapters on F. D. Maurice and Dr. Arnold. The writing throughout is admirable, and by persons evidently in full sympathy with and considerable personal knowledge of their subjects. Especially interesting are the portraits of Dean Stanley by Prof. R. H. Story, of Bishop Fraser of Manchester by Mary Harrison, and the appreciative sketch of Archbishop Tait by his suffragan, Dr. Parry, the Bishop of Dover. Scarcely less stimulating are the accounts of the Scotch contingent, Edward Irving, Norman Macleod, Thomas Guthrie, and Principal Tulloch. A better representative of the English dissenting ministers, however, could surely have been found than John Curwen, the apostle of the Tonic Sol-fa method of teaching music. His work, though doubtless important, was on a decidedly lower plane than that of the others.

A 'Discourse in Memory of William Hague, D.D.,' by the Rev. Dr. S. F. Smith, comes to us from Boston (Lee & Shepard), with a good likeness on steel of this well-known Baptist clergyman.

'Topics and References in English History, 1066–1689,' arranged for freshmen class-work in Carleton College (Northfield, Minn.), by Prof. C. H. Cooper, will be found a very useful guide for the work of classes in this study. Some of the topics seem to us to be rather above the level of freshmen classes, which will find their most profitable work in a clear general outline, rather than in constitutional and ecclesiastical relations. If the number of lessons was to be limited to thirty, we would have omitted some of the topics here given, and brought the lessons down to the present time; for, after all, it is the most recent history that—with the exception of certain important epochs—is of the most value. We should have been glad to see appended to each lesson one really good historical novel. The only ones given are 'Unknown to Fame,' 'Kenilworth,' 'Westward Ho,' and 'John Inglesant'; besides these, Shakspere's historical plays are named.

Mr. John Ashton finds a fresh title for every new publication of his, but one always knows how he is going to spread his table. His 'Men, Maidens and Manners a Hundred Years Ago' (Scribner & Welford) is a smaller antiquarian venture than its predecessors, but it is, like them, the product of scissors and paste—a patchwork of clippings from old newspapers with a semblance of weaving into a general pattern, and illustrated by copies of contemporary caricature and other designs. The year 1787 is the one under review, and is treated in monthly order. The book is amusing and, in a way, instructive reading.

American centennial publications—centennial in both the narrow and the broad sense—abound. Mr. Worthington C. Ford has privately printed the 'Letters of Joseph Jones of Virginia, 1777-1787' (Washington). Judge Jones was a Virginian of no little prominence and local influence in the Revolutionary and post-Revolutionary period. Madison was one of his chief correspondents, and most of the series here printed were to that statesman. Mr. Ford has added a few others from the archives of the Department of State, and some from Washington and Madison to Jones; and has furnished occasional explanatory notes. The collection is very interesting, but we can say no more of it at this time.

The Legislature of Connecticut has published a pamphlet 'History of the Equestrian Statue of Israel Putnam at Brooklyn, Conn.,' with illustrations. It is a very imperfect history, for it praises the public-spirited citizen who determined the present site of the statue on the main street of the village, where it is alike killing to and killed by its surroundings, monumental and bucolic. A sadder destruction of the character of a country town famous for its beauty and for its historic associations, we have seldom seen, amid all the shocking examples of "soldiers' monuments" in every direction.

'A Vindication of Gen. Samuel Holden Parsons against the Charge of Treasonable Correspondence during the Revolutionary War,' by Dr. George B. Loring, has been reprinted from the *Magazine of American History* of October, 1888 (Salem, Mass.). The accusation was conveyed in "Sir Henry Clinton's Original Secret Record of Private Daily Intelligence," which first saw the light in the same magazine.

We should have mentioned long ere this a scholarly paper on the "Land Politics of the United States," by President Welling of the Columbian University, Washington, delivered in May last before the New York Historical Society, and by it published. It begins with the disputes of the colonies over the western extension of their territory or territorial claims, and comes down through the settlement of them to the acquisition of Louisiana, the Missouri Compromise, the Mexican War, and Kansas.

A valuable reprint from the *Pennsylvania Magazine of American History and Biography* is Dr. Charles J. Stillé's 'Life and Services of Joel R. Poinsett,' the confidential agent of President Jackson in South Carolina during the nullification troubles of 1832. Mr. Poinsett was a great traveller in his day, and we have some entertaining views of foreign parts in his letters, especially in Russia. He saw at Baku "the sources of Naptha which are within fifteen miles, . . . and constitute its chief branch of commerce."

A life well worth commemorating is described in papers read before the Rhode Island Historical Society by its President, William Gammell, and by President Robinson of Brown University ('Life and Services of Rowland Gibson Hazard, LL.D.' Providence). The late Mr. Hazard was one of the best types known to this generation of the New England character—a successful manufacturer, a philanthropist, an idealist, a weighty writer on finance and on philosophic subjects. Vols. iii and iv of his published works are 'Two Letters on Causation and Freedom in Willing,' addressed to John Stuart Mill; and 'Economics and Politics.' Mr. Hazard's patriotic services during the Rebellion, his aversion to slavery, and his powerful argument as a mill-owner against our monstrous tariff, hardly need to be recalled now, but should never be forgotten.

Another curiosity in periodical literature launched this year is the *Magazine of Poetry*, an illustrated quarterly review published at Buffalo by Charles Wells Moulton. It is a strange medley of talent and mediocrity, but to somebody the biographical data and the portraits will prove acceptable, and more or less of the poetry, according to taste.

The *Cosmopolitan Magazine* is taking a fresh start, and the February number is a decided advance on former issues. Mr. M. D. Conway's "American Nobleman at Mt. Vernon" exhibits Washington in the light of com-

mon day, with the aid of many interesting illustrations. We may also mention Mr. Frank G. Carpenter's "The Koreans at Home," with many cuts; V. Gribayedoff's paper on Verestchagin, with many reproductions of his canvases; Thomas Stevens's "A Visit to Holy Meshid"; David Ker's "Over the Cossack Steppes," etc., etc. Mr. Edward Everett Hale takes charge of the Department of Social Problems.

From F. W. Christern we receive the December number of the *Illustrated Italian Magazine*, which is published in Rome. It can hardly pretend to rival pictorially the *Illustrazione Italiana* of Milan, and it lacks the attractiveness of being in a foreign tongue.

We are requested to state that Prof. Wm. A. Keener, of the Harvard Law School, succeeds Prof. Thayer as General Secretary in America of the Selden Society; and that Mr. John W. Houston, 346 Broadway, as Local Secretary in New York city, succeeds Mr. Alexander Tison, who has accepted an appointment as Professor of Law at Tokio, Japan.

—If there were any doubt that ballot-reform had come to be a question of great interest to the people, it would be dispelled by the appearance of a discussion of it in that home of timely articles, the *Century*, and by that writer who has the knack of knowing what the people are thinking about as do few of his cloth, Dr. Washington Gladden. There is nothing particularly new in his "Safeguards of the Suffrage," but he puts with great force the truths which most thoughtful men will admit, and no better messenger than the *Century* could be found to carry his words throughout the land. The more striking parts of the Lincoln biography, as it progresses in the February number, have already been given to the public, and serve anew to show on what large lines the Illinois country lawyer was laid out. The "Romance of Dollard" comes to a right tragic end, as it needs must in fidelity to the history it follows. The completion of the story gives occasion to renew the commendation with which its opening was greeted; it is altogether a piece of strong and fine work. We are glad, remembering our adverse comment on the first of the series, to say that the third of Mr. Jessop's stories of Irish life in California seems to us very successful and pleasing. Art is represented in this issue by an affectionate study of Gérôme, with several illustrations from his works, and the short paper, in the Italian series, on Simone Memmi, with two of Mr. Cole's full-page engravings. Practical affairs receive attention in Edward Atkinson's article on "Slow-Burning Construction," which will bring to many a great deal of information about the development of New England factory-buildings. "The Revival of Hand Spinning and Weaving in Westmoreland" hints at the practical, too, but really reveals mainly an experiment in a Ruskin-born fancy and in a cumbrous benevolence.

—Volumes 5 and 6 of Stedman and Hutchinson's 'Library of American Literature' (Chas. L. Webster & Co.) form the second and third parts respectively of the "Literature of the Republic." Channing leads off, and the selections from this writer exemplify at its best the discrimination of the editors. A burning question of the present day probably determined them to make their one selection from Henry C. Carey his argument against international copyright. Criticism of a whole class of text-books is involved in a passage from Charles Follen: "As soon as the historian of a nation ceases to think that posterity will be benefited by the knowledge of the faults, as well as the merits, of their ancestors; or, rather, as soon as he has any other object in view than to represent them as they actually were, whether deserving of censure or imitation, he forfeits his right to describe them." It is because they have been mindful of this that Mr. Stedman and Miss Hutchinson have given so large a place to the gravest of all faults in the founding of the Republic. In these two volumes we meet with Benton's bathetic account of the "high-toned duel" between Clay and Randolph; Beverly Tucker's 'Partisan Leader,' a foreshadowing of secession; Garrison's Declaration of Sentiments and other landmarks; Pierpont's "Fugitive Slave's Apostrophe to the North Star"; Mrs. Child's 'Chloe'; Channing's letter to Jonathan Phillips; Seward's speeches on the higher law and the irrepressible conflict; William Leggett's editorial defence of "ultimate abolition" against Southern threats of disunion; George Fitzhugh's 'Cannibals All'; Whittier's "Ichabod"; John Brown's address to the court that condemned him; Jeff Davis's speech on withdrawing from the United States Senate, and his first inaugural; Toombs's five stipulations of the South as the alternative of disunion; and Lincoln's Cooper Union address of 1860, first and second inaugurals, emancipation proclamation, and speech at Gettysburg. More on this topic might have been borrowed from Horace Mann, Palfrey, Richard Hildreth (his 'Archy Moore' combining imaginative with historical excellence), and Edmund Quincy, whose satirical anti-slavery side has been altogether overlooked.

—The purely literary aspect and entertainment of this instalment are to be sought in authors like Bryant, Cooper, J. P. Kennedy, Halleck, N. P. Willis, Emerson, Hawthorne, Longfellow, Whittier, and Poe—the last five being very copiously represented. Robert Dale Owen's 'Footfalls,' Josiah Quincy's 'Figures of the Past,' the leading historical works of Irving, Mrs. Kemble's 'Records of a Girlhood,' Audubon's 'Ornithological Biography,' etc., contribute further to the general readableness. We remark again the laudable practice of forming a national portrait gallery by competent hands, as, Benton on Jackson, C. J. Ingersoll on Jefferson, Ticknor on Prescott, Everett and Seward on J. Q. Adams, Choate on Webster (with one breathless sentence two and a half pages long), Longfellow's verse to Hawthorne, Alcott's sonnets of character, etc. Finally, a classic in temperance literature, Dr. Cheever's "Deacon Giles's Distillery," has been preferred, perhaps wisely, to his anti-slavery thunders.

—A friend writes to us:

"By the way, the writer of the interesting summary of Döllinger's address on American Literature, by some misunderstanding, makes him say: 'Appleton's Biographical Dictionary devotes a section to inventors, as we elsewhere might to soldiers or to lords.' What Döllinger really said, and was perfectly correct in saying it, was, according to the report of the *Allgemeine Zeitung*, that in Appleton's dictionary the epithet inventor is applied to a number of persons as a designation of their profession or occupation."

—A work on 'Eminent Domain,' by Mr. John Lewis of Chicago, recently published, contains a reference to six thousand cases in this country in which private property has been taken for public use. This list contains perhaps all, or nearly all, the cases decided. Inasmuch as they are, as the author says, an indication of material progress and of public improvements, they make the subject of an interesting commentary. New York heads the list with 830 cases; Massachusetts, the next highest, claims 599. Among the Western States, Illinois takes first rank, showing 377, followed closely by Indiana with 366. Of the Southern States proper, Louisiana takes the lead, though Georgia, showing 87 cases to her 98, may be allowed, nevertheless, to insist upon being the "Empire State of the South," seeing that the reports of these cases extend back at least fifteen years further in Louisiana than in Georgia. Though one of the oldest States, Georgia had no Supreme Court, and consequently no "Reports" (if we except one or two containing a collection of decisions in the Superior Courts of the State) until 1845 or 1846, whereas Louisiana, though much her junior as a State, had at that time already issued many volumes of decisions pronounced by the highest court of the State. Last of all comes Florida, with only six cases—one-half as many as the new State of Nevada.

—While not devoid of its usual general instructiveness, the annual report of the President of Harvard University for 1887-88 raises no important question, and furnishes few topics of discussion. Even the vista of a definitive policy in regard to intercollegiate athletic contests, half opened last year, is closed. If everything in this regard is not quite for the best in the best of worlds, the "general utility" of these contests has been "demonstrated" since the last report. They do indeed intensify "many excesses and evils connected with athletic sports," but the Faculty are comforted by the improvement in the physical condition of the average student, and "they hold that dyspepsia is less tolerable than a stiffened knee or thumb, and that effeminacy and luxury are even worse evils than brutality." Holders of scholarships hereafter must manifest, not athletic distinction, but such a bodily condition as will satisfy the Director of the Gymnasium that they observe the laws of health and are likely to keep down the death-rate of the beneficiaries, which is now one-quarter of one per cent. too high. The gifts to the University last year amounted to some $300,000, of which the larger half was the bequest of the late Mrs. Ellen Gurney, or, as President Eliot points out, jointly hers and her husband's, the late Professor Gurney. It is for the support of higher instruction in history, political science, and literature, in a comprehensive sense, with a view to the promotion of original work. Women have been among the contributors to the new building for a Botanic Museum—in fact, were a majority of all, and some of the larger donors. A former beneficiary of the Divinity School has given back with interest the amount received by him, and it is remarked that this sort of restitution has been more conspicuous in the case of the Divinity School than of any other department of the University. The School is now prosperous, and turns out graduates for whom there is "an active demand" and "immediate employment." Mr. Alexander Agassiz gives notice of his intention ere long to withdraw from the active charge of the Museum of Comparative Zoölogy, which owes so much to his munificence and executive capacity, and which will be left enormously enlarged and self-supporting. Mr. Agassiz desires to be free to devote himself to scientific investigation. On the whole, the University in all its departments seems to have been exceptionally flourishing during the past year.

— The most interesting thing in the seven volumes of the new Weimar edition of Goethe thus far published is a hitherto unprinted fragmentary sketch of the original plan of the Second Part of "Faust." The find consists of half-a-dozen pages of manuscript, defective both at the beginning and at the end, and

covering in print pages 173–177 of the second division of volume 15. The sketch is mentioned by Eckermann, under date of August 10, 1824, who says that it was intended for the third (new) book, or what we now know as the eighteenth book, of 'Dichtung und Wahrheit.' The reason of its non-appearance in that place is obvious: it was in 1824 that Goethe first definitely determined to complete "Faust," and it became thus quite unnecessary to furnish the public with a *brouillon* of a work which it was soon to have in full. Although, as above remarked, the sketch is but a fragment, there is enough of it to make it extremely interesting; it shows how simply and clearly the story took shape in the poet's mind, how closely it attaches itself to the legend, and how far it is from all that frigid allegory and deep-diving metaphysic which a whole generation of interpreters insisted upon reading into it. The sketch has the further value that it throws much light on the poem as it stands, even where the latter differs radically from the first concept.

— The bare outline of the story presented is as follows: *Faust* is disclosed sleeping; nothing is said of mountains or of sunrise. Spirits sing to him alluring songs of honor and power, and he wakes up cured of sorrow and sensuality. *Mephisto* appears and describes in a facetious vein the Imperial Diet at Augsburg, alleging that *Faust's* presence is desired by the Emperor Maximilian. The pair go to Augsburg, where *Faust* is kindly received at court, having first forbidden *Mephisto* to pass the threshold or to practise magic arts in the Emperor's presence. *Faust* now converses with the Emperor about the black art, but soon gets into difficulty and looks around for *Mephisto*, who has approached and now joins in the conversation, speaking in *Faust's* name. He makes a favorable impression, and presently "manifestations" are called for. *Faust* goes away to get ready for them, *Mephisto* meanwhile amusing the court by practising as quack doctor. Evening comes on and a magic theatre takes shape. *Helen* appears, and is unfavorably criticised by the women. Soon *Paris* shows himself, and is adversely commented upon by the men. The spectators cannot agree as to what shade shall be called up next; several illustrious spirits appear together, *Paris* and *Helen* become uneasy, confusion arises, and suddenly the apparitions are gone. *Faust* is in a swoon, *Mephisto* runs away, and the spectators have uncanny sensations. When *Mephisto* returns, he finds that *Faust* has fallen violently in love with *Helen*, and insists on possessing her. *Mephisto* replies that she belongs to Orcus, and that while she can be called back temporarily by magic, she cannot be retained. But *Faust* insists so passionately that *Mephisto* agrees to try to gratify him. *Faust* is now installed in an old castle, whose owner is absent in Palestine, and whose castellan is himself a magician. *Helen* now reappears, wearing a ring which gives her a corporeal existence. She thinks she is just returning from Troy to Sparta. She is lonely and longs for society, especially for the society of men. *Faust* appears as a German knight. *Helen* at first thinks him ugly, but finally yields to his suit. The pair have a son who, from the moment of his birth, has a fancy for singing, dancing, and playing pranks. Here it is explained that the castle is encompassed by a magic line within which alone these sham occurrences can take place. The boy has strict orders not to cross a certain brook; but one day, as he hears music and sees soldiers dancing on the other side, he disobeys orders, crosses the stream, mingles with the crowd, gets into a quarrel with the soldiers, and is killed. *Helen* is inconsolable, wrings her hands in despair, and in so doing pulls off her ring. She vanishes into nothing, leaving only her dress in *Faust's* embrace. *Mephisto* now tries to comfort him for his loss and to interest him in the pleasures of proprietorship. The owner of the castle has died in Palestine, and monks are trying to get possession of the estate. Their formulæ destroy the magic circle, and *Mephisto* advises the use of force. He provides three powerful champions for *Faust*, who, thus assisted, defeats the monks, avenges the death of his son, and becomes a great proprietor. Here, unfortunately, the fragment comes to an end.

HUME'S CORRESPONDENCE WITH STRAHAN.

The Letters of David Hume to William Strahan, now first edited with Notes, Index, etc., by G. Birkbeck Hill, D.C.L., Pembroke College. Oxford: At the Clarendon Press. 1888.

READERS of Burton's 'Life and Correspondence of David Hume' will recall the regret expressed by the biographer at the "unfortunate loss" of an extensive correspondence which was known to have been carried on by Hume with "the eminent printer, William Strahan." Strahan, in connection with Thomas Cadell, a famous Scotch bookseller in his day, was publisher for Dr. Johnson, Dr. Robertson, Blackstone, Adam Smith, Gibbon, and many other literary dignitaries of the last century besides Hume. In 1774 he was of sufficient consequence to be elected a member of Parliament. Select portions of this correspondence between Hume and his printer were shown to George III. soon after the historian's death in 1776. That Burton should have so easily despaired in his search simply because somebody told him, as he says, that it was Strahan's "practice to destroy all the letters addressed to him," is not a little surprising, for one of these letters had been published in the London *Chronicle* of June 7, 1777, nearly a year after Hume's death, and had subsequently worked its way into popular histories of England. It is quoted textually in such a familiar book as Wade's 'British History Chronologically Arranged.'

It now appears that these letters (a few numbers only are missing) were found in the summer of 1887 in the hands of a London autograph dealer, and, the Earl of Rosebery having generously purchased the whole series to prevent their dispersion, they were committed by him to Dr. Hill for editing. It was natural that this scholar, fresh as he is from the elaborate annotation of Boswell's Life of Johnson, should have approached this new task with a good measure of the same commentating zeal which he brought to that most delightful of biographies. Indeed, the "neat rivulet" of the text meanders here so lazily through the "meadow of margin" which spreads out before us that we sometimes have to dredge for our Hume through wide sandbars of literary reference and large continents of historical silt. No nice detail of the learned grammarian is too small, no "coney-catching art" of the delving commentator is too recondite to escape the scrutiny of Dr. Hill. One wishes sometimes to whisper in his ear that the "average reader" of modern times may be safely assumed to know some things. We hardly need to be told exactly where we can find the story of Dares and Entellus in the Æneid, or in what book and at which line of Lucretius we should look for the much-bequoted passage beginning "*Suave, mari magno*, etc." Even when the keen scent of Dr. Hill for ferreting out a literary allusion may occasionally serve us a good turn, we could none the less wish that he had rather called us far afield in quest of larger game. It pleases us somewhat to know that Master Daniel Wray intended a delicate allusion to Horace ("Book iii, Ode 24, line 5") when he tells us that Hume on one occasion, while attending a congress at Inverary, was compelled "*by the adamantine peg-maker* to make one of three in a bed." But we should have been greatly more pleased if our learned critic, with such ample resources at his command, had oftener exercised himself with a higher order of problems—with telling us, for instance, in this very matter-of-chance and gregarious fellowship, how it was that Hume, in the changeful politics of his time, should have sometimes found himself "pigging together in the same truckle-bed" with stranger bed-fellows than any he could possibly have encountered at Inverary. For these letters to Strahan, in throwing a new light on the political opinions of Hume, not only with regard to the American Revolution, but also with regard to the general political situation of England in his troublous epoch, may be said to throw new light on the whole political creed of the great Tory historian. Burton, with all the admiration proper to a biographer, is frank to admit that the political opinions of Hume hung very loosely on him, and could hardly be said to have the consistency of a creed, insomuch that he was "tolerant of any system of politics which bore the air of philosophy," and could "let his reason vibrate between opinions of the most opposite character in practical politics." This judgment of the biographer finds a singular confirmation in the letters before us. On all questions of purely domestic politics the Scotch philosopher here figures as a Tory of the Tories, but on most questions of foreign politics he out-Whigs the Whigs in the extremity of his liberalism. For example, we find him writing to Strahan under date of October 25, 1769, that he "hopes" to live long enough (he was then fifty-eight years old) "to see a public bankruptcy, the total revolt of America, the expulsion of the English from the East Indies, the diminution of London to less than a half, and the restoration of the government to the King, Nobility, and Gentry of the realm." And then, as if he had wished still more to emphasize the antithesis between his foreign and his home politics, he immediately subjoins: "I hope also that some hundreds of patriots [Wilkes, Alderman Crosby, "that rascal Beckford," etc., etc.] will make their exit at Tyburn and improve English eloquence by their dying speeches." In another letter (June 25, 1771) he laments that all the flowers of the royal prerogative are faded or gone—the right of the King to remove judges at will, the privilege of General Warrants, of expelling members from Parliament, and of wielding the coercive powers of the House of Commons in support of Government measures. "For God's sake," he exclaims, "is there never to be a stop put to this inundation of the rabble?"

But with all this "Jingoism" for home consumption, we find him, from the year 1769 down to the day of his death, setting his face like a flint against the foreign policy of the Tories with regard to America. In 1771 he writes to Strahan that "in the nature of things" the union between Great Britain and the American colonies "cannot long subsist." On a rumor reaching him at Edinburgh in 1775 that the Ministry were minded to withdraw both fleet and army from America, he hastens to write that he could wish himself a member of the Cabinet that he might second this measure, which, he prophetically added, "only antici-

pates the necessary course of events a few years." He pronounces the conquest of the colonies to be impossible. "Arbitrary power," says the philosopher to his Tory friend, then sitting in Parliament (for Strahan was a thorough-paced Tory), "can extend its oppressive arm to the antipodes, but a limited government can never long be upheld at a distance, even where no disgusts have intervened." After remarking on the confiscations, hangings, and "acts of destructive violence" which could alone reëstablish the British dominion in America, even if a conquest were possible, he dismisses the topic with these words: "Let us, therefore, lay aside all anger, shake hands and part friends. Or, if we retain any anger, let it only be against ourselves for our past folly, and against that wicked madman, Pitt, who has reduced us to our present condition. *Dixi.*"

It is difficult to understand exactly what Hume meant when, with his high Tory notions and his fondness for kings and lords, he professed himself "an American in his principles." Can it be true, as Dr. Johnson once snarlingly said, that Hume was "a Tory by chance, as being a Scotchman," and not at all a Tory "upon principle," as being "upon principle a Hobbist"? How could he write to Strahan that "it is a pleasure to hear that the Bill-of-Rights men are fallen into total and deserved contempt," when a little later he is found writing to his nephew that "the republican form of government is by far the best"? Was it the personal influence of Lord Hertford which made him reactionary in his home politics, or was it the conservatism inspired by historical studies? Was it the personal influence of Gen. Conway (Lord Hertford's brother) which made him hope for the successful revolt of the American colonies, or was it his mad hatred of the English—"those factious barbarians," as he calls them? These are among the enigmas suggested to us by these letters, and we would willingly forego half a hundred explanatory notes on things which need no explanation, for a little light and leading on such topics.

From other sources than Dr. Hill's text or annotations we are abundantly informed that Hume was private secretary and afterwards Secretary of Legation under the Earl of Hertford at Paris, from 1763 to about 1766, and that he was Deputy Secretary under Gen. Conway during a part of that Minister's term of service as Secretary of State from 1765 to 1768. But Dr. Hill grows parsimonious in his references to the politics of both Hertford and Conay precisely at the point where the politics of the two brothers bifurcated simultaneously in the same two different directions discovered by the letters of Hume. In the whirligig of politics peculiar to that period of turmoil and upheaval, Hertford became the Lord Chamberlain of the King's household in 1771, and Gen. Conway became the leader of the Opposition in the House of Commons to the American war. While his brother, in the name of the King, was notifying Wilkes and the Livery of London that his Majesty would no longer receive insulting pleas for American rebels when offered in the guise of "humble petitions" addressed to the throne, Gen. Conway was openly proclaiming in Parliament that he would never draw his sword against the insurgent colonies, defending as they were the hereditary rights of British subjects. "Better peace with America," he said, "and war with all the rest of the world, than war with America." On the very day (April 5, 1775) when the Tory, Rigby, predicted that "the Americans would not fight," he warned the Commons against "the dreadful consequences" which must ensue "should the sword be once drawn." On the 29th of February, 1776, he scouted the idea of reducing America "as impracticable and absurd." A few weeks later we find Hume writing to Strahan in the same sense.

Was it the antagonistic influence of these two brothers, each a friend and patron of Hume, which kept him "vibrating" between opposite poles in the political world? Or, siding as he did with Hertford on questions of home politics, was it because of his own strong Tory proclivities; and, siding as he did with Gen. Conway on American politics, was it because of his own strong antipathy to the English domination—an antipathy which made him wish not only for the defection of the English colonies in the western and eastern continents, but also for "a general bankruptcy" of the Government? On all such questions Dr. Hill leaves us to our own devices.

Hume's hatred of the English ("the factious barbarians of London," "the barbarians who inhabit the banks of the Thames," as he habitually calls them) was already sufficiently known, but it breaks out *ad nauseam* in these letters. In one of them he protests against "the mad rage of the English against the Scots." The English, he adds, are "a mobbish people," whose opinion "happily gives him [me] no concern"—a proof of the concern he felt. In another letter he intimates that he would like to turn his attention to a species of historical composition which "has no reference to the affairs of these factious barbarians." In still another he avers that if he shall be "silly" enough to keep on writing "more British history," he will take good care "not to warp his principles or sentiments in conformity to the prejudices of a stupid, factious nation with whom he is [I am] heartily disgusted." All this is in perfect keeping with the contemptuous surprise he once expressed that Gibbon's History should have been written by an Englishman, as also with his sardonic dissuasive addressed to Adam Smith against publishing 'The Wealth of Nations,' because a work so "full of reason, sense, and learning" was too good for "the wicked and abandoned madmen."

We have not been much surprised to find the old "Walpole Land Grant" cropping out in these letters. Strahan had an interest in that land-jobbing scheme. Thomas Walpole, a London banker, and Benjamin Franklin were prime movers in it. The project dated from 1769, and contemplated a large land purchase on the Ohio River. This speculation, which Hume thought could never "turn to great account," opened for a time a pretty active mud volcano in our colonial politics. Besides casting up a good deal of mire and dirt in the debates of the day, it threw Lord Hillsborough, the colonial secretary, out of office in 1772. He was disgusted to find that Franklin's influence with the Privy Council was greater than his. The Revolutionary War soon came to put an end to the negotiation, and everybody remembers the curt and irate letter with which Franklin bade adieu to his fellow-stockholder, Strahan, at the beginning of the Revolution: "You have begun to burn our towns and murder our people. Look upon your hands; they are stained with the blood of your relations. You and I were long friends; you are now my enemy, and I am, yours, B. FRANKLIN."

Dr. Hill will regret to learn that notwithstanding the useful aid afforded him by that excellent historical scholar, the late Dr. Israel W. Andrews, he has missed the opportunity of citing some very apposite historical references under this head. For instance, he quotes Smollett's allusion to the "Twightees" who once inhabited "the delightful plains" which it was purposed to cover by the Walpole grant, but he never tells us who the "Twightees" were, though the designation must be very obscure to the modern English reader, and though abundant records exist in which he might have traced the habitat and affinities of that old Miami tribe of Indians. And then, the reference suggested by Dr. Andrews to the proceedings of the Continental Congress on May 1, 1782, when this land grant came up for discussion, should have been preceded by an earlier reference to the debates of September 4, 1779, and should have been followed by a later reference to the proceedings of Congress on the 16th of August, 1782, when Arthur Lee, then a member from Virginia, publicly flouted Dr. Franklin as an unfit man to conduct negotiations for peace, because he was reputed to be "interested in Western lands," and therefore had a personal motive for seeking to bring these lands under the jurisdiction of the United States, instead of leaving them under the jurisdiction of Virginia. It was the last eruption of the mud volcano. It might be added that Lee had good reason for his virtuous indignation. An earlier land-job of his had been squelched by the Walpole concession.

These letters contain nothing new on the origin or merits of the quarrel between Hume and Rousseau. In its day this was a famous *esclandre*. Hume wrote to Mme. de Boufflers in 1766, when the quarrel broke out, that if the King of England had declared war against the King of France, it could not have made more noise in London drawing-rooms. Readers who are familiar with the 'Concise Account' and with the 'Private Correspondence of Hume,' as published in 1820, need not turn to this volume in quest of a single newly discovered gossipy tidbit, but they will find in Dr. Hill's notes a salmagundi compounded from what is most savory in the remains of this literary scandal.

We do, however, see in these letters that Hume, after imprudently allowing his Paris friends to rush into print with a French version of the pamphlet, became heartily sick of the publicity he had provoked, and repented of his angry passion so soon as he was called to take measures for an English edition of the brochure. He writes to Strahan on the 4th of November, 1766: "I wish it were possible not to print an edition in London, because the whole affair will appear perfectly ridiculous to the English." After some correspondence about certain details of the publication, we find him railing at Strahan for some printer's negligences which had made "the silly pamphlet" (so Hume calls it) appear in a still more ridiculous light. The reader will remember that Morley, in his Life of Rousseau, while frankly exonerating Hume from the blame of instigating the quarrel, does not exonerate him from the blame of instigating a needless publication of it in printer's ink. The sober second thought of Hume had anticipated the comment.

In taking our leave of this book, we ought perhaps to say, as a matter of justice to Dr. Hill, that if in his former contacts with Boswell, while editing the Life of Dr. Johnson, he may seem to have caught at all the *lues Boswelliana*, it is only in the mild literary form of that harmless malady. He has not a particle of that adoring awe with which "Bozzy" prostrated himself before the Grand Lama of his idolatry. On the contrary, while doing full justice to Hume's "noble industry as a scholar," he is sometimes even severe in his animadversion on the grave faults and unmanly foibles which marred, as he conceives, the symmetry of the philosopher's character.

PEASANT EMANCIPATION IN DENMARK.

Stavnsbaands-Lösningen og Landboreformerne set fra Nationalökonomiens Standpunkt. Af V. Falbe Hansen. 1ste Del: fra 1733 til 1807. 8vo, pp. 161. (Copenhagen: Gad. 1888.)

THIS is the first volume of an exceedingly interesting book on the emancipation of the peasants and the reform of land tenure in Denmark at the end of the last century. The event is so recent that information about it is fairly trustworthy, and the interpretation of the record is not subject to the difficulty which we experience in filling in the background of remoter times. Hitherto the most accessible source of information has been Sugenheim's 'Aufhebung der Leibeigenschaft.' The present work supplements that, dealing with a particular period, and striving to ascertain, from historical and statistical material hitherto unused, the effect of the settlement and its abolition. It is therefore a very valuable contribution to our knowledge of land tenure, land-class interests, and a whole series of cognate subjects. The present article aims only to reproduce the most essential contents of the book with the necessary condensation.

Serfdom was never fully established in Jutland, because the population always was restless and wandering. It was abolished on the islands in 1702 by decree, although it is very doubtful how far the abolition was realized in fact. Wages were a matter of custom, and the relations of classes were also matter of custom; hence it is hard to get information about them. It appears, however, that wages in city employments were rising in 1730; therefore, that land wages were rising, and that laborers were moving to the cities. Prices of land products were falling. Agriculture produced only fourfold at best. Taxes bore very heavily on land-owners; consequently, land bore no rent beyond the taxes, and had no value except for the improvements. Proprietors abandoned lands, or allowed them to be sold for taxes. In 1728 an ordinance was issued prohibiting this. Cases occurred where a fine was paid for the lease of a house without land, while a lease of a farm was granted gratis. The conjuncture was therefore against landlords and the state treasury, and in favor of the wages class. Five or six days' labor would buy the produce of an acre and a quarter of rye, and the laborer got it in that way more easily than the villein farmer for whom he worked to raise it.

The proprietors complained that the abolition of serfdom was putting an end to the cultivation of the soil. Although the governmental policy of the time was a landlord's policy, the reason of the State for the action which it took lay in the interest of its own revenue. It did not renew serfdom (*Vordnedskab*) by name, but it renewed it substantially under another name (*Stavnsbaand*), and under a pretence of providing for the recruitment of the rural militia. It was ordained that "no peasant youth may leave the manor on which he was born so long as his lord can give him employment, unless he is above the age of enrolment (fourteen to forty), or has served out his time." The lords might enroll whomsoever they would. In 1745, in connection with police measures against cattle disease, the settlement was made still more stringent, and extended beyond the age of forty. A villein could be forced to take any farm assigned to him by the lord, and the service to be done for it was undetermined. The *Stavnsbaand* (soil-bond) was therefore a permanent settlement of the peasants on the land subject to servitude.

As this was a new and arbitrary introduction of settlement, against the tide of history, the villein had no custom to protect him; and it appears that, as the system went on, the demands made on him constantly increased, until the fact was that, under the burden of the landlords, the Church, and the State, the villein had nothing left for himself but scanty and coarse subsistence. Land industry being in a crisis, labor had been stolen to help it out. A protective tax was also put upon grain. At that time Norway imported a significant amount of grain from outside the kingdom. The tax forced the Norwegians to buy this in Denmark at an advanced price, so that the Norwegians were forced, with the villeins, to carry the Danish land-owners over an unfavorable conjuncture.

According to the accepted political economy of the time, every man in the State had his set place, where he was expected to stay and do his allotted part towards the maintenance of the whole. It was also held that the separate interests were entitled to the fostering care of Government, especially to help each over an unfavorable conjuncture when that disaster should overtake it. Hence the succor of the landed interest and the oppression of the peasants were in perfect harmony with current opinion. It was also believed that extravagant expenditures by Government "gave a circulation to money" and enhanced prosperity, provided always that the expenditure was not on *foreign* luxuries. It was also an accepted dogma that big taxes made people work hard, which was morally beneficial to them as teaching them diligence. These theories came from Germany, and Von Justi was invited to Denmark to give counsel. The King acted faithfully upon the theory. In the middle of the century, the King and court used up one-quarter of the revenue. The King built a castle at a cost equal to the market value of all the landed estates on the island of Zealand.

It was also almost universally believed at that time that increase of population was increase of national wealth and strength, because wealth came by labor, and increase of population was increase of labor-force. The reasoning ran: More population, more labor; more products, lower prices; lower wages, greater power to compete in foreign markets, favorable balance of trade, prosperity. The servitude of peasants and artisans was quite consistent with this theory, perhaps necessary to it; but some economists preferred freedom, on the ground that population would increase faster under it.

The unfavorable conjuncture to agriculture speedily passed away. Grain rose in price. Land increased in value. There was greater and greater demand for labor, in the sense that the lords would have been glad to have improvements made and work done on the land, if they could have got it by simply calling on more bondmen to do it without pay. This "demand" did not call out a corresponding supply. The population barely maintained itself. It appears that the settlement was not strictly maintained, and in various ways individuals escaped from it. In 1764, part of the crown lands were sold, and peasants were in a position to buy them at prices then thought extravagantly high. In certain districts, for which statistics are available, about 1770, there were 7,235 peasants free of servitude, 23,224 under servitude, and 21,252 cottagers (land proletariat and day laborers, possibly with slight common rights and petty allotments). The proportion of free peasants to peasants under servitude on private estates in Jutland and Fyen was as high as one-third.

From the middle of the century, distrust of the existing system and opposition to it began. Our author attributes to Arthur Young and Adam Smith the most direct and positive influence. In 1771 Struensee played the rôle of Turgot. He tried to define and limit the servitudes, but his reform was ephemeral. The actual reform began by private initiative under the hands of enlightened landlords. Reventlow is credited with the leadership of the public movement; but Frederick VI., as Crown Prince, not only gave it royal sanction, but put as much enlightened zeal and initiative into it as anybody. An ordinance of 1788 abolished the settlement and also payments, including tithes, in kind, and made provision about allotments, migration, and enclosures. Sugenheim says, what our author does not mention, that it was not a complete and final abolition, but was limited according to the age of the peasants, and did not become final until 1800. The general principle of the new system was free contract; but the villeins were entitled to life-leases, and the lords were not allowed to put the land freely on the market at terminable leases, the doctrine being that, as the peasants had been bound to the soil out of consideration for other interests than their own, they should now be recognized as having a vested right in it. All parties began to come together under voluntary agreement, and a Commission appointed in 1795 to arbitrate and determine, had to act on only four estates in Jutland and thirty-three on the islands. In 1799 all servitudes were made definite. They were gradually commuted, or bought out, or became obsolete.

Our author now proceeds to study the effects of the abolition, directing attention repeatedly to the most material circumstance that this reform, throughout the period of its strong and steady advance—1788 to 1808—was sustained by an advancing market for land and land products. He also refers the advance in social and economic welfare which followed, even more to the dissolution of the village community and the common rights than to the abolition of the settlement. Under the old system the peasants lived in villages, and their strips of land were intermingled with each other. The village assembly met frequently for trivial purposes, leading to riot and drink. Marriages were discouraged, because a young man could not marry until a dwelling was vacant. The sanitary arrangements were bad, and child mortality great. Improvement was impossible without common consent, hence it was hardly practicable at all. The agricultural art stood far higher in the demesne than on the villein farms. The movement which followed the abolition of the settlement therefore took two forms—the parcelling in unity of the lands so that each man got a compact farm, and the scattering of the farmsteads out of the village upon the separated allotments.

Under the settlement the tendency had been to increase the demesne at the expense of the villein land. After the abolition, the big demesnes (sometimes 1,000 to 2,000 acres) could not be worked profitably. They were broken up and sold or rented. The waste or common was also enclosed and included in the new allotments. The lords were more eager to sell, fearing further innovations, than the peasants were to buy. The favorable conjuncture, however, encouraged the latter, and the lords used both persuasion and coercion to make sales. In 1835 the peasant proprietors and copyholders were to the tenant farmers as 41 : 34, and the land held by the former was to the land held by the latter as 177 : 137. In 1806 the same lands were worth ten times as much as in 1733 to 1740, and the advance had been

far more rapid in the last part of the period. The "unearned increment," therefore, was what carried the reform through to a successful issue. After 1818 the advance in land values was arrested, and the peasant purchases diminished or ceased.

In twenty years after the reform—

"the product-fold increased nearly 25 per cent., and the annual harvest was nearly doubled. The largest part of the waste was cultivated so that the cultivated area was greatly extended. The export of grain was doubled while the home consumption greatly increased. Stock was increased and improved. All products advanced in price, and the value of land increased nearly three-fold. Agriculturists who before had been poor and in economic straits, both proprietors and villeins, now felt how wealth poured forth from the ground. Great activity was awakened in agriculture. Agriculturists, formerly locked fast in the routine of the old system, were freed. A new system of land cultivation began to make its way." "Enterprises were begun which even now seem ahead of the times. . . . New plants were introduced (clover, tobacco, potatoes, rapeseed, etc.) and new sorts of grain. . . . Old tools were thrown aside and new ones introduced. . . . Experiments were made with new and noble breeds of animals. . . . They began in places to move buildings to the new farmsteads on rollers, American-fashion. The same feverish struggle forward meets us in the history of Danish agriculture of that time as in the most rapidly advancing portions of modern society, also the same evils—land-jobbery, overindebtedness, and the labor question."

There was great need for capital in carrying out the reform. The expense of parcelling and scattering was reckoned by Reventlow as high as $14 per acre. The State set up a land bank to assist in this respect, it being a paper-money period. When the market turned, the indebtedness thus incurred brought ruin to those who had not freed themselves.

From 1788 to 1800, although other classes of the population remained nearly stationary in number, the cottagers nearly doubled. This was the response to the new demand for labor under the wages system; but the cottagers increased so rapidly that they deprived themselves of all share in the general improvement of the period. There were two classes of them—those who had allotments of land, and those who had not. The former gained by virtue of their crops, but those who depended on wages did not gain. The numbers of these two classes were about equal. The landlords and new farmers built cottages for this class, as a means of attracting them, but in many cases made it a condition of the house lease that the cottager should work for the house-owner so many days per week and so many days in harvest; from which arrangement arose a new sort of servitude, which still exists.

M'KENDRICK'S PHYSIOLOGY.

A Text-Book of Physiology. By John Gray M'Kendrick, M.D., LL.D., F.R.S., Professor of the Institutes of Medicine in the University of Glasgow. Including Histology, by Philipp Stöhr, M.D., of the University of Würtzburg. 2 vols. Macmillan & Co. 1888.

THE first volume of this treatise, entitled 'General Physiology' (pp. xxv, 516), introduces the subject with an unusually full and satisfactory account of the province of physiology, the phenomena of life, and the relation of these phenomena to those of physics and chemistry in harmony with the doctrine of the conservation of energy. The main part of the book consists of short treatises on chemistry, physics, and physical methods, histology, embryology, bacteriology, the microscope and microscopical methods, and the physiology of the simple tissues. This manner of treatment becomes intelligible upon consulting the preface, where it is stated that the book is designed for the author's own students, and is the outgrowth of his needs as a teacher in a great medical school where those who come for instruction in physiology have had practically no preparation in chemistry, physics, and histology, and the methods of investigation in these subjects. The teacher must accordingly clear the ground by explaining the principles of these collateral sciences, and the methods of demonstration, before making a special application of them to physiology. The language is clear and simple, sometimes even partaking of the semi-colloquial directness of the lecture-room. The first part, in fact, appears to be made up of a series of lectures arranged as they were given, and from the variety of subjects introduced it is not a pleasant book to read consecutively, on account of the constant interruption of the proper subject-matter in order to discuss methods or the principles of collateral sciences; and while it is inferior to several of its predecessors, it probably represents better than any one of them an actual course in physiology in a great medical college where the fundamental related sciences are not required for admission, and where histology, the microscope, microscopical and bacteriological methods form part of a course in physiology. Condemnation, therefore, of the introduction of these subjects into a text-book of physiology would be a condemnation of the present state of medical education in Great Britain and America.

Of the 166 pages devoted to chemistry, the parts differing most markedly from other works are the accounts of fermentation, the animal pigments, and the value of chemical formulæ. The discussion of animal pigments forms one of the most satisfactory and welcome parts of the volume. The same commendation cannot be given to the chapter on fermentation, as almost the only reference is to the organized ferments, while those which are unorganized or soluble, and which produce the true physiological fermentation in the processes of digestion, etc., are very briefly, almost parenthetically, mentioned. Hence the beginning student of physiology would inevitably obtain his fundamental idea of a ferment from some living object like the yeast-plant, instead of from one of the unorganized ferments with which he is more directly concerned, for the understanding of the digestive and some other processes of the body. The methods of bacteriological research given with this chapter seem very incomplete and unsatisfactory when compared with works written by specialists upon the subject, and it is hard to see how the value of the work is enhanced by the addition.

The discussion of the physiology of the tissues represents fairly well the present state of knowledge. As a rule, recent investigation has been considered, especially that done in Great Britain and America; but some of the latest and most accurate work has been overlooked. This is most noticeable in the physiology of muscle, where the elaborate investigations on its change of volume and specific gravity during contraction are not noted, and the old statement that a muscle decreases in volume during contraction is repeated and sanctioned. Following the physiology of the muscular tissue is an exceedingly interesting and suggestive chapter on the phenomena of the electric fishes; but it is doubtful whether a consideration of these phenomena will assist the student so much in gaining an insight into the complexities of muscular and nervous action as is hoped for by the author.

The histological and microscopical parts of the book were taken largely from Dr. Philipp Stöhr's 'Lehrbuch der Histologie,' with the consent of both author and German publisher. The treatment of histology is more elementary than one would expect in so ambitious a text-book as the one under review, and is as a whole inferior to that of many English and American works. Histology is one of the prominent features in both anatomical and physiological text-books of the present day, but this one is distinguished by the introduction of the methods of microscopical research. This innovation must be condemned, for, from the nature of the subject, the treatment must be inadequate. The methods given are mostly good, but many are incompletely described or needlessly complex, and several are antiquated; for example, the method recommended for preparing cartilage would produce appearances about as unlike the natural ones as it would be possible to obtain. Admitting the desirability of introducing methods, however, there is one admirable feature of the work: the way in which the preparations figured were prepared is given either in the description of the figure or in the appendix to which reference is made; but the claim in the preface that this is a unique feature is somewhat surprising, for it is common to nearly all treatises and monographs on histology from the classical work of Schwann (1839) to those of the present day; it is also found in some works on gross anatomy. It is no less surprising to find the assertion that the illustrations "are not diagrams, but drawings of real preparations," as though most histological figures were drawn from the imagination. They really illustrate the text, and are mainly of a good quality.

Typographically the work is excellent. Very few errors appear, and most of these are so evident that they may be easily corrected by the reader. The mistake in the statement on p. 5, that the human red blood-corpuscles are "77 microns, or .077 mm.," in diameter would not be so easily corrected, and, to increase the difficulty, the approximately correct size is given, under blood, p. 299, as 7.5, instead of 7.7 microns. Unmistakable errors of statement are also infrequent, but a few occur which would prove very misleading to students: on pp. 318, 320, it is said that the epithelium of the conjunctiva of the eyelids is ciliated. The white blood-corpuscles of warm-blooded animals are said (p. 295) to move very slowly, and the movement "can only be detected by careful observation with the aid of the hot stage." When warmed to the temperature of the body, the white blood-corpuscles of man move almost or quite as vigorously as do those of cold-blooded animals, and at the temperature of a comfortable sitting-room the movement is often quite rapid, and in nearly every case noticeable. It is opposed to the teaching of modern embryologists to affirm (p. 248) that "the notochord becomes the bodies of the permanent vertebræ and the basis of the cranium." This statement is indirectly contradicted even by the author on pp. 251, 252, where he states that bony tissue is developed from the mesoblast, and the notochord from the hypoblast.

Statements are usually positive, but made with care and after duly weighing the evidence; but not enough stress is laid upon exceptions. It looks as though the author disliked to spoil the effect of a striking and easily remembered generalization by giving exceptions; for example, on p. 312, it is affirmed that "the contraction of the transverse striped muscle is quick and under the control of the will," no exceptions being given, not even that of the transversely-striped muscle of the heart. A similar unqualified statement is made concerning the distinction between the red blood-cor-

puscles of animals on p. 300, where those of birds, reptiles, amphibia, and fishes are said to be distinguished from those of mammals by their large size, oval and biconvex form, no mention being made of the fact that in the lamprey eels the red corpuscles are circular and biconcave, like those of mammals. On p. 434 occurs a marked example of the tendency to state a probability as a truth when it is said, with reference to the increase in size of a muscle by exercise, etc., that "the enlargement is due both to the development of new fibres and to an increased thickening of the older ones." This is probably true, but it is only an assumption, and not a part of established knowledge. From the very nature of the case the muscular fibres cannot be measured and counted before and again after the increase in size of the muscle, and no conclusive observations have been made as to the relative size and number of the fibres in the same muscle of individuals with varying muscular development.

Art in the Modern State. By Lady Dilke. London: Chapman & Hall.

THE title of this book is somewhat misleading. It is not, as one might expect, a discussion of the position of "art in the modern state," or of the influence of art upon modern civilization, or of modern civilization upon art; indeed, it contains little discussion of any sort. It should in strictness be called a 'History of French Art under Louis XIV.'

The period is not greatly interesting by its achievement. Between the glories of the Renaissance and the freer and more personal art of to-day, the pompous formality of Le Brun and the mild correctness of Le Sueur seem flat and insipid. Even the art of the next generation, the art of Watteau and of Fragonard, frivolous though it be, has a piquancy and charm altogether wanting in the magnificent commonplace of the *grand siècle*. Nevertheless, it is a period of great importance in art history, for it is the time of the academic organization of art. In this time were founded the French Academy, the various Academies of Architecture, Painting, etc., which make up to-day the Institut, the Ecole des Beaux-Arts, and the French School in Rome. For good or for evil, the influence upon modern art of the academic system then founded has been inestimable, and the history of its founding was well worth the writing.

For good or for evil? One must read between the lines a little to know what Lady Dilke's answer is. The book is, as we have said, mainly a history, with little digression into theoretic or philosophic reflection, and the history deals often with small men and small intrigues, with the names of third-rate and no-rate artists, and the dates of third-rate and no-rate works. Yet, if the details become sometimes fatiguing, the grand lines are firmly traced. The first chapters treat of "France under Richelieu" and of "France under Colbert," and show clearly the conception and the execution of the great scheme of organization and of centralization which created the "modern state"; the succeeding chapters show in detail the application of this scheme to the arts, while the conclusion refers briefly to the modern reaction, "the protest against the suppression of the Renaissance."

One of the most interesting chapters is that which deals with the Gobelins and the Savonnerie. Nowhere did Colbert's idea of art as an organized function of the state meet with a more indisputable success than in the founding of these vast workshops for the production of "meubles de la Couronne," which turned out not only tapestries and carpets, but objects in almost every branch of what we know as industrial art, and where the artisans were regularly trained by celebrated artists in the drawing of the figure, on the principle that "the highest and widest possible artistic training is none too good for your art-workman." The resultant beauty and thoroughness of workmanship have never been lost to the French, and have given them that preëminence in art-manufacture which, to apply a merely material test, has been worth millions of dollars to their nation.

But if the influence of the academic system has been clearly for good in the minor arts, what has it been in the fine arts, properly so called? Has the work of Academies and Schools of the Fine Arts and the Prix de Rome been upon the whole a beneficial or a deleterious work? Lady Dilke seems to believe, as do we, that it has been in the main beneficial. We are in the midst of the reaction, and our ears are filled with denunciations of Salons and medals and prizes. All these things, we are told, encourage only mediocrity, and genius makes its way without them or in spite of them; and we are bid to consider Millet and Corot and Courbet, or perhaps Manet and Monet, and are asked what the official and academic system did for them but to try to crush them. Yet we cannot forget that all these men were Frenchmen, and that it is the one nation possessing a thoroughly organized academic system of art training and art encouragement which has produced them. Granted that Salon after Salon is filled with the work of highly trained mediocrity; is the *un*trained mediocrity that fills the exhibitions of some other countries, preferable? Granted that training cannot produce genius, it can give it its weapons. As Lady Dilke says, "the very antagonists of this system have owed to its method and discipline more than half their practical strength." The office of an academic training in art is to preserve a high standard of excellence in workmanship — to compel all who would attain recognition as artists to become first of all good craftsmen. The very perfection of technique which it induces may make more visible the lack of contents in the work of the mediocrities, but it insures that the work of the geniuses shall be sound. It does not make geniuses of the workmen, but it makes workmen of the geniuses, and the most erratic and rebellious of the artists of France have felt its influence in spite of themselves, while the greater and soberer ones have knowingly profited by it. A Turner would be impossible in France, a Baudry would be impossible out of France; and one such name is enough to mark as successful the system that has produced it.

The book is well written, and is supplied with index and appendices, and the printing and proof-reading seem to have been excellent.

Letters of Felix Mendelssohn to Ignaz and Charlotte Moscheles. Translated from the originals in his possession, and edited by Felix Moscheles. Boston: Ticknor & Co. 1888.

THIS is a charming collection of letters—the record of a memorable friendship, based on a complete harmony of taste and feeling, and unmarred by a single discord. It appears from the preface that the letters addressed to Moscheles came into his son's possession in 1870, but they have not been made public before because "many passages occur in which prominent musicians of those days are unreservedly criticised"—passages which the present editor "felt as little authorized to suppress as to publish during the lifetime of those alluded to." He trusts that "they will be none the less interesting now that time has judged between the critics and those criticised." On the contrary, these passages add immensely to the value and entertainment of the book. Mendelssohn had a rare gift of literary expression, and knew not only what displeased as well as what pleased him, but how to convey his impressions to others. For instance, this is what he has to say of Berlioz, who may be said to be at the musical antipodes of Mendelssohn:

"We were all curious to know what the result of French genius would be. I say French, for so far no other country but France has recognized Berlioz as a genius. But, oh! what a rattling of brass, fit for the Porte St. Martin! What cruel, wicked scoring! As if to prove that our ancestors were no better than pedants! . . . Then the mystic element—a progression of screeching harmonies, unintelligible to all but the March cats! To show that something terrible is agitating the fevered brain of the composer, an apoplectic stroke of the big drum shakes to shivers the efforts of the whole orchestra, as also the auditory nerves of the assembled audience."

Again:

"At first he made me quite melancholy, because his judgments on others are so clever, so cool and correct; he seems so thoroughly sensible, and yet he does not perceive that his own works are such rubbishy nonsense."

This was no hasty judgment, but the expression of a feeling running through all his criticism. Speaking of Neukomm's music, he recurs again to the subject of brass:

"Then, again, that constant use of the brass! As a matter of sheer calculation it should be sparingly employed, let alone the question of Art! That's where I admire Handel's glorious style; when he brings up his kettledrums and trumpets towards the end, and thumps and batters about to his heart's content, as if he meant to knock you down—no mortal man can remain unmoved. I really believe it is far better to imitate such work than to overstrain the nerves of your audience, who, after all, will at last get accustomed to Cayenne pepper."

Mendelssohn liked nothing eccentric in music. He says, for instance, of "a book of mazurkas by Chopin," that they are "so mannered that they are hard to stand," while some of Liszt's music he speaks of as "depressing" and "very stupid," denies him altogether "original ideas," yet speaks of him very highly as a pianist. Most people's judgment of their contemporaries is apt to be capricious, and often governed by personal considerations. Mendelssohn, as he disliked, so also heartily liked, and we have to accept his admirations as well as his criticisms with certain reservations. For instance, it is impossible to believe that Moscheles himself is musically as important a figure as these letters make him out.

This book is a sort of companion volume to the charming 'Life of Moscheles,' edited by Mrs. Moscheles. It gives an impression of Mendelssohn never to be effaced. There is a charm and grace in his letter-writing so remarkable that we can only compare it to that of his music. His relations with Moscheles and his wife are those of a friend whose affection is never dimmed by a sordid or interested motive. Quotations, except in the critical passages, would fail to give any idea of the letters, which, filled with gayety and childlike playfulness (the illustrations abound with that sort of humor), put us at once on familiar terms with the writer and those to whom he writes, please us with their glimpses of a charming mind and heart, and leave us (and what is more rare?) better pleased with ourselves and with the world for having made the intimate acquaintance of a man of genius.

Rides and Studies in the Canary Islands. By Charles Edwardes. London: T. Fisher Unwin. 1888. Pp. xx., 365. 8vo.

If the Canary Islands do not increase in popularity with English and Americans as a health resort, it will not be because attention has not been directed to their merits. Mr. Charles Edwardes's entertaining description of his three months' sojourn among them follows very closely the two large volumes on 'Tenerife and its Six Satellites,' by Mrs. O. M. Stone, which appeared a little more than a year ago, to say nothing of numerous recent works in other languages. From this latest account, the only comfortable place for our countrymen still seems to be Puerto Orotava on the north coast of Tenerife. Here, in a valley extravagantly praised for its beauty by Humboldt, who saw it, however, at the beginning of his travels, sheltered from the hot southern blasts, the invalid may enjoy perpetual summer, the thermometer varying only from a mean of about 62° in January to 77° in August. If he wearies of the palms and the sunshine, he can climb the steep slope of the Peak, passing through every variety of climate and vegetation, until, if he have energy enough, he comes almost to the region of perpetual snow on the summit, 12,180 feet above the sea. Add to these advantages the extraordinary dryness of the atmosphere, at night equally with the day, and an excellent hotel, and it is difficult to see what more can be desired. The want of carriage-roads, however, restricts all but the experienced rider to a small part of the island. Mr. Edwardes, indeed, made the tour of both Tenerife and Palma, but the ride was difficult, and at times dangerous, from the *barrancos* or ravines, some of a tremendous depth and nearly perpendicular sides, which are to be crossed at every few miles. There are also numerous lava-beds and slopes covered with pumice, which, under a scorching sun and with water unattainable, make travelling for the time anything but pleasant. Under these conditions, it is hardly necessary to add that the accommodations for tourists, outside the largest towns, are of the very roughest character. Among other excursions made by the author was a short trip to the Grand Canary and the ascent of the Peak, which was fatiguing and disappointing on account of the clouds.

Interspersed with the narrative are incidents of the early history of the islands, in which, however, the traditional and the historical are not always clearly distinguished. The author is not strictly accurate in his assertion that "the first civilizers of Florida were Canarians, and the city of St. Augustine in that State, which claims to be the oldest European settlement of the United States, was founded in the sixteenth century by a contingent of seventy families from Santa Cruz," the fact being that Menendez brought the first colonists from Spain.

Mr. Edwardes gives, on the whole, a favorable impression of the present condition of the islands. Notwithstanding the decline of the cochineal industry through the invention of aniline dyes, and the destruction of the vines by the oidium disease, the indications of prosperity are not wanting. Roads are being constructed, harbors improved, and school-houses "broadly sown over the land." In the sleepy town of Laguna, the ancient capital of Tenerife, our traveller even found a palace converted into a "workingmen's club." The foundling hospitals, however, in every town still bear witness to a low state of morals among the islanders. In this respect, as in some others, the aboriginal inhabitants, the Guanches, appear to have been superior to their conquerors. Among other things, the son of a noble could not be received into the ranks of the nobility if it could be shown that "he has made raids in time of peace; if he has been uncivil or spoken amiss, especially to a woman." "In the island of Grand Canary, a noble would never wound or kill any one, except in a stand-up fight. And in time of war, when he had his enemy at his feet, he would not kill him."

The author is always entertaining, and gives an apparently truthful and unexaggerated description of what he saw, adding also in an appendix a few useful hints to the intending visitor. The illustrations are in some cases excellent, especially those of the buildings, but those of the scenery do but scant justice to their subjects.

Wellington; or, The Public and Private Life of Arthur, first Duke of Wellington, as told by himself, his comrades, and his intimate friends. By G. L. Browne. London: Allen & Co. 1888.

A book of this kind, if the execution had corresponded to the conception, would have been a really valuable contribution to the literature of history. While the echoes, so to speak, of a great man's achievements are still ringing in our ears, the mind finds a lively interest in the collection of all particulars respecting those achievements. But as these achievements recede into the past, interest in the man himself takes the place of the interest that once was felt in the things that he did. We want to know the secret of his power, the causes and the nature of the influence he exercised over his comrades and friends—the man, in a word, in his habit as he lived. It is because they supply us with this kind of information that so much of interest attaches to works like Mme. de Rémusat's 'Memoirs of the First Napoleon.' The Duke of Wellington was not a genius like the first Napoleon; but in an age prolific in the production of great men, he stands assuredly for one of the most remarkable—remarkable, not alone as a great and successful military commander, but for his patriotism, his rigid and unbending honesty, his admirable adherence through life to a lofty ideal of duty. One would gladly have the picture of such a man as it appeared to "his comrades and intimate friends." Mr. G. L. Browne has given us nothing of the kind. He seems, indeed, to be altogether unaware of the wealth of materials which exists for the construction of such a picture. He has been content to skim, with a pair of scissors in his hands, the pages of half-a-dozen well-known books, and to excise such passages as he thought effective—the total result being as sorry a bit of book-making as we ever had the misfortune to peruse.

For a right understanding of the after successes of the "Iron Duke" there is no portion of his career so indispensable as his Indian campaigns. The victor of Salamanca and Waterloo was there in process of making. The years he spent in India covered the most momentous period of the British connection with that country. His brother, the Marquis Wellesley, was then Governor-General, and under his conduct the East India Company had, for the first time in its history, boldly stood forth as the paramount power in Hindostan. That claim was disputed by the leaders of the great Mahratta Confederacy, whose armies were trained and led by French officers. General Wellesley, who was intrusted by his brother with the conduct of the war in the south of India, formed one of a group of distinguished Indian officials. The Duke was not very susceptible to feelings of friendship, and it is therefore the more worthy of note that he retained through life a special cordiality and friendliness for these early comrades of his—Sir Thomas Munro, Sir John Malcolm, and Mountstuart Elphinstone. In the lives and letters of these men there is much of the greatest interest about the Duke on which Mr. Browne has wholly omitted to levy contributions. The Indian despatches, too, of the Duke exhibit a degree of penetration into character, a capacity for establishing cordial and confidential relations with Oriental statesmen, which show that, despite the apparent inflexibility of his character, he possessed the abilities of the diplomatist in a hardly less degree than those of a soldier. But of all this nothing whatever appears in Mr. Browne's hasty and superficial compilation.

Matters are not much improved when he takes his readers into Spain, France, and Belgium. Wellington's "comrades and intimate friends" are, for the most part, conspicuous by their absence. The title-page naturally suggests that during these eventful years the reader is to be told how Wellington impressed, as a soldier and a man, those who fought under him, as well as those to whom he was opposed. What did his own lieutenants think of him—Grahame, Hill, Beresford, the Napiers, and others? What did the French Marshals whom he successively defeated—Soult, Victor, Masséna, Marmont, Jourdan? Their sentiments are all on record, but Mr. Browne apparently is unaware of the fact. At any rate, he produces nothing which proves the contrary; and the worst of it is that even with the books which he has looked at, he has quite a remarkable capacity for overlooking or ignoring the most characteristic stories. Thus he has looked through Charles Greville's Memoirs and missed two delightful anecdotes which are therein recorded. The one has reference to the Duke's Spanish despatches. Greville informed the Duke, as they chanced to be riding together, that Lord Brougham had declared that there was more of political wisdom to be found in these despatches than in all the works of Thucydides. "By G—, sir," replied the Duke with straightforward simplicity, "and that is quite true. I can't imagine how the devil I came to write such things." The other story is quite idyllic. It tells how Greville, calling at Lady Jersey's house, found that she and a party of thirty-two little children were starting for Astley's Theatre to see the Battle of Waterloo performed, the Duke of Wellington having been pressed into the service as a military escort appropriate for the occasion and the play. The Duke in his later years was exceedingly fond of the society of little children, and there is something beautiful and pathetic in the old hero witnessing in such innocent company the counterfeit presentment of himself and his achievements. The "Iron Duke," as he was called, possessed, in truth, a deep well-spring of humanity under an unsympathetic exterior. A man of war from his youth, he never lost his sense of the frightful sufferings which follow in the wake of war, and no general of any age or country ever strove with greater earnestness to protect from pillage, assault, and incendiarism the people and the country visited by his armies. In after life he had a hand always open to the pleadings of distress. He was accustomed to carry a store of loose guineas in his pocket, to reward any of his old soldiers who might happen to address him. His scorn of all deviation from the strictest justice is well exemplified in the following story, which Mr. Browne has done well to include in his volume:

"Some years ago it was proposed to him to purchase a farm in the neighborhood of Strath-

fieldsaye, which lay contiguous to his estate, and was, therefore, a valuable acquisition; to which he assented. When the purchase was completed, his steward congratulated him upon having had such a bargain, as the seller was in difficulties, and forced to part with it. 'What do you mean by a bargain?' said the Duke. The other replied, 'It was valued at £1,100, and we got it for £800.' 'In that case,' said the Duke, 'you will please carry the extra £300 to the late owner, and never talk to me of cheap land again.'"

As regards his military exploits, the untheatrical character of the Duke—his utter contempt for fanfaronade and everything savoring ever so little of self-applause—has caused the world to underrate in no small degree their brilliancy and greatness. Wellington, in these respects, was the exact opposite of Napoleon. It was essential to the policy of the latter that he should stand forth upon all occasions as the ruling spirit, with Victory attendant at his heels like one of his pages. Wellington despised all such brag and exaggeration. An epoch-making achievement was never told in more laconic and unpretentious language than in the Waterloo despatch. The student, however, of Wellington's campaigns cannot fail to perceive that in his military character there was a happy combination of qualities the most opposite; that, cautious and complete as he was in making his preparations, he had an eye of the utmost keenness to detect the favorable moment for striking a blow, and all the swiftness and audacity of execution to turn it to the best account. The victories of Assaye, Salamanca, and Vittoria are notable illustrations of this keenness of observation and felicitous audacity of action; the lines of Torres Vedras and the battle of Waterloo, of that inflexible tenacity of purpose which gained for him the sobriquet of the "Iron Duke."

BOOKS OF THE WEEK.

Airy, O. The English Restoration and Louis XIV. Longmans, Green & Co. $1.

27 AND 29 W. 23D ST., NEW YORK,

HAVE NOW READY:

THE SCRIPTURES—HEBREW AND CHRISTIAN. An introduction to the study of the Bible. Edited by Professors E. T. BARTLETT and JOHN P. PETERS of the P. E. Divinity School, Philadelphia.

Part I. Hebrew Story from the Creation to the Exile.

Part II. Hebrew Story from the Exile to Nehemiah—Hebrew Legislation, Tales, Poetry, and Prophecy; completing the Old Testament.

[Just published.]

2 vols., large 12mo, cloth, each $1.50.

SOME OF THE COMMENTS ON PART I.

"A work which will find a wide welcome, and the excellent features of which make it of permanent value."—HY. C. POTTER, D.D., Bishop of New York.

"Admirably conceived and admirably executed. It is the Bible story in Bible words. . . . The work of devout and scholarly men, and it must prove a help to Bible study."—HOWARD CROSBY, D.D.

"I give it my hearty commendation."—Prest. SEELYE, Amherst.

"A difficult work, accomplished in a scholarly manner."—Prest. G. W. SMITH, Trinity College.

"Just what I want for my Bible-class."—Rev. C. B. PERRY, Baltimore.

"The work of competent and reverent Christian scholars. We commend it warmly to our readers."—*S. S. Times.*

Full prospectus mailed on application.

THE STORY OF MEXICO. By Susan Hale. 12mo, fully illustrated. $1.50. *No. XXIII. (in the Story of the Nations Series).*

OUTLINES OF A NEW SCIENCE. By E. J. Donnell. Octavo, cloth. $1.00. *Questions of the Day Series. No. LVI.*

Spring list of new publications sent on application.

Cash in Bank.....		252,812 02
Amount.....		$12,167,986 34

Six per cent. interest on the outstanding certificates of profits will be paid to the holders thereof or their legal representatives on and after Tuesday, the fifth of February next.

The outstanding certificates of the issue of 1884 will be redeemed and paid to the holders thereof, or their legal representatives, on and after Tuesday, the fifth of February next, from which date all interest thereon will cease. The certificates to be produced at the time of payment and cancelled.

A dividend of FORTY PER CENT. is declared on the net earned premiums of the Company for the year ending December 31, 1888, for which certificates will be issued on and after Tuesday, the seventh of May next.

By order of the Board,
J. H. CHAPMAN, Secretary.

ENGLISH MEN OF ACTION.

Messrs. Macmillan & Co. have to announce a series of "Biographies" under this title. It will be confined to subjects of the British Crown who have, in any capacity, at home or abroad, by land or sea, been conspicuous for their actions in its service.

The Series will begin in February and will be continued monthly. The first volume will be

GENERAL GORDON. By Colonel Sir William Butler.

To be followed by

HENRY THE FIFTH. By the Rev. A. J. Church. *March.*
LIVINGSTONE. By Mr. Thomas Hughes. *April.*
LORD LAWRENCE. By Sir Richard Temple. *May.*
WELLINGTON. By Mr. George Hooper. *June.*

The following volumes are either in press or in preparation:

SIR JOHN HAWKWOOD. By Mr. F. Marion Crawford.
WARWICK, THE KING-MAKER. By Mr. C. W. Oman.
DRAKE. By Mr. J. A. Froude.
RALEIGH. By Mr. W. Stebbing.
STRAFFORD. By Mr. H. D. Traill.
MONTROSE. By Mr. Mowbray Morris.
MONK. By Mr. Julian Corbett.
DAMPIER. By Mr. W. Clark Russell.
CAPTAIN COOK. By Mr. W. Besant.
CLIVE. By Colonel Sir Charles Wilson.
WARREN HASTINGS. By Sir W. Tyall.
SIR JOHN MOORE. By Colonel Maurice.
HAVELOCK. By Mr. Archibald Forbes.

The Complete Poetical Works of William Wordsworth.

Copyright Edition. With an Introduction by John Morley, and Portrait. 12mo, $1.75.

"Mr. Morley has seldom written anything fresher or more vigorous than the Essay on Wordsworth which he has prefixed to Macmillan's new and admirable one-volume edition of the poet—the only complete edition."—*Spectator.*

"The finest of all tributes to the memory of Wordsworth is a complete edition of his poetical works printed in one volume. . . . It runs to near a thousand pages, and is all that it need be in type and clearness of arrangement. . . . In a good binding it would do perfectly well for the library of a millionaire; in serviceable cloth it would make almost a library in itself for the student of humble means. It has a good bibliography of all the poet's writings, a catalogue of biographies, an index of first lines, and a complete list of the poems in the order of their production, year by year. Above all, it has an introduction from the pen of Mr. John Morley."—*London Daily News.*

"It is the only complete edition extant, for the larger part of the 'Recluse' is published in it for the first time, and even of the other poems it is the only edition which is at once correctly printed, manageable in size, and cheap in price. When we add that it is furnished with a satisfactory portrait, with an introduction by Mr. John Morley, with an adequate bibliography of former editions and of critical notices, and with an admirable double index, the reader will agree with us that it is the very *beau ideal* of what a complete edition ought to be. It will undoubtedly become the scholar's Wordsworth."—*Pall Mall Gazette.*

The Recluse: a Poem.

By William Wordsworth. Fcap. 8vo, 75 cents.

'The Recluse' is a beautiful supplement to 'The Prelude.' . . . It is a new and beautiful exemplification of the poet's chief sources of inspiration."—*Spectator.*

The American Commonwealth.

By James Bryce, M.P., D.C.L., Regius Professor of Civil Law in the University of Oxford, author of 'The Holy Roman Empire.' 2 vols., 12mo, $6.

"As we read his pages their suggestive and instructive value to Americans is so great and so patent that we find ourselves concluding that the book is written for us. . . . No earnest and intelligent American can afford to remain ignorant of it. His education will be incomplete as a preparation for his duties as a citizen if he does not take advantage of the helps to a sound judgment and a noble purpose which are here given."—*Nation.*

Thomas Poole and His Friends.

By Mrs. Sandford. With Portrait. 2 vols., 12mo, $5.

"Poole is not unknown to the world of letters, for his person and character are graphically described by De Quincey in his paper on Coleridge; he appears as a frequent correspondent in the Memoirs of Sir Humphry Davy, and of Southey; there is much about him in Cottle's *olla podrida* and in all works dealing with the life of Coleridge. . . . All the virtues, faults, and foibles that went to make up a notable man are drawn with extraordinary skill and fidelity in this admirable biography."—*Athenæum.*

Letters of David Hume to William Strahan.

Edited by G. Birkbeck Hill, D.C.L. 8vo, $3.25.

"Hume was a good letter-writer, and the prospect of reading the letters by him which are now published for the first time will cause many persons to take up Dr. Birkbeck Hill's volume in the hope of enjoying a treat. . . . The book is highly creditable to its editor. He has spared no pains to elucidate the text, and though his views of Hume's character cannot be accepted without reserve, he has helped to make Hume better known."—*Athenæum.*

"We cannot conclude better than by repeating our praise of this interesting volume. We have never seen a work better edited or better annotated."—*Academy.*

Essays in Criticism.

Second Series. By Matthew Arnold, D.C.L. With an Introductory Note by Lord Coleridge. Globe 8vo, $1.50.

CONTENTS: The Study of Poetry—Milton—Thomas Gray—John Keats—Wordsworth—Byron—Shelley—Count Leo Tolstoi—Amiel.

"Those on English subjects are more or less pervaded by the same central idea—that of distinguishing between the true and the false, between the soberly serious and the frivolous or superficial. . . . Here Mr. Arnold is a sure guide. . . . It is as a poet, as a master of a prose style, unmatched for beauty, delicacy, force, and point, and finally as perhaps the greatest critic of a critical generation, that he has left a deep and lasting mark on our literature."—*Nation.*

The Life of Charles Lamb

By the Rev. Alfred Ainger, M.A., LL.D. New and revised edition. Globe 8vo, $1.50.

The Land of Darkness

Along with some further chapters in the experience of the Little Pilgrim. By the author of 'A Little Pilgrim in the Unseen.' 12mo, $1.25.

"To those who have derived strength, consolation, or enlightenment from the previous experiences of 'The Little Pilgrim' the speculative theology of this small volume will appeal with unquestionable force."—*Glasgow Herald.*

"We strongly commend this thoughtful and beautiful allegory to our readers as one which will repay their study of its striking and vivid description by suggesting not a few valuable lines of devout reflection."—*Banner.*

Gleanings in Science.

A Series of Popular Lectures on Scientific Subjects. By the Rev. Gerald Molloy, D.D., D.Sc. 12mo, $2.25.

CONTENTS: The Modern Theory of Heat—Lightning, Thunder, and Lightning Conductors—The Storing of Electrical Energy—The Sun as a Storehouse of Energy—The Electric Light—The Glaciers of the Alps. The lectures are followed by an appendix giving a short account of the recent controversy on lightning conductors.

A New Novel by Charlotte M. Yonge.

Beechcroft at Rockstone.

By Charlotte M. Yonge, author of 'The Heir of Redclyffe,' etc. 12mo, $1.50.

Price, 30 Cents; Annual Subscription, $3.

MACMILLAN'S MAGAZINE,

NO. 352, FEBRUARY, CONTAINS:

1. The American Commonwealth, by Goldwin Smith.
2. Nether Stowey, by the Rev. Canon Ainger.
3. Maromed, by W. Clark Russell, Chap. x-xii.

6. The House of the Wolf, by J. Stanley Weyman.
7. Dordt, by Reginald T. Blomfield, M.A. Illustrated.
8. Et Cetera, by H. D. Traill.

MACMILLAN & Co., 112 Fourth Avenue, New York.

The Nation.

NEW YORK, THURSDAY, FEBRUARY 14, 1889.

The Week.

THE latest correspondence between Prince Bismarck and Mr. Bayard on the Samoan question ought to be satisfactory to us. The German Chancellor invites a conference on the express basis of the independence of the Samoan islands, and the neutral—that is, equal—position of all the treaty Powers therein. As this is all that we have ever contended for, there can hardly be a doubt that the conference will have a happy result. Mr. Bayard's acceptance of the invitation is accompanied with a suggestion that Germany should refrain in the meantime from seeking satisfaction for the killing and wounding of some fifty of her sailors by one of the warring factions at Apia recently. "If," he says, "we may indulge the hope which the adoption of this suggestion promises for a successful issue of the conference, the Government of the United States will at once take steps to be properly represented at the meeting of such conference in Berlin." This phraseology would seem to make the conference hinge on a cessation of hostilities between the German forces and those of Mataafa. Although this has apparently been agreed to by Bismarck, it is not probable that he will ever forget the slaughter of his men, or fail to secure justice for them in the end. He will do what we should do under like circumstances—exact an eye for an eye and a tooth for a tooth.

The Nicaragua Canal Bill has now passed both houses of Congress, and simultaneously the Panama Canal Company has passed into dissolution, or at all events into a state of suspended animation. It is the common belief in this country that if the Panama property, as it now stands, and the Nicaragua project, with not a spadeful of earth turned, were offered in competition for the purposes of inter-oceanic transit, the latter would be the cheaper of the two. This is the opinion of Admiral Ammen, who is certainly the best authority on this side of the ocean, if not the best in the world. Our people are not much given to investing their money in foreign countries, but there is a strong probability that the Nicaragua Canal will be taken up and carried forward to completion. For the purposes of navigation between our Atlantic and Pacific ports it has the advantage over the Panama route of about 2,000 miles in the way of distance, and the same advantage as between England and the North Pacific ports. Probably English capital will join the venture if Americans show a disposition to go ahead with it. The Clayton-Bulwer Treaty secures to Great Britain an equal voice with this country in fixing the maximum tolls on the canal and in protecting the entrances to the same. This treaty was one of the subjects of discussion in Congress while the bill was under consideration, but was not deemed of sufficient importance to impede the passage of the bill. The opinion seemed to prevail that in time of peace the joint protectorate could do no harm, and that in time of war the entrance to the canal would be under the control of the strongest Power, treaty or no treaty.

Anxiety lest the privilege of completing the Panama Canal should pass into the hands of foreigners is still "played for all it is worth" in Paris. It may be worth something in France, where *la gloire* and *la grandeur nationale* and such fustian really command a good deal of cash. But anxiety to take up the privilege of finishing the canal has not been shown in any other part of the world. In this country the only anxiety felt is to get American citizens who may happen to be on the isthmus out of the mêlée when the pay of laborers stops and the demands of hunger are felt along the line of the works. The administrators who have succeeded to the powers of the Lesseps Company have arranged with the contractors for continuing the work until February 15 by offering as security the unpledged shares of the Panama Railway, the last of the company's assets and the only one that has a market value. This arrangement was made in the expectation of reorganizing the company, issuing preference shares, to take precedence of all outstanding securities, to the extent of 5 per cent. per annum until and after the opening of the canal, and 16 per cent. of the subsequent profits. The subscription to these shares was limited to the present share and bondholders. The subscription closed on the 2d inst., and was a complete failure. Under these circumstances the appropriation of $250,000 by the Senate to enable the President to protect or bring away destitute American citizens from the isthmus was a very proper proceeding.

A syndicate of State Legislatures is a new thing in American polity. Such a phenomenon is in course of promotion or incubation at the West, to deal with what is called the Dressed-Beef Combine. The Senate of the United States also has the subject under consideration, a committee having been appointed last year to take testimony and report upon it. This committee held sessions at St. Louis and other Western cities, and is expected to make some kind of a report before the adjournment of Congress. It seems, however, that the Legislatures of Missouri, Kansas, Tennessee, and half-a-dozen other States cannot wait for the action of their common agent, the Government of the United States, but must needs take the matter in hand themselves, not individually but collectively. It is said that eleven States have given their assent to the movement, whatever it may be. Naturally there is a good deal of confusion as to the steps to be taken. The real grievance is cheap beef, the ostensible one being diseased beef. Mixed up with the grievances, real and pretended, is a deal of sympathy for the ranchmen on the plains, who, it is said, are suffering from the low prices of cattle, and are ground down by the Dressed-Beef Combine to starvation rates. So we have for the basis and *raison d'être* of the syndicate of Legislatures two real evils to be fought against, and one imaginary one, viz.: cheap beef, low-priced cattle, and inadequate inspection laws.

We can understand how the last evil, the imaginary one, may be met, if any single Legislature has the courage to grapple with it, the Granger Meat Bill of Pennsylvania having blazed the way. But since the Legislature of that State, as well as that of Ohio, has been lacking in intrepidity, we do not see much prospect of advance in that direction. The syndicate of States will therefore be expected to give attention principally to the evil of cheap meat, and here the difficulties to be encountered are serious. France and Germany manage it by means of the tariff on imported meats. The former country can even protect one locality against another by octroi duties, as Paris has lately protected her own carpenters and cabinet-makers against the pauper labor of the provinces. With such examples before us, why should not the syndicate of Legislatures, or some one of them, memorialize Congress to authorize internal tariffs to protect the slaughtering industry of the several States? The Constitution says that "no State shall, without the consent of Congress, lay any imposts or duties on imports or exports." The consent of Congress is the only thing needed to clear the way for the discouragement of cheap beef. A duty of two or three cents per pound would probably be all that the local butchers would need. How this step would help the ranchmen to a higher price for their cattle is not so clear. Perhaps a bounty on steers of a certain weight, to be paid under regulations of the Internal Revenue Department, would meet that difficulty.

There has been much discussion as to the effect of next year's census upon the apportionment of Representatives, and by consequence upon the number of Presidential electors, but some newspapers are now saying that such an apportionment cannot be made in time to affect the election of 1892. There is no reason, either in the nature of things or in the precedents, for this assertion. On the contrary, an apportionment bill was passed by the House at the session of Congress which followed the taking of the last census—in the winter of 1880–81—although it failed to get through the Senate. It will be entirely practicable for the Fifty-first Congress to pass a bill, and there

is no reason to doubt that it will do so, especially as the indications are that the Republicans, who will control both branches, will find a partisan advantage in having the expected changes in the division of the electoral vote go into effect in the next Presidential election.

As the New Hampshire Legislature does not meet until after the middle of June, while the term of Senator Chandler expires on the 4th of March, the Governor has the power of naming the man who shall fill the seat during that period, and he has appointed Gen. Gilman Marston, who has been a prominent figure in the State during a long career and has for many years aspired to the Senatorship. He is now in his seventy-eighth year, and cannot expect to continue in the office beyond this brief period, by reason of his age. The importance of his appointment lies in its bearing upon the action of the Legislature when it comes to make a choice, and this is distinctly unfavorable to "Bill" Chandler's ambition for another term. The naming of any other person than himself places an obstacle in his way, and for this reason he has been laboring to secure the appointment. It will not do, however, to feel much confidence that Chandler will fail. The melancholy feature of the case is that he appears to represent fairly New Hampshire Republicanism, and consequently to be entitled, on party grounds, to another term.

The appointment of a Senator from New Hampshire leaves the seat from West Virginia the only one falling vacant on the 4th of March which has not yet been disposed of. The tangle in that State appears to grow more involved every week, and a man needs to give up a large share of his time if he tries to keep track of the daily crop of rumors and intrigues. The balance of power in the Legislature appears to be held by a small contingent of labor men, who mean to get the highest possible terms for their influence. Senator Kenna is out of favor with them, and his chances of a reelection now seem very poor. Outside New Hampshire and West Virginia the almost universal disposition has been to reëlect incumbents, except where, as in Delaware and Virginia, the opposite party has come into power, or where, as in the case of Senator Palmer of Michigan, another term has been declined where it might have been had for the asking. Colorado and Minnesota are the only other States among the twenty-six which have Senatorships to fill that send new men.

"Shall Boodlers Dominate?" Such is the striking title of an exceedingly plain-spoken leading editorial article in the Boston *Journal*. The article is suggested by an expression used by Gen. William F. Draper of Hopedale, in declining to be considered a candidate for the Republican nomination for Governor in Massachusetts this year. After stating other reasons for his decision, Gen. Draper said: "I also do not care to enter into the style of campaign for the nomination which seems to be requisite of late for a candidate supposed to have money." Gen. Draper speaks from experience. He was a candidate for the Republican nomination last year, and he learned then what "the style of campaign" had come to be. The *Journal* says the methods which he refers to "are pushed by a small army of boodlers who seek first a man who will bleed freely, and then enlist for the campaign, not with a view of giving the State the best man that is attainable, but with the sole object of putting money into their own pockets and securing influence when he is elected." It says further that "a man of wealth need only be mentioned as a possible candidate, and the harpies will surround him, and from the day that his name is suggested till success or failure is decided at the polls, he is the victim of this cankerous system which should be stamped out." Proceeding from generalities to particulars, it asks: "Is it not a sad commentary upon this Commonwealth and the tone of its people to know that the cost of securing a nomination for Governor has been in recent years as high as $20,000, to say nothing of the expenses incidental to the election?" These latter expenses, it adds, are put at "thirty or forty thousand dollars," "with our present 'ways that are dark;'" although it believes that "with an honest system not one-quarter of this amount can be judiciously expended."

The *Tariff League Bulletin* publishes a letter from the President-elect which we fear is liable to be wrongly interpreted. The letter is as follows:

INDIANAPOLIS, Ind., January 21, 1889.
Edward H. Ammidown, Esq., New York city.
MY DEAR SIR: I have not been able sooner to acknowledge your telegram of the 18th, extending to me the congratulations of the American Protective Tariff League. Let me assure you that I appreciate very highly this cordial expression, and that it will be my sincere purpose to meet the just expectations of those who not only rejoice in the result of the late election, but whose contribution to that success was so earnest and so large.
With kind regards for you, sir, personally, I am, Very sincerely yours,
BENJ. HARRISON.

It is not customary for Presidents of the United States to publicly thank persons who have made "large" contributions to the success of the party in a political campaign, because it is like saying: "Gentlemen, your money was very useful in this fight. I don't know how we could have got on without it, having so many blocks-of-five to pay for. It will accordingly be my sincere purpose to meet your just expectations." But the word contribution may be interpreted in another way—that is, as a contribution of influence, of sympathy, and other non-material but effective support; and we prefer to believe that that is what Gen. Harrison meant when he described the contribution of the American Protective Tariff League as "so earnest and so large."

"A Merchant" comes to the defence of John Wanamaker in *Harper's Weekly*, and, after the usual accounts of Mr. Wanamaker's business success and liberality with his money, comes down to the question. The observations which his apology suggests are the following: Seeing that Mr. Wanamaker has a voucher for every disbursement of his committee, and that these disbursements are made the ground of attacks on him by which he and friends are annoyed, why does he not do what all good men do when they are attacked about their use of money—submit the accounts and vouchers to hostile or disinterested audit and publication? His friends have been boasting a good deal, ever since he was charged with burning his accounts, of the fact that he has every voucher in his possession, as if the burning of his accounts were the main charge against him. But the only use of vouchers is to protect the custodian of money against those who would say that it had been either paid to the wrong persons or for bad purposes, or had been converted to his own use. Unless vouchers are available for this purpose they have no value whatever. They might as well be lost or burned. To cry out about vouchers, "I have them, but you shan't see them," is very foolish. There is nothing indecent about vouchers. It is not usual to lock them up like bad books, lest the children and servants should get at them.

The charge against Mr. Wanamaker which the "Merchant" studiously ignores, is not that he spent the money he gave or raised for the canvass in "toys, or lust, or wine," or that he used it himself in bribery or corruption—the "Pharisees," as Judge Gresham calls them, hardly ever do that—but that he gave what he raised to a man whose character he knew to be bad, who was noted in Philadelphia as a corruptionist of the worst type, and who Mr. Wanamaker had every reason, except actual complicity in his past crimes, to believe would put it in the canvass to unlawful or immoral uses; and that, finally, Mr. Wanamaker tried, but happily failed, to raise in this city a sum of $350,000, in the last week of the campaign, when it was impossible that it could have been used for legitimate expenses.

There was a very lively time at the weekly meeting of the Central Labor Union on Sunday, chiefly because a member, named William Shakespeare, remarked that a "Walking Delegate was a delegate who always walks in the direction of whiskey." A resolution was prepared and adopted denouncing Shakespeare and calling upon him for an apology, but he refused to make it. There seemed to be a feeling at the meeting that there was sufficient truth in the remark to make it stick to all Walking Delegates for some time unless it was withdrawn; and any one who has observed the habits of Walking Delegates will admit that there is good reason for this belief. The fact that observations of this truthful kind are heard now at nearly every meeting of the Central Labor Union, shows that the light is breaking in what have hitherto been the darkest corners of the laboring men's minds.

Apropos of country roads, which a month from now people will begin to think about once more, a bill has been introduced in the New Jersey Legislature, which, if passed, will bring about a much-needed reform in that State, and probably show the way to it in others. It empowers the Boards of Freeholders to make maps of all the roads, and on such maps to mark off the roads which they adjudge to be county roads, and as such are to be maintained and kept in order by the county. The Boards are then to have power to have the county roads so set apart "graded, paved with telford, macadamized, or otherwise improved by means of stone for a width of at least twelve feet in the centre thereof," by contract on advertised bids. To provide money for this, they are to be authorized to levy a special tax of not more than a quarter of 1 per cent. on the assessed value of taxable property of the county, or, if necessary, to issue county bonds, with the permission of the Circuit Court on cause shown. One-third of the cost is to fall on the cities, towns, townships, or boroughs through which the roads pass. The Freeholders are further to be authorized—and this is very important—to employ a competent engineer at an annual salary to inspect the roads and order repairs on them. We sincerely trust the bill may become a law and that the movement may spread. We can think of nothing which would do more to revive the rapidly declining taste for living in the country.

There is, of course, a ludicrous side to the fight which William O'Brien carries on with his jailers over his prison clothes; but it is quite plain now, and, indeed, was plain from the beginning to anybody but a Tory, that O'Brien is going to have the best of the laugh, or, in other words, that the treatment inflicted on him is egregious political folly. The determination to treat the Irish political prisoners as ordinary felons, against all previous English usage, was formed by the Tory Government, with the half-hearted approval of the Liberal-Unionists, for two reasons. One was, that it would make the sentences of imprisonment inflicted without juries, by the magistrates, so formidable that the offences against which they were directed—that is, encouraging boycotters and discouraging persons from taking evicted farms —would promptly cease. The other was, that they would disgrace and degrade the prisoners in the eyes of the community. Neither expectation has been realized. The Irish members of Parliament continue to make the obnoxious speeches, and print the obnoxious articles, and go to jail in as great numbers as ever, and being in jail the rigor of their treatment makes martyrs of them, and is finally rousing the indignation of the phlegmatic English masses. The speeches for which they are sent to jail would be lawful if made in England or Scotland—a fact which shocks the English sense of justice; and finally, their whole action as Irish agitators is confessedly considered either innocent or praiseworthy by almost half the voters of England and by a majority of the voters of Scotland and Wales. This may be, from the Conservative point of view, a deplorable state of things, but to act as if it did not exist is surely political fatuity worthy of King Bomba or Prince Metternich. Tearing the clothes off a delicate man —fool though he be—whose sincerity and disinterestedness nobody doubts, in order to punish him for fanatical speeches, made on behalf of the poor, is a spectacle which no democracy in our day will long endure without a great increase of fierceness. We shall probably see after the next general election in England a more violent rush than ever in the Radical direction, and see the ruthlessness of the Radical temper greatly increased.

It is interesting to know the attitude of what may be called literary Paris towards Gen. Boulanger. It was naturally to be presumed unfavorable, but there have been until lately few facts in the possession of the public on which to base an opinion. But in the week before the election of January 27 the *Matin* newspaper sent out a circular addressed to 340 well-known men of letters, artists, bankers, merchants, and the like—all "notabilities"—asking whether in their opinion the interests and honor of the country demanded a vote for Gen. Boulanger. The circular was sent out to arrive on Wednesday: in its issue of Friday the *Matin* said that it had received 185 answers to its question, of which 100 were No, and 17 Yes, while 66 declared for abstention, and there were two votes scattering. Only the names of those who signed their ballots were printed. In the list of those who voted no we note the names of MM. Ernest Renan, Jules Simon, Beaussire, Charcot, Leconte de l'Isle, Levasseur, Meissonier, F. Passy, Verneuil, Wallon, all of the Institute; Profs. Rambaud of the College of France, and Müntz of the Beaux-Arts; F. Sarcey and J. J. Weiss. The only voters of yes who signed their ballots were MM. Arsène Houssaye, Xavier de Montépin, L. Bonaparte-Wyse, and Cucheval-Clarigny. M. Duruy of the Academy, and late Minister of Public Instruction, wrote: "I am not an elector in Paris; if I were, I should vote decidedly no." M. Gérôme of the Institute, in a somewhat high note, indicated his preference for M. Pasteur, who might, he thought, have some cure for political rabies. M. Georges Ohnet, with more gayety than he at all times displays, declared that he could not decide between the Boulanger pill and the Jacques draught, and advised the *Matin* to call in Dr. Rameau.

Spanish political affairs of the last twelvemonth present a singular example of the rapid oscillation of party fortune and prospects. The Liberal Ministry opened the year with an apparently consolidated party behind them, and with a good hope that a part at least of their programme might at last be carried out. Prime Minister Sagasta took every opportunity to get the reforms proposed by the Liberals before the country, and his resolute advocacy of a great extension of the suffrage, of thorough military reorganization, and of a reformed civil code, met with marks of popular favor. But the harmony of his party was rudely threatened as early as last April. The protectionist faction of the Liberals, headed by Gamazo, and using the new and powerful Agrarian League as a lever, began to insist upon the adoption of their plans by the party as a whole. This could not be done without the most disastrous results. Yet Sagasta made some important concessions to the protectionists, agreeing to a lowering of the land-tax and of railroad freight charges, and to a thorough readjustment of the revenue laws in regard to alcohol and petroleum. But this only inflamed the appetite of the group it was intended to placate, and their agitation went on as strongly as before. The Conservatives naturally found this water for their mill. Canovas del Castillo stumped the provinces on the protectionist issue, arousing a popular excitement which gave promise of his speedy return to power.

But the Liberals slowly recovered their prestige. In this they were greatly helped by the success of the Barcelona Exposition, opened last May. It was the greatest thing of the kind ever done in Spain, and could not but feed the national pride and reflect credit on the Administration under which it was undertaken. But more lucky for the Liberals was the dead set which Canovas made against universal suffrage, or anything approaching it. This was a great political blunder. It at once alienated those large bodies of non-voting workingmen whom his siren songs in praise of protection promised to rally to his standard. It brought him a vast amount of popular disfavor, violently displayed in his mobbing at the hands of the students of the University and by the populace of Madrid. And the Liberals were not slow in following up the mistakes of their opponents with the enactment of positive and popular measures. They effected a good part of their proposed military reforms, completed the new Civil Code, and reaffirmed their devotion to the extension of the suffrage. For a time things looked rosy for them, but soon the pendulum took another swing. It appears to have been largely personal questions that led to the retirement from the Cabinet of Ministers Moret, Puigcerver, and Martinez, but their action was a terrible blow to the Administration, which seemed to be surely about to go to pieces. But Sagasta's patience and skill conquered the situation, temporarily at least, and latterly things have been running much more smoothly. Even against the powerfully backed demand for an import duty on cereals, he has held a majority together according to late despatches. It ought to be added that the feeble attempts to use dynamite recently made in Madrid, once even in the palace, have no great political significance; the correspondent of the London *Times* rightly attributes them to the petty malice of gamblers and other lawbreakers whose business has been seriously interfered with by the police.

THE BYRNE REPORT.

We return to this document because as long as such methods of administration as are revealed in it are possible, we cannot have a respectable and efficient civil service. Self-respecting and honorable men will never remain in an occupation in which their characters are likely to be assailed and their livelihood put in peril in this way. We say nothing of this mode of attacking wholesale the reputation of a large number of the leading business men of the city, as this report has done, by giving official currency to accusations of fraud got up behind their backs by an illiterate detective, although this, too, is a serious matter. That Byrne is illiterate the English of his report shows, and that he is a man without much self-respect is proved by the extreme, almost Oriental, servility of his language—something very new in American political documents. He never speaks of the Secretary except as "the honorable Secretary." He does not wait for fresh instructions; he waits for "the esteemed commands of the honorable Secretary." He treats unwillingness to obey his orders, as the familiar of the Secretary, as disrespectful to "the honorable Secretary," and therefore little short of criminal.

He collected his evidence in two ways—first, as a detective does it, by going about through the offices and the streets, and picking up any information he could get about the accused persons or their affairs from any person he thought likely to know, and jotting down whatever they said that was of a damaging character; secondly, by examining the accused persons themselves under oath, on the assumption, in the French fashion, that they were guilty. The authority for this latter method is given to this ignorant man by Secretary Fairchild, in a letter for which we think no parallel can be found in the official literature of America or in that of England since 1688, and which we quote entire. That an American lawyer could have brought himself to write it is something amazing. It must be remembered that the persons to be examined were really persons whose reputation and livelihood were both put in peril by the proceeding; that the "special employee" who was examining them was both the prosecutor who accused them and the judge who was to pass on their guilt or innocence; that he was not, before he was employed in this business, in the public service at all; and that the most respectable of his previous and numerous callings was that of an unattached newspaper reporter; that he had no judicial or legal training whatever, and no previous practical acquaintance with the Custom-house business, or with the process of sugar-refining or testing.

TREASURY DEPARTMENT,
OFFICE OF THE SECRETARY,
WASHINGTON, D. C., July 1, 1887.

To any Officer or Employee at the Appraiser's Store, New York:

Special Officer T. Aubrey Byrne is instructed to administer to you the following oath:

You do solemnly swear that the statements and answers you shall make relative to the investigation now pending shall be the truth, the whole truth, and nothing but the truth, so help me God.

I direct, if you have any knowledge, direct or indirect, or information of any kind relating in any manner to any fraudulent or irregular practices in the method or manner of sampling, testing, and appraising sugars, or of any matters connected therewith, you will state it to Special Officer Byrne without reservation.

I desire further that nothing shall be said by you to any person about this examination or as to what you have testified, or the nature of the questions asked you, until permission has been given you by me.

I further desire that any officer or employee objecting or refusing to give the promise as above stated shall state his reasons therefor, and Special Officer Byrne is directed to write out said objections or refusal, which statements shall be signed by the officer or employee so objecting.

Special Officer Byrne is further directed, and is hereby authorized, to examine under oath Special Agent Hinds, Clerks Bauer, Rose, and Howard, and any other officer or employee connected with the Appraiser's store, New York, he may desire.

C. S. FAIRCHILD, Secretary.

Most if not all of those who were summoned under this letter, refused, as American citizens they were bound to do, to take this oath of secrecy, and were consequently treated by "the special officer" with great severity. Among these was Dr. Sherer, concerning whom Byrne had been doing active detective work. Anticipating his examination, Dr. Sherer put in the following very proper protest, dated July 1, 1887:

"The conviction forced upon me by facts within my knowledge that Mr. Byrne is not an unprejudiced investigator, justifies me in protecting myself against possible misrepresentation by all proper safeguards; and I ask that, should I comply with the Secretary's desire to take the oath of secrecy and testify, I be furnished, as soon as practicable, with a copy of my evidence, for use, if necessary, in my defence at the close of the inquiry."

He had previously (June 28) made the following most reasonable request, that—

"should I be called to testify under oath to Mr. Byrne, he be requested to have a stenographer to take down questions and answers. Should Mr. Byrne decline to accede to my request, I ask that my request be noted upon his record of examination. If he declines my request for a stenographer, I have further to ask that his questions be submitted to me in writing and I be permited to write the answers thereto, after being allowed due time for deliberation, and be permitted to read them all before answering any one of them."

The character of Byrne's mind as a judicial organ may be inferred from the following observations which he makes on these documents:

"As no charges had been preferred against Dr. Sherer by me, his great anxiety to defend himself implies evidence of guilt, and is an exhibition of arrogance and presumption to my mind unbecoming of a public officer.

"The action of Dr. Sherer, reviewed in the light of his testimony, presents a case worthy of the most careful consideration of the Department."

The report bristles with similar illustrations of Byrne's mental condition in conducting his inquiry, some very amusing.

We have been frequently asked, since this matter came up, what our theory of the affair is—whether we accuse Secretary Fairchild of deliberate unfairness for political or other illegitimate purposes. We do not. We believe him to have been imposed on by his subordinate, Assistant-Secretary Maynard, to whom he handed over at an early period the business of looking after the offices and things pertaining thereto. We believe that when the Byrne report was sent in, its flimsiness was fully recognized, and that there was no intention to make any use of it until Mr. Maynard decided that the time had come for him to take a more active part in the "politics" of the Presidential situation, and he then resorted to the report as a justification for what is called "a shake-up" in the New York Custom-house. He began it by ordering the dismissal of fifteen officers of the Appraiser's Department, eleven of whom, however, he subsequently restored or left undisturbed, in spite of their "frauds," some at the request of politicians. Even "Tim" Campbell was able to save one. When his action was assailed by us, and at our request investigated by the Hale Committee of the Senate, he was left in a position in which he needed help and support, which Secretary Fairchild has generously, but most rashly and injudiciously, given. We might use stronger epithets than these, because it has been given by fastening on several of his fellow-citizens in respectable standing in the community imputations from which no man should suffer in mind, body, or estate, except after judicial inquiry conducted by a proper tribunal. As long as Secretary Fairchild fails to support his allegations and insinuations against the Custom-house officers and merchants of New York, by such inquiry, he must expect to be the subject of severe criticism, however pure his motives may be.

TARDY CIVIL-SERVICE REFORM.

The removal by the President of Mr. Edgerton as a member of the Civil-Service Commission, and the discussion in the Senate over a proposition to increase the clerical force of the Commission, call attention to the present condition and the future prospects of the reform. The removal of Mr. Edgerton is one of those good acts which lose their chief value from being too long postponed. He abundantly deserves to be removed, but so he has deserved almost from the day of his appointment, three years ago last November. The late Chief-Justice Waite is credited with having recommended Mr. Edgerton in the most unqualified terms on the strength of a long acquaintance; but it did not take long to show that, however amiable he might be as an acquaintance in private life, he was about the last man in the country for a Civil-Service Commissioner. His entire unfitness could not be more clearly shown than by mentioning the fact that his career has been such as to earn the hearty praise of Gorman, who paid this warm tribute to him in the Senate the other day: "He is an old-fashioned Democrat and an old-fashioned thinker, and he is the only man who has been connected with the Commission who by public expression ever showed that he thought the people of this country had any rights outside of the Civil-Service Commission. He has my entire respect and confidence."

The hearty endorsement of Gorman would of itself be conclusive evidence of Mr. Edgerton's original disqualifications for the position, by reason of his being an old-fashioned spoils Democrat. But he proved even worse than his antecedents indicated. He has spent a large part of his time in open

ridicule of the whole idea of civil-service reform, and has been from the first as much out of place as a clergyman would be who received a salary as a representative of Christianity, and devoted his energies to praising some vanishing form of heathenism. His retention as a member of the Commission for more than three years has been an inexcusable blunder, which is not rectified by his late dismissal.

The Senate debate showed how strong is the opposition to the reform which still remains among members of both parties. It arose over an attempt by Gen. Hawley to strengthen the hands of the Commission by giving them two more clerks than the Appropriation Committee had allowed. Chairman Allison consented to one, but successfully opposed the granting of a second, and the discussion which followed covered the whole field of civil-service reform and of politics. Gen. Hawley clearly showed the necessity for the increased force by reason of the increased work imposed upon the Commission, and he vigorously defended the reform policy. In this attitude he was heartily sustained by Mr. Hoar; but no other Republican said anything to indicate an honest belief in reform, while Mr. Stewart, on that side of the chamber, and Senators Gorman and Daniel on the other, declared their opposition to the whole thing. The other speakers occupied the position of Mr. Plumb, who does "not believe in this precise kind of civil-service reform, and would not adopt it if I were to have my choice of the kind of civil-service reform that I would have practised," although, like him, they are "not prepared to abolish this."

There was a good deal of talk about the recent action of the Administration in putting the Railway Mail Service under the rules. The simple truth about this performance is that, like the removal of Mr. Edgerton, it is a good thing, which ought to have been done years ago. The Republican spoilsmen urged that it was an unfair attempt by the outgoing Democrats to "embarrass the Republican Administration," by "keeping in under some kind of arrangement a class of men who but for that would not be kept in at all;" and the Democratic spoilsmen retorted by showing that the Arthur Administration set the example by putting large classes of employees under the rules after Cleveland was elected in 1884. It was of course easy to show that the proposed change in the Railway Mail Service would not in the slightest degree impair the power of removal; and all that Mr. Plumb could say in answer was a confession that the only trouble about it would be that "we"—that is, the Republicans—would "have no control over the person to succeed" a man removed, and so could not be sure of getting in "their man."

Gen. Hawley and Mr. Hoar stood manfully by the doctrine laid down in the Republican national platform of 1888. The Connecticut Senator read the plank, "for the edification of those who believe the Republican party is right, and, it may be, for the amusement of those who look with incredulity upon this whole business, after an election at any rate"; and he declared that "these were not merely preëlection promises," but "an honest assertion," and that "the party, whatever party, which has the management of the Government had better so consider it." Mr. Hoar was equally emphatic. As to the Railway Mail Service, he said: "I am glad that the present Administration, whether late or early, has extended this system to another branch of the civil service. President Cleveland, or the department officer on whose advice he acted, does not secure the retention in office of any unworthy or unfit Democrat by so doing, unless the appointing power is to be administered hereafter by some unworthy or some unfit Republican. He simply provides for taking away the political motive for turning these men out. If they are unfit either in character, or attainments, or special capacity for the particular service, or if for any other reason that can be conceived of they should be removed, that power will remain as heretofore." Mr. Hoar recalled the disgraceful features of the old spoils system, which he said "became absolutely intolerable," and in reply to a question as to how far he would extend the merit system, said:

> "I would apply it, if I had my way, to every official in the country in an executive office whose duties were not of a political or a confidential nature, and whom it was not expedient to have in sympathy with the Administration when that Administration was carrying out its political theories and policies, in regard to which its opponents would be expected not to be in sympathy; and I would have it then apply to all the class of offices to which men of ordinary and average intelligence are competent."

Gen. Hawley made a valuable statement as to the enlargement of the scope of the reform, which he thought much greater than the Senate was aware of, and which is certainly much greater than the general public had any idea of. In 1883, when the Civil-Service Law went into operation, the classified civil service consisted of seven executive departments at Washington, eleven customs districts, and twenty-three post-offices, in each of which there were as many as fifty employees. The departments made 5,652 persons subject to examination, the customs districts 2,573, and the post-offices 5,699—in all not quite 14,000. Since then the system has been extended in the departments and applied to other post-offices which reached the fifty-employee limit, and now the numbers are as follows: In the departments nearly 9,000, in the eleven customs districts 2,298, in the forty post-offices about 11,000, and in the Railway Mail Service 5,320, in all 27,618, being an increase from 13,897 to 27,618, almost exactly doubling the number of persons subject to examination. Excluding the Postal Railway Service, the increase has been, in round numbers, from 14,000 to 22,000, which approaches nearly to one-fifth of the whole force of employees of all sorts in the Government service.

The most important feature about the reform is, that it never loses ground. Every step of advance is contested, and the spoilsmen are even yet going to try and defeat the application of the system to the Railway Mail Service before March 4 if they can through legislation, but nobody any longer seriously thinks of repealing the law, and its steady extension is seen to be inevitable, simply because public opinion favors it.

ANOTHER PROHIBITION EXPERIMENT.

We gave an account recently of the successful operation of a prohibitory liquor law in the city of Cambridge, Mass. We showed that the law had been enforced there because intelligent public sentiment was not only earnest in its support, but was sufficiently aroused to organize itself formally against all violations of the law. The Mayor of the city coöperated with the Citizens' Association, and the two together gave such a constant moral support to the police that the latter pursued all persons attempting to sell liquor with such vigor as to drive them completely out of the city. Undoubtedly, as we pointed out, the enforcement of the law was aided by the fact that Cambridge is separated from Boston only by the width of the Charles River, and its inhabitants can easily obtain all the liquor they desire by a short journey. Still, the success of the experiment showed, first, that a prohibitory law could be successfully enforced in a community in which public sentiment was sufficiently strong and earnest in its behalf to combine, without regard to political distinctions, against all violations; second, that, being enforced, the gain to the moral and material welfare of the poorer classes of the community was instantaneous and great.

We now ask our readers' attention to another prohibition experiment, on a larger scale, and with quite opposite results. The prohibitory law of Rhode Island has been in force for more than two years. It was adopted at a State election in April, 1886, by a vote of 15,113 in favor, to 9,230 against, which was about the average full vote of the State. One might judge from the majority in its favor that public sentiment would compel its enforcement. As a matter of fact, however, it never has been enforced. We have before us the latest report of the officer in charge of its execution, the Chief of the State Police, and in it little pretence is made that the law has had any effect in even restricting the liquor traffic. Nothing is more striking in the report than the frankness with which the subordinate officials in the various cities and towns admit that the law is not enforced, and that the traffic is going on about as usual.

In some of the rural portions of the State the local officials report that there has been a decrease in the number of places in which liquor is known to be sold; but in all the larger places, there is either a report of increase in a greater or less degree, or a confession of ignorance on the subject, which amounts to the same thing. The largest city in the State is Providence, and from this the official report on violations of the law is: "Increased greatly on account of larger number of tenement-houses." From Newport the official report is: "A slight increase, owing to the inability to convict after apprehension." From Pawtucket, the second city

in size and a great manufacturing centre, the official report is: "I don't know." From New Shoreham, the official report is: "Increased; reason, no one takes any measures to stop the same." From Johnston: "Increased; reason, kitchen bar-rooms."

The tone of the various reports is almost invariably the same—one of entire indifference as to the failure of the law. This is the first and most striking characteristic of them, and we may add also that it is the leading characteristic of the Chief of State Police's report as well. The second point to be noted is the revelation made of the localities in which the increase of violations is most marked. The Providence official says it is in the "tenement-houses." The Johnston official says in "kitchen bar-rooms." This confirms a recent statement of the Providence *Journal*, that the "law is having absolutely no effect on the liquor traffic save to drive it into places from which it had hitherto been excluded, and into the hands of irresponsible persons of the most dangerous sort. The business has now penetrated into the tenement-houses of the cities and factory villages, thus bringing a terribly demoralizing influence to the homes of that class of people who can least withstand it." There can be no doubt of the truth of this statement, for the official reports admit it, and it is confirmed by the last annual report of the Newport Charity Organization Society. A sadder effect of any law could scarcely be imagined, and it seems incredible that a knowledge of it should not merely prevail in Rhode Island, but should be stated in official documents without a word of excuse or protest.

What are the reasons for this failure in Rhode Island, as compared with the success in Cambridge? The first and greatest reason is that, Rhode Island being a State, the influence of politics has been brought to bear on the question. In Cambridge good citizens of all parties united in demanding and sustaining the enforcement of the law. In Rhode Island nothing of the kind has been done. In fact, from the outset the Republicans, who made a party question of the adoption of the law, have used it and the machinery for its operation solely for the benefit of politics. They selected for their first Chief of State Police their ex-Boss Brayton, who, as Postmaster of Providence, had been a Government defaulter for $30,000. He at once showed his party the possibilities for gain that there were in the law. He did nothing to secure its enforcement, but he was quick to make it a basis for campaign assessments upon the liquor-dealers of the State. It is notorious now that nearly or quite every liquor-dealer pays to the Republican fund an assessment as a condition of continuing his business without molestation.

It is this political aspect of prohibition which we wish to dwell upon most earnestly, for it is an aspect which we have reason to believe has profoundly impressed these latter-day leaders of the Republican party, the Quays, Dudleys, and Platts. In the first place, the adoption of a prohibitory law takes away the excuse for a separate Prohibition party, and thus brings back into the Republican ranks thousands of votes which are greatly needed in all the close States. In the second place, a prohibitory law, once it is on the statute-books, can be used as a sure means for assessment upon every liquor-dealer in the land. If he won't "come down" at a threat of being closed up, he will certainly "come down," and all his fellows with him, at a threat to repeal the law. Thus, instead of paying to the support of the cost of government through license fees, the liquor traffic would pay only to the support of the Republican party. Herein we catch a glimpse of the reason for Boss Quay's sudden zeal for a prohibitory amendment in Pennsylvania, and of the Republican zeal for a similar amendment in Massachusetts. With the "fat" of the protected manufacturers on the one hand, and the tribute from the liquor interests on the other, the Republican party would have abundant sources from which to draw its campaign funds for many years to come.

RECENT STEAMSHIP DEVELOPMENT.

THE depression in railroad business under which we are now suffering has not extended to the world's carrying trade as a whole. Least of all is it felt in the ocean steam marine, which has fully recovered from the losses of 1885. The ship-building of 1888 is larger than that of any year since 1883, the figures of English shipyards being as follows:

	Tons.
1882	1,200,000
1883	1,250,000
1884	750,000
1885	540,420
1886	473,675
1887	578,668
1888	903,687

In some respects the 900,000 tons of 1888 is substantially equal to the 1,200,000 of 1882 or 1883. More than nine-tenths of the new tonnage is now steam, and by far the larger part of it constructed with steel instead of iron. Different types have been developed so as to produce superior efficiency in carrying cargo, while the average speed has been decidedly increased.

In the ocean carrying trade we are in the midst of a series of experiments of which it is as yet impossible to foresee the end. It can only be said in a general way that the present marine development is like that which was seen in our railroad systems ten years ago. A larger and more varied traffic is being handled by new methods. The history of the ocean carrying trade divides itself naturally into three periods, the first ending with the crisis of 1857, the second with that of 1873. In the first of these periods ocean steamships were developed with political rather than commercial objects in view; and a subsidy, or at least a profitable mail contract, was thought necessary for their successful operation. It was under these conditions that the Peninsular and Oriental, the Cunard Line, and the Royal Mail to South America were developed in England; while the brilliant but short-lived experiment with the Collins Line was the most marked result of the same policy in the United States. In the second period it was found that steamship traffic could be developed in such a way as to be profitable, independently of subsidies. The freedom from the restrictions which such a subsidy necessarily involved was often found to balance the loss of the money itself. Under these conditions steamship lines multiplied and did an increasing business; but it was not a diversified one. Vessels differed from one another in their size, their speed, or their coal consumption, but they ran for the most part in regular lines, and relied on passenger and freight traffic alike. Improvements came but slowly. The fastest passages from New York to Queenstown took about seven days and a half. Some advances had been made in the matter of fuel economy, but the results did not compare with those which have been subsequently realized.

With the crisis of 1873, steamship construction came to an almost complete standstill. Just at the time when the development of new railroad methods was most active, in spite of a commercial crisis, steamship builders were doing little or nothing. The improvement began about 1880. It was the result of a complicated set of causes which it is as yet impossible to analyze fully. The first conspicuous fact was the sudden development of the ocean "tramp." This term is applied to boats which do not run on any regular line, but go wherever they can get a cargo. Such boats were constructed cheaply, and consumed little coal. Wherever a cargo offered, they were able to handle it cheaply. In going from one port to another in search of cargo they used water ballast; that is, they pumped water into the hold of the ship until it lay low enough for the successful operation of the screw, and, on reaching their destination, pumped the water out and took their cargo instead.

For a time the tramps had everything their own way. Unlike their namesakes on land, they did so much work and did it so cheaply as to threaten the regular liners with a loss of employment. There was the same craze for cheap steamboats that there had been for narrow-gauge railroads ten years previous. But a reaction soon set in. It was found that under stress of weather the water-ballast would gradually shift until it got so far to one side as to carry the boat to the bottom. It was also found that the single-deck Mediterranean steamers which were rigged up for this use, were not able to stand the Atlantic storms without serious danger of foundering. Insurance rates soon ran so high as to interfere with the profit of the business. The reaction for a time was ruinous to the owners of such steamers. The tramp is now coming again into favor—but not the old-fashioned, badly constructed tramp; the most successful boats of this kind are those in which economy has been sought, not in the original investment, but in means of operation. Ships like the new freight boats of the White Star Line belong to this class, constructed with the utmost regard to safety, but seeking and securing the greatest economy in their daily operation.

Meantime the attention of the regular lines had been turned towards the improvement of their efficiency. With steamships as with

railroads, this furnished the soundest chance for business development. A steamship, like a railroad, by increasing the solidity of its works and the power of its engines, could increase carrying capacity much faster than it increased fuel consumption or wages paid. A system of construction was then found profitable which at first sight seemed like ruinous waste of capital. The substitution of steel for iron, although not furnishing the main occasion for improvement on the water as it did on the land, was yet an important incident in the change. The subsequent development of triple-expansion engines was of equal service. Beginning with the year 1880, new boats followed one another in rapid succession, each boat in some respects an improvement on its predecessor. The *Alaska* and *Arizona*, the *City of Rome*, the *Servia* and *Aurania*, the *Oregon*, and finally the *Etruria* and *Umbria*, showed an almost uninterrupted increase in size and a still more conspicuous increase in power, the last-named vessels having a horse-power of 14,000, or nearly three times that which was considered available a few years previous. Meantime the German and French lines had come into possession of a set of vessels scarcely inferior in speed to the best English boats, and vastly more economical. The fastest boats of the Continental lines are now distinctly superior in speed to any English boats except the *Etruria* and *Umbria*, while their fuel consumption is hardly more than a third of that of the last-named vessels, and is less than that of many of the slower boats of ten or twelve years ago.

Nor has the development of size and power by any means reached its limit. The use of twin screws, which has for some time been well established in war vessels, is now being applied on a large scale for mercantile purposes. The *City of New York* is the only first-class boat of this kind in the ocean mercantile service; but a companion ship belonging to the same line is practically completed, while the Hamburg Line has four under construction—two of them nearly ready for use. The White Star Line has also two, which it expects to use before the end of the season, that are vastly superior in power to anything hitherto seen. These twin-screw boats have a displacement of upwards of 10,000 tons in every case, and their horse-power varies from 12,000 to 20,000 each.

It is too early to tell what will be the commercial success of enterprises of this kind. The conditions under which they will operate must remain largely a matter of speculation. Under present rates of freight, large and well-constructed steamships, of whatever character, are highly profitable. It seems impossible that this state of things should continue long. A depression in steamship property is apt to be very severe. It should be remembered, however, that the present steamship development is in line with that which has proved permanently successful in other departments of industry. The economy of being able to handle a large business has caused unheard-of reductions in manufacturing prices and in railroad rates. A scale of charges which would have seemed impossible twenty years ago has now become practicable in almost every line of business. It is to be hoped that the new methods of steamship construction, affording a chance of doing larger business with fewer hands, and of keeping the invested capital in more rapid and constant use, may be a means of economy to shippers and shipowners alike.

LONDON'S CHINESE PUZZLE.

LONDON, January 25.

A WEEK has now passed since the County Council election was held in London. Its result has been already telegraphed to America; but this last week has been by far the most interesting in the short history of the Local-Government Bill. The development of popular feeling and public opinion on the subject since the election is indeed more noteworthy than the election itself. The excitement which now prevails is almost more extraordinary than the general indifference which continued from the passing of the act until within a few days of the election. Of course, while the bill was still before the House there was excitement enough in certain quarters, notably, as will be remembered, among brewers and saloon-keepers when the question of license and compensation was discussed. In the City, too, there was some little stir when the very existence of the Corporation seemed in danger; and there were rumors abroad that a good deal of the City money was being spent in self-defence. But people whose personal or immediate interests were not threatened, looked on at what was really a revolution in the government with most unaccountable apathy. In the country, instead of realizing the new power put into their hands, the few who have voted have returned to their County Councils the lords of the manor, the country squires, the justices of the peace—in fact, the very men against whose *tyranny*, the Radicals hoped, the act was specially directed. In London this apathy has been scarcely less. It was the boast of one daily that it was the only paper in the metropolis which, for a couple of months before the election, kept its readers informed as to the doings and progress of the candidates. The election returns showed how many of the electors in certain districts looked upon the matter as not worth the trouble of going to the polls. The election-day passed as quietly as if it did not mark a new epoch in the history of the English people.

But, since the election, all this has been changed. Now the excitement is at fever heat. In the newspapers, which may fairly be thought to reflect the public feeling, columns are given to the new County Councillors, even if to find space the reports of the Parnell Commission are crowded into one small corner. Radical papers are, figuratively speaking, at each other's throats, and calling each other worse names than were ever found for Tory rivals, because of a difference in the policy they propose to the new municipal government; the County Council even figures in big letters on their flaring posters at street corners. Before last week it was agreed on all sides that, with the Council, party politics had nothing whatever to do; now that Liberals have gained an unexpected majority, to them the result of the election is a sign of the times, and how to turn it to best advantage has become a burning question of the day. The extreme Radicals exult over the victory of the people and the triumph of Democracy. One paper goes so far as to speak of the "Commune of London."

To most men, remembering Paris, the very word Commune means, at its worst, a reign of terror and disorder which cannot be said to have begun in London, since the metropolis is more orderly than it was a year ago; at its best, the word suggests a rule of inexperience and fanaticism, and in this sense, it may be, the enthusiastic editor used it with more truth than he intended. Certainly, in looking over the list of County Councillors, one is struck with the number of names of which one has never before heard. It may safely be said that the majority of the men who are to govern London for the next three years are without experience to guide them in their new duties. The best-known names are those of men who, like Augustus Harris, for instance, won their notoriety in other than political fields of action, and to whom a seat in the Council is desirable for very much the same reasons that at home the Postmaster-Generalship is said to seem a prize worth money to John Wanamaker, or else of men who, like Lord Rosebery, were elected chiefly because of their name and title, and not because—at least according to American ideals—they really represent the district from which they have been returned; for what Lord Rosebery, a Scotchman, has to do with the affairs of the very heart of the English capital, only an Englishman could explain. Or again, as in many cases, the most familiar names on the list are those of men who have become notorious through their almost fanatical devotion to one idea or principle. The new Council will have its members who will seek to work out all reforms by teetotalism; its philanthropist who will not understand any scheme of progress which does not begin and end in the East of London; its Socialist—and a famous one, too, John Burns—whose one aim will be to make London what it has just been called, a Commune; and, moreover, it may have its two women who believe in the salvation of the world through the establishment of the political rights of women.

But the principal reason for the excitement is the discovery that this brand-new bill is at best a sort of Chinese puzzle to which Parliament has not supplied the key. Now that the time has come for carrying it into effect, he is a wise man who can tell exactly what it means in all its clauses. The most omniscient editors are not sure they have found the rightful interpretation; the new Councillors themselves are at their wits' ends. There is only too often a humorous vagueness about English laws. No one who heard or read it can forget the discussion—worthy of Gilbert and Sullivan's heroes—over the dynamite explosion on London Bridge a few years ago, when the question arose as to whose duty it was to look into the matter; for if the bomb exploded in the water, then the Thames Conservancy were responsible; if on the bridge, then it came under the jurisdiction of the Metropolitan police; but if in the air, then whose business was it? Or again, what would seem more impossible in a well regulated country than the position of the West-End shopkeepers two years ago, when the mob broke their windows, and for compensation they were referred to an official who had existed but in name for the last two centuries? In such cases, it may be said, there is vagueness either because the law is obsolete or because certain contingencies were not foreseen. With the Local-Government Act, however, there is no excuse of this kind; it was an absolutely new measure of reform, introduced to do away with recognized evils due to the then existing form of local government, or, rather, to the want of it throughout England and Wales. Perhaps the very vagueness of the bill may be considered an excellent example of the result of the present English method of making local

laws, and proof of the urgent need for far more radical measures of home rule than those for which the Irish have so long been fighting. The bill was drawn up by one man, Mr. Ritchie, who has now become famous enough, but who before his name was associated with the Local-Government Act, was unknown, it may safely be said, to the English world at large. It was then tinkered at and argued over for long months by Irishmen and Scotchmen, as well as by Englishmen and Welsh, though only the latter were to be affected by it. Finally, after all this tinkering by people who had but a general interest in it, the bill was passed and became the law of the land, only to be proved the biggest problem the people of England and Wales have ever had to work out for themselves.

The first difficulty arises from the fact that upon very many important points the act makes no clear statement, but refers—with modifications that further complicate matters—to the Municipal Corporations Act of 1882. On turning to this act, it is found that even here there is no intelligent explanation, but instead another reference to an earlier bill, say of 1854, and even from this you are referred to a still more remote act, until, as one of the new Councillors said to me the other day, by the time you get to the fountain-head of all your references you have entirely forgotten what was the exact subject of inquiry that started you on your search. But this is as nothing compared to the greater difficulty that envelops the question of the election of Aldermen. In this connection a trouble arises which threatens to exhaust the Councillors even before they have begun their active work. It will be sufficient here to speak of the difficulty in London alone, where, after all, the new experiment in municipal government is of paramount interest, since for the first time all the many parishes, villages, and districts into which London has hitherto been divided are consolidated into one great whole. Here nineteen Aldermen are to be elected by the County Councillors; so far the act is clear. But how they are to be selected is a point upon which it is no less vague than if this election had been as unforeseen as the explosion of the bomb on London Bridge. A man who is qualified to be a Councillor is qualified to be an Alderman, it says; and, in a parenthesis, as it were, I might add that to make out the exact qualifications of a Councillor means a ramble of some length through more than one Blue Book. This, of course, the Councillors are supposed to know, but their knowledge is little help to them, for they have at once to decide if they are to select the Aldermen from outside or inside the Council. If they choose the latter alternative, in nineteen constituencies the arduous work of canvassing must recommence, another election must be gone through, and, more important still, there is the risk of several seats being lost by the Liberals, who are not anxious to sacrifice the majority they have just gained. It may be said that the elections have tested the Liberal strength of these constituencies, and that therefore no risk is run. But the Liberals cannot afford to be too sure. In many districts the number of voters was small, though it is not in every case possible to tell whether this smallness was due to actual indifference or to the unreliability of the registration list. In Stepney, for example, the names of 1,000 people no longer living there were still on the list, so that the votes seemed fewer than they really were. But, however this may be, there is no doubt that throughout London interest has only just been aroused in the Council, and consequently a new victory would not be won on such easy terms. Already many of the Councillors have declined to be nominated for Aldermen, because they knew their constituencies would seriously object to it.

On the other hand, there is a widespread feeling that these very important positions should not be given to men who have not, by a direct appeal through the ballot-box, proved that they possess the confidence of the people, or who, by failure in the late election, have shown conclusively that they do not possess it. The election, indeed, has been a very good test, since almost all those Londoners who would be willing to accept the position of Alderman have already figured among the candidates for the County Council. This question is exceedingly difficult to answer; but even here the difficulty does not cease. Of the Aldermen who are now elected, ten will remain in office for six years; nine for three years; but, until the nineteen have been duly elected, votes cannot be given for those who are to enjoy the long term. The consequence is that many busy men who might otherwise consent to be at least nominated, now refuse because of this uncertainty; they must be sure beforehand of the exact conditions of time of the work they are now undertaking. That the Councillors, who have anything but an easy task before them, should have been placed in such a dilemma at the very outset, is simply unpardonable. In the country the matter has been decided in many different ways; in some counties all the Aldermen have been taken from outside, in others from inside the Council; in a few a compromise has been made, and this is probably what will be done in London. The chances are that nine Councillors and ten men from outside their body will be chosen. The report of the election may reach New York before this letter, but its full significance cannot be realized unless something is known of the difficulties which preceded it.

The next complication has been caused by the election of the two women. Here also the act is vague. As far as the average man can find out, it says nothing to prove positively that women are not qualified to be Councillors; but, again, it says nothing to prove that they are. Because of this vagueness, an admirable opportunity seemed to present itself at the late elections to test woman's political rights. Very much to the perplexity of their electors and political supporters, Miss Cobden and Lady Sandhurst were returned. The one merit upon which they both stood was their sex; beyond this, their only recommendations were, in Miss Cobden's case, her father's name and a very striking face; in Lady's Sandhurst's, the friendship of Mrs. Gladstone and the power of healing by the laying on of hands. But their competency was not for a moment considered. Already Mr. Beresford-Hope, a defeated candidate in Brixton, the district which returned Lady Sandhurst, has declared his intention of lodging an objection against her eligibility. If he gains his suit, another delicate question will have to be answered by Miss Cobden and her friends, even if her right to a seat in the Council is not directly contested. Should she, after her splendid victory, resign, or should she remain in the Council, liable as she would be by a provision of the act—if Lady Sandhurst's case proves that a woman is not qualified to be a Councillor—to a fine of £50 every time she voted? It is not likely that the most enthusiastic Woman's League or Association would accept the responsibility of such an expensive triumph; and, while I know nothing of Miss Cobden's private means, I am quite certain that the wealthiest would find £50 a vote a very heavy tax.

There is another point which is being disputed by the Councillors, though the public has heard comparatively little about it, and which will probably, like the woman question, have to be carried into the courts. From the wording of the ingenious bill it cannot be decided whether the County Councillors for London are to elect a chairman who need not be a Councillor and who is to be paid, a Vice-Chairman who must be a Councillor and is not to be paid, and in addition to these two officers, a Deputy-Chairman who is to be paid—Councillors and Aldermen, of course, are not to receive pay; in a word, no one in London can tell you to how many chairmen the County Council is entitled. Neither can any one yet say where the new Councillors are to meet; they are at present as much adrift as the poor Socialists who wander about with their red flag from one open space to another.

That all these difficulties have to be surmounted, all these questions satisfactorily and legally answered before any other work can be undertaken, is a serious drawback to a body of men from whom much is expected. The worst of it is, that when these preliminary matters are found to be in such a muddle, one cannot but look for a new crop of difficulties and questions to spring up as soon as the Council meets in April. Instead of the much-hoped-for immediate improvement in the Board of Works, there will be for an interval but confusion and dissensions in the new municipal government. Before order and peace have been restored on the surface there will have been time for many to discover, as the *Spectator* at least has already discovered, what a city London is to plunder! The old Board of Works was so rotten that even the City Corporation would have nothing to do with it; the honesty of the new Council has yet to be proved. One thing seems certain: the Councillors who are for plunder all inclined, will find the opportunities made to their hand, for the modern Englishman, despite the scandals in the Board of Works, in the Admiralty, in the War Office, has a firm belief that the politician can do no wrong. Altogether, some of our American wire-pullers and "bosses" who are out of work at home, might do worse than to look in on the London County Council. In three years, with another election, they might even have a chance to pull the wires from the inside, for if Scotchmen can be elected, why not Americans? And probably before it could be decided whether they had a right to be there, with their usual smartness they could have made off with a goodly share of the plunder. Certainly Buffalo Bill, with his big hat, or Mr. Blaine, with his peculiar record, would have a fair chance in Belgravia or Bayswater, for there is nothing which rouses the Englishman's enthusiasm so much as notoriety, especially if it be of American origin and doubtful quality. At all events, now is the moment for the Irish-American to come back to the mother country and claim his own and take somebody else's.

Correspondence.

GOVERNMENT AND RAILROADS.

To the Editor of The Nation:

Sir: Two pieces of reading coming together have furnished me with a new text for the eternal lesson which I am trying to enforce. One is a pamphlet published, in reply to the inquiries of numerous alarmed stockholders, by John M. Forbes, who has been identified with the management of the Chicago, Burlington, and Quincy Railroad from the start, and C. E. Perkins, the actual President of that road. I believe there is no road in the country more

skilfully, and I am sure there is none more honestly, managed than the C., B. and Q. The taste and temper of the pamphlet leave nothing to be desired, but I am at present concerned with only one feature of it. Mr. Forbes says: "The chief danger of railroads to-day (an artificial and unnecessary one) is from unwise and artificial legislation by Congress and State Governments"; and Mr. Perkins, after setting forth the difficulties which railroads have to contend with, says in plain terms that one of the greatest is the unwise and impractical character of the Inter-State Commerce Law.

I place this pamphlet alongside of the wonderful book of Mr. James Bryce, which I am tempted to say is the most valuable political work published in this country in this century. In analyzing successively the Federal, State, and municipal governments he shows that they are all conducted on the same plan, with entire absence of executive leadership and responsibility—or indeed of any kind—all power being in the hands of numerous committees, secret, irresponsible, jarring, and constantly dissolving and reforming anew, upon every kind of consideration except the public interest. And after each description comes the same refrain: "A European is led to ask, How can such a government be made to work at all?" And then he goes into a somewhat elaborate statement of reasons why it does work better than might be expected. The fact is, it does not work at all. The condition of our legislation and, therefore, in an increasing degree, of administration, may be described as anarchy tempered by local self-government and the conservatism and law-abiding habits of the people.

While this anarchy is undermining many interests, in none are its effects more potent and glaring than the railroad system. If the great railroads do not wish to be carried down by this anarchy into utter chaos, this is the point to which they will have to direct their efforts. If the Union Pacific wishes to get a settlement of its debt relation to the Government, if the Northern Pacific wishes to get its land grant on a stable basis, if all the railroads wish to get a basis of combination by which, like men walking on slippery ice, they can stand by holding each other up, they have got to give up lobbying with committees as a broken reed and a hopeless resource, and set themselves to procuring the establishment of some efficient and responsible authority to which they can appeal. The case might be definitely stated thus:

"What we require is an agent known to be impartial, and occupying a position of commanding influence, who will examine into and formulate our wants in a shape consistent with the public interest; an agent who shall prepare and bring forward at the opening of the next session of Congress a measure embodying these wants, not to be thrust at once into a committee, to take its chance with some thousands of other measures in forty other committees, but to be taken up and discussed by Congress as a body, and back of that by the press of the country; an agent who, by the full weight of official and personal influence, shall hold the discussion to that particular measure, and exert himself, with the aid of independent supporters, to force it through, and who, existing by virtue of his office (as it was said, "The King of France never dies"), would be always ready to carry it on to amendment and greater perfection."

Such an agent is ready to their hands in the Secretary of the Interior, and the mode of operation is fully indicated in the report of February 4, 1887, signed by eight Senators of both parties. Of one thing the railroads can be certain, that if anything can save them, this will; and if this will not save them, nothing can.

Boston, February 11, 1889.

THE FARMERS AND THE PRESS.

To the Editor of The Nation:

Sir: Mr. Jessup's comments in the *Nation* of January 31, on Mr. Whittlesey's suggestions as to ways of reaching the farming population, underestimate the difficulty of influencing them—in Michigan at least. So far as its circulation goes, all the tariff-reform articles that could be written would not do away with the pernicious hypocrisy of the New York *Independent*. No ignorant Catholic ever accepted more seriously the teaching of his priest than very many moral and religious people accept and believe the sophistry of the "amusing old moralist" of the *Independent*. The *Advance* of Chicago is but little if any better. So much for the religious press.

As to the secular press, about every local Republican paper in the State is under a protectionist censorship, that renders it next to impossible to procure the insertion of an article that in any degree argues against the most extreme idea of protection. So long as Alger, Blodgett, McMillan, and Stockbridge control the Republican party in Michigan, any hope of teaching our farmers correct tariff ideas through the medium of local Republican papers is idle. There are, of course, many of our local papers that I do not see, but I know of but one Republican paper in the State, the Coldwater *Republican*, that will tolerate in its columns any editorial or correspondence that advocates any concession whatever from the most ultra theory of protection. Serious boycotts are not infrequent against papers in small towns that show the least tendency favoring a lowering of tariff rates. Perhaps a fair idea of the ignorance and intolerance of the Republican farmers of Eaton County may be obtained when we consider that, so far as they understand it, they *en masse* approve of the tariff bill recently passed by the Senate.—Respectfully yours,

H. J. Martin.

Vermontville, Mich., February 4, 1889.

NEWSPAPER INACCURACY.

To the Editor of The Nation:

Sir: Newspapers, by seizing, as they often do, with uncritical and unscholarly avidity, upon anything that will answer for copy to fill out a page or a column, are the great disseminators of error. Hitherto, so far as I am aware, no one has undertaken to gauge this inaccuracy, and to show just what percentage of error we may expect the average newspaper item to contain. A few days ago, however, Prof. William Hoover, of the Ohio University, found, in the Cincinnati *Times-Star* for January 18, a series of items under the caption "Friday for Luck," that seemed especially amenable to a test. Dates were assigned to a number of notable events that were said to have taken place on Friday. Not willing to believe and take for granted, Dr. Hoover examined and carefully verified the dates. He found that out of nineteen of these events, one fell on Sunday, three on Monday, four on Tuesday, two on Wednesday, one on Thursday, and only six on Friday. In reference to the main statement, that the events fell on Friday, there was thus less than 32 per cent. of accuracy, while, as two of these events were assigned to the wrong month and day of the month, the percentage of accuracy should really be put down to very nearly 21 per cent. From this computation alone it would appear that of what we see in newspapers we might believe one-fifth, if we only knew beforehand which was the credible fifth.

Since many of our teachers, both secular and religious, and even some widely quoted bookmakers like Samuel Smiles and William Mathews, depend upon such sources for their facts, it is of the utmost importance to eliminate these errors by exposing them and putting people on their guard against them. The average man, on whom we depend for the future success of our democratic institutions, will never think correctly, and hence never make a good citizen, until he knows something of the truth, until he has some correct data on which to base his reasoning.

In this matter of the day of the week, however—a matter so easily verified by simply allowing for the difference between old and new style—it is only fair to add that newspapers are not the only culprits. No less a person than our own Washington Irving says that it was Sunday, the 25th of September, 1492, on which arose that marvellous swelling of the sea, without wind, which Columbus records as a special interposition of Providence "to allay the rising clamors of his crew." But unfortunately for Irving's accuracy, the 25th of September fell on Wednesday. Errors like this are trifles in the case of such a literary artist, though trifles make or mar perfection; in the case of the newspaper, however, they are the straws that show the direction of the current.

Edward P. Anderson.

Ohio University, February 4, 1889.

EXCESSIVE CHARGES FOR TRANSPORTATION.

To the Editor of The Nation:

Sir: In a late number you maintain strongly that it is the duty of persons suffering from overcharges, insolence, and other forms of oppression to "kick." You urge that the oppressor argues from our American charity, "bearing all things" with silent fortitude, that we, the people, rather like it; and you insist that a part of our debt to society is invariably, systematically, quickly, continuously, and powerfully "to kick."

I bought from a prominent New York house a roll of floor matting for $10. The Southern Express Company charged me $4.15 to carry it to Pensacola, or nearly 6 cents a pound. When I complained, the company said that was their usual charge.

I bought in Rochester, N. Y., twenty-six ounces of tobacco. The same company charged me 65 cents to carry it to Pensacola, or 2½ cents an ounce.

I had a box of books weighing 150 pounds sent from Springfield, Mo. Charge to Pensacola $11.20, or 7¼ cents a pound.

A railroad is a highway, therefore robbery on a railroad is highway robbery. Blackstone defines robbery to be a taking from the person by violence or putting in fear. The money came from my pocket, and I am afraid. I am so badly scared that hereafter my ounces will come by mail and my pounds by freight. If people will generally avoid giving business to the express company combination, they will find that the cost of transportation will fall.

PHILOSOPHICAL ACUMEN.

To the Editor of The Nation:

Sir: In the *Nation* of November 22, 1888, a correspondent gave a striking illustration of

the "want of philosophical acumen" on the part of Lord Lytton in his 'Last Days of Pompeii' (Book ii, chap. 4) with regard to Italy's "blind policy" of unification; and he referred at the same time to the quotation by another correspondent in the *Nation* of May 24, 1888, of a passage in a speech by Lord Macaulay in 1845, which contained a prophecy that the black population of Brazil would be freed before that of the United States.

It is refreshing to find occasionally an instance of genuine "philosophical acumen" in writers neither "novelists nor historians," and far removed from the world of practical politics.

In Jacob Grimm's 'Kleinere Schriften' (vol. i, Berlin, 1864), in a lecture delivered before the Berlin Academie der Wissenschaften, December 5, 1844, "Italienische und Scandinavische Eindrücke," he says, page 78, of Italy:

"Was auch kommender Zeiten Schoss in sich berge, die Macht, deren Flamme wir noch aufflackern sehn, wird nicht ewig über ihm lasten; und wenn Friede und Heil des ganzen Welttheils auf Deutschlands Starke und Freiheit beruhen, so muss sogar diese durch eine in den Knoten der Politik noch nicht abzusehende, aber dennoch mögliche Wiederherstellung Italiens bedingt erscheinen."

J. H. Senger.

University of California, January 26, 1889.

THE SPURIOUS SHELLEY LETTERS.

To the Editor of The Nation:

Sir: Such, as you are aware, is the designation generally given to a collection of twenty-five letters published, in 1852, by Mr. Robert Browning, with an "Introductory Essay" which assumes their genuineness. Having no access to anything that has been written on the subject of those letters, I am, however, quite uninformed as to what portion of them, if any, abjudicated from Shelley, has been traced to its real author or authors. It may be, therefore, that I have been forestalled in what I am about to show, and it would, indeed, be somewhat strange if the case were otherwise. Should you know that I am retelling an old tale, what I now write is, of course, to be considered as unwritten.

Letter iv., occupying pp. 59–63, is, with the exception of its postscript, to be found in vol. xlviii., pp. 491, 492, of the *Monthly Magazine* (1819). In pp. 59 and 61, parts of the magazine article are omitted.

In Letter xiv., all from the first paragraph in p. 104 to the end of p. 106 is taken from the same periodical, vol. xlvi., p. 112 (1818).

The end of Letter xvii., from "It would be" to "political expedience," pp. 127, 128, is also abstracted from vol. xlvi , p. 214.

All the plagiarized passages mentioned above are transcribed literally from the 'Physico-moral and Political Illustrations and Apophthegms; written in the year 1797,' by John Lawrence. Quite possibly a close examination of these Illustrations and Apophthegms, of which I may not have seen the whole, would lead to discoveries additional to those which have been indicated.

Of John Lawrence, an intrepid logician and vigorous writer, some account was furnished by himself, in 1818, as a prefatory note to his speculations contributed to the *Monthly Magazine*. From that account, mainly, I take what here follows.

The time of his birth, which he does not specify, must have been not long before the middle of the last century; since he states that his first literary efforts, poetical, were made between 1767 and 1770. We are not informed whether he put in print any of what he calls his "heroics and madrigals." He goes on to say: "During the years 1774 and 1775, I was so situated as to have access to a very extensive American correspondence; and I afterwards wrote, occasionally, on that unfortunate international dispute which, nevertheless, ended fortunately for both nations." Between 1784 and 1795 he published, without his name, various tracts and treatises, political and miscellaneous. Veterinary science and agriculture subsequently engaged his attention, as five octavo volumes and one quarto, besides sundry pamphlets, bear ample witness. Then followed two anonymous volumes which he does not characterize. Of his contributions to the periodical press he speaks as if they may have been of considerable extent.

The work by which Lawrence is best known is his quarto on the horse, which came out in 1809.

In 1818, and several years later, he was living in Somers Town, a quarter of London. Further particulars about him I have no present means of ascertaining.

As regards his very unconventional opinions, theological and political, there are few of them in which Shelley would not have heartily acquiesced.

Your obedient servant, F. H.

Marlesford, England, January 26, 1889.

Notes.

Prof. J. J. Rein's 'Industries of Japan,' a work inspired and supported by the Prussian Government, has been translated with the author's coöperation, and will shortly be published by A. C. Armstrong & Son. The work has regard to the agriculture, mining, forestry, arts, and commerce of Japan.

'Home Gymnastics for the Well and the Sick,' from the German of Angerstein and Eckler; 'A Quaker Girl of Nantucket,' by Mary Catherine Lea; 'The Immanent God, and Other Sermons,' by the Rev. A. W. Jackson; and 'The American Book of Church Services,' by the Rev. Edward Hungerford, are the newest announcements of Houghton, Mifflin & Co. The same firm will at an early date publish in four volumes the works of the late Rowland G. Hazard of Providence, edited by his granddaughter, Miss Caroline Hazard.

Brentano will shortly issue 'The Romance of an Alter Ego,' by Gen. Lloyd Brice; 'Frederick Struther's Romance,' by Albert Ulmann; 'The Seldens in Chicago: a Domestic Tale'; and 'Where the Trout Hide,' by Kit Clarke.

'Gertrude's Marriage,' from the German of W. Heimburg, is in the press of Worthington Co.

Dr. Georg Brandes was invited two winters ago to give a course of lectures in French at St. Petersburg and Moscow. On his return, he published a volume of 'Impressions' of life and literature in Russia. With the author's approval and personal supervision, Mr. Samuel C. Eastman of Concord, N. H., has translated this volume into English, and it will be published shortly by T. Y. Crowell & Co.

Mr. Ivan Panin, Wellesley, Mass., will print his lectures on Russian Literature delivered before the Lowell Institute, Boston, in a style uniform with his translations from Pushkin, as soon as he procures enough subscribers at $2 per volume. Names should be sent to the above address before April 1.

Bromfield & Co. will henceforth be the publishers of the Family Biography of Henry Ward Beecher, and will undertake to complete his 'Life of Christ.'

Cupples & Hurd, Boston, announce as in preparation six Adirondack tales in as many volumes, emulating Cooper's Leatherstocking series, by W. H. H. Murray.

Peter Paul & Bro., Buffalo, publish immediately 'The Champions of Agrarian Socialism, and their Teaching,' from the German of the Rev. V. Cathrein, S. J.

There is no good reason for the existence of 'The Story of Thomas Carlyle,' by A. S. Arnold (Scribner & Welford). In his preface the author says: "Intense sympathy and admiration is my excuse for my presumption in dealing with so great a hero." We fear his "grim" hero would have been the last to accept such an excuse for such a book, not one-third of which justifies its title. The leading events of Carlyle's life are told fairly enough, though with a sad lack of order and perspective. But two-thirds of the 371 pages are made up of undiscriminating panegyric, much tiresome moralizing, and much futile literary criticism. The style is of the exclamatory, or the interrogative-exclamatory, order, and the English is neither elegant nor accurate.

'In Pursuit of a Shadow' is the attractive title of a small volume in which a "lady astronomer" describes the experiences of herself and a friend during their trip from England to Russia to observe the solar eclipse of 1887. There is nothing distinctively astronomical in their journey from Hull to Christiania, thence to Stockholm, St. Petersburg, and Moscow; but in spite of rather long sentences and a style slightly involved, the story is pleasantly told, with an agreeable touch of humor now and then. At Pogost the party awaited the eclipse, enshrouded to them, as it was to most of the other expectant observers, in clouds and disappointment. The closing chapter, chiefly upon Nizhni-Novgorod and Smolensk, brings them safely back to English soil at Dover. The volume is published in London by Trübner & Co.

'Cram's Standard American Atlas of the World' for 1889 comes to us from Wm. M. Goldthwaite, 19 Park Place. It is of a class of business atlases which do not recommend themselves by cartographical excellence, but which attain their end if (in the case of the United States), with a reasonable regard for geographic accuracy, they display clearly the greatest number of towns and railroad stations, the railroads themselves, the respective express lines, the county divisions, etc. For ready reference, a State index exhibits for each town the location on the map, population, railway, number of banks, and postal and money-order offices. This Atlas seems to us as good as any that we have examined.

A monograph upon the 'Fragments of Heraclitus,' by Dr. G. T. W. Patrick, published under the auspices of the Johns Hopkins University, is a fresh illustration of the encouragement which that institution gives to scholarly work.

Last year we were struck at first glance with the quality of 'Longmans' School Grammar,' by David Salmon, as being superior to any work of the kind we had ever met with. Since then this text-book has found its way into practical use in our schools, and has proved to be what we suspected on the face of it. We are glad to receive now from the Messrs. Longman a 'Junior Grammar' by the same author, in pursuit of the same scheme, and serving as an introduction to the larger work. We commend it heartily to the attention of teachers. Think of the old-style grammar beginning with a solemn definition of Grammar, and then judge of Mr. Salmon's method from his opening words: "(Nouns.) In the following sentences pick out all names of persons."

Shakspere's "Cymbeline," Jeremy Taylor's

'Holy Living,' more of Plutarch's Lives, Dryden's Discourses on Satire and on Epic Poetry, and 'The Amber Witch,' are the latest of the little volumes, richly freighted, which compose "Cassell's National Library."

We have had for some time on our table the first volume of the Final Report of the State Geologist of New Jersey. The survey of the State was ordered in 1864, and at the end of a quarter of a century the work is done. The great Atlas of New Jersey is the first achievement of its kind in the history of the republic—a splendid product of Federal and State collaboration. Two maps based upon it accompany the present volume—one civil and one topographical. The topics treated are Topography, Magnetism, and Climate, and a very large part of the text is readable and extremely interesting. Historical and antiquarian research has been so freely employed that the classification of the Report in any library or catalogue should be at least two-fold. We cannot give any adequate idea of the exhaustive contents under the above headings. It appears that boundary disputes between New Jersey and two of her neighbors, Delaware and New York, still exist. The copious illustrations of the climate for two and a half centuries do not show a secular change such as is often alleged. The geologic conditions appear to affect the magnetic declination. They have a direct and important influence upon vegetation and cultivation and population, as well as upon temperature—though the Report records in silence Peter Kalm's observations in the middle of the last century concerning the connection between cold nights in spring and summer and the occurrence of limestone. More than 600,000 inhabitants of New Jersey live within eighteen miles of the New York City Hall.

The Bureau of Education has added to its series of circulars edited by Dr. Herbert B. Adams—of which No. 1 dealt with the College of William and Mary, the second with Thomas Jefferson and the University of Virginia (and also with the other leading colleges of the same State)—a 'History of Education in North Carolina,' by Charles Lee Smith. Like the foregoing, it is fully illustrated. This series is well calculated to stimulate the South to renewed efforts in behalf of education, and to inspire the North with respect for the institutions already established.

The second issue of the *University Studies* of the University of Nebraska will most attract the ordinary reader by reason of Mr. L. A. Sherman's "Observations upon the Sentence-length in English Prose," an essay towards the discovery of the relation between mathematics and rhetoric, with a view to determining the laws of the latter. "Three hundred sentences," says Mr. Sherman, "will generally reveal the sentence-rhythm of any writer who has achieved a style."

Under the title, 'Fra Monache e Letterati: Contributo alla Storia dei Plagi,' Corrado Ricci tells in a diverting way of an unblushing appropriation of his labors among the archives of Ravenna by a Frenchman, one H. Gagnière (suggestive name), in his 'Confessions d'une abbesse du XIVe siècle.' The exposure is complete and crushing, but we can do no more than put the offender's name in the pillory as a pretender and a thief.

The catalogue of the Codici Palatini in the National Central Library of Florence has just completed its first volume. An index of authors and popularizers needs still another fascicule to complete it and to provide a preface for the volume.

Among the "Indici e Cataloghi" issuing from the Italian Ministry of Public Instruction is an 'Indice del Mare Magnum di Francesco Marucelli,' by Prof. Guido Biagi, librarian of the Florentine Marucelliana. Who this founder of a library dedicated "publicæ, maximæ pauperum, utilitati" was, Biagi tells in a few words, which were needed, seeing how little fame has done for the generous scholar, littérateur, and bibliographer, and how much he himself did to obliterate well-deserved praises. He died in Rome in 1703, at the age of seventy-eight, bequeathing his collection of books to Florence. His 'Mare Magnum' was a great scholarly commonplace book, with exact reference to the works in which each topic is discussed or illustrated. In its present shape it fills 111 volumes, and Prof. Biagi explains the obstacles to its being printed by Marucelli's heirs, in accordance with their intention. The present key to it takes it up volume by volume, printing the class heading and the topics in alphabetical order, and summing up the whole in one index. Biagi promises great and curious instruction to those who make use of it to explore the original work.

The last supplemental number of *Petermann's Mitteilungen* contains the first part of Dr. Junker's account of his explorations in Central Africa. This treats of the hydrography, orography, and ethnography of the Welle-Makua region. It is accompanied by the southern portions of the large map, made on a scale of 1:750,000, by Dr. B. Hassenstein after Dr. Junker's observations. The southeastern part includes the western portion of Emin Pasha's province, showing the region—left mostly in blank, however—through which Stanley in all probability passed. The parts which show Dr. Junker's journeyings are a striking testimony to the extent and importance of his discoveries.

Turner demands fresh consideration, in one branch of his art, in Mr. Cosmo Monkhouse's twelfth paper on the "Early English Water-Color Painters" in the December *Portfolio* (Macmillan). The copy of his sepia sketch of a pilot-boat would dispense with any text; and there is given, besides, his view of Rome from Monte Mario, and his Newcastle-on-Tyne. In the January number Laurens's Mounet-Sully as *Hamlet* is etched effectively by Mlle. Poynot. Mr. Hamerton bestows what seems to us the artist's full meed of praise on M. Habert-Dys, whose decorative work abounds in *L'Art*, his patron. Mr. Hamerton praises the latter journal for its early perception of the talent of M. Renouard, now so familiar both in England and here.

Reviews of illustrated books, or what it calls "Notre Bibliothèque," agreeably diversify the closing numbers of *L'Art* (Macmillan) for 1888, and the first number of the new year (Nos. 588-591). M. Habert-Dys is seen at his best in the ornamental border in No. 589. A noticeable *eau-forte* by Mlle. Teyssonnières translates one of Julien Dupré's canvases, "The Gleaner." Striking, too, is the drawing of the front of the Duomo of Orvieto, by Lucien Hirtz. Among the leading articles we can mention only that on Liotard, the Swiss pastellist and miniaturist of the latter part of the eighteenth century, an amusing adventurer in many lands. His "Pretty Chocolate Girl," of the Dresden Museum, has done more for his immortality than all his portraits of greater celebrities. M. Henry de Chennevières writes very entertainingly about him.

The People's Cause, a journal of tariff reform, ballot reform, and civil-service reform, has just begun to be issued monthly at 330 Pearl St., with Mr. R. R. Bowker for its directing spirit. From the same establishment it is announced that 'The Cleveland Album: a Memorial of Four Years' Democratic Administration,' will be issued, with photo-engraved likenesses of President and Mrs. Cleveland, heads of departments, Speaker Carlisle, and other prominent supporters of the Government now on the verge of dissolution.

We are asked to announce that the following meetings will be held in Paris in connection with the great exposition during the coming summer, viz.: (1) Congress of Geography etc., August 5–12; (2) Association Française, 8–15; (3) Congrès d'Anthropologie, 19–26.

—The lawless and irrational character of English orthography has given rise not only to the spelling-reform movement, which is aimed at the root of the trouble, but also to more than one attempt at reform in the methods of introducing children to the art of reading and spelling under the existing orthographic régime. One well-known method, which finds great favor among some at least of the leading authorities in pedagogy, consists in teaching the child to recognize a word as a whole, without reference to its component letters. In the February number of *Babyhood* Mr. Louis Heilprin proposes "A Reformed Primer," the idea of which is the exact opposite of the method just described. He thinks that by careful selection of such words as are spelt phonetically, the pupil might easily learn the art of reading, in its essential character; and he shows that even with our unfortunate orthography we have a large stock of words suitable for this purpose. He would begin with words in which the successive enunciation of the names of the letters is almost equivalent to the pronunciation of the word; such words as *fox*, *find*. He would then introduce words which do not enjoy this advantage, but which are, nevertheless, phonetically written; and afterwards, step by step, introduce the more regular and systematic variations from phonetic representation. The idea is worked out in considerable detail; the acute remarks and well-chosen illustrations make the discussion of a subject which one would expect to find tedious, decidedly interesting. We think Mr. Heilprin has gone far towards making out a case for the advantages of the scheme he proposes, and that his article is well worth the attention of those interested in this branch of pedagogy.

—The number of pamphlets on railroad matters is large. One of the most practical among them is a description of the English railway clearing-house, by Edward McDermott, F.S.S., originally published by the *Railway News* of London, and reprinted by H. V. & H. W. Poor. This organization, which has been described in the *Evening Post* through a letter from Mr. McDermott himself, is a wonderful product of English administrative skill. Originating on a small scale at the beginning of 1842, it gradually extended itself over the whole country, and has proved most useful in every respect. It gives shippers of goods and parcels a responsible authority with which to deal, instead of allowing their complaints to be shifted from one company to the other, as is too often the case here. To the railroads themselves it furnishes a means of economy, by allowing settlements through balances and book accounts instead of direct cash payments. As a means of maintaining rates its importance is perhaps exaggerated. During a large part of the time when the clearing-house was in active and successful operation, rate wars were by no means unknown, and when they were finally stopped it was by consolidation or pooling rather than by the action of the clearing-house itself. We also note that Mr. McDermott is in error in some of his more general statements not directly connected with the operation of the clearing-

house—for instance, where he says that it may be assumed approximately that the average distance travelled by each passenger on the railways of the United Kingdom is seventeen miles. This figure is much too large, although, in the absence of detailed statistics, it is impossible to say exactly what it ought to be.

—Most of the other pamphlets deal with the reasons for the unsatisfactory financial condition of American railroads to-day. Mr. Henry Wood of Boston, author of 'Natural Law in the Business World,' gives a plea for the "Long-Suffering Shareholder," against the abuses of Directors on the one hand and Commissioners on the other. The same general subject is treated by Daniel S. Remsen, in an able paper read before the State Bar Association, on "The Security of Railway Investments." The chief merit of Mr. Remsen's paper is its clear recognition of the fact that abuses must be met by prevention rather than by direct remedy. The railroad laws of most States are of such a character as to give every opportunity for abuses. It is by change in the laws which shall give greater safeguards to the investor that we must seek reformation, rather than by directing our attacks against the directors themselves. Mr. Charles Blair is so impressed by the inadequacy of State laws that he goes one step further, and offers a series of suggestions for the incorporation of railroads under the direct authority of the United States rather than by State charters. On the other hand, Joseph Nimmo, jr., long at the head of the Bureau of Statistics of the Interior Department, in a paper on "Cost of Transportation and Freight Charges," pleads strongly for less interference instead of more; his underlying thought being that the rate-maker has no power arbitrarily to determine rates, but is dealing with forces beyond his control. The proper function of the Inter-State Commerce Commission is to see that, in the exercise of this limited authority, he does not make unjust discriminations. We fear, however, that the tendency of the times is towards more legislation rather than less.

—In the *Centralblatt für Bibliothekswesen* for December, C. F. Müller publishes the memorial presented by him in 1886 to the Prussian Minister of Instruction, embodying a plan for the preparation of a general catalogue of all the *Programm-abhandlungen* issued by the higher schools of Germany. The Minister seems to have been of the opinion that were such a work desirable it might very well be undertaken by some publishing firm without Government aid, but no publisher has yet been found willing to take the risk. The author of the plan now submits it to the criticism of those interested, in the hope of receiving their support in getting it carried out. It appears that from 1824 to 1875 it was required by law in Prussia, and in most of the German States as well, that the annual school programme should be accompanied by a scientific or learned dissertation; and though since 1875 this supplement is no longer obligatory, it is still customary. The annual cost of these *Programm-abhandlungen* in Prussia alone is estimated to be at the present time about thirty-six thousand dollars. This mass of material, thus issued at so great an expense—the number of these programmes published since 1824 cannot be less than thirty thousand—lies buried and forgotten in the recesses of great libraries. Practically, it is inaccessible to ordinary students, for though several catalogues exist of the programmes issued during particular periods, or in certain States, these catalogues are not only incomplete and inaccurate, but for the most part have themselves been published only in the form of *Programm-abhandlungen*, and have shared the fate of their kind. To catalogue properly even the current issues of these programmes is a burdensome task to libraries which receive them, for probably no other class of works offers so many difficulties to the cataloguer, while the time spent upon them is, in most cases, out of all proportion to their literary or scientific value. Certainly most American librarians would consider themselves fully justified were they to deal with them as Mr. Dewey does with his pamphlets—that is, mark each one with a class number denoting its subject, pile them away on the shelves with the books on similar subjects, and allow them to be their own catalogue. At any rate, it is doubtful whether, for the sake of the few grains of wheat possibly hidden in bushels of chaff, it be worth while to drag from their dusty restingplaces, classify, and catalogue this host of perfunctory productions. Dr. Müller, however, thinks otherwise, and proposes a coöperative plan according to which each institution shall be required to prepare and send to the Minister of Instruction a complete catalogue of all its programmes; these separate catalogues are then to be combined by a competent editor in a general classified catalogue. To carry out such a plan it is evident that Government aid and influence are necessary; whether they will be forthcoming seems doubtful.

—The articles in the January number of the *Centralblatt* have mainly an antiquarian interest. Thus we are given the first instalment of an elaborate paper on the manuscripts and editions of the pseudo-Aristotelian treatise "Secretum secretorum"; an enumeration of the early editions of the Psalter which contain a German version; a full collation of a German codex now in the Salzburg library; and a brief statement of facts concerning the lost "Memoria" of Velasquez, which Adolf de Castro asserts that he discovered in printed form in 1871, with reasons for doubting Castro's discovery. In the department of library news a large space is given to recent reports of American libraries.

—A week or two before the late election in Paris, there appeared all of a sudden in the streets a great number of hawkers, offering for sale at five centimes a white-covered pamphlet entitled 'Le Brav' Général Barbenzingue.' This proved to be not, as one would naturally think, an attack on Boulanger. It was Freycinet whose caricature embellished the cover of the pamphlet, and he was surrounded by MM. Floquet, Jules Ferry, Clémenceau, and other anti-Boulangists. It soon became known that the opponents of the "brav' général" had been forestalled. They had invented the nickname Barbenzingue, and arranged with the publishing house of A. Lévy & Cie. for the publication once a week of a set of comic tableaus of Boulanger's daily life under the title that we have given above. By some indiscretion their plan was disclosed, and the Boulangists, under the direction of M. Paul Deroulède, took the wind out of their sails by stealing their title and getting out a pamphlet in the opposite sense under it. This has not, however, prevented the publication of the tableaus as proposed. They appear under the title of 'Le Vrai Général Barbenzingue,' and consist of mildly amusing dialogue, with clever illustrations in outline. It is reported that A. Lévy & Cie. will bring a suit against M. Deroulède.

—Those who are curious about the 'Rig-Veda' are now enabled to read the whole of it in English. On the penultimate volume of the translation of it mainly executed by the late Professor H. H. Wilson, of Oxford, we reported briefly in No. 1198 of the *Nation*. The greater part of that volume was the work of its editors, Professor E. B. Cowell and Mr. W. F. Webster. Of the sixth and last volume, published, like the two preceding it, by Trübner & Co., of London, Mr. Webster has had the sole editorial charge. Otherwise than was the case with the fifth volume, the rough version prepared by Professor Wilson was here left complete. This its editor has given as he found it, with the exception of correcting its obvious misrenderings, and of conforming it, by occasional indispensable alterations, to the interpretation of the commentator Sâyana, whom the Professor avowedly aimed to follow, and, so far as he understood his guide, did follow. Welcome as is his translation, something different is required, however, and, in time, doubtless will be forthcoming, towards a right appreciation of the ancient original. Simplicity of style was, of course, to be expected; and we have instead a stateliness of diction, not to say stiltedness, such as might have been looked for in a representment of Homer by Gibbon or Dr. Johnson. Moreover, modern criticism is often competent to convict Sâyana of misprision; somewhat as, at the present day, scholars are in a position to demonstrate that Spenser and his Elizabethan contemporaries in some instances misapprehended Chaucer. Yet, even from the 'Rig-Veda' as we already have it in our mother tongue, one can, no question, form a substantially accurate notion of the fancies entertained by the early Hindus touching matters supramundane. To fathom those fancies has long been to many a subject of profound interest. As we near this consummation, however, the interest which was formerly so eager, is rapidly abating. The conclusion which, on exploring the oldest of the Indian scriptures, impartial investigators have arrived at may be summed up in a very few words. It seems to be little more than that the theology, including both Brahmanism and Buddhism, of the Indo-Aryans and countless of their neighbors, took its rise from a fatuity of childishness trenching close on the inconceivable, and only slightly less absurd than the dreams of ordinary barbarians.

BANCROFT'S CALIFORNIA.—I.

California. Vol. VI. (1848–1859). [History of the Pacific States of North America. By Hubert Howe Bancroft. Vol. XVIII.] San Francisco: The History Co. 1888. 8vo, pp. xii, 787.

THIS sixth volume of Bancroft's History of California is concerned with the most important portion of the whole subject, the story of the young commonwealth from the moment of the discovery of gold to the death of Senator Broderick in 1859. The scale on which the book is written changes with the times. We have no longer the exhaustive minuteness of detail found in the earlier volumes, since the very complexity of the life of the gold period forbade the writers engaged upon these years to hope for completeness. The result has in fact been that they have contented themselves with a comparatively limited selection from the vast wealth of material at their disposal. No general reader, and possibly no subscriber to Mr. Bancroft's series, will lament this condensation; and doubtless many would have been glad of the same thing in earlier volumes. But at any rate plenty of room is left for future local historians. As to one of the most noteworthy matters in the whole history, the development of popular justice in the mines and in the great cities, this volume is especially

brief, the fuller account of the subject having been recently given in the two bulky volumes of the same series on 'Popular Tribunals'—volumes which we may notice hereafter. The present volume discusses in particular the early history of mining, from Marshall's discovery down, the growth of the cities and towns, the organization of the State Government, the character of society in the first few years, the struggles over the settlement of land titles, and the history of party warfare until the fatal duel between Terry and Broderick.

In beginning our comments, our memory naturally recurs to the earlier volumes of the series, and especially to the immediately previous one, containing the story of the conquest. This is, as we still feel, by far the strongest of Mr. Bancroft's series relating to California; and, as readers of our review of that volume may remember, we mentioned the tolerably strong case which Mr. Bancroft there makes out against the legend that England was on the very point of seizing California in 1846, when our naval force interposed to save for us the golden land. Since writing our review, a wholly new piece of evidence bearing on the subject has come into our hands, and we know of no better place than this for putting it on record, especially as it confirms Mr. Bancroft's view in quite an unexpected way. The turning-point of the whole story is this: In the early part of 1846 the beginning of the Mexican war was plainly very near. Commodore Sloat, in command of our fleet on the west coast, was lying in the harbor at Mazatlan with his flagship, the *Savannah*, waiting for news of the outbreak of hostilities. On May 17 he heard the first news of hostilities on the Rio Grande, and on May 31 wrote to the Secretary of the Navy that he was ready to sail immediately to take possession of the ports of California, in accordance with his well-known instructions of June 24, 1845. On further thought Sloat, with unpardonable timidity, resolved to wait for still more news before sailing, and actually, even after hearing of the capture of Matamoras, wrote to the Secretary on June 6 that he doubted his own authority to take the ports until a formal declaration of war should be certain. Not until the next day, June 7, did he make up his mind to leave, having received news of the blockade of Vera Cruz (see Bancroft, vol. v, pp. 206, 207). Shortly before these dates Admiral Seymour, with the British flagship *Collingwood*, had been lying in the same harbor, apparently waiting for news. Not far from the time when Sloat set out for Monterey, Seymour sailed also. Of the date of Seymour's departure no record has hitherto appeared, but on the 16th of July Seymour reached Monterey, about a week after the American occupation had been proclaimed. The British and American ships exchanged courtesies, and then the *Collingwood* sailed for the Hawaiian Islands. These are the only known facts which form the basis for the legend that Seymour had long been under orders to seize California as soon as hostilities should break out between ourselves and Mexico, that he set sail upon hearing the news of Taylor's battles, that he raced with Sloat to Monterey, and that only the superior promptness, astuteness, and seamanship of our great hero, Sloat, combined with Capt. Frémont's courage on land, saved California from British occupation.

Mr. Bancroft's arguments, as given in vol. v, are doubtless sufficient to show the improbability of the legendary portion of this story. Our new piece of evidence, very slight, but very conclusive, relates to a little matter that has heretofore always been obscure, viz., the actual movements of the *Collingwood* at this time. "In reality," says Mr. Bancroft, vol. v, page 213, "little is known of the *Collingwood's* trip, except the date of her arrival at Monterey. Lieut. Fred Walpole of that vessel wrote 'Four Years in the Pacific'; but he pays little or no attention to politics, or to details of the vessel's movements." Anxious to discover further evidence, if any should be accessible, as to the cruise of the *Collingwood* upon this occasion, we were led some time since to inquire of Mr. Clements Markham, the well-known English author, who, as we chanced to learn, was in 1846 serving as a young midshipman on board Admiral Seymour's flagship. Mr. Markham was unable from memory to throw any new light upon the matter, but he was kind enough to communicate for us with Admiral Lord Alcester, who, as Lieut. Beauchamp Seymour, was flag-lieutenant to his own uncle, Admiral Seymour, at the time in question. Lord Alcester's statement, which he courteously sent to us through Mr. Markham, and which he consented to have published, speaks for itself. It is under date of May, 1887:

"I know for certain that Sir George Seymour never had orders to hoist the English flag in California, or to assume the protectorate of that dependency of Mexico in 1846, or at any other time. Neither was there a race between him and Commodore Sloat as to who would reach Monterey first. If we had wanted to precede the *Savannah* there, we should not have begun by going in an opposite direction for several days; for I see by my journal that we left Mazatlan (where the *Savannah* was) on the 24th of May, 1846, arrived at San Blas, which is to the southward, on the 27th, did not leave San Blas until June 13, and arrived in Monterey on July 16. Sir George Seymour treated me with confidence on public matters, and I was completely *au fait* of all questions with which he had to deal, and of the orders he received. He went to California to protect English commerce and interests."

Lord Alcester adds in substance that the immediate reason for going was the receipt of fresh news of the unsettled condition of the country in the north. That the *Collingwood* was at San Blas at the critical moment has been asserted in one or two versions of the story, but that she went there as late as May 24, and stayed until June 13, is quite new to history.

Legends have a fashion of dying hard, and doubtless this English episode in the story of the conquest will often hereafter be repeated and enjoyed. But if records are worth more than wild surmises, and if Lord Alcester's journal outweighs the bad memories of other men, then not only is Mr. Bancroft's view of this matter irrefutably established, but the "race" between Sloat and Seymour appears in a very amusing light. Instead of "outwitting" Seymour, and getting the start of him, Sloat stayed at Mazatlan two weeks after Seymour had left. Instead of going to Monterey at once, Seymour went to San Blas. In short, while the American hero of the great "race" was lying at anchor, his English competitor in the race was sailing the other way. The whole mass of tradition about the matter, from 1848 downwards, thus becomes another interesting example of the fallibility of memory and of the vitality of delusion.

We return to the volume immediately before us. On the whole, of course, in view of the great amount of research represented, we have here the best treatment extant of the years 1848-59 in their entirety for California. As to matters of detail, the elaborate description (pp. 168-190) of the new San Francisco of 1849, the chapter on the early cities of California (ch. xviii, pp. 446-480), and the very scholarly chapter on the Mexican Land Titles (ch. xx, pp. 529-581), are the most important treasures of information in the volume. The last-named chapter, probably from the same hand which is responsible for the clean work and sound results of vol. v, gives, so far as we know, the first accessible and fairly popular summary of all the main facts of that land litigation which for a quarter of a century meant so much evil to California. The most noteworthy cases are summarized in fine print, and in alphabetical order. The conflicting interests concerned are stated with impartiality, and the conclusions are cautiously drawn. As to more attractive topics, the chapters on the gold discovery, on the Constitutional Convention of 1849, on the mining life, and on the filibustering expeditions of Raousset and Walker, are examples of the best. These more popular chapters are decidedly unequal. That one among Mr. Bancroft's collaborators who may best be known as the Rhetorician, is occasionally allowed a freedom which he has not heretofore enjoyed during the progress of this History of California. Elsewhere in the series, as in portions of the history of the northwest coast, this unfortunate person has played altogether too large a part, and one hates to have to meet him in a region which he has usually spared. Apart from his presence, however, one feels, even where one is most in doubt about agreeing with Mr. Bancroft, the great authority which the wide use of many sources of information gives the book.

Criticism occurs to us, however, with respect to the accuracy of the use of some of this material. Where many collaborators are responsible, inconsistencies must creep in; and the less critical workers may cite as authority what their betters elsewhere expressly declare to be worthless. A remarkable case is furnished by a booklet which, as this volume now stands, takes rather too dignified a place among the authorities bearing on the first summer of gold-mining. 1848 is, in comparison to later years, a poor year for sources of information. There were very few immigrants that year by way of the Plains; the gold excitement suspended for some time newspaper publication, as well as other ordinary means of recording events; and most people in California were too busy to write coherently. Mason's and Larkin's reports, Colton's diary, and a very few other sketches, tell us all that we know of what happened among the miners that summer and autumn. In view of this fact, the little pamphlet of thirty pages entitled 'Three Weeks in the Gold Mines,' purporting to be written by "Henry I. Simpson of the New York Volunteers," and published under date of 1848, by Joyce & Co. of New York, would seem to be a very useful addition to the slender material. Yet this work has lately been more than once declared a worthless fraud, written by a man who had never seen California. In particular, Mr. Bancroft's pioneer list, in vol. iv, under the name Simpson, curtly says that nothing besides the name can be discovered as bearing upon this person, and that probably the work was a forgery, concocted in New York. Yet, in the present volume, Simpson is several times cited as authority, *e. g.*, page 410, and, on page 97, a lengthy note gives a characterization of the pamphlet, in which it is taken in perfect good faith. Its pretentiousness is sharply criticised, as are also its entirely unauthentic illustrations, "but," says our author, "Mr. Simpson is not the only one who has attempted to enlighten the world respecting this region after a ten or twenty days' ride through it." The note closes with saying of Simpson that, notwithstanding all, "he printed a book on California gold in the year of its discovery, and

this atones for many defects. Had all done as well as this soldier-adventurer, we should not lack material for the history of California."

Lest some collector should be led by this remark of Mr. Bancroft's to regard this pamphlet as a treasure, and lest some student should cite it as characterizing correctly the glories of that first golden summer, let us call attention to pages 1 and 6 of Simpson's truthful tale. Page 1 relates how, on setting out from San Francisco for the mines, Simpson's party first passed through "flower-decked prairies" until they reached San José. Page 6, in describing the country more scientifically, says that "the valley of the Sacramento is connected with the head of the Bay of San Francisco by a delta some thirty miles in breadth, through the flowery meads of which, as I have already described, the first part of our pleasant journey lay. This delta is part of the fertile valley of San José." And so, as one sees, the Sacramento River empties into the Bay of San Francisco through a delta which lies between the towns of San Francisco and San José, and which, as page 1 tells us, is filled in August with murmuring and meandering streams, with flowers of every hue, and with several other objects well known to old-fashioned poetry. All this Simpson wrote within a few weeks from the time when, if he told the truth, he had actually ridden through the August dust and drought around the long Bay, and had found the Sacramento "delta" sixty or seventy miles distant from San José, and far to the northeast of San Francisco, while he had left San José fifty miles to the south of San Francisco. Just such geographical nonsense would be, of course, very easy if one was writing with the aid of a few books and a bad map in a far distant land. In short, Simpson, if that was his name, was a liar, and the truth was not in him, and he was probably in New York. And if he had ever seen California, he had forgotten it most thoroughly. What makes his book attractive, however, is its ingeniously circumstantial manner of narrating the wholly fictitious adventures of its heroes during their wanderings from Monterey to "Shastl Peak," as well as the artificial literary form, which throughout shows the trained and decidedly clever hack-writer. It is to be hoped that Simpson himself took the gold fever that his book was meant to produce, and, going to California, was hanged in due time under the shadow of "Shastl Peak," or elsewhere. Meanwhile he should not be quoted as authority for the life of the summer of 1848.

The Son of a Star: A Romance of the Second Century. By Benjamin Ward Richardson. Longmans, Green & Co.

Mr. E. W. Howe is best known as the author of 'The Story of a Country Town,' which has won high praise from two critics who have not derived their knowledge of Western life solely from books and newspapers. When Mr. Howells and Mark Twain both certify that they have been struck by such a picture, we may be sure at least that it is worth looking at, especially when there is more agreement than we are wont to expect from critics as to what the features of the picture are. "Amid the prevailing harshness and *aridity*," says one of them, "there are episodes of tenderness and self-devotion that are like springs of water out of the ground." "Your pictures of the *arid* village life," says the other, "and the insides and outsides of its people, are vivid, and, what is more, true. I know, for I have seen it all, and lived it all." The aridity, it should be noticed, is inherent in the life described, and not in the author. What epithet would best mark the literary peculiarities of such a novel or sketch as 'A Man Story,' it is not easy to say. It is distinctly American, and it is distinctly queer. There is an atmosphere of pathos and humor combined with eccentricity which recalls Dickens—as, for instance, in the character of Joe Tack, so singularly occupied in writing spirit letters to himself from his departed wife—and again in the whole tone of the narrative, which is that of a boy relating the story of the older people with whom he lives. The plot deals with love, and is such a bewilderingly improbable story, redeemed by affecting touches, that the whole produces a sort of unearthly impression. Uncle Tom's obstinate repudiation of his wife is so wholly stupid and unnecessary that the reader wonders at times at his own interest in the story; yet we doubt if any one who reads half the book can refrain from finishing it.

The scene is laid in the very heart of the great Western divorce country—that is, somewhere where divorce is regarded as a natural consequence of any ill-assorted marriage, and where at the same time this does not interfere with a high development of fidelity and affection between those fortunately constituted mates who are designed for each other by nature. Combined with a good deal of literary cleverness, there is what an artist would complain of as a total lack of background. We feel that we are in a new place, in a society without any past, without any associations, in which (apart from the eternal passion which keeps the world going) there is nothing left of all that has made life interesting and attractive except railroads as a means of locomotion and "dry goods" as its object. The very language of the story is not the English of literature, but a curious mixture, in which a literary flavor contends with a strong disposition towards bad grammar. Altogether, is this a new species of literature, or is it merely a poor and outlandish species? Heaven forbid that we should find any fault with it as being Western. But what is it?

Mr. Eggleston's pictures of Western life are always worth reading. In 'The Graysons' he has introduced as one of his characters Abraham Lincoln—the main incident of the story being the acquittal of the hero of a charge of murder through Lincoln's dramatic exposure, on the trial, of the perjury of the principal witness for the prosecution. The plot of the story is simple enough, and is made the means of introducing us to Illinois life of a generation ago or more. The dialect is carefully given, and most of the characters drawn with distinct individuality and interest. The Graysons themselves, Tom, Barbara, and the old mother, are very well portrayed, and the attempts to lynch Tom furnish lively reading. Mr. Eggleston would probably disclaim all intention to idealize, nevertheless he contrives to infuse a dash of romance into early Western life which possibly is not true to nature, yet is not on that account necessarily reprehensible.

In 'From Moor Isles' there are two plots which ramble along side by side with a very loose bond of connection. The hero is the lover of a wicked but weak girl who, while secretly engaging herself to another, lures the devoted Brian Holgate to his ruin. This is effected by teaching him how to play poker, a game at which he is unmercifully "bluffed" by his astute rival, Dicky Law. He loses all he has in the world, including his paternal estate, Moor Isles, and at the same moment is made aware of the perfidy of the deceitful Lucy, and driven forth naked into the world. He is loved by the excellent Alice Ormerod, who has only one failing—that of unwittingly letting too many people into the secret of her love; and Alice saves him, gets him a position as secretary or assistant to a musical genius who is going to make the tour of the United States, and in the end he comes back to tell Alice of his changed fortunes and of his marriage to another—for Alice is one of those foredoomed to self-sacrifice and disappointment. The story terminates in a very pretty and pathetic scene between the two. Lucy has been killed, so that the ending of the book is generally satisfactory. Miss Fothergill has a good heart; she desires the welfare of the good and the punishment of the evil-doer, especially if the evil-doer be of her own sex; she understands, like every true woman, how to measure out justice to her own sex rather than to the other; and if there is one virtue for which she has a failing, it is that of self-sacrifice. Her men are consequently less well drawn than her women.

The art of telling stories of negro life is a rare gift, and only to be acquired by much experience and sympathy. The author of 'Our Phil' had it to a high degree. Phil himself, Aunt Rosy, and Marty are all real characters, thorough negroes; and the simple story of their lives is full of a peculiar charm. We regret to learn from the preface that the author, who published them in the *Atlantic Monthly* some fifteen years ago under the name of Olive A. Wadsworth, is no longer living. They have been republished in the belief—quite justified by the volume itself—"that they possess merit which will not only make the book a joy to her wide circle of warmly attached friends, but a pleasure to the reading public."

'Behind Closed Doors' is a story which does great credit to the author's ingenuity. Not in Gaboriau, not in Boisgobey, not even in Wilkie Collins, is a plot so laboriously involved to be found. The only difficulty with Mrs. Green's books is that she puts too great a strain on her readers' attention. It is not within the powers of the ordinary mind to retain control of the contradictory and conflicting incidents which mask the central mystery of the plot; and before we have gone very far we find ourselves rather confused than puzzled, while at the end we are not quite sure whether everything is satisfactorily explained or not. In other words, a sense of oppression is produced, which shows the construction of the story to be faulty. With a little more simplicity, 'Behind Closed Doors' would be more satisfactory and at the same time quite as lurid and blood-curdling.

"Come, my reader, come, and for a few short hours dream with me," is the not too tempting invitation with which Dr. Richardson's phantasy opens. As a matter of fact, a few short hours will not at all suffice for the mazes of a dream so ponderous and complicated. Fact and fancy, history and miracle disport themselves with a diverting interchangeability which becomes somewhat bewildering in the course of nearly five hundred closely printed pages. Beginning while the Emperor Hadrian is in Britain in the year 120, Simeon, the Son

of a Star, refusing to do him homage, is turned into a "living torch" for the amusement of the great audience collected in the circus. Enveloped in sackcloth soaked in bitumen, he is set on fire, but, escaping from the arena, and running far into the country, he puts himself out, as it were, in a pool of water. Being entirely unhurt, and finding attractive companions at hand, he journeys with them to the western coast, from which a craft having the agreeable power of travelling under water at will conveys him to a land (Ireland, presumably) called Juverna. In this abode of peace and beauty, social equality, lack of ambition, and continual summer form a state of beatitude more monotonous than the homesick heaven of modern fiction. From Juverna the reader finds himself back in Britain, then hurried off to Rome, but soon reaches Joppa, where the down-trodden Jews become his companions. Here, all varieties of excitement prevail. Plotting and counter-plotting, battles and bombshells, hold high carnival, in the midst of which Simeon arrives to lead the Jewish revolt. He is hailed as the promised Messiah and crowned king. Largely occupied in striking coins in honor of himself, he is successful for a time, until Julius Severus is sent from Britain to quell the uprising. Then, his people losing battles and faith in him together, he barely escapes alive. The mysterious craft *Leviathan* takes him back to Juverna, where, despite sovereignty, his heart has been ever with the fair Erine.

A book requiring the patient collection of so much material ought to have been great, but it is not. Simeon fails to arouse enthusiasm in the reader. Leon the philosopher, Akiba the scholar, Huldah the prophetess, with the necessarily picturesque setting of the age and time, might, in the hands of a master, have been truly memorable figures. Also, there are elements of unusual power in Elkanah, who, crucified and left for dead, yet lives for years thereafter overshadowed by the horror of that experience, and dies at last with arms outstretched as if upon a cross.

The literary style of the book is objectionable, chiefly because it is pretentious and unnatural—often bombastic; and the use of the present tense throughout is extremely wearisome. The attempted impressiveness of language strangely accords with the occasional slang and lapses in grammar now and then. Altogether, while the book is full of possibilities, the end is an unmistakable relief, when the author allows us to awaken from his dream —or nightmare.

RICHARDSON'S AMERICAN LITERATURE.

American Literature, 1607–1885. By Charles F. Richardson. Vol. II. G. P. Putnam's Sons. 1889.

THE general quality of Mr. Richardson's second volume is not inferior to that of his first, which appeared less than a year ago. The division of his volumes is not chronological. Each covers his whole period, 1607-1885; the first being devoted to "The Development of Thought," the second to "Poetry and Fiction." The title of the first volume was not well chosen. There was much in it that had little or no relation to the development of thought. Everything was swept into it that was not poetry or fiction, and the material was so cumbersome that the treatment was often scanty and the proportions of different values were not always well observed. The last objection holds in a less degree of the second volume, implying scantiness of treatment here and there; but the material handled is much more homogeneous, and is precisely what its title indicates.

The manner of division, which has both advantages and disadvantages, involves frequent returns upon authors considered in the first volume. Emerson is the only author who had a whole chapter to himself in the first volume who has another here. Poe was there regarded as a critic only; here his prose and verse are grouped together in one chapter, and the same method is pursued with Longfellow, though an attempt is made in general to treat poetry in the first part of the volume and fiction in the last. Cooper and Hawthorne have each liberal treatment in a separate chapter. These allotments of space indicate Mr. Richardson's impressions of relative value: Emerson first, nearest to him Hawthorne, Cooper, Longfellow, and Poe. He said in the first volume: "The three 'problematic characters' in American literature, the men whose personal qualities and whose literary work demand the most patient study and the most earnest attempt towards a just critical estimate, are Emerson, Hawthorne, and Poe."

The promise of Mr. Richardson's work in his introductory chapter was a criticism of analysis and not of exposition. To this he has not been altogether true. Leave out the expository matter, and his volumes would be very sensibly reduced. Another promise was that the laws of literary perspective should be observed; that authors should be judged in a cosmopolitan and not merely in an American spirit, their values in comparison with European authors of the highest rank determined as nearly as possible. This promise has been faithfully kept. But many difficulties arise, as with Mr. Gosse's attempt to answer the question whether any of our dead poets are entitled to be ranked with the thirteen English poets of "unassailed renown." In the course of the controversy their renown in several instances has been assailed. Mr. Richardson himself perceives that the function of the critic is something more and better than setting authors in a numerical order. This game has its attractions for critics of the highest rank. Mr. Arnold liked to play it—witness notably the criticism of Wordsworth in his just published 'Essays in Criticism.' But he did better when he endeavored to show us what was really admirable in this or that writer, and why it was so. With Mr. Richardson it is not otherwise. While in a general way his attempt to view our literature without provincial bias is to be commended, and adds much to the value of his work, his best service is not here, but in his showing of what is the peculiar strength and weakness in the poetry and fiction of American writers. Incidentally he expresses many preferences for which he assigns no reasons, and at which his readers will sometimes demur. He is not by any means disposed to regard the judgment of foreign critics on our literary productions as final, or to forget that abroad, as here, there are critics and critics, and that the praises of Poe and Miller and Whitman, if they represent a wide, do not represent a universal suffrage.

Mr. Richardson's epithets are not always fortunate. "Pious" is not a good adjective for Wordsworth; "twaddle" is not the proper word for Longfellow's inferior verse; "a later Franklin" does not suggest Dr. Holmes; nor can we find in Longfellow's 'Hyperion' anything of "*Wilhelm Meister* wholly restated and fitted for a Saxon audience." Mr. Richardson has a habit of definition by negation, as where for half a page he goes on telling us that Longfellow's lyrics are not this, that, or the other thing, which no one ever imagined that they were. In such passages the pride of knowledge seems to get the better of the critic's art. At other times we have a looseness of expression which suggests a lack of definite meaning in the writer's mind. For example, the 'Scarlet Letter' "is the best book Hawthorne ever wrote, though comparison between it and some of his other writings is neither easy nor valuable in its results." Elsewhere we are told that "the very titles" of Edward Eggleston's tales "illuminate the scenes and characters described," and 'Roxy' is among the titles named. A more serious defect is a certain verbal prettiness, a rhetoric which we associate with "sweet girl graduates" of local seminaries rather than with the professor's chair in a New England college. Thus we have "soulful" more than once; Bryant's imagination "does not soar and sing in distant and ultimate skies"; Dante "forth fared six centuries ago"; "he forgot not"; and the alliterative title "Tones and Tendencies of American Verse." We also have considerable rhetorical fuss about one matter or another by which our apprehension is not helped at all.

But these limitations, which, perhaps, should have been waived, do not prevent Mr. Richardson's second volume from being an interesting and valuable body of criticism upon American poetry and fiction. In his introductory chapter on "Early Verse-making in America," there is no attempt to prove that any of the geese of the colonial times were swans, or to claim for Dwight and Barlow and Freneau any but the faintest praise. Hardly more is claimed for Drake and Halleck in the second chapter, on "The Dawn of the Imagination." Bryant is also treated under this head as "a poet relatively, though not absolutely of the first rank" —whatever this may mean. "Not a poet of the first rank," Mr. Richardson says further on. But in the first rank he puts Shakspere alone, and in the second Homer, Æschylus, Sophocles, Virgil, Dante, Milton, Goethe. No one would think of classing Bryant with these, but, apparently, Mr. Richardson considers him inferior to Emerson, Longfellow, Poe, Lowell, and Holmes. We say "apparently," because his gradations are not clearly marked. They vary with the point of view, as they must do. "Bryant resembles Emerson," he says, "in the characteristic of uniformity "—of un-uniformity would be truer. Both ranged through widely differing degrees of excellence. The treatment of Longfellow is extremely sympathetic, and leaves little to desire. "All in all, Longfellow has been the nation's poet," though he has less philosophic depth and insight than Emerson, less music than Poe, less energy than Whittier and Lowell, and of humor next to none. In his sympathetic quality is found his rarest gift. As for his hexameters, the wonder is they are so good. Poe has for Mr. Richardson a remarkable fascination. Beyond the liberal space allotted to him, the references to him are numerous; but the final judgment is not too favorable. It is not more favorable than Mr. Woodberry's in his admirable life of Poe, or than Mr. Stedman's in his 'Poets of America.' The chapter on Emerson is appreciative of his lyrical perfection, too seldom sought or found, his felicity of phrase, and his penetrative thought.

Under the heading, "Poets of Freedom and Culture," we have a consideration of Whittier, Lowell, and Holmes. The reader will expect Whittier and Lowell to be the poets of freedom, Lowell and Holmes the poets of culture. But Mr. Richardson would have us regard Holmes also as a poet of freedom. A patriotic poet he has surely been, but he never sang one anti-slavery line in the anti-slavery conflict, and he sang the praise of Daniel Webster after

his miserable fall. The chapter on "Tones and Tendencies of American Verse" covers a multitude of names and still lacks completeness. There are less known poets than any mentioned here that are of equal if not greater worth.

The beginnings of American fiction are divided between Irving and Charles Brockden Brown. The chapter on Cooper is very much upon the lines of Mr. Lounsbury's admirable Life. The criticism of Hawthorne is in a tone of cordial admiration. The denial to Hawthorne of any morbid quality is overdone. The closing chapters, on "The Lesser Novelist" and "Later Movements in American Fiction," are much crowded, but the necessity for condensation is always helpful to Mr. Richardson's force and style. A good many of the judgments have in them too much of the personal equation. Of these are the judgment that 'Nathaniel Hawthorne and his Wife' is the best biography written in America, and the general opinion of Mr. Julian Hawthorne's work; another is that Mr. Howells's 'Modern Instance' is his strongest work in his later manner. On page 435 we are told that 'Roderick Hudson' and 'The Portrait of a Lady' are Mr. James's best novels, and on page 438 that 'The Bostonians' is his masterpiece. Mr. Richardson's admiration for Mr. James is of the qualified sort.

A book like this profits us by the antagonisms it excites as well as by the things that we accept. There are books which treat of parts of Mr. Richardson's subject much more justly and delicately than he can do within his narrower scope, or could if he had freest range. Mr. Moses Coit Tyler's 'History of American Literature' is incomparably richer than Mr. Richardson's early chapters; Mr. Stedman's criticism of the poets has much more of nice discrimination; the lives of Emerson and Irving and Poe and Cooper, in the "American Men of Letters" series, are far more satisfactory than the chapters here, and Mr. James's 'Hawthorne,' with all its faults, has merits to which Mr. Richardson cannot attain. Moreover, there are separate essays, such as Mr. Morley's upon Emerson and Mr. Hutton's upon Hawthorne, that make Mr. Richardson's work seem poor indeed. But even for those who have these things at hand, Mr. Richardson's volumes will be valuable on account of their extended scope, their suggestion of many fading reputations, their challenge of opinion so frankly given all along. The poets, the novelists, and the critics will take little pleasure in them, but a multitude of the general public will find them stimulating and instructive, and will gird themselves to follow up some of the less frequented roads on which Mr. Richardson has travelled with a jocund mind.

A History of Charles the Great (Charlemagne). By J. I. Mombert, D.D., author of 'Handbook of the English Versions,' etc. D. Appleton & Co. 1888. 8vo, pp. 564.

Dr. Mombert has made too big a book of his 'Charles the Great'—not too big for the subject or the materials, but for his treatment of the subject and use of the materials. His treatment is wholly popular and essentially narrative; but the present generation is too busy and too abundantly supplied with reading matter to care for a narrative, on the scale of this book, of the events even of so important a life as that of Charles the Great. Such a treatment, limited in its scope and incomplete in the view which it presents, would be well enough for a moderate-sized volume, such as we find in the various series of biographies with which the market abounds; but a volume of the bulk of the one before us can only justify itself by a scholarly and approximately complete study of its subject.

When we speak of the view as incomplete, we do not mean in the ground that it covers, but in the treatment. It is a book of detail, not of generalization. The author has faithfully and industriously collected all the materials that bear upon his subject, and has, of course, grouped these materials into chapters under their several heads. But in the treatment of any given subject, the items of information are, as it were, strung along, with little attempt to combine them in their larger relations, or to give them their due emphasis. The very construction of the paragraphs is after this fashion. They are of the vicious style so much affected by the French, often consisting of single sentences, so that a page may contain six or eight short paragraphs. This may be very effective in connection with a brilliant, epigrammatic style, but it is fatal to the dignity and consecutiveness required by a work of this kind. These are not true paragraphs, for a paragraph should have an independence and structural completeness which are missed by this method of composition.

This defect is well illustrated by Book iii, chapter i, "The Diet and the Capitularies." This chapter afforded an opportunity of analyzing and classifying the legislation of Charles the Great, and placing it before the reader in an intelligible and instructive summary. But the method pursued is that of enumeration rather than generalization. Many interesting and important facts are told, some capitularies are given in abstract—and this work is well and skilfully done; but at the end the reader has failed, after all, to get an idea of what Charles aimed to accomplish, or what he actually did accomplish. For example, we do not remember that any distinct mention is made of that feature of policy which shows perhaps more clearly than any other the true greatness of Charles, and stamps him as an enlightened statesman—his steady effort to protect the common freemen, the better class of the peasantry, against the exactions and encroachments of power. The effort was of course unsuccessful in the long run: economic and political forces were working against him too strongly for even his gigantic powers; but it was something to hold these forces in check for a season, and maintain partially and temporarily the existence of that class upon which national well-being must in large part rest. This settled policy of Charles the Great gives the key to many legislative acts which, taken by themselves, appear only as curious bits of antiquarianism.

This policy, for example, explains the reorganization of the military system, as worked out in the capitularies of 806 and 807. This is totally misconceived by Dr. Mombert, who, curiously enough, brings in the account of this legislation in connection with the Saxon wars, some twenty years before it was effected, and gives it a wholly misleading interpretation. His words are (p. 103): "He devised the plan of combining the old military constitution of the Franks with the feudal system, in virtue of which not only his vassals and their liege-men, but also all freemen possessed of independent freehold property, were bound to march against the enemy." Now, in the first place there was at this time no feudal system, but only some germs of feudal institutions, partially developed. The military system was that here described, the *heerbann*, or "universal obligation to military service" resting on all freemen, not those alone of "independent freehold property." The legislation in question, coming at the very close of Charles's reign, was not designed to combine this universal obligation of service with feudalism (as was the object of the Assize of Arms of Henry II.), but, in view of the increasing power of the lords, and the diminishing resources of the peasants, to commute this universal service in the way described in the text. So far, therefore, from his military institutions being "the most onerous and least popular of his government," they were among those which exhibited most clearly his wise and humane statesmanship.

The whole subject of institutions is indeed treated very inadequately, as could not but be the case with an author who cites no modern writer in relation to them later than Hallam and Guizot. We find (p. 66) the astonishing statement "that the terms 'duke' and 'count' were simply official designations, unconnected with the geographical and political division of the country"—a statement which is true for modern times, but exactly the opposite of the truth for the time in question, when counts and dukes were simply appointed governors of administrative districts. On the next page we have a passage of some length from Montesquieu, describing the military system of the Franks. Now, Montesquieu is a writer full of wisdom and abounding in instructive suggestions; but the scholarship of his age did not make it possible to understand in detail the forms and institutions of the Frank period. We find, in relation to these institutions, no citations from Waitz, Roth, Sohm, Brunner, or Fustel de Coulanges, and, in regard to economic history, none from Von Maurer, Inama-Sternegg, or Lamprecht. But the political and economical conditions of these times cannot be comprehended without the study of these writers and others of their class.

These are the defects of the book. As a narration we have already said that it has many merits, although always suffering from the method of composing by detail rather than by grouping and combining. The judgments are generally sound and often sagacious. The original authorities have been carefully studied—and here in the best editions—and generally well combined. The remarks on the coronation of Charles (p. 364) are shrewd, and contain what is to us a new explanation of Charles's ostensible indignation—that he had intended, as in the case of his son's coronation, to place the crown upon his head with his own hands, and that Leo's act excited his indignation as being unauthorized and unexpected. There are a good genealogical table, map, and index. In the note to page 45, *Gravidus* should read *Gradivus*.

Portfolio Papers. By Philip Gilbert Hamerton. Boston: Roberts Bros.

Mr. Hamerton's latest book shows all the qualities of his former work. The placid good sense, the absence of exaggeration, the clearness and precision of statement, and the capacity for saying simple things, that have made him the first of English-speaking critics of art, are all as marked as ever. The last of these qualities seems to us the rarest of all. Mr. Hamerton never takes anything for granted, never assumes a knowledge in his reader which he may not possess. He has a wonderful gift of understanding ignorance, and, at the risk of seeming tedious or superfluous to the initiated, explains clearly and simply, in language to be understood of all, things that most artists and critics have known so long that they have half forgotten them, or have, at least, forgotten that all the world is not as wise as they. This is the

essence of all teaching, and when combined, as it is here, with a wide practical and theoretical knowledge of the subject to be taught, and with a clear brain and an unbiassed judgment, it gives us the ideal teacher. It would hardly be too much to say that Mr. Hamerton has done more for the education in sound ideas of art of the English-speaking public than all other critics together.

The present volume is not as important as some that have preceded it, being, as the title indicates, a collection of miscellaneous papers from the *Portfolio*. It is divided into four parts—Notices of Artists, Notes on Æsthetics, Essays, and Conversations. The Notices of Artists are five in number, and deal with Constable, Etty, Chintreuil, Guignet, and Goya. That on Constable contains, as a matter of course, the old anecdote about Sir George Beaumont's "brown tree," and Constable's remark that he did not find it difficult to determine where to place it, as he "never put such a thing into a picture." After looking at his pictures now in the Metropolitan Museum, one wonders whether they were painted before this conversation, or whether the story is apocryphal. Or is it that our standard of brownness has changed, and that these trees were green in comparison with those of Sir George? Possibly the color is much changed with age.

The paper on Goya is the most interesting of the five, but here Mr. Hamerton shows that if he is the best of British critics, he is still British, and not quite exempt from insularity. His Anglo-Saxon moral sense is aroused by the not very savory personal character of the Spanish artist, and he is as nearly savage in his denunciation of man and work as is possible to his nature. Indeed, Macaulay himself could hardly use stronger language than is contained in this notice. Mr. Hamerton maintains that "the celebrity of the artist is in great part political, and not artistic in its origin," and protests that "the qualities of artist and politician are in themselves distinct, and they ought to be kept so." We cannot avoid thinking, however, that he has himself been guilty of a similar confusion of ideas, and has been led by his reprobation of Goya's moral character to undervalue his art. He certainly lays himself open to such a charge when he says, "Such coloring as I have seen of his is foul and filthy to the last degree; and I have a difficulty in understanding how a man so restless, so irritable, and so degraded by mental and physical vice could at any time color tenderly, delicately, and purely. I have believed hitherto that the power of fair coloring was reserved for serene and elevated natures." This is an artistic heresy of the kind with which Ruskin has familiarized us, and is astonishing from a man of Mr. Hamerton's usual good sense and knowledge of the history of art. Fortunately, such slips are rare, and even here the saving clause is added—"but there may be exceptions to the rule, if it is a rule."

Something like racial bias crops out again in the notes on Æsthetics, in discussing idiosyncrasy, where he says, "In the fine arts we owe to idiosyncrasy that charm of infinite variety which so vastly increases the interest of our exhibitions. This variety has been greater in England than elsewhere, because our artists *have been less moulded by a common system of authoritative education* than the artists of the Continent, and also because Englishmen have a natural turn for the development of individual peculiarities." And again, "The moral of all this is, that we can hardly be too careful to preserve so precious a thing as the inborn quality of a person." Of course this is perfectly true, and of course Mr. Hamerton is not indifferent to the value of education; yet one receives somehow an impression that he has little sympathy with the classical ideal of an impersonal art, perfect in itself, which is at the foundation of academical training and which has so generally prevailed among the Latin races. There is a slight, a very slight, trace of the same natural bias in favor of the individual rather than the impersonal, later in the volume, in the sound and admirable essay on "Style." It would be strange indeed if a critic were absolutely without any of the prejudices of his race and country, and these slight instances are only rendered conspicuous by our author's habitual breadth of view.

One of the most novel and interesting of the Notes on Æsthetics is No. 8: "Right and left not indifferent in Art." The writer states his conclusions on this subject in the form of two rules, which we will quote:

"(1.) Whenever there is an issue from the picture along which the imagination of the spectator will be enticed to travel, as, for instance, an opening to the distance in a landscape, it ought to be, if possible, to the spectator's right.

"(2.) Whenever there is a large mass that blocks up the composition, it ought to be, if possible, on the spectator's left. It follows from this, that when there are two masses, one on each side, as often happens in the side scenes of a theatre, and in pictures arranged on the same principle, it is the larger and more important of these that should be placed on the left."

We have not space for the discussion of this curious discovery, or of the probable reasons in the physiology of the brain and in the European method of writing, etc., for this principle of æsthetics; but we feel sure that many artists, their attention once called to the matter, will be surprised to find how generally they have instinctively obeyed Mr. Hamerton's rules.

The volume contains, besides that on "Style" already mentioned, short essays on "Soul and Matter in the Fine Arts," on "The Nature of the Fine Arts," and on the question, "Can Science help Art?" and concludes with some imaginary "Conversations" between an artist, a critic, a poet, and a scientist, on the subject of book illustration. These, while they contain a great deal of truth, are perhaps the least valuable part of the book.

There is only a very meagre table of contents, and the proof-reading has been poor, and printer's errors are rather abundant.

Jonathan and His Continent. (Rambles through American Society.) By Max O'Rell and Jack Allyn. Translated by Madame Paul Blouët. Cassell & Co.

"Max O'Rell" has a genuine gift for social observation, or he could never have written 'John Bull and His Island.' So much we knew before, and now no candid American reader will deny that in this study of the manners and customs of the United States he has made a decided hit. It is not that the book is very deep or very wise, or contains much that is new and important; but it is the work of an observer of a certain originality of style, who has occasionally the gift of insight, and who has the art of telling disagreeable truths without giving offence. This is the art which the English observer of American institutions and manners finds it so hard to acquire. He forms judgments which when expressed leave a sting behind, partly because they are produced as judgments, and not as impressions, and partly because they are produced with an air of authority only to be explained by the assumption that the observer is, by the fact of his nationality, placed above those he criticises. Mrs. Trollope and Dickens told the truth about the America of their day, as any one will see who takes the trouble to look into their books—and very amusing reading they are, by the way—but they lashed the provincialism of the country into a fury. Max O'Rell is full of things displeasing to our vanity, and it is by no means simply because we are grown too large and powerful to care that we are not irritated by them. It is also because what he says neither expresses nor implies superiority—he does not seek to establish that galling relation of critic and victim which sets at naught the rights of man and the Declaration of Independence, and tramples under foot the axiom that one man is as good as another.

Max O'Rell would not for a moment deny that American civilization is as high as any in the world (though he thinks that the French are perhaps a little happier), but he notes here and there little peculiarities, more or less important, such as lack of manners, devotion to money-making, laxity of the marriage tie, bad cooking, etc., etc., which are features of American life—all with a pleasant, cheery, sympathetic smile which disarms antagonism. We all have our weaknesses, he seems to say; in examining and reporting upon what they are we are engaged in an improving occupation, which may make us wiser, and need not leave us any sadder than we were before. It is not necessary to be profound, nor even painfully accurate. Max O'Rell is often decidedly inaccurate. For instance, though the cost of living is undoubtedly far higher here than in England or France, it is rather a figure of speech to say that in the United States "you get for your dollar but the worth of a shilling in English money or a franc in French." When a comparison is made between a hotel bedroom in France at five francs a day and the same apartment in America at five dollars, M. O'Rell seems to forget that the latter includes meals. It is true that the cab which costs you eighteen pence in England will cost you a dollar and a-half in New York, but it is not true that "the proportion is always kept" (p. 307). If it were, it would cost exactly four times as much to live in New York as in London. In the same way, we are told that receipts are enormous, too: "a newspaper article for which would be paid in France from 100 to 250 francs (and no French paper except the *Figaro* pays so much for articles) is paid for in America from $100 to $250." He does not mention what paper rewards its staff in this way. Little errors of this sort in the work of an English critic would attract much hostile attention, but in our good friend Max O'Rell we pass them smiling by.

It is difficult to make extracts; but one or two good points we must notice, on account of the pleasure they have given us. Every one is familiar with that pest of railroad travel in the United States, the man who appears from time to time, now with books, now with prize-candy packages, now with pop-corn balls—and with his habit of depositing his wares upon the lap of the unfortunate passengers. Of the patience with which this abuse is tolerated Max O'Rell says: "The Americans have the patience of angels. I have seen them for five or six hours refuse, with the politest signs of the head, the different articles of these ambulant bazaars. They seem to say, That creature is very annoying, a terrible nuisance; *but I suppose we must all get a living somehow.*" Is not this correct, and shrewd, too? The best part of this criticism, however, is the sequel. The author became so much interested in this "ambulant bazaar" that he tracked him to his lair, his depot of supplies in the baggage-car, where he found him at his toilet. The stranger watched him with interest. "When his toilet was com-

pleted he turned round, and, seeing that I was looking at him, he threw me a patronizing glance, eying me from head to foot. I thought he was about to say, 'What is it you want?' 'Well, business is looking up, eh?' I hazarded. 'Mind your own d——d business,' he replied; turning on his heels, he departed."

Again, every one will recognize the force of an observation which is particularly true of the West—that the genuine American is unwilling to admit being *bored*. To illustrate this, we are given an account of a conversation on the subject of a railroad journey the greater part of which lay through a dreary forest. When asked what he thought of that part of the country, the author suggested that it was a little uninteresting. But he found, to his surprise, that the American view of the subject was that it was "immense—like everything else in the country, immense." Whatever opinion we may hold about this particular journey, we believe it is strictly true that one of the striking features of American civilization (as distinguished from English) is the unwillingness to admit that you are "bored," and the correlative determination (also noticed by Max O'Rell) to insist that you have had a "good time," no matter how untrue to the facts it may be. Is this part of a real universal happiness, which such an observer as Mr. Bryce finds here (but of which Max O'Rell seems doubtful), or is it assumed with an eye to business, in the belief that people who are easily bored and not interested are not those who get most orders and the largest trade?

Everybody who observes men and cities has a theory about them, more or less preconceived, into which facts must be made to fit. De Tocqueville explained everything he saw as an effect of democracy and equality. These were the efficient causes of all the phenomena of American life. Max O'Rell's cause is what the late John Stuart Mill, in his scorn, called "dollar-hunting." It is as a dollar-hunting animal that he studies the American. When he notices anything novel or peculiar, the first question he asks himself is, "How is this trait connected with the pursuit of money?" Of course, pushed to an extreme, this method of analysis would reduce everything to an absurdity; but part of the author's cleverness consists in not pushing anything to an extreme. We feel the influence of his theory without being shocked by it. We do not arise in our wrath and exclaim: "What! would you attribute to this young and vigorous democracy, glowing with hope and manly pride, a single motive—and that the lowest of all? Do you really think that money and money-making furnish the universal standards of life in the United States?" On the contrary, we smile and reflect that, after all, there is a good deal to be said for the theory now, as a generation ago our fathers thought there was a good deal to be said for De Tocqueville's.

Logic; or, The Morphology of Knowledge. By Bernard Bosanquet, M.A. Oxford: Clarendon Press. 1888. 8vo, 2 vols. xvii., 398, viii., 240.

Mr. Bosanquet is a high priest of Neo-Hegelianism, and his 'Logic' may be considered as an *ex-cathedra* statement, especially if contrasted with that somewhat heretical book, Mr. Bradley's 'Principles of Logic,' which called out our author's criticism a few years ago. If Mr. Bosanquet writes with one eye upon the authors of such all-round works as Wundt's and Lotze's, he certainly writes with the other upon Mr. Bradley alone. But his work is a complete treatise, more so than Bradley's own snapping denunciation of "the diffident admirers of the phenomenal world." He has left no important phase of his subject without a thorough discussion; but, on the other hand, his volumes lack the interest which Mr. Bradley's highly charged style gives to 'The Principles of Logic.'

The author's πού στῶ is at the centre of reality. The judgment is our continued construction of this reality. The great assumption of all thought is the *systematic* character of this reality, and so the only canon of our thinking is the internal coherence of the system we construct. The articulation of means and ends, either in a real teleology or in the *de facto* teleology in which we assume that nature works, is the guiding principle of our analogical inference, and the unity of the complete system, when reached, the guide of our deductive inference. Inference, which will be found in all judgment, is the passage through the universal from one of its differences to another, and the judgment itself is but the continued construction of this universal. This is a very bare, and therefore a probably rather unintelligible, account of the line along which Mr. Bosanquet discusses the problems of logic.

He parts company with Mr. Bradley at the very outset; for Mr. Bradley finds no subject *in* the proposition, but considers that the entire ideal content of the proposition is asserted of a reality which is outside the proposition. Mr. Bosanquet does not deny the ideal unity of the judgment, but finds it to be the unity of reality itself. Since we are constructing this reality in judgment, the relations of the judgment can be the relations of the reality, and there can then be predication within the judgment. This is the fundamental difference between Mr. Bradley and Mr. Bosanquet. The others follow naturally, Mr. Bradley's standpoint being not at the centre of reality but outside it.

Unfortunately, Mr. Bosanquet is most obscure here where he should be most luminous. But in his treatment of the abstractions of space, time, and number, he has given one of the clearest expositions that can be found, and almost as much can be said of his treatment of inference. This part of his work is so admirably done that one deplores the more the frequent lapses into obscurity. Mr. Bosanquet has sometimes the habit of thinking aloud in condensed and complicated sentences, that would require the labor of hours to unravel. Being sure of his field, he flies over it, heedless whether the reader is with him or not. In a word, his book is written esoterically, or for the intellectual aristocracy in the universities. The writer has not brought himself down to the level of those readers whom Mill addressed, and who study Spencer, Huxley, and Bain today. An author has perhaps the right to choose his audience; but when we remember how much the public needs to be educated away from the crude logical dualism of a dead matter of knowledge entirely divorced from the living mind which knows it, we cannot but feel that writers of Mr. Bosanquet's power and freedom from superstition have a mission to the people as well as to the aristocracy.

It is the belief in the objectivity of reason which is the animus of all this high thinking; and, clothed in the right forms of statement, this belief is just as appreciable by the ordinary mind as the phenomenalism of the "advanced thinkers," besides having a spiritualizing power which the latter kind of thought has not. We have yet to be taught that under each perception lies a mass of unanalyzed relations; that our crude reflections have no claim to finality; that we cannot approach nature at any point without finding the existence of thought and ideals. The men who should teach us all this are Mr. Bosanquet and his fellows. It is matter for deep regret that their indifference to popularity in style should deprive them of so large a sphere of effectiveness.

A Manual of Decorative Composition for Designers, Decorators, Architects, and Industrial Artists. By Henri Mayeux, Architect to the French Government and Professor of Decorative Art in the Municipal Schools of Paris. Translated by J. Gonino. Illustrated by nearly 300 engravings. D. Appleton & Co. 1888. Pp. ix, 310.

The reader of this book is often puzzled by the vagueness of its phraseology. Statements and principles are made in such language that the reader finds that even a second reading fails to fix in the mind any positive meaning: the words, indeed, mean something and the sentence can be parsed, but what is it that the writer has intended to say? For example, on page 89, at the beginning of a paragraph, and with nothing going before to explain what is coming, we find: "Bands are introduced on vessels in order to avoid undue redundancy of form, and to invest them at the same time with an appearance of solidity. This important principle was never absent from the Greek or Etruscan artist's mind, and is also well remembered in most work of our own days. It need hardly be said that their application on retreating forms would be most incongruous." A cut, three pages further on, bears the legend "Horizontal Bands applied to form," but nowhere does the text allude to it. What is meant one can only guess. But reference to the French original, page 95, tells us in a moment what Mr. Mayeux meant; he is speaking of the employment of decorative bands at certain parts of a piece which has a surface of revolution (such as most vases have, a shape that might be turned in a lathe), especially at those parts which approach a cylindrical form; he refers to his Cut 78, and goes on as follows: "The necessity of maintaining and hooping (*cercler*) the form, as a belt or a band of leather or metal would do, seems to be the reason for this; if placed on the receding (*fuyantes*) parts of the surface, these bands would seem about to slip, and would be incomprehensible." That is perfectly clear, and it is a fairly satisfactory statement of a principle in design which, however, should be discussed at greater length to be of any value to a beginner. But the English book misses it altogether.

It is generally the case, throughout the book, that the so-called translator has used the original text merely as notes for his guidance in writing a fresh text of his own. It is often very difficult and sometimes impossible to find in the one book even the paragraph which corresponds with a given paragraph of the other. In the sweep of his ready writing, the author of the English version often fails to allude, even, to the cuts incrusted in his text. Moreover, it appears, as would be expected of such careless work, that the translator is not particular about his technical terms and names of objects, materials, and processes, but takes them as they stand in the French, untranslated, or translates them at haphazard. This is aggravated by the giving of legends to many cuts which have none in the original; and in these, where he has no support, the translator is free to blunder. There are several notable instances of such blundering, but the reader of the English version may take Cut 219, on page 228, and see whether he can make sense of the legend; and may then try to make sense of what is said

on this and the following pages about the process which Cut 219 is supposed to represent. In the French text a rare but perfectly well-known process is briefly described.

The question whether a book upon the principles of design can be of any great use to students is a very difficult one, perhaps to be answered only by long experience of the attempted employment of such a one as a sort of text-book for the pupils of an atelier or a school of art. Principles of artistic and decorative design may indeed be explained in words, but only by a sympathetic speaker to an attentive audience. Every assertion must be given so carefully, so suggestively, with such large allowance for exceptions, for contradictory or seemingly contradictory truths, and for difference in situation, materials, and conditions, that the lecturer must have a quick eye for his hearers' comprehension, or he is lost. Whether any clearness of statement and feeling for his readers' needs will enable a writer so to address the readers of his printed thoughts, is doubtful. The subtlety of those general truths in art the application of which to special cases constitutes what we call *design*, may be too great for a handbook to contain. In Mr. Mayeux's book there are assuredly a great number of sound maxims and a great deal of just appreciation.

BOOKS OF THE WEEK.

Bartlett—Peters. Scriptures, Hebrew and Christian. Arranged and Edited as an Introduction to the Study of the Bible. Vol. II. Hebrew Literature. G. P. Putnam's Sons. $1.50.

Beard, G. M. A Practical Treatise on Nervous Exhaustion (Neurasthenia). E. B. Treat. $2.75.

Blunt, W. S. In Vinculis. Scribner & Welford. $2.

New Publications.

A Happy Find.

From the French of Madame Gagnebin. 12mo, $1.25.

A sweet and yet dramatic love-story; the moral, always prominent but subordinated to the action, teaches simple and childlike trust in God. It is healthful and interesting, and its perfect freedom from anything like cant is reinforced by its charming French vivacity and humor.

Red Carl.

By J. J. Messmer. 12mo, $1.25.

'Red Carl' in simple but exquisite style pictures the eventful lives of a colony of German emigrants in one of our large manufacturing cities. The descriptions of the "labor movement," the strike and the settlement of it are written from life, while the characters introduced are such as to attract the interest of all readers.

Cecil's Knight.

By E. B. Hollis, author of 'Cecil's Cousins,' 'Cecil's Summer,' etc. 12mo, $1.25.

'Cecil's Knight' is the story of a manly boy who, through perseverance, good sense, and genuine courage, fought his way from poverty and trial to success and fame. It teaches a useful lesson in a clear and attractive way.

Polished Stones and Sharpened Arrows.

By C. W. Bibb. With an Introduction by Rev. A. J. Gordon, D.D. 12mo, $1.25.

A handy volume and admirable manual for Christian workers, thinkers, and teachers, embracing some four or five hundred Scripture texts, giving under each one or more apposite and appropriate illustrative anecdotes enforcing the moral truth conveyed in each heading.

The style is fresh and vigorous, and the work will meet a genuine want.

T. Y. CROWELL & CO.,

13 Astor Place, New York.

THE NATION.—COMPLETE FILE from 1868 to 1889, inclusive (21 years), in perfect order, for sale. Address A. C., Nation office.

D. LOTHROP COMPANY

HAVE NOW READY:

THE STORY OF LOUISIANA. By Maurice Thompson. 8vo. $1.50.

"Mr. Thompson has acquired the art of portraying an historical character in a sentence, of depicting a revolution in a paragraph, of unfolding vital tendencies of a whole epoch in a single chapter."—*Boston Beacon.*

"It will be read with equal interest by the student in search of information, and the general reader in quest of entertainment."—*Boston Commonwealth.*

"As an historian, Maurice Thompson has wrought faithfully and has done needed and valuable service."—*Boston Globe.*

ACROSS LOTS. By Horace Lunt. 12mo, $1.25.

"His work, for fine comment and for a certain unconventional freshness and closeness of seeing, is quite on a par with that of Thoreau or Richard Jeffries. The touch is unerring."—*Boston Herald.*

"The whole book is as wholesome as a wide-awake walk on a bright day, and belongs to the literature of Thoreau and Burroughs, a practical exposition of Emerson's advice to study nature."—*Boston Journal.*

"Full of the spirit of outdoors, and of tender sympathy with nature."—*Boston Transcript.*

GLIMPSES OF GREAT FIELDS. By Rev. J. A. Hall. 12mo, $1.25.

"A very concise and complete summary of the results of scientific research on the questions, What is force, mind, life? The thought throughout is original and important and will be followed with unusual attention."—*Boston Herald.*

"The author's style is remarkably simple and direct, and the work is wholly free from dogmatism or assumption."—*Boston Transcript.*

"It is an attempt to express the enlarging ideas of the age, especially in regard to God. It helps to spiritualize, therefore we bid it God-speed."—*Morning Star.*

Scribner & Welford's NEW BOOKS.

Operatic Tales.

By F. R. CHESNEY. Crown, 8vo, cloth. $2.25.

*** A series of tales giving in popular form the stories on which the favorite operas are founded, including Lohengrin, Carmen, Aïda, Faust, The Prophet, Die Meistersinger, etc., etc., etc.

Old Chelsea.

A Summer Day's Stroll. By Dr. BENJAMIN ELLIS MARTIN. Illustrated by JOSEPH PENNELL. Crown 8vo, cloth, $2.50.

The stroll described in these pages may be imagined to be taken during the summer of 1888; all the dates, descriptions, and references herein having been brought down to the present day.

Correspondence Between Wagner and Liszt (1841-1861).

Translated from the German by Dr. FRANCIS HUEFFER. Two vols., large crown 8vo, cloth, $5.00.

This correspondence gives us a deeper insight into the character and aspirations of Wagner than any other existing biography of the master. These letters take the same rank of importance in Music as those of Goethe and Schiller in Literature, and will be of permanent value.

Tropical Africa.

By Prof. HENRY DRUMMOND, F.R.S.E., F.G.S. With six maps and illustrations. 12mo, cloth, $1.50.

He touches briefly upon the slave trade, recent explorations, the life of the natives, the missionary work, the entomology and geology of Africa; and gives just such information as one who has not time to read deeply on the subject is anxious to know. The maps, being the most modern, are of exceptional value.

Napoleon at St. Helena.

By BARRY O'MEARA, Body Surgeon to the Emperor. A New Edition, with copious Notes, Biographical Sketches of Sir Hudson Lowe and the Author, and other additions, including Appendices of great value, containing a complete Napoleonic Kalendar, the Napoleonic Roll of Honor, etc., etc. The whole embellished by Colored Plates, several Portraits of Napoleon, Woodcuts, and other Illustrations. Two vols., demy 8vo, decorated cloth, $10.00;

PROFESSOR BLACKIE'S NEW WORK.

Scottish Song:

Its Wealth, Wisdom, and Social Significance. By JOHN STUART BLACKIE, Emeritus Professor of Greek in the University of Edinburgh. Author of 'Lays and Legends of Ancient Greece, etc. Crown 8vo, with music, cloth, $3.00.

"Cavendish" on Whist.

Seventeenth edition. 1 vol., 12mo, Cloth, $2.00.

"The respectable and sometimes excellent translations of Bohn's Library have done for literature what railroads have done for internal intercourse."—R. W. Emerson.

"I may say in regard to all manner of Books, Bohn's Publication Series is the usefullest thing I know."—Thomas Carlyle.

"An important body of cheap literature, for which every living worker in this country who draws strength from the past has reason to be grateful."—Professor Henry Morley.

"The publishers are making constant additions, of an eminently acceptable character, to 'Bohn's Libraries.'"—Athenæum.

Bohn's Libraries.

CONTAINING

STANDARD WORKS of EUROPEAN LITERATURE in the ENGLISH LANGUAGE.

With Dictionaries and other Books of Reference.

Comprising in all translations from the French, German, Italian, Spanish, Scandinavian, Anglo-Saxon, Latin, and Greek.

700 Volumes, $1.40 or $2 each, with exceptions.

RECENT ADDITIONS,

VICTOR HUGO'S DRAMATIC WORKS. HERNANI—RUY BLAS—THE KING'S DIVERSION. Translated by Mrs. Newton Crosland and F. L. Slous. $1.40.

THE LETTERS AND WORKS OF LADY MARY WORTLEY MONTAGU. Edited by her great-grandson, Lord Wharncliffe; with additions and corrections derived from original MSS., Illustrative Notes, and a Memoir by W. Moy Thomas. New edition, Revised, in Two Vols., with Portraits. $4.

"A most convenient reprint of Mr. Moy Thomas's admirable edition."—*Athenæum.*

AN EGYPTIAN PRINCESS. An Historical Novel. By George Ebers. Translated by Emma S. Buchheim. $1.40.

"The translator's rendering is easy and elegant."—*Morning Post.*

ADAM SMITH'S THE WEALTH OF NATIONS. An Inquiry into the Nature and Causes of. Reprinted from the Sixth Edition. With an Introduction by Ernest Belfort Bax. Two vols., $4.

SENECA (L. ANNÆUS) ON BENEFITS. Addressed to Æbutius Liberalis. Translated by Aubrey Stewart, M.A. $1.40.

"This is a faithful rendering of the 'De Beneficiis' in plain but Academic English."—*St. James's Gazette.*

RANKE'S HISTORY OF THE LATIN AND TEUTONIC NATIONS. Translated by P. A. Ashworth. $1.40.

HEINE'S TRAVEL-PICTURES. Translated by Francis Storr. $1.40.

"Mr. Storr's brilliant version."—*Academy.*

GOETHE'S CORRESPONDENCE WITH ZELTER. Selected, Translated, and Edited by A. D. Coleridge, M.A. $1.40.

THE STUDENT'S HANDBOOK OF HISTORICAL GEOLOGY. By A. J. Jukes-Browne, B.A., F.G.S. $2.40.

PAUSANIAS'S DESCRIPTION OF GREECE. Translated by A. R. Shilleto, M.A. 2 vols. $4.

HOFFMANN'S TALES. The Serapion Brethren. First Portion. Translated by Lieut.-Col. A. Ewing. $1.40.

HAUFF'S TALES. The Caravan—The Sheik of Alexandria—The Inn in the Spessart. Translated by S. Mendel. $1.40.

GOLDSMITH'S WORKS. A New Edition. By J. W. M. Gibbs. 5 vols. $7.

A SELECTION.

ANTONINUS.—THE THOUGHTS OF M. AURELIUS. $1.40.
ADDISON'S WORKS. 6 vols. $8.
BAX'S MANUAL OF THE HISTORY OF PHILOSOPHY. $2.
BOSWELL'S LIFE OF JOHNSON (Centenary Edition, edited by Napier). 6 vols. $8.40.
COLERIDGE'S WORKS. 6 vols. $8.40.
FAIRHOLT'S COSTUME IN ENGLAND (Dillon). 2 vols. $4.
LESSING'S LAOKOON. Translated.
LESSING'S DRAMATIC WORKS. 2 vols. Translated.
MILTON'S PROSE WORKS. 5 vols.
MOLIERE'S DRAMATIC WORKS. 2 vols. Translated. $4.20.
PEPYS'S DIARY. 4 vols. $8.
PLUTARCH'S LIVES. 4 vols. (Stewart & Long's trans.) $5.60.
SPINOZA'S CHIEF WORKS. Translated. 2 vols. $4.
STAUNTON'S CHESS HANDBOOK. $2.

*** *The above sent upon receipt of advertised price. Catalogues of our regular stock, also full lists of all Bohn's Libraries, will be mailed, if desired, to those interested. New catalogue of choice and rare books nearly ready.*

The History of the Roman Republic.

ABRIDGED FROM THE HISTORY BY PROF. MOMMSEN. By C. BRYANS and F. J. R. HENDY. 12mo, $1.75.

This abridgment of Prof. Theodor Mommsen's popular 'History of the Roman Republic' presents the salient points of the original in a form suitable for use in schools and colleges, and for the convenience of the general reader. The popular qualities of Mommsen's style are retained throughout.

"It brings the results of Prof. Mommsen's masterly historical investigations within the reach of all."—*Zion's Advocate.*

"Wherever Roman history is thought of, this volume should find a place."—*London Literary World.*

A NEW VOLUME IN THE EPOCH SERIES.

The English Restoration and Louis XIV.

FROM THE PEACE OF WESTPHALIA TO THE PEACE OF NIMWEGEN. By OSMUND AIRY. With 3 Maps. 16mo, $1.00.

In a clear, concise, and graphic style, the author has given a remarkably interesting account of this important period of modern history.

"It is thorough and complete."—*Boston Globe.*

"Remarkably successful."—*London Saturday Review.*

Gibraltar.

By the Rev. HENRY M. FIELD, D.D. Illustrated. Small 4to, $2.00.

"It is a simply delightful book, infolding every kind of interest between its covers."—*Rev. Dr. R. S. Storrs.*

"No one who takes up this volume will be likely to put it down until the last page has been mastered."—*New York Tribune.*

"The best modern description and history of a small bit of territory which ranks next to Rome and Constantinople as a geographical centre of romance and heart-burnings."—*New York Herald.*

A History of French Painting

From its Earliest to its Latest Practice. By C. H. STRANAHAN. With 16 full-page illustrations. 8vo, $5.00.

"This book deserves success anywhere as being at once the most comprehensive and most judicious book upon its subject. Readableness, comprehensiveness, judiciousness mark it as of signal value."—*Boston Advertiser.*

"A volume elaborate, learned, rich in the history of French art."—*Rev. Dr. R. S. Storrs.*

"Until a better book is written this must stand as the best of its general kind."—*Newark Advertiser.*

First Harvests.

An Episode in the Life of Mrs. Levison Gower. A Satire without a Moral. By F. J. STIMSON. $1.25.

"In plot, character, drawing, variety of incident, and all that makes a story readable, it is the peer of any American novel published during the present year."—*N. Y. Journal of Commerce.*

"One of the most remarkable novels of the day."—*Chicago Times.*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 21, 1889.

The Week.

THE Senate Tariff Bill seems destined to expire for want of friends, either in the House or in the country. The coldness with which it has been received by those who should have been its supporters, leads to the belief that it was never intended or desired by the Senate Finance Committee that it should become a law, but, on the contrary, that the present tariff—the tariff of 1883—should stand undisturbed. The large protected interests, and especially the protected Trusts, are satisfied with things as they are. They want no change at all. Therefore a bill of the "cranky" kind, as, for example, one increasing the duty on carpet wool 60 per cent., and on tin plate 100 per cent.—a bill carrying plenty of explosive material to blow itself up with—would suit all the monopolies perfectly. Such a measure is the Senate Tariff Bill It has met its predestined fate in the report of the Ways and Means Committee. The resolution which accompanies the report, however, challenging the right of the Senate under the Constitution to bring in an entirely new measure, is not by any means conclusive. Of course it is contrary to the spirit of the Constitution, but if the Senate may "propose or concur with amendments, as on other bills," there is no limit to the number of amendments. These may relate to every section and line of the bill. They may be introduced separately or in a lump. That the spirit of the Constitution is violated seems clear, but it was more distinctly violated in 1883, when the Senate took a House bill relating solely to internal revenue, and grafted on it a new tariff bill complete in all its parts, which tariff was finally juggled through a conference committee and became law.

The refusal of the Senate to confirm Hugh S. Thompson as Civil-Service Commissioner in the place of Judge Edgerton is perhaps as justifiable as anything of the kind it has ever done. It was very discreditable to leave Judge Edgerton in office till the last moment, considering that the old fellow had for years made no secret of his bad faith in holding the office. The only way of accounting for his retention is the supposition that in this, as in the general management of the offices in Indiana, the President was acting on what we have called the local-option theory—that is, that States which liked the spoils system were entitled to have the spoils system, and States which liked the merit system were entitled to have the merit system. But to put Mr. Thompson in his place would not have mended matters, even if he had been put in sooner, for Mr. Thompson is not a genuine civil-service reformer. His name appears attached to one of the orders (April 21, 1888) addressed to Mr. McMullen, the Appraiser, compelling him to restore to the service, in a fraudulent manner, the examiner, McElwee, dismissed for drunkenness and insubordination. Anybody who was voluntarily mixed up in this transaction cannot be considered a fit person to be charged with the execution of the Civil-Service Act, for this was an attempt to evade or override the law in one of its most salutary provisions, by extorting from a subordinate a false representation, and procuring from the examining board a fraudulent certificate.

Mr. Edgerton has been giving the public another taste of his quality by writing a letter to the President in the Junius style, "scarifying" him for turning him out. He taunts him for relying so much on Mugwump support, and also, with more justice, for not removing him (Edgerton) sooner, as he had long made no concealment of his views. The Judge is evidently an old-fashioned blatherskite as well as an old-fashioned Democrat, and his invective is very poor stuff; it is these very things which make the letter somewhat damaging to the President. That he should ever have put a man capable of writing it in any place of trust, and kept him there, must be a subject of painful reflection. The only approach to an explanation of Edgerton we have ever heard was that he was recommended by the late Chief-Justice Waite; but the Chief Justice was probably an old friend, and men of his generation were apt to consider an elderly man who wore a blue coat with brass buttons fit for any office he could get—which, by the by, was George the Third's view.

Senator Hoar, we are glad to see, has called for the production of the evidence on which Byrne's report was based, and we learn that Mr. Fairchild is preparing another "statement" about "the frauds," which will be ready in a few days. This one, when it appears, will be the fourth. His first was in a letter to Mr. George William Curtis, the second to a reporter of the *Times*, the third to a reporter of the *Evening Post;* this last being illumined by the suggestion that the *Evening Post* was fighting the Government on behalf of "moneyed interests in New York." Not one of these statements tells what the frauds were, or who committed them, or why the persons who committed them were not brought to justice. We trust this forthcoming one will be more satisfactory. Mr. Fairchild must know by this time who the importers were who procured the frauds and profited by them; on what entries, on what days, the frauds occurred; the extent of the undervaluations, and the loss the Government sustained by them; and the names and addresses of the examiners and brokers who perpetrated them. Knowing these facts, he must know also that it is, under the United States Law (Rev. Stat., sec. 5444), his duty to procure the indictment and conviction of the officers guilty of committing or conniving at the fraud or frauds. It is not optional with him whether he will prosecute them or content himself with their dismissal. He is bound to prosecute as well as to dismiss them. The persons concerned in the "frauds" exposed by Byrne are all at large. Not one of them has been arrested or committed for trial. Not one, as far as we have heard, has run away. And yet the horror excited by the frauds seems to grow steadily in certain official and journalistic circles.

The latest rumors about the Harrison Cabinet give it a very Blaineish aspect. One of the most interesting of them pertains to an alleged cipher despatch from Mr. Windom (who went to Indianapolis presumably to accept the Secretaryship of the Treasury), to "Steve" Elkins. It is said to have been sent immediately after Mr. Windom's interview with Gen. Harrison, and is taken as evidence that Elkins is directing the construction of the Cabinet. If this be a correct inference, it will be interesting to note the effect of the information upon "Boss" Quay. Aside from Mr. Wanamaker, Quay does not appear now to have succeeded in getting any especial protégé of his into the Cabinet, and Wanamaker was a good Blaine man before he became a Harrison man, as any one would have said without asking for information on the point. But Quay was not a Blaine man, and is not believed to be one now. If it shall prove true that Elkins has supplanted him as manager of the new Administration, it will only be fresh evidence that the Blaine managers have got a mortgage upon Gen. Harrison and are foreclosing it without mercy. We will add that Mr. Windom's brief career as Secretary of the Treasury under President Garfield was successful and creditable. He accomplished the refunding of the 5:20 bonds into 3 and 3½ per cents by the use of a hand stamp. This was done, according to stories current at the time, in spite of the vigorous opposition of Mr. Blaine, who had his own ideas about funding and wanted to dominate every department of the Administration. Since his retirement from office, Mr. Windom has been identified with the Broadway Arcade Railroad project in this city.

The Ohio *State Journal* insists that "the only *objection against* John Wanamaker" is that he gave a considerable sum of money to the Republican campaign fund, and raised another considerable sum from other contributors. This is considered by the *State Journal* to be a "a hypocritical objection." But our Ohio contemporary overlooks the most essential part of the case. What the hypocrites are saying is, that the only thing *in favor of* Wanamaker as a candidate for a Cabinet position is that he gave and raised the money aforesaid. We will for the moment pass over the possible or prob-

able use made of the money, "the blocks-of-five," and that sort of thing, and repeat the question in its least offensive form. Has Mr. Wanamaker ever done anything entitling him to a Cabinet position except to raise money for campaign purposes? Was he ever prominent in politics before? Do his claims bear any other color than that of money? Would he ever have been thought of for a place in the Cabinet if he had not contributed or raised this money? Shall it be established for a precedent that a certain amount of cash entitles the giver or the financier to the position of Secretary of the Navy or Postmaster-General? If so, there will never be a campaign hereafter without a boodle candidate for a Cabinet position. We say a boodle candidate because that phrase describes the terms of his reward, whether the money was used for good purposes or bad. It is the purchase of a Cabinet position outright, and no other phrase defines the transaction. We say further that if Wanamaker is appointed, it will be the first time in the history of the Republic that such a thing has been done. The appointment of A. T. Stewart by President Grant is no parallel case. Mr. Stewart was not appointed because he had given or raised money for the campaign. The appointment was the whim of an inexperienced man. Nobody thought of Stewart's campaign contribution when his name was sent in. Everybody thinks of Wanamaker's. Nobody thinks of anything else when his name is mentioned. Even the Ohio *State Journal* thinks of that and nothing else, as the whole drift of its article about "a hypocritical objection" shows.

It is not possible to ascertain with accuracy the degree of protection granted Republican chiefs of division under this Administration by a mere comparison of blue-books. It is true, for instance, that in the offices of the First and Second Comptrollers of the Treasury no one can now be found at the head of a division who was there in March, 1885, but simple justice demands that the facts should be clearly brought out that Mr. Garrison, one of the chiefs in the First Comptroller's office, was, on account of his experience and efficiency, promoted by Mr. Cleveland to be Deputy Comptroller, which position he continues to hold to this day, and that a Republican clerk was made chief in his place. In that office there are but four chiefships. One of these is filled to-day by a young man who came into the service by means of a competitive examination, and who attended to his duties with such diligence as to deserve the chiefship which became vacant by the death of the incumbent, who, by the way, was an old Democrat, appointed by Howell Cobb, Secretary of the Treasury before the war. The successor of Mr. Garrison died shortly after his appointment, and his place was filled by a Democrat. In the Second Comptroller's office an able and industrious clerk, though known to be a Republican, was taken from the ranks and placed at the head of the Naval Division. In the whole Treasury Department there have been retained, according to our information, eighteen out of the seventy-five chiefs of division. In the State Department, with the exception of three or four high and confidential places, not a post has been filled except through the Civil-Service Commission, and the clerks selected by that means do not number half-a-dozen. Mr. Bancroft, the librarian, was chosen without any consultation with politicians. Mr. More, the Third Assistant Secretary, was raised from a clerkship, which he had obtained by reason of his own merits as disclosed by the examination papers forwarded from the Civil-Service Commission. Mr. Adee was found a Third Assistant Secretary, and, after Mr. Hunter's death, was advanced a step, notwithstanding his Republican politics. The old chiefs are now on hand; the clerks who rallied around Mr. Blaine in 1881 are there with ranks almost unbroken to welcome him again, and among them one who, though he was known to be Mr. Blaine's especial favorite, and his private secretary during the campaign of 1884, has been treated by Mr. Bayard and his associates with uniform consideration.

Mr. Cabot Lodge made a most extraordinary speech in the House of Representatives on Wednesday week. According to the report published in the Boston *Journal*, he said that "he had heard the denunciation of United States bayonets and United States Supervisors interfering with elections in the States. He was perfectly willing that there should be a United States Supervisor, *and, if necessary, a file of United States soldiers, at every polling-place in his district.* He was not afraid to have them overlook his election, and see how the people of his district voted; and what was fair for one was fair for all." The *Congressional Record* of Thursday did not contain the speech, stating that Mr. Lodge "withholds his remarks for revision." The explanation is to be found in a Washington despatch of Wednesday evening to the Springfield *Republican*, which says: "The declaration of Mr. Lodge to-day that he would be willing to have a file of United States soldiers at every polling-place in his district, is causing a deal of comment to-night. Mr. Lodge has been advised to strike the passage out of the *Record*. If he attempts this, attention will undoubtedly be called to the change by some Democratic member, and the insertion of a correct copy of the reporter's notes will be demanded. Members of the Massachusetts delegation express great surprise that he was betrayed into such an utterance, and some of the Southern Republican Representatives say that they advocate no such doctrine, and that the Republican party can make no progress in the South if it does advocate it." A more pitiable exhibition of "the scholar in politics" has perhaps never been presented than this defence of the use of troops at the polls by a man who should be presumed to know something not only about the history of the long struggle to free civil elections from military interference, but also about the historical attitude of Massachusetts towards this question, as last illustrated in the imposing mass-meeting in Faneuil Hall, Boston, January 15, 1875, "to utter a solemn protest against military interference with the Legislature of our sister State of Louisiana."

The Iowa *State Register* publishes a very refreshing article addressed to the spoliation sentiment of that State on the subject of the attack by the Railroad Commissioners and the Legislature on railroad property. Such an attack, it says, would not be possible if any considerable part of the railroads of Iowa were owned by citizens of the State. The property is virtually taken out of the hands of the owners because the owners are not Iowans. The people of the State are simply helping themselves to other people's money because the other people are non-residents. This is a bold saying for an Iowa newspaper, but it is a true one, and the *Register* says that no tide of popular clamor shall deter it from proclaiming the truth on all fitting occasions. It warns the people of Iowa that they are taking a short-sighted view of their own interests in this matter, since it is quite certain that capital will be deterred from coming into the State, either for railroads or for other purposes, by such proceedings as are now witnessed. The repudiating States have been severely let alone by capitalists, and the confiscating States will meet the same fate. The *Register* goes one step further, and acknowledges that in its zeal for liquor prohibition it has wrongfully overlooked the rights of property invested in breweries and other fixed capital, for which recompense ought to have been made when the property was destroyed by law.

There are encouraging signs of a popular uprising in Rhode Island which will put an end to the prohibition folly which has done the State such serious harm during the past few years. The first step towards the change was taken on Wednesday week, when the lower house of the Legislature, by a vote of 45 to 25, rejected a proposal to engraft the injunction clause of the Kansas Prohibitory Law upon the statute-books. This proposal has been urged by the Prohibitionists with great zeal, and as the agitation has advanced it has been recognized by both sides that the failure of the proposal would involve the safety of the present prohibitory law. During Wednesday's debate a petition, signed by 625 names, and representing millions of dollars of taxable property, was presented, asking for a resubmission of the prohibition question to a vote of the people. It is thought by the best judges of the situation that the Legislature will vote to resubmit the question, and that the ultimate result will be the repeal of the present law.

A bill has been introduced and passed to a second reading in the Pennsylvania Legislature to grant a bounty for the killing of foxes, minks, and skunks in that State. A

correspondent of the Philadelphia *Ledger*, who says that he has been a furrier all his life, and is familiar with the prices which such skins sell for, declares that there has never been a time when the price obtained for their hides has not been a sufficient inducement to catch them. Foxes to-day, he says, are worth from $1 to $2.50; skunks, 50 cents to $1.50; minks, 50 cents to $1.50, while peculiarly valuable ones sometimes sell as high as $10. He, therefore, thinks that the bill should be called an "act to donate about $100,000 per annum to the hunters and farmers' boys of this State." Granted; but why should not the Pennsylvania Legislature pass such an act. The Federal Legislature passes tariff laws of which Senator Plumb says that "the manufacturers get practically the sole benefit." It is time for the hunters and farmers' boys to "have a whack" at the public treasury.

The cable forwarded last week another of those ridiculous despatches which reach us and all the newspapers from time to time, announcing the inheritance by "the Russian branch of the Leslie family" of a fortune of $50,000,000 in England, payment of which is made conditional on their becoming English subjects. The object of the despatch is, doubtless, to prepare the minds of American heirs for similar windfalls, such as are every now and then announced by the numerous swindling claim-agents who live on their credulity. In all or nearly all these swindles, the payment of the legacy is made dependent on absolutely arbitrary conditions, with which the transmission of property is not saddled in any civilized country. The Queen or the Lord Chancellor is holding on to it, or the Peers will not pass an act authorizing its payment without getting a "divvy." If American heirs will bear in mind that England is, like this, a country governed by known laws, that legacies are protected and transmitted there precisely as they are here, under existing acts of Parliament and the decisions of the courts, and that "the Crown" has no more right to impose conditions on a lawful heir than the President has, they will be saved many a ten-dollar bill. Whenever they are told of some difficulty in getting their inheritance in England which does not exist here, they may be sure that the "confidence man" is after them.

The testimony of Pigott, who supplied the London *Times* with the Parnell letters, would probably of itself have done little to establish their authenticity. That question will be settled in the judges' minds mainly by internal evidence—that is, the handwriting of the letters and the comparison of the signatures with others of Parnell's. But his testimony may do a good deal to damage the case of the *Times* generally, owing to his recklessness. For instance, it was plainly a great mistake to draw from him the assertion that Labouchere of *Truth* had offered him £1,000 to admit that he forged them. Of course Labouchere will deny this, and he will deny it with overwhelming force, because he is noted for his shrewdness and worldly wisdom. The most malignant of his enemies would not accuse him of simplicity or indiscretion in dealing with sharpers, or charlatans, or blackmailers of any description. His experience of this class has been very great, and they have no more deadly enemy in the press or police court. He is much more likely to have extracted an offer from Pigott to swear they were forged for £1,000, than to have made him an offer if he would do it. It is now no secret that Pigott offered to sell the letters to Labouchere before he took them to the *Times*, of course with the expectation that it would be worth that sum to the Home-Rulers and the Irish party to get them out of the way. Whether Labouchere has any proof of this beyond his own word remains to be seen. But the mere fact that the letters were hawked about for sale, and that the *Times* finally paid a great price for them, must give their authenticity a deadly blow in the public mind. The law of demand and supply governs forged letters as well as other things. As soon as it appears plain that there is a market for documents which will damage a man, they are apt to be produced in sufficient quantities. In this matter Pigott has shown more sagacity than in other transactions of his life, because he appears to be a broken-down and generally despised old fellow.

The eviction of tenants on Mr. Gladstone's, or rather his son's, estate at Hawarden, for non-payment of rent, is giving great satisfaction to the Unionists, and they are making merry over it. Mr. Herbert Gladstone, we learn by the cable, has been making some sort of defence of it. We do not know what the special circumstances of the case are, but there is one general defence which any English landlord who happens to be a Home-Ruler, can always make for evictions in England, based on the central fact of the whole Irish agitation about land. That is, that in England the landlord erects and keeps in order all the farm buildings, and fences, and does all the draining—in fact, plays the part that the landlord of a city house does. In Ireland as a general rule, to which there are but few exceptions, the improvements which now exist in the island are the result of the unprotected labor of the tenants, who have been charged increasing rents on the additions made by their own industry to the value of the farms—additions which, in a vast number of cases, have consisted in the absolute reclamation of the farm from a state of undrained bog or moor. It is not uncommon for Unionist speakers to point out the large number of evictions which take place annually in New York city without resistance or remark, as an illustration of the unreasonableness of the Irish in objecting to evictions at home; but this argument, of course, owes whatever value it has to ignoring the Irish tenant's share in creating the property from which he is evicted, and the difference between buildings on coveted spots in a great city and farms in remote regions, which owe all their value to the industry of the occupier.

The resignation of M. Floquet without warning to the Chamber, after defeat on the mere question of adjourning the debate on the revision of the Constitution, seems to show that he was tired out, and was only waiting for a decent excuse for retiring. Any other explanation would impute to him unpardonable levity. The probabilities are that he was completely demoralized by the result of the Paris election, and despaired of making further head against the Boulangist tide. President Carnot will try for a few days to form a new Ministry, but is very unlikely to find a man willing to form one at the present juncture, in a Parliament which is already discredited in the popular eyes, and will be more discredited than ever through Floquet's hasty resignation. After some futile efforts, he will doubtless have to resort to dissolution, for which everybody is now looking; and if the country sends up a Boulangist majority, which will provide for the revision of the Constitution under Boulanger's direction, we may bid good-by to the republic. Boulanger will become first President, then dictator—the sorriest that has ever appeared in a great nation—and after that nobody knows what will happen. He cannot become a President of the American type. He will be simply a shabby Cæsar, without either talents or character, and France will be in a deeper slough of despond than she has ever been. He will be helped rather than hindered by the near approach of the Exposition. That is, the Parisians will want to have the crisis over before the Exposition opens, and they will hardly care how it ends, provided it ends in time for that. They will doubtless be pleased, too, to have a President who looks showy on horseback to conduct the ceremonies and receive the foreigners, even if he is a charlatan. A great people making an idol of an arrant humbug and impostor is a new spectacle, but one which the new age will probably furnish now and then. It is perhaps in that direction more than any other that democracy will make its mistakes.

The Tribunal of Commerce, before which an application was made to declare the Panama Canal Company bankrupt on the ground that it is a commercial company, has decided that it is a commercial company, thus upsetting the Panama Canal Company's plea, based on the recent decision of the Tribunal of the Seine, that it is a civil concern, and that the Tribunal of Commerce had therefore no jurisdiction in the matter. If this decision be maintained, it will put an end to all efforts to turn the Panama Company over to any new syndicate or combination, to issue new loans and exploit the remains "for all it is worth." The decision means that any creditor or any security-holder of the company can force it into bankruptcy and sell its assets (if any) under the hammer.

SIGNS OF PROGRESS.

Republican politicians and Republican organs are filled with disgust at the shameless conduct of the Democratic Administration in trying to fill offices with Democrats, notwithstanding the election of a Republican President last November. During the last three months, scores of offices have fallen vacant by reason of the expiration of the terms of the incumbents, and Mr. Cleveland is roundly censured for his temerity in nominating successors. In some cases vacancies have occurred through death, and the President has provoked the censure of his opponents by naming Democrats to fill the vacancies. In at least one instance he has removed a Democratic incumbent of an office, Civil-Service Commissioner Edgerton, in order to put another Democrat, Mr. Thompson, in the place, apparently from personal rather than public considerations.

Much of this talk is simply amusing for its impudence. Republicans complain that the Democrats are "greedy" because Democrats are named for offices at the expiration of terms, in face of the two facts, that these offices fall vacant now because a Republican President appointed men to them four years ago, after the election of a Democrat in 1884, and that the Republicans whom Mr. Arthur thus installed after Mr. Cleveland's election have been allowed to hold their offices throughout a Democratic Administration. To inveigh against the office-grabbing propensity of Democrats under such circumstances represents a climax of audacity which only such unselfish patriots as "Bill" Chandler can maintain with a sober face.

So, too, it requires a good deal of brass for Republicans to complain when Mr. Cleveland names a man of his own party to succeed another Democrat upon the latter's death, as in the nomination of Assistant Postmaster-General Stevenson to take the place of the late Judge Merrick of the District of Columbia Supreme Court. A number of Republican office-holders died during the four months between Mr. Cleveland's election and inauguration, but in not a single instance did Mr. Arthur fail to nominate other Republicans to succeed them. Nobody then presumed to suggest that, as the Democrats were coming into power, it would be indecorous to saddle Republican office-holders upon the new Administration.

In like manner it seems somewhat inconsistent for Republicans to complain of a Democratic President for attempting official changes like the recent one in the Civil-Service Commission in order to oblige a personal friend, when one recalls the shamelessness with which Mr. Arthur, Mr. Hayes, and Gen. Grant used the public service to pay off obligations to political supporters and to secure good places for friends and relatives. Nothing that has been charged against Mr. Cleveland in this respect begins to approach the notorious and admitted facts in the record of his Republican predecessors.

At the same time, all civil-service reformers will welcome every indication, of whatever sort, that the use of the civil service for purely personal and partisan purposes is coming more and more under the ban. If Mr. Arthur had made such an appointment as that of Mr. Stevenson to the District of Columbia bench four years ago, it would have been almost universally accepted as the natural thing; and it is a good sign that public sentiment now so generally resents the nomination of the Illinois politician on the ground that he does not possess the special qualifications demanded. The attempted substitution of Mr. Thompson for Mr. Edgerton as Civil-Service Commissioner does not begin to compare in impropriety with Mr. Arthur's gift of a paymastership to a near relative who would shortly go upon the retired list with a pension by reason of age; but the latter passed almost without protest, while the former is severely condemned.

We have heard a great deal, and very justifiably, about the disgraceful extent to which the Democrats have carried politics in the postal service, but really nothing has been brought to light which is worse than the evils that prevailed under Republican rule and are now forgotten, so short is the public memory. Senator Plumb of Kansas recently presented a letter from the business manager of the Kansas City (Mo.) *Journal*, a Republican organ, complaining of "the present demoralized condition of the Western mail service." A few days later Senator Vest of Missouri produced from the files letters from the very same man written in 1882, bringing equally and even more severe complaints against the mail service under Arthur. An editorial article in the *Journal* of September 12, 1882, said: "From every source in Kansas where the Missouri Pacific extends, there come bitter complaints of the mails. Late, late, always late, from one to twenty-four hours. We have hitherto borne this annoyance and positive loss—for it is a serious loss to the Kansas City morning papers—without public complaint; but when our patrons take up the cry and charge the fault at our doors, we must state the facts in self-defence, if nothing more. The one thing which would make our hearts glad and our patrons happy would be a regular mail service along the line on this road, which could be run on time for thirty consecutive days."

The explanation of these gross delinquencies under the Arthur Administration is very simple, and was thus given by Mr. Vest:

"I had occasion once before to state a single fact which came to the knowledge of my colleague and myself in regard to the appointment of railway postal clerks under the Administration of the late President Arthur. It came within our personal knowledge that the patronage of the State of Missouri as to railway postal clerks was divided—one-half of it, the eastern half, going to Chauncey I. Filley, and the western half to Col. R. T. Van Horn. There was a factional fight in the Republican party within the State, and in order to bring about that placid and ecstatic condition of political feeling that was necessary to the success of the party, there was a line drawn through the middle of the State from the Iowa to the Arkansas line, and one-half of the patronage was given to Mr. Filley and one-half was given to Col. Van Horn, and that instruction from the Postmaster-General to the appointing clerk of the Post-office Department was put in writing. The result was that men were put in office utterly incompetent, and there were thirty-four of them in office when Cleveland's Administration came into existence, many of them from other States, of whom we had never heard in the State of Missouri; but the exigencies of political warfare demanded their appointment and their retention."

The hopeful feature of the situation is that public sentiment would not permit Gen. Harrison, should he be so disposed—which there is no warrant for charging—to make such a division of the patronage of a State as was made under Mr. Arthur, and not only made, but then accepted as natural and reasonable. The revelation of the bargain half-a-dozen years ago would not have created a great sensation, whereas now such a disclosure would do irreparable harm to an Administration. Civil-service reformers, therefore, while not concealing their amused contempt for the hypocrisy of Republican talk about Democratic greed, may well feel encouraged at the multiplying signs that the public sentiment to which both Republicans and Democrats must bow grows more pronounced every day against the spoils system. The people will not stand now what they accepted, almost without grumbling, only a few years ago. Voters have expected more of Mr. Cleveland than they did of Mr. Arthur. They will expect more of Gen. Harrison than of Mr. Cleveland, and they will condemn more unsparingly abuses under Gen. Harrison than they did under Mr. Cleveland. The irresistible tide of enlightened public opinion sets more and more strongly against the spoils system.

THE McELWEE EPISODE.

The careless reader of the newspapers, on seeing the above heading, will probably ask, "Who is McElwee?" McElwee is an examiner at the Custom-house, and "the McElwee episode" is a luminous illustration of what civil-service reform ought *not* to be. The first appearance of McElwee in history was in May of last year, before the Hale Investigating Committee. It was there testified by Mr. McMullen that McElwee's removal had been recommended to the Secretary of the Treasury for "drunkenness and insubordination," and he was accordingly removed in or about August, 1887. He remained out of the service until March, 1888, when Mr. McMullen received a communication removing several of his subordinates, but "suggesting that he (McElwee) be recommended by you for reinstatement." There was no explanation, no expression of opinion about the man. The letter did not say, "I think the charge of drunkenness and insubordination on which you obtained his removal was unfounded," or, "I am satisfied that he is now a seasoned teetotaler, who can be safely trusted with responsible duties." It simply said: "It is suggested that he be recommended by you for reinstatement"—that is, reinstated in spite of Mr. McMullen's knowledge that he was "drunken and insubordinate."

Mr. McMullen testified that he had no choice but to obey; that he looked on the Secretary's "suggestion" as a command, and he accordingly recommended the reinstate-

ment of this man whom he knew to be drunken and insubordinate, thus conniving at a fraud on the Government and on the American people. On the receipt at Washington of this false and fraudulent "recommendation," McElwee was restored to the service as an examiner by an order of Secretary Fairchild nominally, but really of Assistant-Secretary Maynard, dated March 26, 1888.

A day or two later it was discovered that this summary mode of reinstating a drunken insubordinate would not do—that he must get back again by the civil-service gates; and the order of March 26 was accordingly revoked on the 21st of April, and poor Mr. McMullen was requested to "make a requisition on the Board of Civil-Service Examiners for a certificate for the reinstatement of McElwee." The reason of this was, that the Civil-Service Commissioners at Washington, having heard of McElwee's summary restoration, had warned the Secretary of the Treasury that it was illegal; that McElwee, having been removed for "delinquency and misconduct," could not be restored to the eligible list in the manner proposed, or at all within a year. This was an awkward situation. The escape from it was effected by altering or overriding the rules by an ingenious device. The Civil-Service Commission at Washington was induced to rule that the request of a department for the recertification of an employee removed for misconduct, was prima-facie evidence that he had not been removed for misconduct, and was mandatory on the Board of Examiners—in other words, that the Department could certify to a falsehood, and make the falsehood serve the purpose of truth. Accordingly, McElwee was restored over McMullen's head on the 5th of May, 1888, and in the teeth of evidence of the clearest kind that he had been drunken and insubordinate, and in the absence of all evidence that any change had taken place in his morals or manners.

What did this interest in McElwee mean? Why did the Secretary connive at these dishonest and demoralizing practices in behalf of a person of McElwee's description? It was impossible to answer this question satisfactorily until the Byrne report appeared. That contains the explanation. Byrne began his operations in New York by detective work—that is, by going about, "concealing his identity," to use his own words, towards the end of 1886. He describes himself as visiting any person who would be likely to know anything about the employees in the Appraiser's Department, and trying, through gossip or otherwise, to hear of something to the personal discredit of any of them, and particularly of Dr. Sherer. In this way he learned from one man that Sherer was the Turkish Consul, but that "the Turks were disgusted with him."

These operations of course were heard of in the Custom-house long before he entered on his judicial functions in the summer of 1887, and naturally filled the officers of the Appraiser's Department with prejudice against him and hostility to him. A magistrate who mounts the bench to administer justice in the double character of judge and prosecutor, after having himself collected some of the evidence in the humble rôle of a "shadow," naturally finds the poor prisoners considerably incensed against him. They all, in the most impudent and insubordinate manner, according to Byrne, denied to him, when put on oath, all knowledge of frauds or undervaluations in the sugar department, except one, and this was McElwee. Now McElwee was then, and had probably been for some time, under an alcoholic cloud, so to speak. In plainer English, his prospects were dimmed and his standing discredited by his fondness for liquor. Removal at the hands of the wicked McMullen appeared clearly among the possibilities of a not very remote future. To him, therefore, Byrne appeared as a sail on the horizon to a shipwrecked mariner afloat in an open boat. He hailed Byrne promptly, and offered to tell all he knew if he would take him aboard. We consequently soon find in the report eulogies of McElwee. He "testified honestly and fearlessly," and for this the wicked McMullen suspended him. Indeed, when McMullen heard of McElwee's testimony, "his rage," Byrne says, "could not be kept within bounds," and the old gentleman "exhibited his rage in a most unbecoming manner." The dislike of McElwee felt by his brother officers finally "crystallized into a charge of intemperance," which, of course, was all slander, or, anyhow, "exceedingly ancient." In a final burst of praise, Byrne says:

> "I would call attention to the reports made by this officer on 'Violations of the Regulations,' annexed to this testimony (Exhibit 101), and made at my request, evidencing the ability of that officer, and his worthy desire to place before the Honorable Secretary of the Treasury all facts in his possession as to irregularities in the treatment of imported sugar for duty, with a view towards the impartial enforcement of existing Treasury regulations."

The dénouement of the comedy is exactly what it ought to be. As soon as McElwee was restored, his old enemy appears to have again assailed him. In other words, his feeling of satisfaction and security "crystallized," as Byrne says, into intemperance. He appears, from the testimony taken on his trial here, to have begun drinking again as early as June last, and we suppose has been taking "a little something" at intervals ever since. Finally, about three weeks ago, it became too bad to go longer unnoticed, and he was once more put on trial for being drunk on duty and making a mess of his official memoranda. The result is still unknown. His case has been reported to Washington, and is there under deep deliberation. We have tried to get photographs of the latest official writings of this eminent public servant for publication, but the Government was too sharp for us, and they are buried in the official archives. If ever the full history of the "sugar frauds" is written, they will doubtless be laid before a long-suffering people. But we venture to predict that McElwee will be neither acquitted nor convicted. His case will remain under deliberation until the 4th of March, and then float down the stream of time as "unfinished business." It is a funny but disgraceful episode.

THE LARMON TAX BILL.

A BILL has been introduced into the Assembly of this State, by Mr. Larmon of Washington County, which might justly be entitled "An Act to Increase the Burden of Taxation upon the Consciences of the Taxpayers." With a few verbal alterations, it is the same measure that was last year presented by Mr. Brundage. Its aim is to equalize the taxation of realty and personalty. To holders of mortgaged estates it offers most generous and substantial relief. Until the expiration of the contracts under which they gave these mortgages, it would enable them to deduct from the interest pledged to their creditors the amount of the taxes levied upon the assessment of the mortgages. In so far as these creditors are individuals resident within the State, their protestations would probably enlist but little sympathy, since the proposed act would merely insure the collection of taxes which are already in name imposed upon them. But in the case of mortgages held by savings-banks and mutual-insurance companies, the situation is different. By law as well as in fact, such mortgages have been exempt from taxation. When the money for them was loaned, it was not loaned at the entire value of its usufruct, but at the value which would remain to the borrower after he had paid the claims of the State. A tax-law, therefore, which should a second time deduct the amount of these State claims from the interest received by the creditor, would be the enforcement of double taxation against institutions which it has heretofore been deemed public policy to favor. Where the holders of the mortgages are residents in other States, a still further complication arises. The case becomes almost identical with that of the State tax on foreign-held bonds, which was decided unconstitutional by the Supreme Court of the United States (R. R. v. Pennsylvania, 15 Wall, 323).

It is not, however, our present purpose to protest against this provision affecting the obligation of contracts. The remainder of the bill deserves, perhaps, even stronger condemnation. The Larmon bill is the last and perhaps the most perfect of the measures which have been presented in nearly every State to force upon the holders of personal property the alternative of taxation or perjury. It requires every taxable inhabitant to return a list of all his property liable to taxation, "no matter where situated," including all moneys loaned, invested, or deposited, and all credits owing him by any solvent person or persons, body corporate or body politic (except stock in corporations otherwise taxed), "with an averment that he has not invested or transferred any portion of his personal property, or entered into any agreement or incurred any obligation or liability for the purpose of avoiding taxation." Deduction is permitted for "debts owing in good faith," but only in so far as such debts are "in excess of all non-taxable securities" owned by the taxpayers.

That such an act would result in demoralizing the public conscience without materially increasing the burdens resting up-

on personal property, does not need to be redemonstrated. Yet the fact that this bill, after being defeated in one Legislature, should be introduced into the next, and that similar measures, increasing in the strenuousness of their provisions, are being presented in nearly every State in the Union, does demand public attention. It makes clear the truth that the taxation of personal property is not soon to be abandoned, and therefore, since it cannot be abolished, it must be reformed.

Thus far the attitude of the cities towards reforms in State taxation has been chiefly that of obstruction. Some of the arguments which are now being urged against the Larmon bill are as demonstrably absurd as is the attempt of that measure to reach personal property beyond the borders of the State. Particularly is this true of the position taken by the single-tax advocates, who, perceiving that perhaps three-quarters of the taxation imposed upon real estate rests upon land, are enthusiastically urging that the taxation of personal property be abandoned. The most influential newspaper that has espoused this cause, puts forth the claim that were all taxation levied upon land alone, its burden would be justly distributed among the whole people. This is equivalent to saying that were a 6 per cent. blanket mortgage placed upon all the farms in the State, their owners could advance the prices of grain sufficiently to remain as prosperous as now. The rental value of land depends entirely upon the advantages which it affords above those of other land yielding less rent or no rent. The value of these advantages is in no way increased or diminished by greater or less taxation. Taxes upon land rest precisely where they are put.

Yet the single-tax men who recognize the truth, are persistently maintaining, that were all taxes levied upon land alone, it would be the cities and not the country which would pay more than now. Last month Mr. Thomas G. Shearman urged this point before the Legislature of Ohio. For the keenness with which he presented statistics bearing remotely upon the question at issue, his address was admirable. Unfortunately, however, Mr. Shearman failed to make use of some statistics bearing directly upon the question, which were prepared by the State Board of Equalization in 1880. The report of that body contains the assessed value of all the real estate in the commonwealth—land and buildings being listed separately. We have compiled the returns there given for the various counties, and find that, in the cities, towns, and villages of the State, land constituted 54 per cent. of the value of the realty, while on the farms it constituted 86 per cent. Less than half of the population of Ohio is agricultural, yet the value of its farm land is more than 70 per cent. of the total value of the land of the State.

If Mr. Shearman had gone further, and studied the returns of any typical county in Ohio, he would have understood why the average legislator insists upon the taxation of personal property. In the county of Greene, for instance, where the town and country population are approximately equal, the ten incorporated towns returned for taxation 9 per cent. of land of the county, 18 per cent. of the real estate, and 38 per cent. of the personal property. In the face of facts like these, a common sense of justice demands that the rural legislator shall insist upon the taxation of personalty, but it does not demand that he shall insist upon the taxation of property situated beyond the borders of the State, nor upon the intangible evidences of property situated within the State. Such attempts are as unjust and unwise as they are impracticable. The theory of the property tax demands that each piece of property be taxed once and only once, and that the taxation be levied where the property actually exists, and not where the owner happens to spend the income derived from it. In Connecticut, the State in which the taxation of personal property has been carried out most successfully, the attempts to tax fugitive property have failed ignominiously. The Special Tax Commission of 1887 reported that the proportion of intangible securities to other taxable property was dwindling from year to year. "In 1855 it was nearly 10 per cent. of the whole, in 1865 about 7½ per cent., in 1875 a little over 5 per cent., and in 1885 about 3¾ per cent." In the interests of honesty and justice the Commission urged the abandonment of the hopeless attempt to tax such securities. Yet in this same State the tangible personalty returned by individuals amounts in value to one-third as much as the real estate, and the taxes imposed upon the railroads and other corporations amount to a 1 per cent. levy upon an assessment of $115,000,000, while the farm lands of the State are assessed at but $59,000,000.

COLLEGE DISCIPLINE.

THE action of the Harvard College Overseers in adopting a minute providing for a certain modification of the policy pursued by the President and Faculty for some years past, is one of those interferences by outsiders with college management which must always, on general principles, be more or less regretted. For the Overseers are, to all intents and purposes, outsiders—the representatives of alumni who live all over the country—and are intended to be what their name indicates, viz., a sort of council to keep an eye on the doings of Faculty and students. They are, for the most part, men who live in or near Cambridge, and are generally men of high standing in their own callings, and an excellent body of advisers on any subject to which they give their full attention. Moreover, it is not easy to find fault with some portions of their direction in the present instance. The expediency of a rule "that every undergraduate be requested to report in person early every morning, with a moderate and fixed allowance for occasional absences," which they adopt, will hardly be questioned by anybody who knows anything of the capacity of some Harvard undergraduates for lying late in the morning. Many of them, since the abolition of compulsory attendance at prayers, find it convenient to stay in bed until their first recitation, which may not come before eleven or twelve o'clock, and others, of course, may readily be absent for days from their rooms without being missed. Parents naturally enough dislike to see these sluggish, unready, and desultory habits contracted by their sons at the age when the formation of habits is such a very important part of a youth's training; and the Overseers, to some extent representing the parents, and feeling the pressure of their anxiety, have taken the matter in hand, overridden the Faculty, and called on the latter for a considerable increase of rigidity in the discipline of the College, the President voting in the minority against their action.

However desirable it may be that this change should be made, we feel sure that a very large number of those who have given any attention to American colleges as a moral influence will wish it had been made by the Faculty rather than the Overseers. That the Faculty should be overborne on a matter of discipline by an outside body having no direct share in the management, is certainly calculated to aggravate the most serious defect of our collegiate system. Nothing does so much to prevent a "collegiate education," as it is called, in our day and generation, leaving marked and lasting effects on the character and tastes of young men who graduate, as the low esteem in which they hold the professors—that is, the small importance they attach to their opinions about everything relating to the conduct of life—everything, in short, outside the special subject which the professor teaches. It is a rare thing to find a graduate of one of our leading colleges who has brought away any respect for the Faculty in any character but that of men of learning. As men of the world, or as social or moral philosophers, it is hardly an exaggeration to say that he contemns them and contemns their calling. Now and then a professor of unusual force or shrewdness or attainment keeps his place in the memory of his old pupils as a guide, philosopher, and friend; but, as a general rule, our American graduates, and especially those who succeed in life afterwards, are apt to remember their college days mainly as days of fun with their classmates, and very rarely as days of instruction from men of stronger minds and longer experience.

Of course there is more than one cause for this, but the chief cause, and the one needing most serious attention, is the low place given to the professor in our college organization, the small account made of his opinions about collegiate administration, and the very small share given him in college government. There is hardly a college in the country in which he does not, to a greater or less extent, play the part of a clerk employed in carrying out the views or whims of boards of trustees, whose main qualification for the task is either that they have contributed money to college funds, or are trusted and admired as business men by those who have done so. As we have more than once said, all the great universities of the world, which are recognized as genu-

ine "seats of learning," to which, *as such*, graduates look back with reverence as sources of genuine intellectual or moral inspiration, are governed by the Faculty; in truth, the University is the Faculty, and the Faculty is the University. The thought of treating the University as a factory or a bank, to be managed by boards of business men, does not in such places enter into anybody's head. All the statutes and regulations are formed with a view to magnifying the teacher's office, and, through him, magnifying the instruction he gives.

Our system is entirely different, and, in our opinion, most unfortunate. All our legislation and our practice tends to lower the professor in the eyes of the youth who take his courses, to make them think him a person of small account, to whom a boy who means to play his part well in the battle of American life, will pay little attention. And this undergraduate estimate of the professor's value diffuses itself through the community, until we find it the fashion among plain Americans to despise a professor's opinions on nearly everything but Greek and Latin. Amusing illustrations of this are to be met with every day, when professorial teachings happen to run counter to some popular opinion or political humbug. The serious proposal that professors of political economy should be forbidden to teach free-trade doctrines because a majority of the voters think a high tariff a good way of making money, and the profound contempt expressed in Congress for their utterances on the currency during the greenback and silver craze a few years ago, are specimens of what we mean. If it be said that the professors of any particular college are not competent to regulate its discipline and curriculum, we answer that they are in that case unfit for their places, and that better men should be found, and better salaries, if necessary, paid to get them, and not that the government of the college should be handed over to persons burdened with other cares, and whose chief attention is given to other subjects.

THE SUNDAY PAPER IN LONDON.

THE uproar created in London by the attempt of the proprietor of the New York *Herald* to establish a Sunday newspaper there is a little difficult to understand. There are Sunday papers already, but not exactly newspapers. They are weeklies devoted to tales, sketches, anecdotes, theatrical and sporting gossip, and their circulation is largely confined to public houses and bachelor quarters. The novelty of the London edition of the Sunday *Herald* will consist simply in the fact that it will be a Sunday morning paper of the New York type, giving the news of Saturday precisely as the Saturday paper gives the news of Friday. Some of the opposition to it in London has been due to the notion that it will be produced on Sunday, and thus compel compositors and pressmen to break the Sabbath; the fact being, of course, that it will not cause as much Sabbath-breaking as the Monday edition of the London *Times*. But the greater part of this opposition is due to the fear that it will introduce into the homes of the middle and upper classes on Sunday morning the Sunday paper as we know it here—that is, the ordinary morning newspaper, with its usual editorial discussion of every-day topics, plus a great mass of light reading, partly original and partly extracts, some of it really serious, some of it sensational, and some of it unmitigated rubbish; the average quality, of course, varying with the character of the newspaper during the other six days of the week. It cannot be said that the New York Sunday morning paper is really any more objectionable, from a moral or intellectual standpoint, than the morning paper of week days, except in containing more matter. In fact, most of our Sunday papers work in, we believe, enough of what is called "religious matter" to give a semi-sacred character to at least one of their pages, so that the Sunday paper cannot be said to be any more pernicious *per se* than the Monday paper.

What the English clergymen who have protested probably most dislike, is the process of assimilation of Sunday to other days in the minds of readers, which they think the reading of the Sunday paper will work. A great many even non-religious Englishmen support with perfect equanimity the famous dulness of the London Sunday, as compared with that of Continental capitals, because it marks off Sunday from other days in the popular imagination in a very impressive way. The "Sabbath stillness" is a dreadful infliction to the young and gay in the city, but it keeps them in constant remembrance that elderly people and serious people consider Sunday a day of rest, and like to accentuate the difference between it and other days in every possible way. It is feared, therefore, that if the morning paper came into the house on Sunday as usual, and the men, who are here the principal patrons of the Sunday press, got into the way of dawdling over it through the forenoon, one of the great differences between Sunday and Monday would be effaced. We do not believe the intellectual objections to the Sunday paper amount to much. Nobody who loves the Sunday paper and lingers over it has his mind seriously injured by it. He is pretty sure, long before he comes to crave it, to have lost the habit of prolonged attention by confining his reading exclusively to week-day newspapers. He likes the scrappy character of the Sunday paper because his mind has grown scrappy, because he can no more read anything requiring protracted attention to one topic than he can "put up" a hundred-pound dumb-bell with arms that have for months lifted nothing heavier than a ten-ounce cane. Bottom in reading, to use a sporting term, is only acquired or retained, like bottom in athletics, by steady exercise.

Whether a Sunday paper modelled on the New York *Herald*, and edited by Heraldic Americans, can succeed in London, is another matter. We think it is very doubtful whether it will do more than add to the proprietor's experience of life and make away with a good deal of his money. The English taste in newspapers, as in other things, is very steadfast. It may be changed, but it can only be changed slowly and by editors who have some touch of the national temperament and turn of mind. Englishmen, even the frivolous ones, have a sombre vein which makes such editorial treatment as the New York *Herald* bestows on most subjects absolutely incomprehensible to them. That portion of our journalistic fun, for instance, which consists simply in flippant or childish or ejaculatory treatment of serious subjects, it would be very hard to get an Englishman of any class to enjoy, or even endure, very long. The attitude of the people towards nearly all public questions is the attitude of men who have seen and suffered a good deal, to whom mistakes are grave matters, who cannot afford to indulge in horse play or tomfoolery about government or finance, or war. English politics, in short, great as the fame and success of England have been, are the politics of people who have paid dearly for their glory, who bear great burdens, to whom the future is still full of uncertainty, and to whom, therefore, the joyous antics of those who have never known adversity, and hardly know what to do with their money, are more or less repulsive. A "Here we are again!" Sunday paper of the American type, therefore, is hardly likely to take in London, although it is not impossible that a really English Sunday paper might succeed pretty well.

BOULANGER'S AMERICAN CONSTITUTION.

BOULANGER, though supported by the partisans of the houses of Orleans and Bonaparte, proclaims himself the stanchest of republicans, aiming only to transplant to French soil the Constitution of the United States, of the greatest and most firmly grounded republic. What he means by the American Constitution is mainly this: that the Chief Executive shall, like an American President, have the power to retain his own Ministers notwithstanding the hostile vote of one or both chambers, and to negative the passage of laws unless they be consented to by an overwhelming majority of the Chambers; and shall have the independent position of an American President, which results from his election by the people while the French President is only the creature and mouthpiece of the Chambers. As a slight modification, Boulanger suggests that the President's term, instead of seven or four years, be extended to ten. Of course, it is understood, as the main feature of the programme, that Boulanger himself is to be the first President of the reformed commonwealth. Leaving out the question of the extended term, it is very clear that an executive with such powers as are here outlined, would differ in little but in name from an absolute Emperor.

To see the matter in the true light, let us look at the powers which our own President wields, both in the appointment of officers and in the recommendation and rejection of laws. They distribute themselves through the seven executive departments. All of these reappear in France on a vastly enlarged scale. Foreign intercourse is more delicate and important; also, much more

expensive. As chief of the army, President Cleveland commands 28,000 men; Sadi-Carnot commands 480,000, besides the territorial army and the reserves; Cleveland commands less than 8,000 sailors and marines; Sadi-Carnot more than 25,000. The French Post-office embraces the telegraphs, the American does not. The French Treasury deals with a national debt five times as large as ours. Our Indian problem is no more troublesome than the management of the Arabs and Moors is to the French. The only bureaus in the American service which outrun their French counterparts in importance are Patents and Pensions. The French Department of Justice is in every way more powerful than ours: it shapes all legislation on private rights.

But those powers which in the American system are Federal or central, are but a small part of those which are wielded by a French Executive. It is true that Boulanger proposes to give a "certain autonomy" to the provinces to assimilate them in some respects to the American States. Whether he means the old provinces as they were known before 1791, or the modern departments, is not clear from his utterances; but neither can be made to answer for American States. The French people never would allow any portion of their common country to act like an American State—that is, to devise its own laws on religion, schools, marriage and divorce, rights of property, punishment of crimes, proceedings in the courts of justice; and there is hardly any portion of France which would desire to wield such an autonomy. The laws of the nation, in all these subjects, would be the paramount if not the only laws, and the President of the nation would be clothed with the power of executing them. He would thus combine with the power of an American President many of the powers wielded by the thirty-eight State Governors; many also of the powers which the people of the counties enjoy in most of our States, in electing their judges, sheriffs, and other ministerial officers.

But this is not all. The French President has a third source of power and patronage. The concordat made in 1803 between the First Consul and the Pope gives to the head of the French Government the power of naming all the Catholic bishops, who in turn appoint and assign to their cures nearly one hundred thousand priests. Though these have been lately deprived of all influence in the public schools, they still, in many provinces, have great power over the minds of the people, especially over those of the women. Louis Napoleon's control of the clergy was one of his strongest weapons in raising himself to the throne and in holding it for nearly nineteen years.

Whatever, therefore, may be said about the beauties of the American Constitution, with its powerful Chief Executive, it seems that the true Republicans of France are right in refusing to duplicate it in their own country. Parliamentary rule, depending on the shifting majorities of a chamber, may be weak and vacillating, but on the whole it is preferable to a renewal of a dictatorship, followed by a new cycle of revolutions.

THE PARIS ELECTION.

PARIS, February 7.

THE election which has just taken place in Paris is an event of unusual importance. I have seen many elections in the capital, but at no time have I witnessed such an ardent struggle. Day after day, one might almost say hour after hour, kilometres of walls were covered with placards, red, blue, yellow, green, —of all possible hues—of Boulanger versus Jacques, or Jacques versus Boulanger. When the struggle was over, I saw people detach with knives pieces of these superposed placards, in order to examine the thickness of the deposit. All is over now. Jacques has fallen back into absolute oblivion; he has had his day, and will never be heard of again. On the evening of election day, the boys were singing on the boulevard the old popular song,

> "Pauvre Jacques!
> Dormez-vous?
> Sonnez les matines," etc.,

which has been used for many generations to put children to sleep.

The triumph of Gen. Boulanger was expected for some days before the election; it has been greater than his partisans themselves could have hoped for. In round numbers, Paris has half a million of electors, out of which you must always expect that there will be 100,000 abstainers, by reason of absence, sickness, etc. In all the recent elections in Paris, the Republican vote has amounted to about 250,000; the Conservatives have an army of about 100,000; the Socialists have a small battalion of 20,000. In the election which has just taken place, the Conservatives had no candidate of their own; they had agreed not to oppose any rival to General Boulanger, though this neutrality was not approved of by the oldest Conservative leaders, who were somewhat in the position of a general no longer obeyed by his troops. The Royalists (and the same may be said of the Imperialists) are in fact divided since the intervention of Gen. Boulanger in our public affairs. The old Parliamentarians, the men who belong to the generation of the Duc de Broglie, of M. Buffet, the respected leader of the Right in the Senate, the men who were opposed to the Second Empire and who remember still the 2d of December, who form the staff, if I may so say, of the Conservative army, may all be said to be more or less hostile to Gen. Boulanger. They look upon him with great distrust; they do not believe that he is working for anybody but himself; they do not approve his political programmes, his new methods of political warfare; they cannot forgive him his conduct while he was Minister of War, his spirit of insubordination while in the ranks of the army. Truth obliges me to say that the great mass of the Conservative army, and that the Conservative leaders who belong to a younger generation, are not moved by the same feelings; it is enough for them that Gen. Boulanger should offer to wipe out the present state of things. "He is a broom, and that is enough for me," was said to me by one of them. Before building anew, they believe that they must first destroy what exists. They have long been waiting for a bold man, for the unknown General, Gen. X, as an algebraist would say, who should come forward and offer to clean the stables of Augeas. They have no particular love, affection, or admiration for Gen. Boulanger, but they find him ready to do what they wish to have done.

It is certainly a curious fact that the older Conservatives are the most patient, are willing to wait; the younger generation are impatient and will wait no longer. They are also much less idealistic. The old parliamentarians belong to the class whom the great Napoleon condemned under the name of ideologists. The young Conservatives are materialistic; they accept Gen. Boulanger without reference to any principle: if he can do their work, it is enough for them. They accuse the old leaders of the Conservative party of impotence and stupidity; to all the reproaches which can be made to them they invariably reply: We cannot do worse than you have done, and we may do better. In 1870 you allowed M. Thiers to maintain the republican form of government when the country, after the disasters brought upon it not only by the Empire, but also by the so-called Government of National Defence, clearly showed its intention of going back to monarchy, by returning a majority of Royalists. When you replaced M. Thiers with Marshal MacMahon, you yourselves gave to the Republic its Constitution by passing the so-called Constitutional laws. You made of the Republic something stronger than a government *de facto*. You hoped to keep the power in your own hands, but the logic of the situation which you had created was stronger than you; you were unable to maintain Marshal MacMahon in power, and as soon as he was replaced by the old Republican Grévy, the direction of the Government fell into the hands of the Moderate Republicans, from their hands into those of the Opportunists, from their hands into those of the Radicals. You have foreseen nothing; you have prevented nothing.

It is difficult to answer this language. A country governed by universal suffrage is not like a chamber, where the personal influence of a few men can be felt; it obeys simple ideas, it follows simple instincts. The old-fashioned Conservatives agreed, in this last election in Paris, to vote neither for Jacques nor for Boulanger; to take some indifferent name, merely in order that their votes might be counted. Well, they were counted. Ten thousand electors threw away their votes in this manner, while the great mass of the Conservatives (about 80,000) voted for Boulanger. These numbers gave the exact proportion of the old-fashioned Parliamentary Conservatives, who are adverse to Boulanger, or who are at least not willing to help him to come to power, and of the Conservatives who are more indifferent to means, and who have but one clear wish, which is the end of the present system of government.

Let us look now on the Republican side. Here we have about 300,000 men who, since 1870, in all the elections in Paris, have always united their votes on the Republican candidates. This time we see them divided: one-half followed the party discipline and voted for the unknown Jacques, but the other half went over to Boulanger; and if we look very closely at the numbers, we see that, even if *all* the Conservatives had abstained, Boulanger would still have been returned by a majority of electors who continue to call themselves Republicans. I will not discuss here the quality of this Republicanism: France still called itself a Republic after the 18th Brumaire. The Republic of the Parisian electors who voted for Boulanger, is not of the parliamentary type; as far as it can be defined, it is a sort of Consulate, a régime under which the Consul would be almost everything. It is enough to say now that, at the present hour, Boulangism—I use the word in its vague sense—is dominant in Paris; out of every three men whom you meet in the street, you can say to yourself that two voted for Boulanger.

This great triumph in the capital of France, coming after many electoral triumphs in the provinces, in the wealthy and populous depart-

ments of the North, of the Somme, in the Charente, creates a very peculiar situation. This succession of electoral victories, equivalent to a sort of plébiscite, has already had one effect: Three years ago the Republicans abolished the district ticket (*scrutin d'arrondissement*) and replaced it with the general ticket (*scrutin de liste*). They now propose to abolish the latter (which gives each elector in a department the privilege of voting for several deputies), and to return to the system which gives the elector only the right to choose the deputy of his own arrondissement. It is feared that if the present system is maintained, Gen. Boulanger will make up the list in each department, placing his own name at the head, and adding to it the names of his own partisans, and of those among the Royalists and the Bonapartists who will be willing to form a coalition with him. In 1870 M. Thiers, who had spoken against the war, was placed on many lists by the electors who wanted peace, and was returned by twenty-five departments; and this fact gave him at once the executive power. If Boulanger should, in the general elections which must take place in 1889, be returned by thirty or forty departments, no constitutional machinery would long prevent his accession to power.

Will the present Chamber substitute the district ticket for the general ticket? It is still doubtful. If the change is made, what will be its consequences? It will be necessary for Boulanger to choose, all over France, the arrondissements in which he has a chance of being elected; but in each arrondissement he will meet an opponent, an established influence. It is far more easy to put a new name on a list of deputies than to carry an arrondissement. Still, if there really is in the people a strong current of opposition to the present state of things, the end can only be delayed, and no system of election can prevent the popular will from finding expression. We must, therefore, whether we like it or not, prepare our minds for great changes, for the accession to power of an enigmatic man, who, under one form or another, will wield a personal power, founded upon the forces of imagination, which cannot well be explained, but which cannot long be despised. If the country rushes blindly in one direction, who can stop it? Of course, there will be resistance; even if we suppose that Gen. Boulanger remains the strictest observer of all constitutional forms, he will soon find himself opposed, if he comes to power, by the formidable array of the sincere Republicans, of the sincere Royalists, of the sincere Bonapartists. They will all be disappointed in turn or at the same time. The Royalists will probably find that they have not found a new Monk, the Bonapartists may make the same discovery. The most important Republicans are Gen. Boulanger's most bitter enemies. New coalitions may then take place, and if the danger becomes too great, then there will be the supreme resource of war. If Napoleon III., after his *coup d'état*, thought it obligatory to make a most unnecessary war in the Crimea, what will not be the temptation for a ruler who will find himself in a very different position from that of the men who thus far have occupied the Presidential chair?

EMPEROR WILLIAM'S BIRTHDAY.

BERLIN, February 1, 1889.

No Emperor had celebrated his birthday since March 22, 1887, nearly two years ago. William II., who had his on Sunday last, is new to the honors of his office. He is neither very popular nor exactly unpopular. The birthday of Prussia's monarch, however, is a kind of national day which means as much for the office as for the man. Hence I thought it a favorable occasion to study whatever of monarchism or royalism might come to the surface among the Germans, and, knowing that this is vaunted as one of the cardinal virtues of the present representatives of "Teutonism," and that, with the comments upon this special subject some kindred matter would come to light, I determined to see less of the celebrations in the streets and give more attention to the premeditated lucubrations of the press. I can only say that the crowd "unter den Linden" was large, both afternoon and evening, and that the illuminations were fine. But on the twenty newspapers that I read I can report more fully.

Two or three features, which about three-fourths of them had in common, were extravagant praise of the Emperor, such as I think his manliness would shrink from if he were to listen to it; an irreverent, if not hypocritical, use of the name of God; impotent invocations of peace, and a good deal of Bismarck worship mixed with condescending flouts at the French. Most of this was expressed in prose, so that not even the exigencies of the metre could be pleaded as an excuse for such clap-trap and fustian. It must be monarchism run mad that makes people living in the last quarter of the nineteenth century indulge in such adulation and yet expect to be believed sincere.

The *Post* feels happy that, with the introduction and gradual strengthening of constitutional forms of government, no change has taken place "in the elevating and grateful feelings with which all Prussians on such a day look up to the head of state." These feelings are called "the priceless jewel of the Prussian people," and what the loss of it would signify may be guessed at by "a look at the confusion of a clever nation across the border, which for nothing but the loss of this jewel fails to extricate itself from its errors. . . . It would have been impossible to point out in truer and more impressive language the deepest religious and moral foundations of our Prussian and German national life than our youthful and stirring Emperor and King did at his accession to the throne," when he entered upon his duties "with a joyous confidence in God." The *Norddeutsche* celebrates the Emperor as having conquered the hearts of the nation already, and says that they actually "beat faster at the mention of his name." Another tells us of having heard the Sunday church bells ring on Saturday, before going to press—they had a special chime for the Emperor. The *Hannoverscher Courier* speaks of the Emperor's recent travels as "a deed of glory on which the nations of Europe look with astonishment and admiration." The *Deutsches Tageblatt* says: "Other nations may have some difficulty [*sancta simplicitas!*] in sympathizing with us in our feelings on the Emperor's birthday. But we know that on no other day is our desire so irresistible to realize the great mercy of God our Lord in giving us our first great Emperor William." And so it goes on, rejoicing that there was such a man as William I., who made it possible for Germany's genius to unfold "to the honor of God and the blessing of mankind"; that there is still such a man as Bismarck, who upholds royalty and keeps parties in check; that a wholesome reaction in favor of national self-consciousness has set in against the spirit of faction; that the battle against democratic aspirations to power has been won; that we are not as other countries are, especially not like France, "once so proud, royal, and most Christian"; and that, on the whole, all things seem to work together for the good of Germany. The *Kölnische Zeitung* glories in William II. as the "pathfinder" of the nation, and comforts a tax-burdened people by saying that "a loving eye watches over the safety of the nation, and sees to it that the citizen does not contribute to the war budget in vain." After all these assurances of deep-rooted royalism comes the insatiable *Kreuzzeitung*, and calls for a "revival of the monarchical idea, and unquestioning obedience towards our young Emperor whom God placed at the head of our army, and whom he endowed in his mercy with all martial virtues and talents, with the faithful zeal for his royal office, and with a firm belief in the Lord who reigns over princes and peoples." This, too, is in prose, by the way.

There are a few other papers which instead of representing the young ruler as having "already attained," wish him simply God-speed while "running" to attain. Such are the *Freisinnige Zeitung*, the *Berliner Zeitung*, and also the *Berliner Tageblatt*, which somehow got its congratulatory lines mixed up with its "Local News and Miscellanies"! Compared with the freshness and exuberance of the preceding, their monarchical sense seems to be somewhat blunted.

I wish to speak of three more papers: the *Weser-Zeitung* of Bremen, and the *Vossische Zeitung* and *Volks-Zeitung* of Berlin. The first two deserve to be commended for having some serious reflections on the monarchical idea. The *Weser-Zeitung* contends that party government is impracticable for Germany because it is unstable; that the development of the nation lies "in the direction of unity, of a more thorough fusion of the different parties" and their interests; and that "the symbol of all this is the Emperor." The *Vossische Zeitung* says: "The strong monarchical feeling in Prussia is not founded in a mystical belief that God has ever revealed his will as to the best form of government, but on the clear conviction that nothing can be better than an hereditary monarchy, in which the rulers continue to be mindful of the power that has fallen to them, and of the duties that are involved in their power." "'All that a legitimate prince has to do,'" it quotes from Macchiavelli, "'is to perform his duties, and he will be able to maintain himself in power.' . . . The history of Prussia's kings proves this to be true."

Finally, the *Volkszeitung*, with which we arrive at the freezing point of monarchical temperature, if not below it. Never a word about Emperor William, nor about any other emperor or king. It begins with a pathetic reference to "the memorable spring of the nations in 1848," and feels tempted to pray for the return of the Manteuffel era, which, compared with the present, was at least "what Greenland sunshine is, compared with perfect night." "In the end, every nation has exactly the kind of government it deserves. The German people could, if they chose, make short work of their oppressors." Their indifference makes one doubt at times whether this fight against the reaction is ever going to amount to anything. And yet, is there really no hope at all? Out of the 46,000,000 there cannot be more than 1,000,000 who are actually benefited by Socialist laws, corn duties, unfair taxes, the raising of the Emperor's civil list, and similar measures. What, then, makes 45,000,000 submit to 1,000,000? The answer is: "Either people understand their real interests, or they do not understand them, or, thirdly, if they understand them, they are prevented by outside influence from

doing what they otherwise would do." Thus we find the large army of Government officials and their dependents influenced in their actions by external considerations, and the people in the country incapable of independent action because they have been kept in leading-strings for centuries and are nothing but "voting-cattle." Only the artisans, tradesmen, and laborers have begun to think and act for themselves; and it is these classes which deserve our special sympathy and encouragement. For the others we can do almost nothing; but where we may fail, "the inner logic of historical development" will succeed in due course of time. So far, then, from calling the reaction an unmitigated evil, the *Volkszeitung* closes by regarding it in certain respects even as an ally. "The Socialist laws, the duties on grain, etc., etc., are our best agitators. They convert thousands every month; they furnish one man with sufficient intelligence and another with the requisite determination to break away from the ban of the reaction. . . . When the end will come we know not, but it cannot be far distant."

So much for the commentary of the press on Emperor William's birthday. Excepting one or two papers, it must be said that the very best of it is not elevating and the worst positively demoralizing.

Now, either the drift of things throughout this modern era is towards democracy or it is not. If it is, Prussia, to say the least, has for some time past been doing nothing to help it on; if it is not, and the monarchical idea is to have another lease of life, Prussia is doing her best to make that idea unpopular even among her own people. In either case, however, the national life of Germany is stunted in its growth, and Germany's outside influence is, in so far forth, bound to be impaired. And if it is pertinent to ask what Germany has to hope for from Prussian royalism, it is no less pertinent to ask what she may still expect from Prussian militarism, for the two go hand in hand. And here, too, the question is, not what Prussian armies have done for Germany on the field of battle, but how the corporal's spirit affects the national life; which practically amounts to asking, How far can any military government develop a people?

Closely bound up with Prussian militarism there is an intense nationalism which bids fair to overleap itself some of these days. No great nation has ever escaped being blamed for its national conceit, and Americans least of all. They have had their share of such blame, deserved and undeserved. And all their other sins, both of omission and of commission, arranged in alphabetical order—"behold! are they not written in the book" called 'Langenscheidt's Notwörterbuch: Land und Leute in Amerika'? Still, American nationalism, supposing it to be a poison never so virulent, has long been treated with powerful antidotes, and the effects are known to be marvellously wholesome. This antidote is—travel abroad. Even if the typical American "professor" does not get further than Berlin and Leipzig in order to expose his shallowness or ignorance, he returns a much wiser man. Now, it is chiefly the lack of this or a similar antidote that has made German nationalism so "hidebound" and estranged so many Germans from "a wide world and a broad life." Travel, however, is out of the question with a people who expend so large a part of their earnings on soldiers, and give some of the best years of their lives to being soldiers themselves. Hence they must go on in their nationalism, making the best of it; and that, too, cannot but finally vitiate their influence over others.

A demoralizing royalism, a discivilizing militarism, and a cramping nationalism—has not Germany been known quite as much for these three, since the end of the last decade, as for art, science, and literature? And were they not long ago recognized as baleful by some of her best men, who have fought them ever since, tooth and nail? Yet those are the very men who are decried here as croakers, as enemies of the Empire because they are bold enough to oppose some of the powers that be, and occasionally remind them that not all the good is summed up in what is German, or rather Prussian. What can and what cannot be traced to those three most potent factors in German life there is not space here to inquire. But how are artificial distinctions, hard-and-fast lines in society, prejudices of all sorts, as for example in the question concerning the position of woman—how are all these, each being a problem in itself, to be solved by a military government? If we may judge from the huge State-Socialistic scheme of forcing whole classes to insure themselves against illness, accident, and old age, and making the State, the employer, and the laborer or mechanic contribute a third of the cost each, we can only look for a further petrefaction of society. The scheme, dictated as it may be by Christian charity, is at best a drill in compulsory self-help, not a lesson in the voluntary practice of prudence; and although some of the insured may in the end become convinced of the desirableness of economy, more will probably be "rocked and swaddled and dandled" into the belief that both economy and self-dependence are virtues of a tripartite nature, of which one third inheres in the poor man, the laborer himself, the second in the rich man, his employer, and the third in the strong man, the State—virtues which therefore can be practised only by common consent.

I have nothing to say about German art, science, and literature, nor about German thrift, economy, patience, and love of thoroughness. The Germans themselves know that sensible Americans value these attainments and virtues, even if the sensible American is not quite so apt to become known in Germany as the blustering one. That there goes hand in hand with "German learnedness" a good deal of "German perverseness" is a proverb even here, and has certainly not been discovered by Americans. That German economy is often penny-wise and pound-foolish, and even mean, and German thoroughness often pedantic, and that German patience sometimes degenerates into sheepishness—all this is neither here nor there. But—the Prussian régime! With due respect for the good it accomplished when it was at its best and was the only thing that could unite and save Germany, it may still be asked: How must it finally affect German life at home and German influence abroad? What will it, what can it still do for this excellent people, many of whom it has already led astray into such Chauvinism and nationalism that one would almost imagine the "Teutonization" of what little there is left of the Anglo-Saxon race to be only a question of a decade or two? Is this régime to continue in full power, or is there to be a change? X.

TO BOMBAY FROM TRIESTE.

BOMBAY, January 11, 1889.

THE ease and cheapness of a journey to India deserve to be better known. One may go from New York to Bombay in four weeks. The routes are many. They may be grouped roughly in two classes: the all-water routes and the trans-European routes. The first involve only one change of conveyance, viz., of steamer in England, whence you proceed via Gibraltar and Suez, saving money at the expense of time. The routes across the Continent are better. I know of none that combines economy of time with economy of money more satisfactorily than the following: the Red Star Line from New York to Antwerp; the Gotthard Tunnel route across Europe; and the Austro-Hungarian Lloyd from Brindisi or Trieste to Bombay. In this way, the passage-money for the round trip, first-class by water and second-class by rail, need not amount to more than $600. The price of a round-trip ticket by an all-water route varies from $550 to $460 for the first cabin; and for the second, which involves no real hardships, it is as low as $340. The pamphlet entitled 'Cook's Indian Tours,' to be had for twenty-five cents at any of Cook's offices, gives with admirable clearness all needed information concerning routes and prices.

And here, something about guide-books and maps. Murray has a volume for each of the three Presidencies, Bombay, Bengal, and Madras, and a fourth for the Punjab. They have most grave defects of plan and execution, but are perhaps indispensable, *faute de mieux*, for travellers who wish to visit out-of-the-way places. For the towns, Agra, Delhi, Benares, Calcutta, and the like, there are local guide-books published in India, and enumerated in Cook's pamphlet, page 52. Among them is Maclean's 'Guide to Bombay,' a thoroughly good book, issued by the Bombay *Gazette* press. The same press publishes monthly the 'Indian Travellers' Guide,' which contains all the time-tables and a railway map. Maps 33 and 34 of Keith Johnston's 'General Atlas,' maps 63 and 64 of 'Stieler's Hand-Atlas,' and Kiepert's 'Vorder-Indien' are all desirable, and may be had separately for a small sum. I suggest that they be bought flat, mounted (uncut) on light muslin, rolled on the outside of a stiff mailing-tube, and carried in a cylindrical tin case to keep them from the white ants. Finally, for a general travelling atlas, I believe that Justus Perthes's 'Taschen-Atlas' (22. *Auflage, bearbeitet von* H. Habenicht) is incomparably the best. I will say no more; a full page of the *Nation* would be none too much to do the little volume justice.

At the head of the list of eighty-five steamers that form the fleet of the Austrian Lloyd stands the *Imperator*. She was built expressly for the Indo-Chinese service, in which this is her sixth voyage, and is commanded by Captain Bechtinger. Her appointments are magnificent, and she is a model of strength and beauty. Altogether, she is a noble ship. It was our good fortune that she was the one to be despatched on the day we had fixed for our departure, and that, in the assignment of state-rooms, we were put on the port side. As for this last matter, it is one of no small moment; for during the voyage eastward, the tropical sun beats upon the steel plates of the starboard side with great force.

The passengers are few. My *vis-à-vis* at table is a judge returning with his wife to duty in the Punjab. It pleases me to learn that he values and uses Story, and to think that American jurisprudence is not without its influence even in the distant land of the Vedas. Few as we are, we are of very diverse nationalities; and so the talk is polyglot, and the little manifestations of racial antipathies are amusing. There are three German rice merchants returning to Rangoon. They are "quite English," but they don't like the real Englishman. And

one morning a stalwart Neapolitan went away from the table in a trembling rage because one of the "sour-krouts" had ridiculed his extreme fondness for maccaroni. Several Parsis are in the second cabin; and among them is Sorabjee Hormuzjee Harver, a member of the Parsi Cricket Club, returning from a series of matches in England! The Parsis often bear surnames—such as Scott, Wallace, Ashburner—taken from the families with whom they have served. Sorabjee's stock has borne the name Harver for five generations. Here, then, is a reminiscence of the Harvards as far to the east of Greenwich as is our New England college to the west. And the name is coupled with that of Zoroaster's god. *Habent sua fata—nomina!* Among the passengers there is only one captain-teaser, so far as I have heard; and the element that furnishes the material for the familiar jokes of transatlantic travel—the "young men and maidens," etc.—is conspicuously absent.

Conspicuously present on deck are steamer-chairs furnished by the Lloyd. Why do the Atlantic companies still force us always to lug a chair to the port of embarkation? Either let them stop treating us like steerage passengers in just this one respect, or else, for consistency, require us to bring each a tin plate and a cup and a feather bed! The food here is excellent, but the dinners have the same weary round of many courses as elsewhere. Fortified by a recent article in the *Nation* on "Eating at Sea," I have maintained a perfectly ascetic temper, and am the better for it.

The distance from Trieste to Bombay is about 4,500 miles, and the voyage takes about 18 days. The weather has been so fine, the sea so smooth, and the company and everything on board so pleasant, that the time has seemed all too short. Even if the circumstances had been less agreeable, I think the voyage could hardly have seemed long; for it is naturally divided into three parts—not very unequal—by the Canal and Bab-el-Mandeb. The first part includes the Adriatic and Mediterranean courses; the second the Red Sea, and the last the Arabian Sea. We left Trieste on Saturday evening, December 22. The brief call at Brindisi on Monday morning made a pleasant, if not exciting break in the first part. We gaze from the deck at the grass-grown towers of the ancient town, while a couple of beggars, the one with an accordeon and the other with a voice, murder Santa Lucia for *pochi soldi;* but soon we are off again, enjoying our books and talks and the delicious air. Tuesday we pass quite near the two Strivali Islands. We see the lighthouse washed with a delicate pink, and the lonely monastery—not a sign of life besides. The white breakers dashing on the steep and ragged rocks are a pleasant reminder of Mt. Desert, and so of home. Next come the mountains of the Peloponnese, with clouds towering like snow-peaks above the real mountains, and then no more land by day-time until Thursday afternoon, when we pass the Damietta mouth of the Nile and steam into Port Said.

This is our first coaling-station. A barge comes up on each side with a gang of almost naked coolies. They work fast, carrying up the coal on their backs by the light that flames from some iron baskets. What with coal and freight, dust and noise, we are fain to make a short night of it and set foot as early as may be upon Africa. Port Said is a wretched upstart place, existing solely for the Canal. Besides the governmental and mercantile establishments and the shops, its only boasts, I believe, are a concert-saloon and a gambling-hell. And I think the nose of Coleridge would have detected full as many stenches as he avers that he counted at Cologne. Champagne Charley, a good-natured and rather good-looking Oriental, importuned us to ride one of his donkeys, "Lily Langtry" or "The Grand Old Man," offered to show us to the post-office "over the garden-wall," and declared to Judge T.—presumably as a reminiscence from Mark Twain—"Oh! I know you, sir. I've seen you before, Mr. Fergusson." We discreetly refrained, "lest a worse evil should befall us," from rewarding the performer with baksheesh, and bought instead some pith hats, some Zanzibar grass mats, cool and gay, and some postage-stamps with the Sphinx and a pyramid on them.

We were glad to get off at noon (Friday) and enter the Canal. It is eighty-seven miles to Suez, and a good passage takes eighteen hours; but a Hall Liner just ahead of us kept taking the ground so that we could not run even at regulation speed, and were twenty-four hours on the way. It is a most interesting experience—one's first passage in a great ocean steamer through the desert. On the right, at the entrance, Lake Menzaleh stretches away for miles. Thousands, myriads of flamingoes are feeding in the marshes, the more distant hosts appearing as a mass of white color tinged with pink. And beyond, here and there, is a lateen sail. As we proceed, we see the sand drifting into the Canal, and we wonder how long it would take for the wind, that blows while men sleep, to make the huge ditch impassable, if the work of the great dredges should cease. We pass quickly through the Bitter Lakes at early morning, Saturday. In a deep cut, where the dredges can't be used for the purpose, we see coolies and camels at work widening the Canal. Each camel bears two trap-bottomed boxes, kneels to have them filled, and plods slowly in line with the rest—each neck making precisely the same awkward curve—to the top of the cut, while a group of filthy vultures sit by, on a desolate knoll, waiting for a man or a beast to die. Not far away, the Canal is crossed by the pilgrims' road from Cairo to Mecca. This was the track, for I know not how many centuries, of the grand caravan that brought the annual carpet to the tomb of Mohammed. But now it is sent by rail and boat to Jedda; and the train that we see on the right, steaming away over the burning sands from Suez to Cairo, reminds us that the old order changes, even in the desert.

We come to anchor at Suez, on Saturday noon, a bit less than a week after leaving Trieste. An Arab brings us bright tempting "Syrian" cloths, and we buy one, albeit a fellow-passenger recognizes it as made in a factory of his firm at home in Switzerland. Another offers us a fez; but he has forgotten to remove the tell-tale label which shows that it came from Strakonitz in Bohemia, and we turn from these illusions. The breeze freshens, the afternoon grows cool, and we go to the bow and look around us. To the east is the "Well of Moses," marked by two little green oases; before us, the Gulf of Suez, its waters showing a marvellous variety of hues and tones, from the most translucent green to the deepest blue; and to the right, Jebel-Ataka, a volcanic ridge, without a trace of plant-life upon it to protect it from the weathering of ages, which has made its face a series of everywhere sharply serrated spurs, often thrown into the boldest relief by the light and shadow. The sun gets lower, and to chiaroscuro are added the most gorgeous effects of color, such as challenge the best powers of a Turner and leave even "the pen of a ready writer" quite baffled.

Soon after midnight, Sunday morning, December 30, we quit Suez, and coast along the Sinaitic peninsula, which wedges itself in between the two northern arms of the Red Sea, the Gulf of Akabah and the Gulf of Suez. The "God-trodden mountain" is said to be hidden from us by heights between. Suez Gulf is perilous. I had heard that we should pass a wreck. And, sure enough, in Jubal Strait, at the mouth of the gulf, my eye was caught by a ghastly one, on the east side of the channel. I was studying it with my glass, when suddenly we were called to the other side to see a wreck still more ghastly. There lay—or rather hung—a steamer, her bow high in air, her keel out of water to a point abaft her foremast, and her deck line making an angle of not one minute less than 40° with the horizontal. The fatal bank of coral served doubtless as a pair of ways, up which the unlucky monster slid to her doom; but her momentum must have been enormous to carry her to such a height and such an angle. The captain, we learned, was drunk; and some one made a grim joke about the combination of whiskey and water.

Now we are fairly in the Red Sea. It is broad, and we see little more of land. For Jebel-Tar, a bare volcanic rock rising abruptly 900 feet out of the sea, can hardly be called land; and no more can the Zebayer Islands, "The Twelve Apostles." The Red Sea is *said* to be hot; and in fact the double awnings are stretched over us, and the great fan or punkah is set agoing over our table on New Year's day, and I slept that night in the open air on deck. But I am only a midwinter passenger. Perhaps I shall have a right to commit myself on the subject after I have traversed those waters next mid-August.

The dangers of the southern end of the Red Sea are behind us, and the pilot brings us into the anchorage of Aden, our second coaling-station and our fourth and last stopping-place. Has the scene been too often described? "O-whö, o-whö! o-whö, o-whö! Hab a dive, sir? Tro away, sir!" repeated *ad lib.*—and away go the swarthy youngsters, kicking their heels at heaven, and return from the depths with a three-penny or a two-anna bit in their fingers. The fellows wear just a clout about their loins; so they have no pockets, still less pocket-books—which we might otherwise kindly suppose they had left at home, and so excuse them for putting the coins between their teeth and their gums, as they sing out again "Tro away, sir!" I noticed only one offer to swim under the ship for a sixpence. They say the divers are degenerating. But how many sixpences would it take to induce the *laudator temporis acti* to dive under a steamer of twenty-four feet draught? After all, the best fun at Aden was the sight of two diminutive Africans, paddling for dear life after us as we went ashore. The speed of the tiny sharp-prowed dug-out did them credit. Then came a wave and swamped the craft. Head over heels they tumble, and for a moment paddles and Africans and dug-out are in confusion so delightfully amusing that I should have thought it all a part of the programme for baksheesh had they been on hand in time to claim it. The great rock-fortress of Aden, the drive to the tanks, the people—all is strange and interesting. But I have wearied you.

We started out from Aden on Friday morning, January 4, to cross the Arabian Sea. No land, no outside incident more. But our evenings were illumined by the crescent and the star, shining so as they can shine only from a tropical sky. And early this morning, we set foot on the Apollo Bunder.

CHARLES ROCKWELL LANMAN.

Correspondence.

LINE UPON LINE.

To the Editor of The Nation:

Sir: The topics in illustration of my theory present themselves in such crowds that I will ask leave this week to deal with two.

(1.) Your comment upon the article of the Boston *Journal*, "Shall Boodlers Dominate?" I seldom touch upon State affairs, because it is perfectly hopeless to get anybody to listen, and I do so now only so far as they relate to national. What is the Governor of Massachusetts? As far as any honest and legitimate power and influence go, he is merely a figurehead. He has absolutely no voice in the initiation or guidance of legislation or policy, which are exclusively in the hands of the Legislature and its committees. He has no power over the executive officials—Treasurer, Auditor, Secretary of State, Attorney-General, etc—who are elected separately, and are as independent of him as of any sovereign in Europe. He is surrounded by a separately elected Council, without whose advice and consent he can hardly take his meals. His powers are in substance limited to three: (*a*) the veto, upon the absurdity of which I have dwelt often enough to save space now; (*b*) the appointment of judges—certainly of inestimable importance, but as they are appointed for life any one Governor has very little to do in the matter; (*c*) the appointment of the members of the commissions which, with the entire dislocation of the regular executive authority, have been set up to govern the State. But these commissions, when once appointed and confirmed by the Council, are again completely independent both of him and the Legislature. He can get no credit for their proceedings, though he may incur blame.

The Governorship being thus insignificant, the people are quite apathetic and indifferent as to who occupies it, especially as their choice is limited to two or three candidates nominated by the handful of politicians who run the conventions. I once heard a leading member of this class say that there were a dozen men in this State who could make anybody Governor whom they pleased. Obviously, such a place as this offers no attraction for the intellect, industry, and energy of first-class men. It is still, however, nominally the first position in the State; and as, in this land of equality, there is an unlimited thirst for distinction of any kind, there is a plenty of rich men who, with very shady ideas of what the position really means, and not being able to get much other satisfaction out of their money, are ready to pay handsomely for the privilege of occupying it. Could there be a more perfect arrangement for making the Governorship a matter of purchase?

What is the remedy? To make executive office a thing of substance as well as a name; to give the Governor what the President of the United States has, the appointment of officials and the control of their action; to give him, further, what the President of the United States has not but ought to have—the power of appearing, either by himself or his officials, in the public arena of debate and legislation, of shaping and conducting policy and administration, with full responsibility for them in the sight of the whole people. Then we should open the field to a different class of capacity, and introduce the element of brains into the competition with money.

(2.) The other topic is the letter of Secretary Fairchild in the case of Inspector Byrne, which you justly characterize as "amazing." Even on the authority of your paper, I can hardly bring myself to believe that a Secretary of the Treasury can have signed and issued such a document as that. Still, as to what you say of it, I will quote a clause from Mr. Bryce's book:

"The people see little and they believe less. True, the party newspapers accuse their opponents of offences, but the newspapers are always reviling somebody, and it is because the words are so strong that the tale has so little meaning. For instance, in a recent Presidential contest, charges affecting the honor of one of the candidates were brought against him by journals supporting the other candidate, and evidence tendered in support of them. The immense majority of his supporters did not believe these charges. They read their own newspapers chiefly, which pooh-poohed these charges. They could not be at the trouble of sifting the evidence, against which their own newspapers offered counter-arguments, so they quietly ignored them—I do not say that they disbelieved. Between belief and disbelief there is an intermediate state of mind."

Now let us imagine a scene. It is a full session of the House of Representatives. Immediately in front of the Speaker's desk are seats specially provided for the members of the Cabinet. A member having given notice a week before of his intention to ask a question of Secretary Fairchild, nearly every member of the House is present, and the galleries are crowded with eager spectators. The member rises in his place, and puts his question as to this Byrne letter, in a form which implies a strong comment upon its character. He pauses, and the Secretary in his turn rises to reply. Can you not imagine the hushed silence with which the whole country would listen for his words? And do you not think that such a process would effectually bar the recurrence of such an offence? What would be the effect of something similar upon the Secretaryship of State for the next four years? G. B.

Boston, February 16, 1889.

HAMERTON AND GOYA.

To the Editor of The Nation:

Sir: In the criticism of Hamerton's 'Portfolio Papers' in your issue of February 14, its writer speaks of Mr. Hamerton's article on Goya as being the most interesting in the volume; but adds that in his estimate of Goya as a painter, he seems to have allowed himself to be unduly biassed by his dislike of the artist's unsavory personal character. One might naturally suppose that a critic of Mr. Hamerton's acknowledged standing, before writing an article on Goya—and especially such an article, in which, as you say, "Macaulay himself could hardly use stronger language"—would take pains to see the best examples of the master whose reputation he demolishes in so summary a manner. But your critic has omitted to call attention to the curious fact that, notwithstanding the dogmatic statements upon Goya's art with which Mr. Hamerton's article abounds, and which seem to be made from an almost omniscient knowledge of what he did—his actual knowledge of Goya's paintings is extremely limited. This is naïvely confessed in the following passage, in which he says:

"The artist remains to be considered. There is a certain difficulty for me here, which may be stated frankly, as a critic should never pretend to more knowledge than is really his. I have never been in Spain, and only know Goya as an artist through his etchings, through the engravings from his works, and the 'frescoes' from his country house. This is comparatively little, because Goya was an immense producer, and left hundreds of pictures behind him which are only to be seen in Spain."

This is pleasantly written, and would disarm criticism if it in any wise disarmed Mr. Hamerton as a critic.

The frescoes in question, which Mr. Hamerton says "look as if they had been painted with a mixture of soot, mud, whitening, and candle-grease," possibly have the same relative value to his other works, as have a collection of about forty studies, made for reproduction in tapestry, which are preserved in an out-of-the-way room in the Prado Gallery, more for their curious delineation of Spanish manners than as works of art. As against these, in Madrid, for instance, must be placed the important collection of portraits in the same gallery, chiefly of persons of the Spanish Court, and also an equal number of valuable examples at the Academy of St. Ferdinand. Until Mr. Hamerton has seen some representative collection of this kind, it is hardly fair to enlighten other people about Goya in a tone so dogmatic. And, possibly, if he had seen more of his work, he would have modified his views as to his coloring, which he has so far found "foul and filthy to the last degree." He would, to be sure, have been deprived of the pleasure of employing his ability in the composition of the paper in question; but this omission would be not only better for Goya's reputation as a painter, but, we may venture to add, not altogether a bad thing for Mr. Hamerton's reputation as a critic.

It is not so much Mr. Hamerton's conclusions as his methods in attaining them, that are now under criticism—a criticism which, with all deference to his fame as a critic, makes itself heard in obedience to an implied precept, embodied in the very article in question. "What is fame?" asks he; and then replies: "It is nothing but a noise made by talkers and writers; and if other talkers and writers were to be cowed by it into respectful silence, they would be like watchdogs afraid to bark because other dogs had barked on the next farm."

D. B. Updike.

Boston, February 16, 1889.

Notes.

D. Appleton & Co. publish directly 'Mental Evolution in Man: the Origin of the Human Faculty,' by George J. Romanes; 'The Development of the Intellect,' being Part II. of W. Preyer's 'Mind of the Child'; Ducourdray's 'History of Civilization,' in two volumes, Ancient and Modern; 'The Folk-Lore of Plants,' by T. F. Thiselton-Dyer; 'A Dictionary of Terms in Art,' fully illustrated; and 'Co-operative Building and Loan Associations,' by Seymour Dexter.

J. B. Lippincott Co. have in press a 'Life of Henry M. Stanley,' by the Rev. H. W. Little.

We have received the last volume (6th) of 'Appletons' Cyclopædia of American Biography,' and the first of Washington's Writings (Putnams), but must defer comment.

Macmillan & Co. send us the tenth volume in the author's edition of the 'Poetical Works of Robert Browning,' being the third of 'The Ring and the Book.' It has for a frontispiece the woe-begone countenance of Guido Franceschini, from a contemporary drawing made on February 22, 1698, the day of his beheading at Rome.

Carlyle's 'Sartor Resartus' has, fitly enough for a "Volume on Clothes," been given a new dress by being included in the Parchment Library (Scribner & Welford). It is now, with its claret-colored covers and its compact but legible letter-press, very attractive and pocket-companionable.

From the same publishers we have a third edition of "N. D'Anvers's" 'Elementary History of Art,' three volumes in one. It excludes living artists, and its successive extensions only

keep pace, or seek to, with the recent dead. It is surprising that a work "adopted by the [English] Civil-Service Commissioners as a text-book for the examination of candidates" should have no table of contents to unfold its scheme, and no other index than a biographical one. The section on Painting alone has a preface for the present edition, and tells of more than a hundred fresh illustrations introduced.

Irving's 'Life of Mahomet' reappears in Bohn's Select Library (Scribner & Welford).

Dr. Johnson's Essays from the *Rambler*, *Adventurer*, and *Idler* have been added to the "Camelot Series" (London: Walter Scott; New York: T. Whittaker). Mr. Stuart J. Reid, the biographer of Sydney Smith, furnishes a biographical introduction and notes.

"Fault of novel germs," Roberts Bros. enlarge their "Handy Library" with Sir Thomas Browne's 'Religio Medici,' Silvio Pellico's 'My Two Prisons,' and George Fleming's 'The Truth about Clement Ker.'

A recent English biography, 'The Career of Major George Broadfoot, C. B., in Afghanistan and the Punjab,' which we find noticed in the *Athenæum* of February 2, destroys the legend of the defence of Jellalabad in 1842, after the slaughter of Elphinstone's command at Cabul and on the retreat. The hero of this defence, according to Sir John Kaye's history, was General Sale, whereas Broadfoot's diary (confirmed by that of a brother officer) represents Sale as sharing the fears of the garrison, and disposed to evacuate the town under a convention with the besieging Afghans. He was really screwed up by Broadfoot and Havelock.

'A New Way of Training Nurses' (Boston: Cupples & Hurd) is the truthful but not very attractive title of one of the most interesting and valuable little books of practical philanthropy. It is three papers by Dr. A. Worcester of Waltham, Mass., wherein is clearly and excellently set forth, in detail but without prolixity, the exact method by which, in small towns and without the aid of hospitals, nurses may be as efficiently and perfectly trained as in the great city schools. In fact, in some respects, these nurses prove more efficient than those who have had only hospital practice. Wherever there are four or five doctors who will work together, two or three ladies who will coöperate, and four or five sound young women who wish to support themselves and to help the sick, this system can be established. The book is a clear and admirable exposition of the scheme. It is very brief, but appears complete, and we heartily wish that it may be spread broadcast, so that every community may learn and practise the Waltham way.

'Accidents and Emergencies' (New York: J. H. Vail & Co.) is a small, plain book giving information as to the treatment of those suddenly stricken while awaiting skilled assistance. When accidents occur, it is usually inconvenient to consult a book, and it is perhaps too much to expect the average citizen to acquire such a knowledge in anticipation of possible injury to his neighbor. Nevertheless, the advice here contained is wholesome, and too much good advice cannot be circulated. The author is Joseph B. Lawrence, a professional nurse.

The 'Invalid's Own Book' (New York: Wm. S. Gottsberger), which describes itself as "a collection of recipes from various books and various countries, by the Honorable Lady Crist," is a cosmopolitan compilation, for the sick, of formulæ, some of them novel, which appear palatable and useful.

Dr. George M. Gould, in a reprint from the Philadelphia *Medical News*, answers the question, "Is the electric light injurious to the eyes?" in the negative, except where workmen and experimenters are compelled to stand prolonged exposure at short range. In view of the superior hygienic advantages of electricity as an illuminant, and the probability that it can be supplied cheaply enough to replace other artificial lights, this is a very satisfactory reply. Those indiscreetly exposed to its full power suffer first a temporary paralysis of sight followed by extreme sensitiveness, and in some instances the skin reddens and peels as in sunstroke. But the diffused light Dr. Gould believes harmless.

The *Green Bag*, "a useless but entertaining magazine for lawyers," edited by Horace W. Fuller, and published in Boston by Charles C. Soule, is a new aspirant for favor. As to the need of it, a layman is perhaps precluded from venturing an opinion. The first (January) number is certainly entertaining, and the opening sketch of the pedigree of Chief-Justice Fuller of the U. S. Supreme Court will gratify all those who like to see the Puritan stock coming to the front in the control of the republic. There is a taking portrait of the Chief Justice, and many other lights of the profession are pictured in connection with an article on the Harvard Law School. Typographically the *Green Bag* is to be commended.

The Messrs. Harper send us bound volumes of their *Weekly* (No. 32), *Bazar* (No. 21), *Monthly* (Nos. 76, 77), and *Young People* (for 1888). The most pronounced style in the illustrations of the *Weekly* is M. Paul Renouard's, whose vigorous crayon sketches of our public men show a decided talent for characterization. The only other marked feature of the physiognomy of the present volume is the series of portraits of eligible Presidential candidates hazarded before the actual nominations. Gen. Harrison's was not omitted, and had the distinction of an encore after the election. Among the invariable memoranda of moving accidents by flood and field, those of our March blizzard stand out on the one hand; of the yellow fever in Florida on the other. The valuable supplements were largely devoted to Western, as in 1887 to Southern, cities—materials, one might think, for a great album without text. England and Ireland are the dominant note, pictorially speaking, in the *Bazar*. The Lake District, Dublin Castle, the Armada Tercentenary, Coaching Days, Shakspere's Home, a London Book-Sale, and Mission Hall Entertainment; portraits of royalty, of the eminent men of the Jubilee year, of English novelists, with illustrations borrowed from Walter Besant's 'Fifty Years Ago'—these are samples. In the text, outside of fashions, Mr. Higginson's serial "Women and Men," and three articles on as many American colleges for women, may be mentioned. Of the *Monthly* we have spoken regularly on its appearance; nor do we need to speak here of *Harper's Young People*, in which we observe no change.

The *Studio* for January is exceptionally attractive with a photo-print of a group representing Dante Rossetti and his mother at chess; and two of terracotta groups from Asia Minor. Mr. Clarence Cook passes in editorial review the late interesting exhibition of the Architectural League in this city, and pictures at the Union League.

In *Shakespeariana* for February, Mr. Horace Howard Furness pays a proper tribute to the late Halliwell-Phillipps, and remarks incidentally what may not be widely known, that New York "already possesses in its Astor, Lenox, and Columbia Libraries the larger portion of the existing Shakspere Quartos and Folios."

Appalachia for December, 1888, is full of good reading for lovers of mountain climbing and adventure (Boston: W. B. Clarke & Co.). Two charming heliotype plates illustrate Ypsilon Peak in Northern Colorado, the ascent of which is well described by Frederick H. Chapin.

The February number of the *Library* shows no falling off in the interest or variety of its contents. A. W. Verrall contributes an appreciative sketch of Henry Bradshaw, based upon Mr. Prothero's excellent biography of the learned Cambridge librarian. Mr. Bullen's second article on the Appledore Press gives an interesting account of Mr. Linton's great work, 'The Masters of Wood-Engraving.' T. Mason's paper, "A Bibliographical Martyr," tells the story of the life and labors of Robert Watt, the indefatigable author of the well-known 'Bibliotheca Britannica.' Mr. Pollard finds in Le Petit's admirable 'Bibliographie des principal-s éditions originales d'écrivains français" (Paris, 1888) a text for an exhortation to his countrymen to undertake a similar bibliography of English first editions. One is tempted to believe that the ruling maxim of this generation must be "No year without a centenary," when he reads that "A number of show-cases have been recently set apart in the King's Library at the British Museum for the exhibition of manuscripts, printed books, medals, etc., illustrative of the royal House of Stuart, the bicentenary of whose abdication of the throne of England is now being celebrated." In a note the editor regrets that the harmless fun of "Theophrastus Junior," in the January number, has by some been taken seriously, and assures all concerned that nothing personal was intended.

Paris Illustré for February 9 (International News Co.) is a Boulanger number, with its portrait of the General, a scene in front of his residence, the mob before the office of his organ *La Cocarde*, the Place de la République and its lion plastered all over with rival political placards, and facsimiles of some of these placards in the interest of Jacques.

The permanent antidote for Boulangism may, perhaps, be discovered in the subject of the *Annuaire de l'Enseignement Primaire* which comes to us from Armand Colin & Cie., Paris. This is the fifth year of the model little manual and record of progress in primary instruction in France. The second part is particularly rich in articles which repay reading, as, a review of primary instruction from 1789 to 1889; an account of the coming great Exposition; more of the series on the condition of teachers abroad—Baden and Würtemberg, with notes of a French teacher in Saxony; education in Algeria and Tunis; bibliography; geographical review of the year; necrology—we have still topics to mention, but no space. The production as a whole is most praiseworthy.

'Inedited Letters from Talleyrand to Napoleon, 1800-1809,' edited by Pierre Bertrand, is an interesting publication of Didier, Perrin & Cie. (New York: F. W. Christern). It reveals the writer in the character of a counsellor of moderation at the height of his master's ambition and successes.

The committee appointed last October by the American Oriental Society to ascertain what MSS. exist in this country written in the Oriental languages or connected with their study, with a view to cataloguing them, indicate in a circular that they have in view MSS. in the ancient and modern languages of Asia, with Egypt and Ethiopia, and desire the name of the language, the style of writing (very particularly), the material used, size, binding, number of leaves, etc.; also its history in each case, with date if known. It will be helpful to learn that no MSS. exist in the libraries addressed by this

circular. Dr. Isaac H. Hall, Metropolitan Museum of Art, New York city, is Chairman of the Committee.

—Mr. Joseph Thomson's account of his recent adventurous journey in Morocco begins the new volume of the Proceedings of the Royal Geographical Society. He reached the city of Morocco without difficulty, but could not get permission to enter the mountain region. Notwithstanding this, he managed to elude the vigilance of the authorities, and made his way across the Atlas into the great elevated plateau lying between that range and the Anti-Atlas. Further progress in this direction being impossible, he retraced his steps and passed westward along the northern slope of the mountains, ascending one peak 12,734 feet high, to Agadir on the coast. The most interesting place which he visited was the beautiful mountain valley of Demnat, where is a wonderful natural bridge, a magnificent arch 100 feet high, "hung with stalactites, with walls presenting all the aspect of clustered pillars." It is used by the natives as an aqueduct. During the journey he was frequently exposed to great peril, narrowly escaping being stoned to death in the city of Morocco. This paper, which treats mainly of the geological formation of the Atlas, and is accompanied by an admirable map, is followed by the description of a visit to Sheshuan by W. B. Harris. This place is also in Morocco, not far from Tetuan on the Mediterranean. The inhabitants are nearly all descendants of the Prophet, and have a fanatical hatred of foreigners. Mr. Harris got into the town in disguise, but dared not stay more than a day, escaping at night. He reports it better built than most Moorish towns, showing a greater civilization than places having constant communication with Europe. An elaborate treatise on the Nilometer, by Col. J. C. Ardagh, shows the inefficiency of the present method of measuring the height of the Nile. In reference to Sir Samuel Baker's suggestion that last year's low Nile was caused by the Mahdi's tampering with the upper waters, he says: "A civilized administration, controlling in a scientific manner the course of the Atbara, the Blue and White Nile, and the Bahr el-Ghazal, would have Egypt completely at its mercy." Hence, he concludes, the interests of Egypt and the Sudan are inseparable.

—The Riverside Edition of Whittier's Compiete Works has now filled out the seven volumes with three of this writer's prose. They do not, of course, bear to the four volumes of verse the same ratio in importance as in bulk, or anything like it. Nevertheless they have a decided autobiographic interest, and offer both for New England traits and our national history memorials of lasting value. The anti-slavery portion is large, including the whole of the tract called 'Justice and Expediency,' the introductions to Johnson's 'Life of Garrison' and the reissue of John Woolman's Diary, the *Atlantic* article on the founding of the American Anti-Slavery Society, and biographical sketches of William Leggett, N. P. Rogers, Lewis Tappan, etc. The *pièce de résistance* of vol. i is 'Margaret Smith's Journal.' We enumerate, further, sundry tales of Yankee character; a description of Lowell in 1843, when its population was "constituted mainly of New Englanders," and the Lowell *Offering* was issued by the mill-hands; a graphic account of an open-air Millerite meeting; a good deal of local history and tradition and Quaker biography; and a few essays in criticism of fellow-poets. Whittier's style is noticeably agreeable and easy, a good model. His humor freely finds vent in it, and we close our necessarily brief notice of this collection with what we hope will prove an appetizing example. "It is one thing," says Whittier, at the close of "My Summer with Dr. Singletary," "to hold fast the robust faith of our fathers—the creed of the freedom-loving Puritan and Huguenot—and quite another to set up the five points of Calvinism, like so many thunder-rods, over a bad life, in the insane hope of avoiding the Divine displeasure from sin."

—'The Civil-Service Reform Law,' by William Harrison Clarke (L. K. Strouse & Co.), is an attempt to arouse public attention to the importance of civil-service reform, the use of competitive examination for appointments, the evils of the spoils system, of legislative and electoral corruption, and of the unlimited power of removal. We have expressed our opinions upon all these subjects, and so often that none of our readers can possibly be ignorant of our sympathies. Hence it is without danger of misapprehension that we feel obliged to record an unfavorable opinion of Mr. Clarke's book. Its principal value consists in bringing together a very large number of utterances publicly made by some of our most honorable, intelligent, and celebrated statesmen on the unmitigated and self-perpetuating harm done by the spoils system, and the absolute need of some efficient check by law on its operation. To these are added some similar warnings from the experience of other countries. But these extracts are joined in a rambling and unsystematic way; they are interspersed with editorial comments and suggestions much more smart than profound; some branches of the subject are very exhaustively treated, others are but sketched out. Matter, whether original or quoted, is thrust in just when it seems to strike the editor's fancy, and not on any principle of historical or philosophical development. Mr. Hawthorne's notorious "interview" of Mr. Lowell, and a singularly unpleasant passage from Lamon's Life of Lincoln, are thrust in with no relevancy at all, simply disfiguring without illustrating the page. The English has a strong savor of Philistia, in spite of the admirable models afforded by the quotations. Considering how entirely sound Mr. Clarke's cause is, and how much excellent material he has collected, it is a great pity that he has done his work so clumsily.

—It is not very clear upon what principle the series of volumes entitled "The Great French Writers" is made up. Mme. de Sévigné and George Sand may properly appear, but Montesquieu, like Adam Smith in England, belongs not to the class of writers, but rather to that of philosophers or statesmen. The same is true of the subject of the volume on Turgot, by Léon Say, although Turgot was also a man of affairs. But, however this may be, we are glad to welcome the book in this very satisfactory translation (Chicago: A. C. McClurg & Co.) as a help to the better understanding of one of the purest and most estimable of French ministers. It is common to say of him that he did not know how to deal with men, that he had not the qualities that secure success. But M. Say makes it clear that he did attain success, though not in time to save France from revolution, for it was owing to him that freedom of labor was established. Nor is it probable that any man could have averted the Revolution; for that could have been done only by such reforms as Turgot proposed, and the feebleness of the King, the folly of the Queen, and the selfishness of the nobles made the task impossible. Attainable reform would, under the circumstances, have been a sham, and it was because Turgot insisted upon genuine reforms that he was overthrown. M. Say has introduced the recently discovered letters of Turgot to the King, in which the situation is clearly defined. The story of his life is agreeably told, although there is little of incident to enliven it.

—More fortunate in some respects was another great French minister, Maximilien de Béthune, Marquis and Duke of Sully, whose 'Économies Royales,' as condensed by M. Joseph Chailley, forms one of the volumes in the "Petite Bibliothèque Économique" (Paris: Guillaumin & Cie.). The extracts which M. Chailley has made from this enormous work are sufficient to convince us that it is "d'une lecture difficile et même pénible." But those who are not deterred by the involved style and archaic language of the work will find the materials for forming a judgment of the Government of Henri IV. and Sully far more satisfactory than the views of most historians. As to the work accomplished in the reformation of the finances, we can only say that Sully, during the few years of his administration, succeeded in paying off about 100,000,000 francs of debt, in recovering to the Crown immediately or prospectively estates to the value of 80,000,000 francs, in greatly increasing the revenues, in substantially reducing the expenses, and withal in restoring prosperity to the impoverished people. How this was brought about—the incessant and desperate contests with aristocratic plunderers; the quarrels with the benevolent but too generous King, who sometimes did not dare to tell his minister of his losses at play, but who always supported him, and whose letters to him are charmingly confiding; the naïve views of political economy and finance—all this may be studied with edification in the pages of this little book, which often reminds one of the conversations of an Oriental despot with his Grand Vizier.

—The recent resignation by M. Pasteur of the office of Perpetual Secretary of the Academy of Sciences gives occasion to the *Temps* to remark upon certain curious formalities that are still observed in the academies upon the death or resignation of a member. It is the rule in the Academy of Sciences that when a member is elected Perpetual Secretary, his seat in the department to which he specially belongs becomes vacant. If this rule were strictly enforced, M. Pasteur, instead of going back to his department of mineralogy, would not be, unless he were reëlected, a member of the Academy at all. But by a sort of academic fiction a chair is held to be occupied until an official declaration of its vacancy is made, and so M. Pasteur falls back into his old place without trouble. In the Academy of Inscriptions the rule is stricter, and the process by which a vacancy is declared is more formal and odd. At the end of a month after the death of a member the President is required to take a vote by ballot upon the question whether so-and-so, a deceased member, shall be replaced. The members vote aye or no. If the ayes have it, this vote is held to be the formal declaration of a vacancy, and a date is set for the examination of candidates for the chair. In the Académie Française it is customary to delay the announcement of a vacancy for a space of time proportioned to the distinction of its latest accupant, so that the period that elapses before a member's seat is filled is a rough-and-ready measure of his reputation among his colleagues. In the Academy of Medicine the whole matter is in the hands of the Bureau and the Administrative Council, who may declare vacancies at such times as they see fit.

—Attention has repeatedly been called to the great increase of the income of the Harvard College Observatory within the past decade, and more especially within the last two or three years. No less often has the material advancement of astronomical science through their expenditure been remarked. That the astronomers of Europe fully recognize this, is evidenced in one way by the prizes awarded to the Director by foreign scientific societies. His last annual report shows a further widening of the fields of the Observatory's work. The co-operation of other institutions and individuals has been secured, especially in the department of meteorology; and the Director hopes that the work now in progress will show that, in scientific institutions as well as in the industrial arts, large sums of money can be expended much more economically than small ones. Mrs. Draper's continued liberality permits the Henry Draper Memorial work to progress rapidly, and the end of the first large research in this department is now nearly reached. In the complete survey of the spectra of all the brighter stars an eight-inch telescope has been employed. More than six hundred plates have been taken, and nearly 28,000 spectra have been examined. As the photographic intensities of the spectra have also been measured, astronomers have thus for the first time a standard measure of stellar light by which the stars of different colors may be compared. This same telescope is now mounted near Lima, Peru, for the purpose of extending the research to all the stars of the southern hemisphere not visible here. The study of the spectra of the brighter stars continues at Cambridge with an eleven-inch telescope, and has been extended by the use of plates which have been stained with erythrosin. In the spectrum of Sirius, for example, all lines except those due to hydrogen are very faint. However, the positions of nearly four hundred of them have been measured.

—The work under the auspices of the Boyden Fund has afforded more definite plans for the proposed mountain observatory. The meteorological fitness of the Colorado mountains is under investigation, in which General Greely and Prof. Loud are affording much assistance. The expedition to Peru, in charge of Mr. Bailey, to be joined later by Mr. Pickering, will undertake special work for ascertaining the steadiness and transparency of the atmosphere in those regions. Meanwhile, the minute investigation of the atmospheric conditions at Cambridge pursues very interesting lines, in order to show precisely what results may be expected at or near the sea level. Numerous double stars have been photographed, also the satellites of Mars, Saturn, and Uranus. The Paine Fund of the Observatory is nearly unrestricted in the conditions of its use, and it aids thus in every part of the work. The meridian photometer, an important instrument of Prof. Pickering's original devising, has now completed seven years of work, the main outcome of which was the publication of the Harvard Photometry of all stars to the sixth magnitude. This scale has since been extended to the ninth magnitude, and the instrument has now been sent to Peru, where the Harvard Photometry will be extended to the south pole of the heavens. For other details of the activity of the Observatory, the report of Prof. Pickering must be consulted. The increasing interest of the establishment in purely meteorological work is worthy of note, particularly in reference to the Blue Hill Meteorological Observatory, the observations at which will hereafter appear in the Harvard Annals, while the eventual consolidation of the two institutions is contemplated. The coöperation of observers of variable stars has been greatly extended, and much valuable material has in this way been made available at little cost above that of publication. The dropping of the Boston time-ball is accomplished with unusual precision.

WILSTACH'S DIVINE COMEDY.

The Divine Comedy of Dante, Translated into English Verse, with Notes, by John Augustine Wilstach. 2 vols., 8vo. Houghton, Mifflin & Co. 1888.

MR. WILSTACH'S translation of the 'Divina Commedia' is so distinctly commonplace, or worse, that it would not be worth while to speak of it at any length, had not certain reviews of it which have appeared as advertisements taken pains to praise it highly. According to them the translation is the fruit of scholarly and careful study; and its superior merits, its poetic purity, its copious explanatory notes, and so forth, will, it is predicted, win for it the place of the standard English edition of the poem. After such announcements it is certainly worth while to examine the translation in some detail.

In the first place, the notes are mainly composed of selections from and paraphrases of the notes of Longfellow and Carlyle on the 'Inferno,' and of Longfellow and Butler on the 'Purgatory' and the 'Paradise.' The following are fair illustrations. Longfellow says in his note to *Purg.* xxxi, 116:

"The color of Beatrice's eyes has not been passed over in silence by the commentators. Lani, in his *Annotazioni*, says: 'They were of a greenish blue, like the color of the sea.' Melchior Messirini, who thought he had discovered a portrait of Beatrice as old as the fourteenth century, affirms that she had 'splendid brown eyes.' Dante here calls them emeralds; upon which the *Ottimo* comments thus," etc.

Mr. Wilstach's note is:

"The eyes of Beatrice. 'A greenish blue,' says Lani, 'like the color of the sea.' By Melchior Messirini, who claimed to have discovered a portrait of Beatrice, dating as far back as the fourteenth century, she is declared to have had 'splendid *brown* eyes.' On Dante's 'emeralds' the *Ottimo* comments thus," etc.

Again, Longfellow's note to *Purg.* xxix, 41 is: "The Muse of Astronomy, or things celestial, represented as crowned with stars and robed in azure. Milton . . . makes the same invocation." Mr. Wilstach's note is: "The Muse of Astronomy, or things celestial, whom art represents as robed in azure and crowned with a coronet of stars. Milton . . . invokes her," etc. These examples, taken almost at random, indicate fairly well the relation of Longfellow's notes to many of Mr. Wilstach's.

How many of the commentaries which Mr. Wilstach cites he has ever seen, it is not easy to say. There are certain names of German and Italian critics which one looks for instinctively in an index to notes on the 'Divine Comedy.' Of these names many are absent from Mr. Wilstach's index, and the works of those whose names are found there seem to have been known only at second hand. For instance, there are eleven references in the index to passages in which King John of Saxony, better known as "Philalethes," is cited as an authority. One of these passages is not to be found, but in the other ten the references to Philalethes are virtually paraphrases of the corresponding references in Butler's notes. In two instances Mr. Wilstach has made an error in transferring a quotation from Philalethes from Butler's notes to his own. If we must make use of other people's information without giving them credit for it, let us at least do it accurately. Again, Mr. Wilstach seems beyond a doubt to know nothing of Scartazzini's edition of the 'Commedia,' the most helpful modern edition. He quotes it once, to be sure, but the quotation is taken—without acknowledgment, of course—from Butler. Witte, too, is cited twice in a casual way, and evidently at second hand.

When Mr. Wilstach does stray from the excellent sources of information which have been mentioned, the result is curious. Usually his remarks are absolutely commonplace. Sometimes he makes blundering errors, as in his reference to the 'Vita Nuova' in his note to *Purg.* xxix, 85. Sometimes he comments on a borrowed piece of information in such a way as to show that he does not appreciate it, as in the note to *Purg.* xiv, 106. Sometimes he makes rash statements, as in the note to *Purg.* ix, 1. Oftener he shows an inadequate acquaintance with what has been written on his subject. What annotator, for instance, who had read what has been written of late years about Guittone d'Arezzo, would think of putting off the interested reader with "to him Carey, whose judgment has value, assigns a distinguished place in literature" (note to *Purg.* xxiv, 56)? Occasionally he is plainly inaccurate. Guido Cavalcanti, for example, died on August 27 or 28, not in December (note to *Inf.* x, 60).

There is, moreover, about the notes a sort of cheap American wit, the wit that tries to be "smart." The reader could forgive the long note that is lugged in (*Par.* vi, 44), beginning, "American annals have produced an American Camillus: Sitting Buffalo, usually called Sitting Bull, Tatonkaiyontonka, a chief of the Dakotas," or even the three sprawling, rambling pages on the Constitution of the United States, Roger Williams, decisions of Supreme Courts, and various other things (*Inf.* xix). But such attempts at jokes as that in the note on Asdente (*Inf.* xx, 118) are unpardonable; so, too, are Mr. Wilstach's extraordinary "smart" sayings about Beatrice in his notes to canto xxxiii of the 'Purgatory,' *e. g.*: "Savors of coquetry"; "We may imagine that the woman, Beatrice Portinari, is pouting, while the divine Beatrice, the symbol of theological truth, is absent from the scene"; "The jealous woman!" Were one writing a comment to Josh Billings, these would no doubt be the kind of remarks which the text would suggest. But to say "smart" things about Dante is the very height of the inappropriate.

Mr. Wilstach's translation is no less extraordinary than his notes. He explains in his preface that only by a rhymed translation can one hope to approximate a reproduction of the effect created by the original.

> "The form," he goes on to say, "is so inseparable from the soul of the work as to compel the translator to accept all the risks involved in order to represent it. . . . It is hoped that one may be pardoned for putting himself under bonds, and denying himself the freedom which inevitably leads to the expression of too much of the translator's personality. Fidelity to the Italian poet has therefore been the *jus et norma* of the translator's dealing with the text."

It is curious to find an author who shrinks from the *freedom* of a prose translation, and prefers verse because he can in that way be more faithful to the text. However, let us test Mr. Wilstach's translation by his own ambitions—fidelity and accuracy. It is made in ten-syllabled verse. The first lines of each pair of *terzine* usually rhyme. The second and third lines of each *terzina* rhyme. The arrangement of rhymes is, then, *abb, acc, dee*, etc. The

quality of the verse is on the whole that of a rhymed paraphrase of a prose translation. It bears sometimes so little resemblance to the original that one wonders if the author had ever read Dante in Italian. In the first place, words, phrases, sometimes whole lines, are put in to fill up the verse and to make out the rhymes. Dante says (*Inf.* v, 50): "Master, who are those people whom the black air thus lashes?" (Carlyle). Mr. Wilstach translates: "Master, *I fain would know* Who are these people whom the darkening air So *seems* to lash *and buffet, beat, and tear.*" *Un bel fiumicello* (*Inf.* iv, 108) is "a stream *with prattling falls.*" *Questo passammo* (*Inf.* iv, 109) is "We pass the *dimpling stream.*" Marzia (*Inf.* iv, 128) becomes "Marcia, *pure of heart*"; Corniglia, "Cornelia gemmed"; Lavinia *sua figlia* (*Inf.* iv. 126), "Lavinia *with her wedding-ring*"(!). Adjectives and short phrases are inserted without the slightest provocation, and it is doubtful if there are five consecutive lines in the whole translation in which there is not some noticeable addition to Dante's idea. For last illustrations take these: Dante writes (*Inf.* ii. 111, 112),

> "Com' io, dopo cotai parole fatte,
> Venni quaggiù del mio beato scanno."

Mr. Wilstach translates: "As I, when *sweet From sacred lips came forth this message meet*, My seat to leave *with all its glories strewed.*" The description of Charon, "Charon the demon, with eyes of glowing coal, beckoning them, collects them all; smites with his oar whoever lingers" (Carlyle), reads, "Demoniac Charon with his eyes like coals *That glow in furnaces keen*, collects the crowd, His *stout* oar those who linger smiting *loud.*" And this is fidelity in translating a writer who weighs his adjectives like fine gold. What would Mr. Wilstach have written had he not avoided the freedom of a prose translation?

In the second place, Mr. Wilstach never scruples to insert a figure of speech of his own when Dante uses none, or to change one which does not meet his approbation. Such instances as follow are not rare; similar ones can be found on almost every page. "She is Semiramis, of whom we read that she succeeded Ninus, and was his spouse" (Carlyle, *Inf.* v. 58), is translated: "Semiramis she is; her consort Nisus, he *Left her his throne when death's knell set him free.*" Again, "And I saw the great Achilles, who fought at last with love" (Carlyle, *Inf.* v. 65-6), becomes, "And saw the great Achilles who, at last, *Through love the line of safety rashly past.*" A little below: "And more than a thousand shades he showed me, whom love had parted from our life," becomes, "And until More than a thousand flitted, had he shown Me with his finger *where love's wrecks were strewn.*" It is scarcely worth while to cite more. The translation is entirely destitute of the two qualities which are most marked in Dante, simplicity and directness. The simplest, plainest statement must be tortured into a roundabout form; *e. g.*, "Dirotti brevemente, mi rispose, Perch' io non temo di venir qua entro," has to be turned into "Thee briefly will I tell the reason why No fear me kept within those regions high."

Lastly, the translation, the paraphrase rather, is not intelligible. There are cantos in it which no English-speaking person could read aloud understandingly without the greatest effort, and that, too, when the corresponding cantos in the original are absolutely simple. Mr. Wilstach's prefatory sonnet to Dante is perhaps not an unfair example of the lucidity with which he writes, and as such is worth giving in full:

> "Poet divine, or, yet, in terraces meek
> The effulgent Cross of southern oceans lights,
> Or, throned where Seraphs, in empyrean heights,
> Close contemplation of the Highest seek;
> Thy heaviest woes from wrath that factions wreak,
> Thy keen resentments voiced in melody's flights,
> Safe thou from Minos and infernal rites;
> On whose behalf was Beatrice moved to speak
> With Virgil's shade, his aid expert to pray;
> On this thine humble follower's task do thou
> Look down benign! Since went thy soul its way
> From out the western waves hath risen, and now
> Hails thy great Muse, a realm more wide than Rome's,
> And give thy themes their thoughts its studious homes."

To sum up: Mr. Wilstach's notes are not accurate, they are not scholarly, they are not at first hand. His translation is not faithful, it is not accurate, it is not intelligible. Is there any excuse for such a piece of work when we have Longfellow's faithful translation in verse-form, and the excellent version by Carlyle of the Inferno in prose? Is it likely that Mr. Wilstach's translation will become the standard one in English? We think not, nor can we look forward with pleasure to the appearance of Mr. Wilstach's "companion volume, devoted to Dante, the Danteans, and things Dantean."

BANCROFT'S CALIFORNIA.—II.

California. Vol. VI. (1848–1859). [History of the Pacific States of North America. By Hubert Howe Bancroft. Vol. XVIII.] San Francisco: The History Co. 1888. 8vo, pp. xii, 787.

MISTAKES about minor authorities such as our previous notice illustrated must, of course, occur in the course of an elaborate undertaking like this. The chief difficulty that they cause us lies in the distrust they must needs give us of the more important results of our author, when he has to judge greater and more doubtful matters, such as the general tone of society in the early days, the general trend of the political movements of the years before the war, and the characters of leading public men. As to the social order, to be sure, Mr. Bancroft avoids serious problems by giving us, in general without extravagance, a very full description of rather well-known classes of facts. His material is vast; but there is surely much yet to be done in the way of estimating the real social forces at work. That California society was in a sense cosmopolitan we know, but nobody has yet shown us just how much and in what sense its forms and its tone were determined by foreign and how much by American influences. The foreign influences—the Sidney convicts, the Spanish-Americans, the bull-fights, the gambling sports, the dances, and the rest—were of a nature to display themselves very openly. In consequence, the American account of the early days has often explained what happened by saying that Americans went out as honest miners, but found themselves surrounded, corrupted, and even abused by wicked foreigners, until at last they arose in their might, lynched and intimidated the foreigners, and so made all well. To this notion Mr. Bancroft's facts give, on the whole, no great countenance; but really to understand the society of the early days we still need much more statistical and systematic knowledge of the relative numbers and of the relative behaviors of the various constituents of the population than we yet possess. Although complete information upon this subject will never be obtainable, there is doubtless much more possible than Mr. Bancroft has yet accomplished in the way of a scientific examination of the sociology of the gold period. So full are all who describe those days of a sense of the wonder of the thing, that it is still very hard to get men to study the subject simply and straightforwardly, and to look upon early California as a highly interesting collection of largely abnormal but still, for that very reason, so much the more instructive social and psychological phenomena.

Upon one interesting topic in particular Mr. Bancroft furnishes, as was indeed almost necessary in so general a work, very little important information, and that is upon the workings of early municipal government. To be sure, two chapters of the volume are devoted to the Annals of San Francisco, and, in the chapter on "City-building," the fortunes of Sacramento during its first few years are briefly summarized. But such annalistic summaries are far from being scientific analyses; and surely, while the annals of cities as such are likely to mean little but confusion and weariness to the general reader, serious examinations of the inner lives of cities are at present among our greatest desiderata. And, as some study of the facts has convinced the present reviewer, no cities could well furnish within so narrow a range more instructive lessons, at any rate in the pathology of municipal government, than could San Francisco and Sacramento, if their records and newspaper files were carefully and scientifically scrutinized for the first ten years of the gold period. The changes were so rapid, the municipal needs to be met were so varied, the devices used were so manifest, the evils were so great, and the reforms of the immediately pressing evils were in more than one case so swift and so complete, that the whole forms a sort of hospital study of numerous forms of acute municipal derangement, with several remarkable cases of at least temporary cure. Professor Moses, in his 'Beginnings of Municipal Government in San Francisco' (in the Johns Hopkins "Studies"), has really led the way in a field where no small service can be done to political science. And we would strongly urge upon intelligent Californians of wealth the propriety of encouraging such studies, say, at the University of California, by founding a fund for prize essays on early municipal government in California, and on other related questions. Surely, with the appearance of Mr. Bancroft's book, the day of mere annals ought to end. What Californians now have to do is to *understand* their early history, which, properly viewed, is a treasure-house of instruction in curious social and mental phenomena.

But we come at last to the portion of Mr. Bancroft's book where of necessity he moves on the most doubtful ground, and where, at the same time, his results have a very high interest, even if we cannot always agree with him. We refer to the political history of the *ante-bellum* days in California. As was to be expected, this history becomes very largely an account of the great contest between Broderick and Gwin, and the culminating point of the whole is his characterization of David Broderick, the Irish stone-cutter's son, who became by dint of courage and good fortune a Senator of national reputation, and whose tragic death made him a popular hero. To characterize Broderick in public is, as everybody in San Francisco knows, to offend some one very seriously; but Mr. Bancroft is obliged to take sides, and he takes, on the whole, the easier side. Broderick was a lone, sad, heroic, solemn, burning, aspiring soul, a born hero, the noblest of his race, with steel-blue eyes that occasionally shot sparks of fire. He was incorruptible, although it must be confessed that on occasion he corrupted other people. He was too lofty a being to desire the spoils of office, although, when he became Senator, his first thought was how to secure the most of them for his friends.

His whole life was a battle against baseness, insomuch that he once made a disgraceful bargain with his enemy, Gwin, about the distribution of Federal patronage. This bargain he treated as confidential, denying its existence until he was sufficiently angry at Gwin, when he gave himself the lie, and described it in full. The combined chivalry hereupon plotted to slay him in the course of a projected series of duels, but, as he was a noble-hearted man and no fire-eater, he, for his part, only plotted to slay his Senatorial colleague, Gwin, since duelling was opposed to the Constitution of his State, and could not properly be pursued to excess by any good citizen, however lone or burning or aspiring his soul. Unfortunately Terry interposed and Broderick was killed. He was not buried in consecrated ground, a fact which leads Mr. Bancroft to denounce priestcraft with some vigor.

If, however, one wonders, on reading this statement of Broderick's virtues, why we say that Mr. Bancroft, in eulogizing him with so much eloquence, takes the easier side in an old California controversy, we can only reply that the inquirer knows not Broderick, nor the generation that lived side by side with Broderick. If anything, indeed, is remarkable in California history to an outsider, surely Broderick's great reputation, if viewed at all closely, will seem not the least of the marvels. The lovers of Broderick are always so inarticulate, so given to metaphors and interjections, so incapable of a rational statement of the faith that is in them! And, on the other hand, a critic of Broderick finds his way, from a purely rational point of view, so plain! And yet, we repeat the paradox, to eulogize Broderick in that inarticulate fashion is, after all, for an average progressive Californian, especially if he be of Northern stock, so much easier than to condemn him on those plain rational grounds. For, first of all, Broderick was by common consent a fascinating and baffling personality—lovable, to be sure, and ferocious, like many another Irishman, but withal a lonesome, dignified, melancholy man, whom people could not fathom, and whom all his friends accordingly regarded as full of deep and wonderful promise and power. This was simply the actual personal effect produced by the man upon others. Hence a leader who was probably no great wonder of depth at all, and who was merely an ambitious but comparatively ignorant man, who worked hard to improve his wits, who brooded much over all his failures, and who was very jealous, warm-hearted, high-spirited, and selfish, became, in the eyes of admirers and even of enemies, a mystery and a genius. And next, Broderick, partly by fortune and partly by choice, was led to take sides with the distinctively Northern section of his party. Thus he gradually became more and more nearly an anti-slavery man. Had he lived to see the war, he would have been a prominent Republican leader. He was hated violently by the Southerners for years; he was long the only man in California who could meet them successfully in political warfare; and his death at the hands of Judge Terry made him seem to the Republicans of the war times a martyr of the John Brown type. That his warfare against the chivalry expressed much more his private personal ambitions than his patriotism, was easily forgotten. He had opposed the extension of slavery in the Territories, and he had attacked Buchanan's Administration. Was not this enough? Some men, indeed, opposed the extension of slavery because they loved human freedom, whereas Broderick did so because he hated Gwin. Some men assailed Buchanan's Administration because they found it evil, while Broderick joined their number chiefly because Buchanan gave him no share in the Federal patronage. But such defects are of very small importance in case of a martyr for a great cause, and so one in vain reminds Broderick's friends of the plain facts. Finally, as to Broderick's obvious lack of principle in conducting his political warfare, his admirers have only to reply, as Mr. Bancroft in effect does, that no politician could possibly have succeeded in those days in California whose incorruptible soul was unwilling to disguise its honesty under unrighteous cloaks. Everything was base except Broderick's noble purpose, and of course this noble purpose had to use bribery, corrupt associates, lies, and the rest, as its tools. The whole matter is therefore very plain, and to praise is far easier than to condemn. To be sure, Mr. John H. Hittell, in his 'History of San Francisco,' and yet more recently, in a criticism of Mr. Bancroft (*Overland Monthly* for January, 1889), has persisted in condemning Broderick as a corrupt demagogue, and in giving what we fancy to be very plain reasons for his view; but then, Mr. J. H. Hittell has long since shown himself to be comparatively destitute of poetical imagination, and has a fondness for insisting upon plain reasons, and for taking the unpopular side. To be sure, also, Mr. Bancroft himself, with praiseworthy frankness, puts on record most of the disgraceful facts of Broderick's career; but then, disgraceful facts count for so much less than noble sentiments!

After all, however, this paradoxical career and reputation of Broderick must be regarded as forming an episode at once very romantic and highly instructive in early California life. We often wonder that nobody has yet made Broderick the hero of a novel. We also often wonder why only local historians, such as Hittell, O'Meara, and Bancroft, should have been attracted by a story which illustrates in a very interesting way forces and conflicts that are still active in our national life.

MORE NOVELS.

First Harvests. By F. J. Stimson (J. S. of Dale). Charles Scribner's Sons.

Annie Kilburn. By W. D. Howells. Harpers.

The Countess Eve. By J. H. Shorthouse. Macmillan & Co.

A Heart Regained. By Carmen Sylva. Boston: Cupples & Hurd.

Pen. By the Author of 'Laddie,' etc. Boston: Roberts Brothers.

Remember the Alamo. By Amelia E. Barr. Dodd, Mead & Co.

Testa. By Paolo Mantegazza. Translated from the Italian. Boston: D. C. Heath & Co.

In Far Lochaber. By William Black. Harpers.

Colonel Quaritch, V. C. By Rider Haggard. Harpers.

'First Harvests' is described on the title-page as "A Satire without a Moral." Thus, if it should have no other interest, it piques curiosity about what sort of a composition a satire without its pith and marrow may be. The subject is large, and one which, treated satirically, whether with biting invective or humorous extravagance, it is difficult to keep the moral out of. The 'First Harvests' are the first yield of the social seed sown by the founders of the Republic. If the author sees aright, the vigorous abundance of tares must embitter the joys of paradise for the long-departed fathers. Noxious weeds are everywhere, thriving equally amidst splendor and squalor, but the great stock of pristine virtue has perished, or lives only in wayside flowers. There is more moral than satire in this exhibition of our social conditions, and Mr. Stimson's definition seems to be at fault.

The first fruits described most minutely are apples of Sodom that cluster and dangle about a house situated on Fifth Avenue, and owned by Mrs. Levison-Gower, herself the ripest specimen. Precedence is given to these apples, not because they are the most prolific yield, but because they excite a frenzy of envy, and because to become one of them is the greatest good conceivable to multitudes. The influence of their baneful splendor is extended even to those whose heads they hang hopelessly above. Their tantalizing remoteness creates an impulse of destruction, surging occasionally into mad desire to tear them down and grind them in the dust of their own sacred precincts. The truth of this picture of almost universal devotion to pleasures which can be had for money, and eagerness to share them, is unquestionable; but, on examination of the separate apples, it turns out that, if no better than they should be, they are not so bad as they might be. The ashes concealed by a rosy surface are at the worst mere dry dust of folly. The author, or one of his characters, remarks that American society doesn't mean anything, having neither love nor politics for its end. That is why our society is dull and our society novel duller, and why the women in both have only decorative significance. The English knight-errant of the novel judged Mrs. Levison-Gower and her satellites with Old-World eyes. The author, in spite of his dark innuendoes, knows that they respected the commandments, for no authoritative preacher has declared that the women who merely vulgarize a nation are in danger of hell-fire. Mrs. Levison-Gower's experimental elopement with Mr. Wemyss illustrates very fairly her set's possibilities for iniquity. Nine out of ten of them would only have talked about eloping, and the tenth, like Mrs. Gower, would bring up at the hearth of "nice" relations in Boston.

Mr. Stimson's literary form and style have been perceptibly influenced by Thackeray, and by his social satire, with universally applicable moral, 'Vanity Fair.' Like Thackeray, he is at his best in independent addresses to the reader, but he has almost none of that novelist's art of combination, of grouping, of presenting a complete picture of individuals and a clear idea of their reciprocal influences. With the exception of Mrs. Gower, his people are only half made, and each one takes his way practically according to his will. Such liberty is not life, especially it is not social life. The interpolated reflections on a number of "burning questions" are generally sagacious and keen and admirably expressed. The poetical passages, apropos of nothing in particular, are very pleasant, and have the effect of a Roman punch served between courses—they encourage one to go on.

The scene of 'Annie Kilburn' is remote from that of 'First Harvests,' and the people are of a somewhat different breed; yet, nevertheless, one gathers from it that our God is Mammon, and that the Republic, in all that concerns a fine and high development of the race, is so far a failure. The New England conscience is wearing old, only showing fight in an irresolute Annie Kilburn with a propensity for meddling in the affairs of the "lower classes," or in a Mr. Peck, of vague and mystical utterance, pushing towards unpractical experiment. Mr. Howells in a way here justifies himself

for what in former novels has been regarded as a rather wilful ignoring of the spiritual and intellectual elements of New England character. He pretends to write only what he sees, and now it appears that he doesn't see that traditional spirit and intellect because they are no longer there to see. The opening paragraphs of the thirteenth chapter explain his position quite clearly.

Taking away, then, the finer mental qualities and moral aspirations from the New England village become an American town, there remains a community neither agreeable nor profitable to dwell upon. No one but Mr. Howells could write a readable book about those whose interests are narrowly personal, whose motives are mostly petty and manners always bad. With the advantage of his literary facility and his wit, 'Annie Kilburn' is not more than readable. There are, of course, oases in the deserts of trivialities and censorious tattle, the most amusing of which is the description of Mrs. Munger's theatricals, and all the people who had to do with them. Here is an example of a very lively and effective kind of satire. The young ladies and gentlemen who would not infer the moral that they had better dissociate their desire to shine as *Romeos* and *Juliets* from beneficence towards the "lower classes," must be dull indeed.

Mr. Howells so seldom represents the improbable that his management of Putney, a prominent character, gives us a succession of surprises. This Putney is the acknowledged aristocrat of Hatboro', a man of education and a lawyer, with a refined wife. Yet he talks like a jocose and illiterate "drummer" of dazzling smartness, and loves to tell the stranger that every one in town has seen him drunk in the gutter. He behaves very indecently on the occasion of Mrs. Munger's theatricals, but popular sympathy, and apparently the author's, are with him and against poor Mrs. Munger for having put rum in her lemonade. In the delineation of Putney the author's delight in saying bright things in surprisingly bad English seems to have blinded his judgment, and his preference for phraseology which defies grammar is noticeable besides in both narration and description.

If 'The Countess Eve' had been written at the time when its scene is laid, a century ago, the difference between the author's thought and literary style and that of his contemporaries whom we have just been considering could hardly have been greater. Mr. Shorthouse is entirely unaffected by the fashion of the day—it may be said, by the spirit of the age, from which the common belief is that no man can stand apart. The transient phases of life do not occupy him at all. His soul is filled with a conviction of the existence of positive sin and positive virtue, with their inevitable, eternal consequences. For him the devil is a personality and Christ a God. He takes his stand on the dogma of the Christian Church, and scorns that compromise which accepts Christ's ethics and rejects his divinity. The Countess Eve is tempted by the devil and saved by the Cross, but, for dallying with temptation, her beauty is for ever singed with the flame of the pit. The story is highly imaginative, humanly passionate, and picturesque. The form is thoroughly artistic, and the expression has a fitting elegance. All these qualities heighten the charm, but they do not make it. That springs from the same religious faith with which the old masters mixed the pigments that produced Madonnas and saints of a rapt and mystical beauty which we call heavenly.

The tales and poems of Carmen Sylva all show a keen sympathy with human suffering, whatever its origin or form, which is admirable and rare in common mortals and seems much more so in a queen. But her novel 'A Heart Regained' approaches dangerously near to what common mortals characterize as feeble sentimentality. Though a woman may forgive her brother who has sinned against her seven times seven, she can hardly forgive her husband, and that, too, with a generous ampleness which naturally encourages his sinful propensities. Moreover, in the interest of private and public morals, it is doubtful whether such tolerance is desirable. Léonie adopting the child of the woman whom her own husband has deceived and discarded, is a strong woman, whose reason dominates emotions essentially feminine; Léonie voluntarily divorcing herself, then taking to her heart the husband, the new wife, and their daughter, is a figure that excites a smile rather than respectful admiration. These episodes in Léonie's sorrowful life are narrated in a simple, straightforward, and graceful way which partially conceals their improbability. There is, indeed, a natural pathos in her grief and self-humiliation which at times makes us forget that the latter was self-inflicted and unworthy.

The author of 'Pen' is to the full as sentimental as is the Queen of Rumania, but expends her heart on less serious and more familiar situations. Authors are quite commonly blind to any lack of originality in their own compositions, so perhaps the author of 'Pen' may believe that the lines of her story entitle her to copyright. At all events, there is an air of good faith about it which will make it as good to the unsophisticated as if it had never been told before. The rising generation is the hope of the story-teller as well as of the nation, and doubtless there are thousands of possible readers who have never heard of that wilful daughter of a noble house who ran away with her drawing-master for the sake of his velveteen coat and the scarlet ribbon round his neck. So they cannot instantly predicate poverty, children, death, noble relatives to the rescue, wealth, and proper husbands, and happiness ever after. The knowledge that only one kind of literary edifice can be built on a given foundation is not instinctive, and this particular lesson of experience cannot be more agreeably or harmlessly learned than by following the fortunes of Penelope Brand.

'Remember the Alamo!' is another story which may be commended to youth. Mrs. Barr is clever in selecting historical events more romantic and dramatic than most fiction, and in weaving together instances of individual heroism. The episode of the revolt of American residents of Texas against Mexican rule affords her abundant material, which she uses to instruct the American youth concerning a small war of independence fought in what has since become a part of his own country, and to fire him with his forefathers' enthusiasm for "liberty or death." With such unimpeachable patriots as Davy Crockett and Sam Houston, such a bloody-minded villain as Santa Anna, and such thrilling events as the massacre of Goliad and the storming of the Alamo right at hand, there was small need of creating fictitious excitement. Sentimental love affairs add nothing to stories of this kind, but serve to diminish both their interest and value. Partisanship, too, is very well when it means patriotism, and when one is writing a story, not a critical commentary. But partisanship in questions of religious creed almost invariably assumes the bitterness of a personal prejudice. Undoubtedly the Catholic Church was opposed to the independence of Texas, which implied speedy Americanization; but no astute ecclesiastic ever tried to accomplish an end by the methods of brutal intimidation ascribed to the Señora Worth's confessor.

Mrs. Barr's story, with its generous allowance of fighting, is much more to the taste of American boys than is 'Testa,' addressed especially to boys by its Italian author. Mantegazza is a wise social philosopher, but he has much to learn about the literary methods through which a boy's fitful attention may be captured. From the preface, by Mr. Ventura, we learn that the Italian boy has been consistently neglected by literary men, and that 'Testa' is among the first acknowledgments of his existence as a rational animal, deserving of intellectual food. The offering is a great compliment to untried capacity, and seems to have been seized ravenously. Nevertheless we have a suspicion that most of the ten Italian editions were swallowed by his elders and judiciously doled out to the boy. Uncle Baciccia, whose accumulated philosophy of experience is poured for a whole year into the patient ears of little Enrico, reminds us strongly of Sam Johnson and of Ben Franklin. He combines the severe morals and explosive temper of the one with the general serenity, candor, and practical shrewdness of the other. At an early age he adopted Franklin's device of carrying about a written table of good resolutions, from which he too derived much moral support. But we must do Baciccia the justice to say that he seems quite free from the guile which helped to make the American sage great in diplomacy, and that he has a sweetness and idealism entirely his own. The translation of 'Testa,' which was made by a club of students of Italian in Bangor, is charmingly smooth and very faithful, bearing comparison with the best work of professional translators.

From some chapters of 'In Far Lochaber' it is evident that Mr. Black's affections do not embrace every human being north of the Cheviot Hills and Solway Firth. He almost seems to draw a dividing line of emotion about geographically parallel with Loch Linnhe and the Grampians. South of that, he can neither desire nor admire, but he can be decently fair. His delineation of the "dour Scotch," the stiff-necked, Free-Church Scotch who swear by the Covenant and hate the Establishment, who are incomparable kill-joys, is an illustration of justice without mercy. He gives credit for many recognized virtues to the Minister of Kirk o' Shields, and even to his elders and their wives. He refrains, too, from suggesting that almost every one of them may be possessed of a spirit of fanaticism as cruel and vindictive as was that of Balfour of Burley and the murderers of Archbishop Sharp. But he doesn't like the "unco guid" nor want anybody else to like them; he is glad to get off to the moor and heather and sing the hospitality, the prodigality, the impulsive, warm-hearted shiftlessness of the Celtic Highlanders. Arriving at 'Far Lochaber' he is delightedly at home, and infects the reader with his own sense of pleasure. In describing Captain Macdonell's feeling that difference of faith was no obstacle to his marriage with the Free Church minister's daughter, Mr. Black writes from the wrong point of view. Catholic indifferentism is not so thorough as Protestant. It would be very difficult to find a Highland Catholic who, wedding a Protestant wife, would not have at least a private intention of divorcing her from the Covenant.

Mr. Haggard's ingenuity fails him in 'Colonel Quaritch, V. C.,' and he is quite at his wits' end for something new and strange. In the beginning, we are told that treasure had

been hidden by a Cavalier who died rather than deliver it over to the Roundheads. In the end, Colonel Quaritch digs the treasure out of a mound where every one has felt certain from the first that it lies concealed. No schoolboy would have bothered himself about the cipher, but, on hearing Miss de la Molle's story, would at once have attacked the mound with pick and shovel. The bulk of the book is given to an intrigue of the lowest sensational order, and the treasure and cipher must be regarded as the excuse for presenting it to the public in a form that may make the reading of it consistent with self-respect.

The Advance Guard of Western Civilization. By James R. Gilmore (Edmund Kirke). D. Appleton & Co. 1888.

THE title of this book is peculiarly appropriate, for Robertson, Donelson, and their associates unquestionably led the advancing line of civilization to the Cumberland, whence it pressed steadily forward to Arkansas and Texas. The story is worth telling, and the author has told it well. But it is the story rather of that class of writers who popularize science than of those who make original and decisive investigations. Mr. Gilmore, however, is not satisfied with being a "popularizer": he is also ambitious to acquire the laurels of the investigator, and to these he is not entitled. As his 'Rear-Guard of the Revolution' and his 'John Sevier as a Commonwealth Builder' were founded almost exclusively upon Ramsey's 'Annals,' so the present book is nothing if not a rehash of Putnam's 'History of Middle Tennessee,' garnished with some irrelevant matter about James Wilkinson. In his preface the author says:

"The narrative is the result of eight years' careful study of early events in the Southwest, nearly four of which years were passed upon the ground where the events occurred, and it is the author's sincere conviction that it may be accepted as authentic history." And again, "In the preparation of this volume, the writer has had the advantage of personal intercourse with the descendants of the men he portrays, and he has also consulted—so far as he knows—all that has been written upon the subject."

This is simply sailing under false colors. The events narrated by Mr. Gilmore, barring the appendix, have long been accessible to all students of Southwestern history. It would embarrass Mr. Gilmore to point out two important events narrated in his book, not also contained in Pickett's 'Alabama,' the Histories of Kentucky and Louisiana, and other equally accessible authorities. His "intercourse with the descendants of the men he portrays" has been of little service to him. The author's error lies in leading his readers to the belief that he has discovered and exploited an entirely new field of historical research. He is, however, merely a gleaner, not a discoverer.

Paradoxes of a Philistine. By William S. Walsh. Philadelphia: Lippincott. 1889. Pp. 192.

THIS volume of little essays, chiefly reprinted from *Lippincott's*, does not call for much comment on the part of the reviewer. It is another illustration of the fact that to fill a department in a magazine is very much like making bricks without straw, unless, like Howells, one happens to have a mission, or unless one is gifted, like Curtis, with a power of transmuting every subject which comes up into gold. Nevertheless, writing of a different kind may serve a useful purpose. This is an age of much sympathy with the undeveloped classes; the problem of practical charity which literature has ever before, it is to set forth the literary instinct in some such way as shall cause it to appeal to those who are as yet insensitive to it. The purpose which the regular writer in the monthly magazine may serve is to explain, if he knows it himself, the difference between literature and non-literature to those who do not know it. This purpose Mr. Walsh fulfils, on the whole, but badly. Much of what he has to say is open to no special objection, but much of it is of a tendency the reverse of elevating.

His principal note, if there is a principal note, is the belittling of great achievement; and the gospel which he feels most strongly called upon to set forth is that there is little difference between common men and great men. But this is a doctrine which is, from the scientific point of view, thoroughly incorrect. There is a diagram in Mr. Galton's book on 'Hereditary Genius' which is intended to illustrate the extraordinariness of great men, and which it is very instructive to carry about in one's mind. Human beings are represented by a column of scattered dots. In the middle of the column the dots are very thick, to represent the immense number of average men; further up they grow thinner and thinner, until near the top a very few, and finally one, serve to represent the greatest, who stand nearly or quite solitary and alone. Below the average there is a corresponding gradual thinning out, until one reaches the very small number of the most degraded idiots. But this diagram may serve to illustrate not only the distribution of greatness, but also the degree of admiration with which greatness ought to be regarded. In other words, the estimation in which we hold a great man, if we were disposed to scientific accuracy, ought to be apportioned to his degree of rarity. The unusualness of a giant is not to be measured, as Mr. Walsh seems to suppose, by the ratio between seven feet and six feet, and still less ought it to be depreciated by saying that twelve inches is a small matter compared with infinite space. It can only be correctly represented by the ratio of the number of people seven feet high to the number of people of the average height.

To drop the mathematical aspect of the question, to say that one man is as good as another is both false and highly inconducive to the progress of the race in greatness. There is no one thing which leads people on to better thoughts and feelings than those which are natural to them so much as a warm and generous admiration for the great either in intellect or in virtue. It is only a distorted sense of perspective which can permit a man to say that 'Leaves of Grass' is now recognized as a monumental addition to American literature; to instance Milton, Wordsworth, Keats, and Walt Whitman as greatest poets, and to say that "in our country to-day some of the most vital and vigorous verses are written by . . . Will Carleton and James Whitcomb Riley."

If the critic had any influence with Mr. Walsh, he would try to persuade him to give greater attention to values, and to take his monthly task more seriously.

BOOKS OF THE WEEK.

Allen, G. Force and Energy: A Theory of Dynamics. Longmans Green & Co. $2.25.
Bell, Mrs. Hugh. Petit Théâtre des Infants: Twelve Tiny French Plays for Children. Longmans, Green & Co. 50 cents.

JUST READY:
THE TRUE STORY OF HAMLET
AND OPHELIA. By Fredericka Beardsley Gilchrist. Crown 8vo, cloth, $1.50.

"One of the most original books of the season, as it seems to me from reading the advance sheets, is 'The True Story of Hamlet and Ophelia,' by Fredericka Beardsley Gilchrist. It is a keen analysis of the characters and situations of the famous play. . . . The author's view of the character of Ophelia is novel, and will provoke criticism; but in this, as in other parts of the book, her acuteness and independence are noticeable, and will insure a careful consideration of her work."—*Alexander Young, in The Critic, Feb. 9, 1889.*

Appended to the work is a reprint of the story on which Shakespeare founded the play "The Hystorie of Hamblet. London: Imprinted by *Richard Bradocke*, for *Thomas Panier*, and are to be sold at his shop in Corne-hill, neere to the Royall Exchange, 1608."

G. P. Putnam's Sons,

NEW YORK AND LONDON,

HAVE NOW READY:

THE WRITINGS OF

George Washington.

Including his Diaries and Correspondence. Edited by WORTHINGTON C. FORD. Volume I. The edition will be published in fourteen royal octavo volumes, handsomely printed *from type*, in the general style of Lodge's edition of Hamilton's works and Bigelow's edition of Franklin's works. The number of sets printed will be but seven hundred and fifty (750), and the type will be distributed after the printing of each volume. Price per volume, $5.00.

Since Mr. Sparks issued his edition of Washington's writings in 1834-37, an immense mass of new material, illustrating the history of the Revolution and the first years of the nation's existence, has been discovered. Manuscript collections, which in his day were jealously guarded in private hands, have been dispersed or deposited in public institutions, and so in a greater measure become accessible to the students of American history. The purchase of the papers of Washington by the National Government, as well as the acquisition of the public and private correspondence of other leading spirits of that time, have preserved from dispersion and destruction historical material the value of which can hardly be estimated, and of which little study and use have as yet been made. Where Sparks was obliged to be content with a rough draft or transcript, often imperfect and intended as a mere memorandum, the original may now be seen; where he was unable to find an explanation of the subject-matter of one of Washington's letters, the proper understanding of which depended more upon a letter written to Washington than upon the reply, we are now in the possession of such letter; many private papers of Washington, supposed to have been lost, have been brought to light, while it is within easy bounds of truth to assert that for every letter that Sparks printed, ten are now available, throwing new and valuable light upon the military and political history of the day, and furnishing the means for deciding finally many questions that are in dispute through lack of the historical information needed to determine them.

*** *As above noted, this edition is limited, and no electrotype plates will be made. Those desiring sets, therefore, should enter their names at once, as a large part of the edition has already been subscribed for. Prospectus sent on application.*

ENGLISH WAYFARING LIFE

IN THE MIDDLE AGES. (Fourteenth Century.) By J. J. JUSSERAND. Translated from the French by LUCY TOULMIN SMITH. Limited edition. Octavo, fully illustrated, $6.00.

The author has supervised the translation, and has added about a third of new matter, so that the volume differs to a great degree from 'La Vie Nomade.' Many of the illustrations are taken from rare illuminated manuscripts, and are unique.

"A work of distinctive views and interest."—*Saturday Review.*

"Jefferies's power lay in describing natural scenery and rural life with a faithfulness and a brilliancy almost unrivalled."—*Nation.*

Letters on Literature

By Andrew Lang. Foolscap 8vo. $2.00.

*** This volume consists mainly of reprints of Letters contributed to the *New York Independent.*

Social Progress: An Essay.

By Daniel Greenleaf Thompson, author of 'A System of Psychology,' etc. 8vo, $2.00.

Masks or Faces?

A Study in the Psychology of Acting. By William Archer. Crown 8vo, cloth, $1.75.

Mr. Archer takes up afresh the question debated by M. Coquelin and Mr. Irving as to the amount of feeling an actor should have. He has collected from books and from leading living actors a mass of pertinent and interesting anecdotes. Among those who have helped him are Mary Anderson, Mrs. Kendal, Genevieve Ward, John Drew, and Dion Boucicault.

The Story of Genesis.

By Francis Younghusband, author of 'The Story of Our Lord.' Crown 8vo, 75 cents.

Graphics.

Or, the Art of Calculation by Drawing Lines, applied especially to Mechanical Engineering. By Robert H. Smith, Professor of Engineering, Mason Science College, Birmingham. Part I. Text, with Separate Atlas of Plates—Arithmetic, Algebra, Trigonometry, Vector and Locor Addition, Machine Kinematics, and Statics of Flat and Solid Structures. 8vo, $5.00.

Deductive Logic.

By St. George Stock. (Printed at the Clarendon Press.) Fcap 8vo, $1.25.

The Student's Atlas.

In twelve Circular Maps on a Uniform Projection and One Scale, with Two Index Maps. Intended as a *vade-mecum* for the Student of History, Travel, Geography, Geology, and Political Economy. With a Letter-press Introduction, illustrated by several cuts. By the late Richard A. Proctor. 8vo, $1.50.

*** *For sale by all Booksellers. Sent on receipt of price by the Publishers,*

The Nation.

NEW YORK, THURSDAY, FEBRUARY 28, 1889.

The Week.

BOTH branches of Congress have agreed upon a bill admitting four new States into the Union, and the President has approved the measure. Dakota is to be divided by an east and west line drawn midway across the Territory, and to constitute two States; the other two are to be created from the Territories of Washington and Montana as they now stand. Provision is made by which elections may be held in each of the four, next October, by virtue of which Senators and Representatives (one apiece of the latter, except in the case of South Dakota, which will have two) can be chosen in time to take their seats in Congress next December. This is a happy outcome of the long controversy over the matter. South Dakota and Washington have been qualified to become States for some time; North Dakota has become so; and, while it would have done Montana no harm to wait a while longer, it already has sufficient population and assurance of permanent prosperity to remove any fear of its ever turning out a second Nevada. The act has therefore the great merit of not including any Territory which ought not to come in on its merits, but which is admitted as a sort of political balance, as would have been the case if the illiterate population of New Mexico had been placed on an equality with the intelligent people of Washington. This most of the Democrats were anxious to have done, because New Mexico has of late years been Democratic, while the Republicans have had the preponderance in the northern Territories. But enough Democrats rose above partisan considerations to permit the dropping of New Mexico, and save the Union from a State wherein, according to the last census, 60 per cent. of the people could not read. The only valid criticism upon the Omnibus Act as passed is, that it works no reforms in nomenclature. Each half of Dakota clings to that name, and Washington the State will always cause confusion with Washington the capital. But the people most directly concerned would not consent to any change, and the home-rule principle was allowed to govern.

This is the first time in our history that Congress has provided for admitting four States at once. The nearest approach was in the closing days of the Twenty-eighth Congress, in March, 1845, when acts were passed annexing Texas and bringing in Florida and Iowa, although admission did not really occur in Iowa's case until nearly two years later. The first to join the original thirteen were Vermont and Kentucky, in 1791 and 1792 respectively; each made out of the thirteen—Vermont out of New Hampshire and New York, and Kentucky out of Virginia. In 1796 Tennessee was made, in like manner, out of North Carolina; and in 1802 Ohio out of the Northwest Territory as organized under the Ordinance of 1787. Louisiana followed, out of the newly acquired territory in the Southwest, in 1812. Then came a period during which the rule was to balance a new slave State against a new free one, and thus admit States by pairs—Indiana and Mississippi, in 1816 and 1817; Illinois and Alabama, in 1818 and 1819; Maine and Missouri, in 1820 and 1821; Arkansas and Michigan, in 1836 and 1837; Florida and Iowa, in 1845 and 1846. After this latter date only free States were admitted—California in 1850, Minnesota in 1858, Oregon in 1859, and Kansas early in 1861. Since 1861 but four States have come in, and this has been at least one too many. West Virginia was torn from Virginia in 1863 by methods which would only have been possible in the stress of war, although it promises to justify its separate existence. Nevada is the one terrible blunder. It was made a State in 1864, when it contained only a few thousand miners, solely to strengthen the Republican party in Congress and the Electoral College, and there appears to be no chance of its ever having a large population. Nebraska, which came in during 1867, and Colorado, in 1876, complete the existing list.

The signing of the so-called "gentlemen's agreement" by all the railroad presidents whose coöperation is deemed necessary, is a very important step towards the restoration of value to a class of property upon which the value of all other property depends. The railroads have recognized and acted upon the maxim that the gods help those who help themselves. They have perceived that nothing will be done to save them from financial ruin unless they first do everything in their own power to that end. It is within their power to do, not everything, but much to check the headlong race towards bankruptcy, which the weaker ones have already reached, and which the stronger ones have been approaching at high speed. They have now done the best thing that they could do with and for each other, and they can now confidently appeal to the public for relief from the burden of unjust laws from which they are suffering. The Chicago and Alton Company have made such an appeal in their annual report just published, and have presented a state of facts which, if not answered by fair argument, must have a powerful influence in determining the course of future legislation and judicial decision. This company was by its charter expressly authorized "to fix the rates of toll in the transportation of freight and passengers over its railroad." It took the grant subject to the principle of the common law, that the rates should be reasonable and equal to all customers. In the early days of the enterprise, even while the grant was undisturbed by State interference, and even while railroads were few and competition slight, the company failed to make both ends meet. It passed into bankruptcy, and was sold under the hammer. Its stockholders realized nothing, and its bondholders got less than fifty cents for each dollar they had invested.

This is what happened little more than twenty years ago to a railroad connecting the two largest interior cities in the country. Nearly all the Western roads had the same experience. Of twenty-four railroads coming more or less directly in competition with the Chicago and Alton, the report tells us that twenty have been forced into bankruptcy within twelve years after the State began to interfere with their operations—five of them within one year, three within two years, four within three years, one within four years, three within five years, one within eight years, two within nine years, and one at the end of twelve years. The "water" on all these roads, both the earlier and the later ones, has been squeezed out of them either by the laws of trade or by legislative interference. As to the Chicago and Alton itself, the report shows that the actual cash cost of the property has been $10,989,878 *more* than the total amount of its stock and bonds outstanding, and that it could not be duplicated to-day for the sum represented by its stock and bonds and $15,000,000 added thereto. This road is very favorably situated for purposes of traffic; it is one of the best in the country or in the world in the durability and completeness of its road-bed, equipment, terminals, and everything which goes to bring in the largest results with the least expense. It can still earn a dividend for its shareholders. But as things are now going on in the Legislatures and among the Railroad Commissioners of the States in which its business is carried on, it sees only gloomy prospects for the future. Its relative position toward other less prosperous roads may be maintained, but unless a different spirit animates the people whom it serves, they will all be engulfed alike. An attempt has now been made to fix rates absolutely by State authority. This means that one party to a bargain has the power to fix the terms of both purchase and sale, and that he is restrained by no compunction or consideration for the rights of the other. This is communism without disguise. It is the essence of injustice, tyranny, confiscation.

The conference of the civil-service reformers in Baltimore which was held on Saturday was a great success, in part because it was managed by strong supporters of Gen. Harrison, and was attended and addressed by such ardent civil-service reformers as Messrs. Foulke and Swift from Gen. Harrison's own State. The resolutions were drafted by Republicans, and all the speakers were Republicans, and we are bound to say that no supporters of President Cleveland could have expressed themselves more warmly in defence of the competitive system. The resolutions, while undoubtedly expressing hopefulness as regards the attitude of the new Administration

towards the reform, do not betray any disposition to overlook possible mistakes or shortcomings. In other words, unless all signs fail, Gen. Harrison will have as stern critics in his own party as any civil-service reformers could desire; but it must be admitted that all signs do fail sometimes. Mr. Theodore Roosevelt made the mistake of giving the Baltimore people, at the public meeting in the evening, to understand not only that the municipal service in New York was no better than in Baltimore, but that it had not improved since his Committee made its investigations in 1884—a palpable misrepresentation, doubtless due to the oratorical excitement of the moment. The State and municipal services have since then been placed under the competitive system, and the enormous receipts of the County Clerk and Register, over which he made merry, have been changed into moderate fixed salaries. Even the devil, as is well known, must have his due.

Mr. Fairchild has made another statement, this time to a reporter of the *Commercial Advertiser*, in which he falls back on his right, even under the Civil-Service Law, to remove without giving a reason, simply because he thinks a change will be for the good of the service. This is a good general rule, but unfortunately it is not a rule applicable to the present case. What he is criticised for in regard to his recent Custom-house removals is, that he removed after a trial on charges of fraud, before a tribunal composed of a newspaper reporter who had been previously employed as a detective, whom he armed with extraordinary and unconstitutional powers, including that of examining the accused secretly under oath, who acted both as judge and prosecutor, and whose findings were adopted and approved without giving the accused an opportunity to defend themselves; and that until the flimsy and disgraceful character of this report was exposed, he (Mr. Fairchild) allowed it to be understood and spread abroad that Byrne had discovered enormous frauds at this port, in which not only many officers of the Appraiser's Department, but many leading merchants were implicated. While doing this, too, or permitting it to be done, he showed that he was actually ignorant of the fact that any importers here had complained of the acts of his new examiners, or, in other words, did not keep the run of the matter in his own office. Even in this interview he so far loses his head as to say that "the Sherers had lied in connection with the Front Street matter," which is something that a high officer of the Government should not say publicly of any man in his employment, without proof, and particularly of men whose character is considered by those who know them just as good as Mr. Fairchild's, and whose word is considered just as reliable. He now promises, we suppose under recent spurring, "an exhaustive account" for District-Attorney Walker to base indictments on—a composition which he ought to have produced just one year ago, but of which, we venture to predict, we shall not hear much more.

Col. W. W. Dudley, the Treasurer of the Republican National Committee, has sued the *Evening Post* for libel for printing that letter of his about the "floaters in blocks of five." The *Evening Post* obtained an order from the Supreme Court here to examine him in Washington before trial about the letter, whether he wrote it in whole or in part, or, if he wrote it in part, what part, and so on; or, in other words, ask him for the explanations which all Christian gentlemen are eager to give when their reputation is unjustly assailed. A subpœna was successfully served on the Colonel, fixing his examination for the 27th inst. But, instead of joyously hailing this opportunity of vindicating himself from an odious imputation, the Colonel gave notice of his intention to apply to the court in Washington to have the summons quashed, so that his examination might not take place! Is it possible that we are wholly mistaken as to the practice of Christian gentlemen in the matter of unjust accusations? Is it really true that, when charged with doing a disgraceful thing, they cut, run, break away, and avoid their accusers, and absolutely decline to be questioned touching allegations made against their integrity? It certainly used not to be so. In old times they met the enemy in the gate, and it was the accuser who used to run away.

A correspondent calls our attention, in the interest of Mr. and Mrs. Harrison, to the American vice of hand-shaking. It is the common experience of occupants of the White House that their right hands and arms become swollen and well-nigh paralyzed after each struggle with the hand-shakers at a public reception. There is no tyranny so imperious, there is no custom so senseless, as that which condemns the President of the United States and his wife to grasp the hand of every citizen and every citizeness who comes to the White House during the space of four years, and as often as they come. If we cannot reform it altogether, we might do so by degrees, and we make the suggestion to President Harrison accordingly, that a rule be established that only one hand-shake be allowed to each person during four years. This rule would necessarily require some bookkeeping. The usher would be required to take down the name of each person favored with a clasp of the Presidential palm, and make an alphabetical index of the same. Such persons should be notified by posters or otherwise of the rule in force, and when retiring should be put upon their honor not to claim the privilege of hand-shaking at the White House again during the present term. If anybody were caught violating the rule, he should be forbidden to enter the Executive Mansion during the next four years. Gradually the vice of hand-shaking would become unfashionable, just as the practice of taking a drink when the ceremony of introduction occurs has become, and so eventually we might get back to the custom of Washington and Jefferson, with whom a bow from the gentlemen and a courtesy from the ladies was the customary form of greeting.

Poor Foraker! Less than a year ago he was running for a Presidential nomination on the great issue that President Cleveland had snubbed him, and yet to-day he is struggling desperately to prevent the Republican party of Ohio from throwing him overboard. When he failed to get either first or second place on the Presidential ticket, he began to work for a Cabinet position. Now he appears to have abandoned hope of that, for he has had one of the few Republican newspapers of Ohio that are not tired of him "nail his name to the masthead" as a candidate for reëlection to the Governorship. This proposal appears to have split the Republican press of the State, for a large number of the more powerful members of it are crying out that the party has had all it can stand of Foraker, and that he must step aside. Of course he refuses to step aside. He is as warlike now as he was when he drew his sword and prepared to die rather than surrender the battle flags at the call of a "rebel Congress"; and if he is thrown overboard, it will only be after such an uproar as the State has not heard in many a day. It is in accordance with the eternal fitness of things that Ohio, which nourished and developed this preposterous statesman, should have all to itself the job of ridding politics of him.

The *Independent* contains an interesting "symposium" by Southern educators on the question whether the negro should be educated or suppressed. A text was found in the article written by Senator Eustis of Louisiana for the *Forum* a few months ago, which represented the hopeless attitude of the Southern Bourbons. As Mr. Eustis has been discarded for his Bourbonism even by his own somewhat unprogressive State of Louisiana, having been refused a reëlection to the Senate, somewhat undue importance appears to have been attached to his utterance. However, it is pleasant to find how universally it is disavowed and condemned by the leaders of Southern thought, and how hopeful is the view which such men take of the future. All of these writers hold that the Southern problem can be solved only by the education of the negroes, and all of them hold that it is certain to be solved in this way. Mr. John H. Boyd of Durant, Miss., illuminates the situation when he says that the question is not how to secure the negro his vote at the next election, but how to elevate him in intelligence and virtue, because "when the negro has been qualified by education and character, he will secure his rights as naturally as the heir enters into his property on reaching his majority."

A valuable contribution to the discussion is made by Prof. F. C. Woodward of the University of South Carolina. He points out that, since the decision of the Supreme Court annulling the Civil-Rights Act, the

adjustment of these matters—which, by the way, affect the negro far more constantly and powerfully than does the exercise, or non-exercise, of the suffrage—has been left to the operation of time, education, and other natural causes. Prof. Woodward thinks it strange that this analogy is not applied to the settlement of the negro's political status, and says that "if any phase of this question is liable to natural and peaceable methods, this more than any demands the application of such methods." He might have strengthened his argument by pointing out that the political status of the negro has already been satisfactorily adjusted through the operation of natural causes in some parts of the South, and that the same process will ultimately produce the same result in the other parts. It must take more time in some States than in others, but "the strong arm of the Government" cannot press forward the process.

A remarkable illustration of the rapid progress which is making in the right direction down South is afforded by a discussion in the Texas Legislature a few days ago. A bill had passed the Senate requiring railroad companies to provide separate coaches for whites and blacks, and it was favorably reported to the House. But it was earnestly opposed by both white Democrats and colored Republicans, and was finally referred to a special committee under circumstances which virtually made this action equivalent to its rejection. The strongest reason presented for its passage was the fact that, under the present system, rowdyish negro men sometimes insist upon taking seats by respectable white women simply in order to annoy them. But the wiser speakers urged that such difficulties should be disposed of as rowdyism is ordinarily disposed of. "As the railroads are now conducted," said one white member, "good colored men can separate themselves from the bad. It is not derogatory to us to sit down in the cars with gentlemanly colored men." Another white member held that the question was one to be settled by time, precisely as the similar question on the street-cars had already been settled. Two colored members took the same view. "It would be better to let the people settle it themselves," said one of them. "The white people in my country treat us well," said the other, who represents a county where the population is almost equally divided between the two races. When colored Republicans and white Democrats of a Southern State which gives 140,000 Democratic majority talk in this way, there is certainly no reason for Northern Republicans of the "Bill" Chandler school to think that any interference on their part is called for.

It is announced that leading colored citizens of Lynchburg, Va., have just organized a real-estate and trust company with a capital of $20,000. The Wilmington (N. C.) *Messenger*, commenting on this, says that "the colored man is a better citizen as he thrives and becomes a stockholder in the property interests of the community," and expresses the opinion that when habits of industry, economy, and thrift have been well instilled among them, "we shall hear little of political disturbance and outrage, or of threatened race conflicts." The negro already votes freely in Virginia, and Gen. Armstrong of Hampton testifies that he "is quick to see the result of good government, especially in State and local affairs, and to cast his vote for the man whom he thinks most likely to serve best in office." It appears from the testimony of Mr. Harris, a Democratic member of the Alabama Senate, that the same thing is coming to be true of the latter State. "It has been said," he remarked in a recent speech, "that the negroes in all elections are always found arrayed against the best element in society. It may be true that in all Federal elections they vote en masse. Yet, sir, my observation is that in local elections they are very nearly equally divided. Very many of them are earnest workers for the best interest of society, and conduct themselves with much propriety, for which they are held in high esteem."

We observe the passage in the Missouri House of a bill providing that no language shall be taught in the public schools of the State except English, and that all instruction shall be given in English. Missouri has a considerable German element, which is largely massed in a few districts, and which is in some counties the controlling influence. The result is that in a large number of school districts the English branches have been almost entirely crowded out of the public schools by the German residents, who constitute the majority in the districts. In more than one-half of the school districts in Gasconade County nothing but German is taught, and a letter was read which had been addressed to the State Superintendent of Public Schools by a resident of the county, who said that the schools there were ruled by a foreign element, many of whom are unnaturalized and unable to speak the English language. The most noteworthy feature of the discussion was the hearty support given the proposed change in the law by German members. Mr. Vogel, who said he was a "Dutchman," and that he was therefore entitled to speak as he pleased, declared that he was also an American, and said that he wanted to see every man who came to America adapt himself to the laws of this country, and not try to follow here the customs of any foreign country. There was no more reason, he said, for making German the language of common schools in Missouri than there was for furnishing common-school instruction in Hungarian, Chaldaic, or Chinese. The Republicans, who carried the Congressional districts in St. Louis last fall through an alliance with the "Personal-Liberty League" of German beer-sellers, held a caucus and made opposition to the bill a party measure, but it was carried by a vote of 57 to 38.

The Sackville correspondence has been printed in full, and, now that the election excitement is over, is somewhat melancholy reading. The trick played on Lord Sackville was a very sorry one, but until it was taken up and made much of by a great political party, it disgraced nobody but Osgoodby, the obscure Californian who concocted it. It was this which forced the Administration to take hold of it, and make much of it, and demand the recall of a foreign minister on account of it, or, in other words, exhibit to the world the sorry spectacle of a great nation thrown into violent agitation by the petty fraud of an individual. The language used by Mr. Bayard in describing Lord Sackville's behavior now seems very strong indeed. Unhappily it did not seem too strong last November. What lesson the affair teaches we cannot say. The best disposition to make of it is to forget it as soon as possible, with the pious hope that nothing like it may ever occur again.

The English Unionist newspapers received by the last mail furnish curious reading, owing to the complete unconsciousness of danger they show with regard to the Parnell Commission. In running through their columns one seems to be listening to citizens chatting in the forum of Pompeii the evening before the eruption. Not the slightest trace do they contain of any apprehension of the tremendous calamity that was impending over the *Times* and the whole scheme of Unionist morality. Mr. Chamberlain is still making those "effective" and "luminous" speeches of his in which he for the hundredth time demolishes Gladstone, turns John Morley inside out, and exhibits the Irish to the scorn and reprobation of the truly good of both hemispheres. Poor Gladstone still goes on wearying and disgusting his admirers, and Morley making hideous blunders in fact and argument, and Trevelyan displaying his hysterics and his guilty conscience to a pitying public. The Unionist orators were, in fact, up to Saturday week under the visible protection of the Almighty, for nothing but supernatural oversight could keep men so constantly just and true and right as they were, until Pigott took the stand. What has happened in London is, in fact, the only earthquake of which the causes are fully understood. The only sign of prevision on the part of the *Times* has been its persistence in postponing the question of the authenticity of the letters so long, when the proof of it in the beginning would have made the production of the testimony about outrages unnecessary, as it would have ruined Parnell and his followers at one blow, and perhaps have led to their trial and indictment. No adequate idea of the gravity of the situation for the *Times* can as yet be formed. Surrender would not only expose the manager, Mr. Macdonald, and Houston, the young man who led him astray, to indictment for conspiracy with Pigott, but lay the paper open to libel suits on the part of the Irish which it could not defend, and which might ruin the property for some years to come.

A NEW WAR AGAINST LABOR-SAVING MACHINES.

One of the most disgraceful manifestations of the spirit of Labor is the attempt to abolish steam plate presses from the Bureau of Engraving and Printing. The House of Representatives succumbed to its malignant influences, and recorded its vote against these valuable labor-saving machines, but the Senate has refused to concur.

The agitation against the steam plate presses began more than a year ago. "We demand," said the impudently dictatorial resolution adopted by the General Assembly of the Knights of Labor held in Minneapolis in October, 1887, "that all Government securities, notes, bonds, checks, and stamps shall be printed in the highest style of the art of plate-printing from hand roller presses, so as to secure the Government and the public against loss by wear and counterfeiting." The admirable and patriotic motives here given rest upon the assumption that securities printed on steam presses wear out faster and are more easily counterfeited than those printed on hand presses.

Only a mind muddled and confused by Labor can for a moment understand how a steam press is more conducive to the destruction and imitation of bank notes, or silver certificates, or internal-revenue stamps than a hand press. The operations involved in the production of a Government security are the same on both presses, the difference being that hand power does the work on one that machine power does on the other. In the first place, the intaglio-engraved plate is inked in with a roller charged with ink; in the second place, the thick coating of ink thus adhering to the plate is wiped off with a muslin rag, leaving the depressed lines of the engraving filled with the fluid; in the third place, the surface of the plate, which is still covered with a thin film of ink, is polished with the palm of the hand which has been rubbed over a cake of whiting; in the fourth place, after the sheet of paper is laid on the plate, both are run under a roller heavily swathed in layers of felt to prevent the lines of the engraving from being crushed or marred in any way. It is the second operation that constitutes the bone of contention. "It is impossible for any machine to be utilized to handle a rag," said one of the witnesses before the sub-committee of the Senate Finance Committee charged with the duty of investigating this question. Only an ignoramus that had never heard of the wonderful work of the Jacquard loom could have made such a statement. "This constant exercise of discrimination and judgment in going over the plate," said the attorney for Labor, speaking of the high order of intellect required to manipulate a piece of cloth two yards long, "is the substantial reason why we contend that hand printing is superior to steam printing."

A technical discussion of the absurdity of this position is not necessary. The observation that "the test of the pudding is the eating thereof," is more pertinent to the controversy; for it makes no difference how a note has been printed if it is properly printed. What is the character of the work done on steam presses, and wherein does it differ from the work done on hand presses? Happily the means for arriving at a correct answer to this question is within the reach of every person who has a new silver certificate in his pocket, or possesses a box of cigars with an internal-revenue stamp upon it. Up to the present time the eighteen steam presses in the Bureau have been chiefly used to print internal-revenue stamps and the backs of silver certificates. The faces of certificates are printed on hand presses, it having been thought, although not conclusively proved, that steam presses could not be used for the finest grades of work. If, therefore, all doubting Thomases will examine the back and the face of the one-dollar silver certificate, for instance, they can see for themselves whether the fine lines are printed as clearly and distinctly on one side as on the other, and whether, without a previous knowledge of the two kinds of printing, any distinction between them could be detected. Even the four experts that appeared before the Senate sub-committee in behalf of Labor could not tell the difference with any degree of certainty. Of the eleven opinions that they gave upon sheets of notes printed by hand and by steam, and marked for the guidance of the committee, eight were wrong and only three were right—that is to say, these experts could not tell a hand-printed note from a steam-printed note, although it had been declared in a petition to Congress demanding that steam presses be abolished, that "no expert with any regard for his reputation will hesitate to pronounce the work done by said presses as inferior."

The allegation of Labor that these presses facilitate counterfeiting may be met in another way. The opinions of bankers and the experience of the Government are against it. Speaking of the United States silver certificates of the series of 1886, Mr. George S. Coe, President of the American Exchange National Bank, says: "The backs of them all, which I have carefully examined, are, in printing and in every other particular, in the best style of the printer's art, and I see nothing in them to condemn, but everything to commend their workmanship." Mr. George F. Baker, President of the First National Bank, testifies to the same effect. "I see nothing in them," he adds, "to facilitate counterfeiting more than in any other series." Mr. Edmund D. Randolph, President of the Continental National Bank, makes this statement: "As far as there being any appearance of deterioration in any part of the work as compared with former issues, or anything which would in any way facilitate counterfeiting, we entertain quite the opposite opinion." The testimony of these men, who are as deeply interested in preserving the integrity of the currency as any of the fanatical disciples of Labor, is confirmed by the reports in regard to the production and circulation of counterfeits. Since the issue of paper money, 150 counterfeits have been detected. This is at the rate of six a year, or one every two months. During the two and a half years that silver certificates have been issued, only two counterfeits of this class of currency have appeared. Up to September 10, 1888, only one $1 and nine $5 silver certificates had been presented to the Treasury for redemption. During the fiscal year of 1888, 532 separate counterfeit United States notes and national-bank notes were presented for redemption; of these, 81 United States and 106 national-bank notes were of the $5 denomination. As they were all printed on hand presses, the conclusion required by the peculiar system of logic that Labor applies to this subject, is not beyond the reach of the ordinary intellect.

Experience shows also that notes printed on steam presses last as long as those printed on hand presses. When a plate can be used, as it has been used, on a steam press to print 163,000 first-class impressions, a work requiring eight months, the evidence that it has not been subjected to a grinding process that would wear out or deface the lines of the engraving, and thus facilitate the work of the counterfeiter, would seem to be conclusive. Hence the only points in the controversy to be considered with seriousness are the real motives for the war upon steam presses and the consequences that would follow their abolition. The milk in the cocoanut is disclosed in the petition already mentioned. "Unless Congress interferes," says this document, "the attempt to force the steam presses upon the Government will succeed, and every kind of Government obligation will be printed on them, rapid cheap work being substituted for good but more costly work." It is the old opposition to labor-saving machinery. The desperate effort to drive steam presses out of the Bureau has its origin in the belief that it is the only way that the men now engaged on the hand presses can retain their places. Certain it is that no other class of people—no bankers, or merchants, or farmers, or mechanics—have raised this clamor against one of the valuable creations of modern civilization.

The success of the movement in behalf of retrogression would have meant great cost and serious trouble to the Government. The substitution of hand presses for steam presses would necessitate a large addition to the force of the Bureau. At least 170 plate-printers and 150 printers' assistants, besides other employees, would be required. The cost of the additional material would be over $84,000. In round numbers, the increase in the annual expenditures of the Bureau involved in the proposed change would be over $300,000. Large as this sum is, it does not include the entire cost of the blunder that Labor hoped to induce the Government to commit. The present building occupied by the Bureau is already filled to its utmost capacity, while the change would require the construction of a large addition or the rental and use of some private building, render valueless the steam presses now owned by the Government, and throw the work of the Bureau into confusion. It is to be hoped, therefore, on every account that the Senate will stand firm in opposing the Labor demagogues.

THE LAW OF LIBEL.

An effort is being made, both in Massachusetts and in this State, to bring about an amendment to the law of libel of the following tenor. We quote a section of the Massachusetts bill:

"No action or prosecution for libel shall be maintained for the publication of any matter of legitimate interest to the public, if such publication is made without actual malice, and if the author or publisher thereof causes effectual retraction or correction to be made of anything untrue or mistaken in such publication as soon as practicable after being requested so to do by any person aggrieved by the original publication."

The amendment is supported, both in Albany and in Boston, by the publishers of some of the leading newspapers in both States, with whose grievances under the existing law we fully sympathize, having had some experience of them. Actions for libel, where the libel is simply the result of accident or mistake, and where all possible atonement has been promptly offered, are unquestionably very frequent and vexatious. We know about them and have suffered from them ourselves. Nevertheless, we are bound to say that we do not think the best interests either of the community or the press would be served by the proposed change in the law, for a variety of reasons, which we shall endeavor to state in as inoffensive a way as possible.

(1.) The notion that any retraction or correction can be made "effectual," in the full and proper sense of the term, is illusory. A charge against a man is always more eagerly read than his explanation or defence. Moreover, it is not possible to make any retraction or apology cover the exact ground covered by the original charge. The two things inevitably go to some extent in different directions. Large numbers of people who see one are sure not to see the other. Papers which copy one will not copy the other—a very common experience. No doubt this is partly due to the careless way in which newspapers in our day are read; but for this it is the publisher and not the person libelled who ought to suffer, if anybody is to suffer. At any rate, there is sure to remain a residuum of unredressed wrong in every libel case, no matter what pains the libeller may take to set matters right. Doubtless in a very large number of cases, the newspaper proprietor ought not to be punished for this. It may be the result of one of those inevitable risks of his calling, just as the most careful driver may now and then run over a man in the street; but each case should be judged on its merits. The law ought not to be changed in any way that will diminish vigilance.

(2.) It is the more undesirable that the law should be changed in any way to diminish vigilance, because the direction in which the newspaper business is growing is almost altogether hostile to the rights of individuals in the matter of libel or libellous annoyance. In the trade, the doctrine is being more and more accepted that the sole function of the newspaper is to make money. This doctrine was indeed openly avowed at the convention of newspaper publishers here a fortnight ago. The older notion that the editor's rôle as an instructor or commentator was the most important one on a newspaper was scoffed at, and the early collection of whatever sort of matter would promote sales was set forth as the chief end of the newspaper publisher. Now, the enterprising publisher, intent on putting in whatever will sell his paper, is sure not to be very careful about the rights or feelings of individuals. It has been said before the Committee of the Massachusetts Legislature that he cannot sift things in "the small hours of the morning," just before his paper is going to press. Doubtless he cannot sift, but he can omit or hold over until he makes inquiries. What prevents his doing this now in any doubtful case, or makes him reluctant to do it, is the fear that a rival may "get a beat on him." The only thing which can overcome the fear of "a beat" is the fear of the law. Remove the fear of the law, and we venture to say little or no care would be exercised in examining any piece of news. Everything would go in when it was known that a few lines of apology or retraction would set any mistake to rights. Moreover, it is to be borne in mind that it is not the old and wise heads of the office who are apt to be on duty in the small hours of the morning. It is the young fellows, who dread of all things "getting left" with regard to any piece of news however trifling.

(3.) There is no sign of any change in journalism which tends to make legal restraint unnecessary. On the contrary, the changes are all in the other direction. The indifference to intellectual or moral influence, as compared to income, seems to grow. So does the tendency to seek topics of discussion in the personal or domestic life, and to eschew those of a more serious and general nature. Journalistic success is more and more measured in dollars and cents, and contempt for whatever interferes with this success is more and more openly avowed. This means that the power of the journal over the individual's comfort has increased, is increasing, and ought to be diminished.

The amendment in the law which is really called for is one which will protect journalists against sham suits—that is, suits brought for mere temporary effect on public opinion, and without any intention of prosecuting them to trial. These are numerous, and are a serious source of expense. When one is brought, a publisher has always to employ a lawyer and make more or less preparation for resistance, which inevitably costs a large part of $500, and, in fully seven cases out of ten, the prosecutor drops them after service of the opening process. What is needed here is the filing by the plaintiff at the outset, whether he be resident or non-resident, of ample security for costs—that is, costs which will really indemnify the defendants if the case never comes to trial. No man in this community who feels sufficiently aggrieved by a newspaper to desire honestly to lay his wrongs before a jury, ought to be debarred from doing so by any technical limitation. Whether the publisher's mistake was, under the circumstances, an excusable one, and whether he has sought to make proper atonement for it, are, like the extent of the damage the plaintiff has sustained, questions for a jury to pass on, with which juries as a general rule are eminently qualified to deal. It is an exceedingly rare thing to hear of a journalist suffering wrong at the hands of a court of law. On the other hand, the community swarms with men who suffer daily wrongs at the hands of journalists, which to some men are intolerable, with no remedy within reach which would not aggravate the pain and annoyance. It is these the lawgivers should keep in mind when legislating about the press, rather than the publishers, who are turning their tears and blushes into dollars and cents. There may come a time when the public will not need much protection from the press, but we are apparently further from it now than we were twenty-five years ago.

THE LONDON TIMES'S COLLAPSE.

When the London *Times* produced the Parnell letter in facsimile in March, 1887, we said of it, among other things, that "it would probably turn out to be a clumsy forgery like the Morey letter, and that its appearance was made doubly suspicious by the fact that it appeared on the very day on which a division was expected on the second reading of the Coercion Bill." This has proved to be a tolerably correct forecast. It now appears from the evidence of Mr. Macdonald, the manager of the *Times*, that the resolution to print the facsimile was taken very suddenly—that is, it was determined on a Saturday to print it on a Monday, and on Monday it appeared, and a division on the second reading—the crucial stage—of the Coercion Bill was expected to take place, and did take place, on that very night, April 18, 1887.

It further appears that when this facsimile was printed, for the purpose of influencing the opinion of the House of Commons on a measure of extraordinary severity directed against one portion of the United Kingdom, Mr. Macdonald, the manager, knew nothing of the origin of the letter, except what Mr. Houston told him, and Mr. Houston, who supplied it, knew nothing of it except what Mr. Pigott had told him, and Mr. Pigott was well known to be what we call in this country a "dead beat" of nearly twenty years' standing. This remarkable step, too, had been preceded by a formal announcement that Mr. Parnell's denial of the authenticity of the letter imputing to him complicity with assassins, would not have the slightest weight, and that nothing would induce the editor of the *Times* to say who gave him the letters, because, if he did, this person would surely be murdered. We believe this was the first case on record in which a person in good social standing (and not a blackmailer) produced a letter injurious to another man's character, and absolutely refused to state *all* his reasons for believing it to be genuine. Of course, in a case of this kind, the history of the letter is all-important. To withhold this history, while treating or using the letter as authentic, would in private life be considered infa-

mous. The fact that so many honorable and high-minded Englishmen were led by their hatred of the Irish party to acquiesce in the *Times's* view of its obligations, is perhaps as striking an argument in favor of Home Rule as the whole controversy has produced. It illustrates that state of the English mind on Irish questions which has made Irish history such a dismal tale.

The dénouement of the tragi-comedy which has since last November been dragging its slow length along before the Parnell Commission, came on Tuesday, in London, when Sir Charles Russell announced on the opening of the court that Pigott had confessed the forgery of the letters and had fled. He added, moreover, that he was prepared to prove that Pigott had been forging signatures to a greater or less extent since 1878, and that he had invested the money he got from the *Times*—some thousands of pounds—in an obscene-literature business. A warrant has accordingly been issued for Pigott's arrest, and at this writing the Attorney-General is in doubt whether he will proceed any further with the case. We do not need to point out the probable effect of all this on the fortunes of the London *Times*. The pecuniary loss, present and prospective, to that journal is of course enormous; the loss of confidence and influence is simply incalculable and certainly irremediable. In the hands of different men the paper might recover, but in those of its present managers it seems hopeless.

What is of most importance in the affair is its bearing on the fortunes of the present Ministry and on the Irish question. It is safe to say that any other Ministry which has held office since the passage of the Reform Bill, would have resigned at once under a blow of this kind, because the present Ministry has done everything it could to identify its fortunes with those of the *Times* in the pursuit of Parnell and his followers. The *Times* has been furnished with all the official documents it needed, with the assistance and testimony of all the police and magistrates and of the salaried Government spies like Le Caron, or Beach, and though last, not least, with the services of the Attorney-General as counsel. The powers of the court, too, were defined in the Act of Parliament which created it, in spite of the protests of the Liberals, in such a way, to suit the *Times*—that is, the field of inquiry was made so large, vague, and indefinite—that the framing of issues would be impossible, and judges would be unable to shut out any evidence on the ground of irrelevancy. Accordingly every crime and outrage committed in any county of Ireland was admitted as proof, more or less strong, in support of the thesis that the Irish members of Parliament were the accomplices of assassins, "moonlighters," and other offenders against persons or property. On top of them came the forged letters intended to show that Parnell was actually cognizant of and approved of the murders of Burke and Cavendish, and of the plot to murder Mr. Forster.

In legislating in this way for the benefit of the *Times*, the Ministry were undoubtedly giving a *quid pro quo*. When, after coquetting with the Irish in 1885, denouncing coercion, and half promising Home Rule, they found in 1886 that Gladstone's scheme was so unacceptable to the English constituencies that they could get a majority in the House without the help of the Irish, they fell back once more on the natural Tory plan of "resolute government" or "rigorous policy." In other words, they determined on a plan of coercion which should have certain novel features. One was, that the bill should be perpetual in its operation, and not limited in point of time, as all previous ones were; another was, that the power of imprisonment at hard labor as common felons under it should be given to removable justices of the peace, sitting without a jury, and that it should cover speeches or writings which should, in the eyes of these jurists, have a tendency to promote boycotting or non-payment of rent, or to prevent people from taking evicted farms. To get a bill like this passed, with the help of the Liberals who had deserted Gladstone, and large numbers of whom had pledged themselves on the stump against coercion and in favor of the government of Ireland by ordinary equal laws, of course was not an easy matter. Englishmen were not quite prepared for anything so drastic as putting it in the power of the Irish Secretary to thin the benches of the Opposition by shutting up the opponents of the Government in jail on plank beds. To carry it through, it was absolutely necessary that the Irish members should be made to figure in English eyes as common criminals, the friends and companions of assassins, so that public opinion should be prepared for any coercion bill, however ferocious.

This work the *Times* undertook by producing the pamphlet so widely known as 'Parnellism and Crime,' and by a series of articles on the Irish members, of extraordinary ferocity, in which they were really described as unfit for human society. When the Coercion Bill was ready for its second reading, facsimiles of the forged Parnell letters were produced on the morning before, and accepted by the supporters of the Government as genuine, and the bill went through with a rush. Parnell's indignant denial was received with derisive laughter, and the *Times* treated it as an aggravation of his crimes. English society then started that system of persecution in which a certain portion of it always delights. Not only were the Irish members treated as the vilest of their species, but a strict boycott was set on foot against everybody who associated with them. To have dined with Parnell or Healy entailed a sentence of exclusion from all Tory and Unionist drawing-rooms, and the "immorality" of the Home-Rulers became a favorite topic of semi-sacred journals like the *Spectator*, as well as of common secular Jingoes like the *Telegraph* and *Saturday Review*. Parnell—a very sick man—was pursued in city and country by reporters, who daily reported his movements as those of an escaped criminal, and threw out the most odious insinuations about his walk and conversation. In fact, it is not too much to say that the life of the Irish members in London during the past two years, under the baiting of the *Times*, has been as near an approach to "hell upon earth" as is possible in a well-policed Christian city. The bulk of them were men of the ordinary somewhat coarse type which peasants have to elect when they have but few gentlemen on their side; but Parnell, and Sexton, and Dillon, and others are men of education and refinement, on whose health and spirits these long-protracted social barbarities could not but tell. At last the day of reckoning has come, and the whole "fabric of iniquity," as Mr. Gladstone has called it, has fallen to pieces through the confessions of a forger, blackmailer, and vender of obscene literature. On this wretch, whom the conductors of the *Times* actually forebore to inquire about lest they should ruin their game, nine-tenths of the superstructure seems to have rested.

HOW THE WINTER PASSES IN IRELAND.

DUBLIN, February 9, 1889.

THE position of affairs in Ireland claims peculiarly the careful attention of all interested in the government of civilized men. The field may be comparatively narrow, the people immediately concerned comparatively few, but on that field and among that people some of the most vital issues that can affect mankind are being tried, with a completeness that will leave no doubt for future generations as to the significance of the lessons illustrated. With a consensus such as few nations have ever before shown upon any question, by a proportion of 85 to 18 of her representatives—a proportion equally striking whether we consider population, area, or Government valuation represented—Ireland demands one thing, local self-government: no more than was granted with success to the separate States in your Union; less than was granted to the component parts of the German Empire; the one thing that might have kept the thirteen States united to Great Britain; the one thing without which Canada and Australia would long ago have severed the connection. This is denied to Ireland mainly because the island is not absolutely unanimous; and also in accordance with the views of a school of British politicians who hold that the desire for complete separation is inherent in the Irish, and that the only way to preserve the unity of the empire and its benefits to both parties is, to continue to coerce the weaker. The experiment is interesting and valuable, moreover, from the fact that it is approved by most of the Protestants here, who believe that force alone prevents their Catholic fellow-countrymen from reënacting St. Bartholomew's Day; it is approved by the mass of accumulated wealth and by some of the highest education of the country. As things were a century ago, such an experiment could not be so tried. The majority would rise against the minority, and would soon be decimated or suppressed by the mother country; the pot would either boil over or boil down. To-day, in accordance with more advanced ideas of humanity which cannot be wholly set aside, effective suppression is impossible, while the resources of modern civilization prevent even a transient

assertion of power by the majority. The minority can afford to openly scorn the majority as they never could have done formerly. Greater civilization saves us from a repetition of bygone horrors, and enables the elements of society fiercely opposed to exist side by side without active hostility, as without compromise or union.

For some months we have not progressed much, one way or the other; but all that has occurred illustrates the state of feeling to which I refer. The present is a hateful and intolerable conjuncture, subversive of true life and progress; yet, through all, society goes on much as usual, marrying and giving in marriage, attending balls, concerts, and art exhibitions. At political meetings and trials the people in Ireland are met and hustled about by the police, with a wanton barbarity and a display of force which seem intended only to exasperate. When they do not "clear out" or run away fast enough, like sheep, they are mercilessly bludgeoned, as at Carrick, on the occasion of Mr. O'Brien's trial and escape. I know that the Nationalist accounts of the transaction were little if at all exaggerated. We have the central incident of William O'Brien being knocked down by warders in his cell in Clonmel jail in presence of the Governor, his clothes torn off, and his hair and beard clipped while he was semi-unconscious from the struggle; we see him forced into the garb of a felon, and, later, when he had taken it off, left in his shirt, in the expectation that cold and misery would force him to resume it. William O'Brien is beloved by all who know him; he is regarded by millions of the Irish people in Ireland and by millions abroad with as much personal veneration as the English people accord their sovereign. Through suffering and abnegation, through long years of strife on behalf of the Irish, he has endeared himself to them as no one in modern times has endeared himself to the British people. When under arrest in Manchester, he was entertained by the Mayor and Mayoress, who lodged him in rooms last occupied by royalty. A few days later occurred the disgraceful scene in Clonmel jail. At the worst crisis, when the life of O'Brien was felt to be in hourly danger, the Lord Mayor of Dublin, aware that a telegram by Government messenger is the only means by which he can certainly reach Mr. Balfour, the Governor of Ireland, telegraphed an indignant protest, demanding a reply. None comes. He waits till late at night, and then despatches a letter by hand to the Chief Secretary's lodge. Mr. Balfour's secretary addresses the messenger, a Mansion House official of forty-six years' standing, as an "impudent rascal"; says, "It is merely humbugging, and if you come here again later on I will give you into the custody of the police"; then, to the police on guard outside the door—"Why did you allow him to come down here? If that impudent rascal comes here again this morning, you will take him into custody." I quote Mr. Balfour's own modified version of the incident.

Next day some one hundred and fifty Irish admirers of the Chief Secretary entertained him at dinner. The gathering was supposed to be "Liberal Unionist." The names of those present were not given to the press. Among the ninety "got at" and published by the *Freeman*, I counted seventeen Crown Prosecutors and others in Government employment. Some of the best men in Dublin were there—that is the serious part of the business. The press was excluded. Mr. Balfour made a long speech. An official report was sent to the papers, and in it "prolonged laughter," "renewed laughter," "roars of laughter," "laughter and applause," "laughter and loud applause," are noted as greeting remarks about the treatment of Mr. O'Brien and the reception of the Lord Mayor's messenger at the Chief Secretary's lodge.

The following day, Sunday, some two hundred and fifty protest meetings were held over Ireland. I attended one in a remote district, considered so comparatively unimportant that no newspaper reporters were present. It was a bitter winter's day. The district had been scoured from early morning by armed police patrols, so as to secure that no meeting should be attempted without their presence. Three Government reporters were in readiness with swift conveyances, in case more than one meeting should be held. On the field was drawn up a dark file of constabulary, shivering and sullen, an officer with his sword standing in front, as in pictures of a "line of battle" before going into action. Some thousand or two eager, bright-faced peasants listened to the speakers. John Bright once said that the British Government could put an armed man down beside each Irish civilian. Is it coming to that? Twenty-six of the Catholic archbishops and bishops joined in a "solemn protest" against the shameful indignities and "inhuman violence" inflicted on Mr. O'Brien. At all this the "sweetness and light" of Ireland thought it could afford to scoff. The *Daily Express*, the organ of what considers itself the cultivated public opinion of Ireland, wrote: "William O'Brien, M. P. for West Cork, is no less a criminal than any corner-boy who has been sent to jail for breaking a street-lamp in a drunken row. That is the plain fact of the matter. . . . We care no more for the political opinions of the twenty-six archiepiscopal signatories . . . than they care for ours. . . . There is now no reason, if indeed there ever was any, for making distinctions of persons. The hierarchy and priesthood in Ireland who signed the manifesto have declared themselves the enemy of law and order."

And so the minority here could continue safely to defy the feelings and opinions of the majority—that is the key to the whole Irish question— and William O'Brien would be still perishing in his shirt, but for the indignant and noble protests of the English people, a token of that sympathy with which our cause is now regarded across the Channel, drawing together the hearts of two peoples, the surest augury of some termination to the present intolerable condition of affairs, the strongest incentive to patience on our part, the best assurance that any reasonable settlement accepted and confirmed will be loyally adhered to in the interests of union and the Irish minority.

A noteworthy event is the arrest and committal to prison at Limerick on Wednesday of Mr. Reeves, a Conservative newspaper reporter. It is a striking illustration of how a repressive system of government tends to draw into the vortex of opposition many who would most desire to live peaceably. Some of the worst landlord tyranny in Ireland has been practised upon Mr. Delmege's Glensharrold estate in the County of Limerick. The particulars are fully given in a pamphlet written after a personal investigation by Alfred E. Pease, M.P., a wealthy Englishman, a member of the Society of Friends. The estate fell into Chancery. Some of the tenants obtained relief through the land courts, rents of £110 being reduced to £75; £20 to £13; £24 to £14; £39 to £24; £3.17.0 to £2.10.0, and so on. But many tenants burdened with heavy arrears could obtain no relief; adoption of the "Plan" was their only resource. Among others Mr. Pierce Mahony, M.P., a Protestant, an estated gentleman, and a refined, educated man, one of the Parliamentary party, attended a meeting of the tenants, and advised them to hold together in their combination. For this an attachment was issued against him by the receiver. On coming to the point it was discovered that, through some unaccountable negligence, no Government reporter had been present at the meeting, and there was no evidence of what Mr. Mahony had said. However, the presiding judge, Boyd, one of the strongest upholders of the present régime, was not to be balked. He sent for Mr. Reeves, a Conservative gentleman, who was known to have reported the meeting for his paper, and demanded that he should give evidence. Mr. Reeves demurred, urging that reporters were to a certain extent privileged, that the position they are accorded largely depends on their maintaining an independent attitude, and that this position would be forfeited if it were known that they were prepared to turn their opportunities to account as eavesdroppers for Government or people. On this Mr. Reeves, for contempt of court, has been committed to prison for an indefinite period. Our judges are not so punctilious as to their independence. We read in fashionable intelligence that on Monday, in the height of popular indignation regarding Mr. O'Brien's treatment, "Mr. Balfour was the guest of Chief Baron Palles at his Lordship's house. Some twenty-five other guests attended." D. B.

THE OLD MASTERS AT THE ROYAL ACADEMY.

LONDON, February 4.

THE exhibition at Burlington House this winter is especially interesting on account of the splendid examples of Rembrandts gathered together in the long gallery. We have fourteen examples from this great master's hand, painted at different times, in the various stages of his artistic development. We recognize the earlier manner, in which he seemed to seek merely the realization of the sitter, in the portrait of the painter's mother (164), from Sir Richard Wallace's collection—a three-quarter figure of an old lady dressed in black silk, against a gray background, looking towards the spectator. This canvas is dated 1632; and in "The Shipbuilder and his Wife," dated a year later (No. 167), we see the same precision of touch, the same firm modelling and clear bright color in the flesh tints, with shadows golden and transparent in their depths. This latter picture, lent by the Queen from the Buckingham Palace collection, is said to be the first work of art ever sold in England for the sum of five thousand pounds. This detail does not add to its interest, which is extreme for itself, the subject being so vividly represented. The shipbuilder is seated to the left of the spectators, near a window, and is evidently much engrossed with a design he is just drawing. Books, papers, and an inkstand are on a table beside him. He has been roughly called from the subject of his study by the good housewife, whom we see just coming in through a door she holds open. She is handing him a letter over the back of his chair, he is turning to take it. One can see by his expression the interruption is unwelcome, and that he is only half giving his attention to the fussy little lady in white cap and collar and black dress, who seems to be the very personification of stern reality and household cares. The man's dress is black with a white ruff. Although the picture is so sober in its colors, having only black and white and

brown besides the flesh tints, it is full of color and richness and depth of tone. The arrangement of the whole thing is so spontaneous that it strikes one as a lucky piece of nature the painter has come across and realized with a magic brush. The woman's expression is quite wonderfully living; her impatient, rather querulous attitude of handing the letter suggests to the modern mind an oft-presented bill. The shipbuilder's hand resting on his paper is so real one thinks almost he could grasp the warm soft fingers. In this work, as in his mother's portrait, the painting is very smooth and simple throughout, without that appearance of dashing brush work which characterizes later productions. It is as if the master wished to produce an illusion of reality, and to make us forget the vehicle; and the reality is indeed before us, besides so much more which only the best art can give.

Another portrait contributed by the Queen is that of a lady who has, if we mistake not, been once before on these walls some fourteen years ago. In this picture we see that Rembrandt could paint a handsome woman with as much skill as an old one. The lady holds a golden delicately worked fan in her right hand, and with the left she grasps the frame of an open window. The flesh glows throughout in a golden haze, as if the figure were standing in a sunset light, and the eyes, very beautifully rendered, look towards us; the cheek's tender modelling and the half-smiling lips give the impression of a day dream. The black dress is laced in front across a white satin dress richly embroidered with gold, and a long collar of delicate lace covers the shoulders and falls in points in front. The lady has three rows of pearls round her neck, and sleeves of lace on her arms; the figure relieves itself on a dark background. Every detail of the embroidery and of the lace is wrought out carefully, but with proper subordination to the face. The brush work is very masterly, and freer than in the examples described above. The name of the original of this beautiful portrait is not known. The work is signed and dated 1641.

Of Rembrandt himself we have two portraits —No. 159, in a dark-blue cap and fur collar, over which hangs a gold chain, which his gloved hand holds. This head is very like many other portraits he did of himself, and not as highly finished or as interesting as that in the National Gallery; but a very brilliant example of his latest manner is the larger than life figure of the painter in his old age, dressed in a Jewish gabardine and broad-brimmed black hat, holding a stick in his hand. This painting, No. 157, seems to be the fullest expression of masterly and facile execution, a very feast of color and of dexterous touches. He has revelled in reproducing the bright costume, evidently a studio property, and his own misshapen and rather bloated features in all their ugliness and unshapeliness. 1653 is the date affixed, eleven years before the painter's death, and one cannot help being fascinated by the complete mastery and originality of the painting of this work, although the earlier period seems, after all, the more desirable, and what will remain to show future generations how great the work of Rembrandt is in its broad simplicity.

Of Rubens, we have the portrait of Thomas Howard, Earl of Arundel and Surrey, known as the first collector of works of art in England. He is turning towards us, clad in armor, a blue sash across his shoulder, and a gold chain of some order round his neck. The head is a very handsome one, and is finely painted, as also the armor; but the arrangement of helmet and plume behind him, and the architectural background is mechanical, and does not suit the head. "The Marriage of Mars and Venus," a large composition of landscape and figures, is interesting to painters because unfinished, and shows Rubens's method of painting on a gray ground.

The Romney portrait of Henrietta, Countess of Warwick, and her children is extremely fine, one of the most completely satisfactory groups of this painter of graceful ladies. The Countess, a very beautiful person, with a curly erection of soft auburn hair falling in ringlets on her shoulders, is dressed in white satin, which is painted with a great deal more care and finish than usual with Romney. She is sitting in a crimson chair; her right arm is round the waist of her little daughter, who looks in her face. The boy stands a little way from her, hoop in hand, looking out of the picture. They are surrounded by landscape and architectural background to suit, according to the eighteenth-century tradition for family groups. Besides the inevitable Lady Hamilton, who, in the picture lent by A. de Rothschild, is not so bewitching as in other examples, we have by Romney a very fine portrait of the actress Miss Mellon, also a lovely face, with a character of its own. She is seated facing us almost full face, and wears a white dress open in front, showing neck and arms, round which a fur boa is twisted, which very effectively brings a dark note of color into the picture. The head is relieved against a pale gray-blue sky and distant landscape. The painting is very masterly—the graceful pose and light color of the whole are so appropriate. Another interesting head by the same master is of Mrs. Trimmer, the authoress of several educational works.

The most exceptional display of works of the rare master Antony Watteau is one of the principal features of this exhibition. They are exhibited in Gallery No. 2, and for the most part belong to Sir Richard Wallace and Mr. Alfred Rothschild. "Le rendez-vous de Chasse" and "The Garden Party" are the principal pictures in size, both 50x75 inches, and very fine examples. We have in the latter a wooded park with graceful groups of figures among the trees. In the foreground, a lady offers flowers to her companions seated on the grass; children are playing with a dog, and there are dancers with music beyond. In the landscape there is a delightful atmosphere and space, a suggestion of enjoyment of the present in the daintily dressed ladies, in bright satin sacques of tender hue, and their attendant chevaliers. Everything tells of ease and luxury and refinement. The eighteenth-century pastoral grace, which is as far removed from robust nature in Watteau's painting as in Metastasio's and Guarini's verses, has its own peculiar charm, and we have before us its happiest expression in these paintings, so exquisite in color and easy in execution. We are told that Watteau painted much in the Luxemburg Gardens, and studied Rubens to educate his eye for color. However this may be, his own intuitions never erred in this respect, and the smaller canvases, "Sérénade Italienne," "Masquerade," "Harlequin and Columbine," are all gems of pure bright color.

Examples, and very fine ones, of Claude, Greuze, Lancret, are also here, besides Van der Neer, Van der Velde, Van Ostade, and other Dutch masters. No room has been devoted this year to the early Italians, but, although they generally attract most attention, the rooms are so full of interesting works one cannot complain of their exclusion for once. For students of realistic landscape painting nothing can be more useful than a careful contemplation of J. Constable's "View on the Stour near Dedham," a very characteristic river landscape, full of movement and local color. One feels the damp marshy land, the watery sky, the winding river with its bridge, its barges being towed along, its cottages and people, are all essentially English. The painting is vigorous, splendid in execution and finish, yet so broad, although full of detail. Constable was evidently the first of the Impressionists.

The Water-Color Room has been devoted entirely to Turner's drawings. Besides the well-known large water-colors of Florence, Heidelberg, Stirling Castle, "Falls of the Clyde," etc., we have the entire collection of Mr. Fawkes, now for the first time framed and exposed to the light. These fifty-one sketches were done during a fortnight on the Rhine in 1819. Turner was absent from England for three weeks only, and on his return went straight from Rotterdam via Hull to the house of his friend, Mr. Fawkes, at Farnley Hall;

"and it is well remembered," says the catalogue, "by those still living that, on his arrival, he took from his coat pocket a roll of paper tied with a string, which, on being unfolded, displayed to the astonishment of all present these studies. They were made on paper originally white, but which Turner stained gray by passing it through a dish filled with the tint he required. This enabled him to wash and scrape out lights, and aided the marvellous power and rapidity with which he always worked. Body color is also freely used, as was his custom when working on tinted paper. Mr. Fawkes purchased the drawings, and they have been always kept in a special case; but the present owner, Mr. Ayscough Fawkes, has kindly allowed them to be temporarily framed and exhibited together."

Two rooms are devoted entirely to the portraits and subject pictures of the late Frank Holl, R.A., whose sudden death this summer, at the most successful moment of his career, caused so much regret among his brother Academicians, who hold him in very high repute as a painter, and felt especially proud of him as a man who developed his talent in England and at the Academy school. His sitters were from among the most distinguished personages of our time, and most of these portraits now before us have been in prominent positions on the line in Royal Academy exhibitions of recent years. The most admired are Earl Spencer, the Duke of Cleveland, Sir G. O. Trevelyan, the Rev. E. H. Cradock, Principal of Brasenose, Oxford, in doctor's gown, the Prince of Wales in black gown with insignia of the Garter, William Agnew, the great picture dealer, Lord Wolseley, John Bright, M.P., and many others. A careful survey of this collection fills one with wonder at the great reputation Frank Holl enjoys, and also convinces us that the impression made by seeing so much of his work together is not advantageous. One reason would be that the portraits are those of men; there is only one woman's portrait among them, and the treatment of men of ripe age in nineteenth-century garments could not be very inspiring. Holl has not even attempted to compose a background for most of them, and the heads, in rather forced effect of strong light and shade, are mostly relieved by a very dark brown background.

The qualities which are admirable are the excellent firm drawing, the simplicity of pose, always natural, the good modelling, and in most cases the likeness. Of artistic treatment and effect, and agreeable workmanship, there is none. Frank Holl was evidently not a poetic nature, and had very little taste; and although comparisons are always odious, we cannot help recalling that Rembrandt, who painted plain old ladies in the black and white costumes they wore in his time, and ill-favored men often,

and was very much given to brown backgrounds, produced effects which delight us, and which remain for all time enviable works of art. We very much doubt whether, two centuries hence, any one will desire to purchase as an object he wishes to gaze on for mere pleasure, not knowing the name of the original, any one of the portraits of Holl. Sir John Millais says, in some article recently published, that the old masters owe much of their glamour to age, and that the moderns will thus have a chance later on. It is true that the white paint acquires through time and varnish a delightful creaminess; but beyond this a picture which is inharmonious in color cannot become good by being darkened in tone.

The subject pictures of Frank Holl are especially native of the soil. No other city but London could have suggested their melancholy notes, or offered such types of misery and squalor. Take, for instance, "Want: the Pawnbroker's Shop," "Ordered to the Front," in which a group of soldiers in highland uniform are taking leave of their wives and children at a railway station; "The First-Born," in which the parents, an old man and boy, are following a child's funeral in a village churchyard; "Newgate: Committed for Trial," "Leaving Home," besides very many funerals in different churchyards, of young and old. Even Holl's friends and greatest admirers admit that he seemed to wish to illustrate every phrase of the funeral service. Notwithstanding their lugubrious subjects and a rather heavy treatment, accompanied by color always gray and unpleasant, these pictures were eagerly purchased at the time they were painted; it is evident they appealed strongly to the public taste. Sir Frederick Leighton himself did not scruple to tell us at Liverpool, two months ago, at the Congress there, that the English have no taste in matters of art, and he took some pains to prove it; yet he referred with admiration to the work of Holl, and deplored his loss as one of the most promising artists in the Academy, and of whom all Englishmen should feel proud.

Correspondence.

BENJAMIN VAUGHAN.

To the Editor of The Nation:

Sir: In your review of Mr. Hale's recent volume on Franklin, you speak of the conflicting estimates concerning the ability and character of Benjamin Vaughan and his services during the peace negotiations of 1782. You are quite correct in adding that the matter is not very material; but it may be of some passing interest to add a few facts not generally known concerning the part taken by a man so variously estimated.

Benjamin Vaughan, at the time of the peace negotiations, was a young man of about thirty. His father was an Englishman, his mother an American. He was connected by marriage with Laurens, and became a friend of Franklin through their mutual scientific interests. Through these relations with two of the negotiators he became connected, in a lesser way, with certain steps of the peace negotiations throughout the whole time of their transaction. He went to Paris early in July, 1782, to use his good offices, as a friend of Dr. Franklin, in allaying any suspicions concerning the sincerity of Lord Shelburne's desire for a lasting peace on liberal terms. He went at Lord Shelburne's express request, but he went as a friend of both parties, to do what it might chance to fall to him to do in smoothing the way for peace, rather than as a regular agent of Lord Shelburne. He was offered an official position by Lord Shelburne, but declined it, partly in order, as he stated, that he might be more free to act as it seemed to him would most promote peace. He was at no time "in the pay" of the British Government, as stated by Mr. Bancroft, having refused to receive any pay, or even the reimbursement of the expenses of his various long visits to Paris. Nor was he in any proper sense the "agent" of Mr. Jay. The correspondence indicates that Vaughan would have gone to London in any event, even had he not been requested by Jay to do so, for on September 9th, writing to Lord Shelburne of Rayneval's proposed visit to England, he begs him to "take no sort of measures till one of us comes over"—by this meaning apparently either Oswald or himself. As to the interview with Lord Shelburne to which Mr. Hale attaches so little, and Mr. Jay so much, importance, it was in the line of the long letter of September 11th, written by Vaughan to Lord Shelburne just before leaving for London, and sent in advance by one of the couriers. What Vaughan was able to do at this interview was probably only in confirmation of what he had written, that "under this commission I see they will not act," and "America must have a character"; and "if this moment is rudely managed, or slightly passed over, I conceive peace in consequence takes its flight, and that America will be hurried back into war at a moment when they have so ripened things that three hours would make you friends again."

Though sometimes displeased with his course, Shelburne requested him on at least four different occasions during the negotiations to go to Paris to attempt to facilitate the negotiations; and since Franklin stated to Vaughan "more than once," at the time of executing the preliminary articles, that "but for his letters and conversations" on the subject of the refugees, he "should not have given his assent to the refugee part of the treaty," his services may have been of some value. His position as a friend of both parties was unquestionably a difficult one; but that he filled it properly is best shown by the fact that his private correspondence shows him to have retained till old age the personal friendship of both Jay and Franklin as well as of Lord Shelburne, the actors on both sides most familiar with his course. G. H.

PEWS AND CLERGY IN GERMANY.

To the Editor of The Nation:

Sir: Mr. Anderson, in writing on newspaper inaccuracy, opens a theme that would never be closed from lack of material. In an editorial of the New York *Times* for February 15, on the difficulty that strangers find in getting seats in St. Thomas's, it is asserted that "in countries where there is an established church the rights of pewholders do not arise." Prussia has an established church; yet when in Hanover last winter, I several times accompanied my landlady to her church, and always found, as in St. Thomas's, the aisles filled by a standing throng, and the rights of the pewholders guarded more ruthlessly than in the American church, for the pew doors were locked, and each seatholder brought his (more usually *her*) key, and on passing into the pew closed the door after him. With German thrift, only one or two sittings are taken by a family, so each pew back had a line of china labels bearing the names of its several occupants, and the various holders scrupulously placed themselves in the foot or two of space allotted each. A portion of the church was also set aside for the families of the bureaucracy of the parish. My landlady seemed to regard the ownership of a seat as a luxury, and was quite content to take her chance when, at a late hour, the doors were unlocked for such as could find places on the unoccupied benches; but as the preacher was a popular one, the large majority of the non-pewholders were obliged to stand through the entire service.

Pewholdings also exist in the Church of England. An English lady lamented to me the difficulty of getting a sitting in Canon Duckworth's Church, London, for which she paid, I believe, a guinea and a half. And we remember, in that dreary-pathetic sketch of a few years ago, 'Miss Toosey's Mission,' how the gentle old maid resolved to save another guinea for her heathen by giving up the sitting she had so many years occupied in church, and placing herself among the poor on the free benches.

I never entered a German church without being struck by the middle-class air of preacher and people. The ministry, albeit an established one, by no means holds the social position which it does in England. A Frau Professorin expressed great surprise to me that a son of the Marquis of Salisbury should be in holy orders —"it was very noble in the *Adel* to be willing thus to work—but," she added, after a pause of reflection, "in England the Church offers a career." A member of the class who bear *von* before their names, corresponding, one may say, to the gentry of England, rarely, if ever, enters the Protestant ministry of Prussia, and no pastor ever wins for himself that predicate. The livings are, from a German middle-class point of view, reasonably well endowed, and, like all German official positions, accompanied by a pension, and in some cases by a dowager house; yet a few years ago there was such a scarcity of young ministers that the Government was obliged to increase the emoluments, and even yet, I believe, this profession offers the quickest road to a competence.

I was told that the pay of an officer, until he reaches the rank of captain, is insufficient for his support without parental subsidies; yet, as a young fellow said, it is only in the army that laurels are won, so the aspiring youth press into its ranks, when social prestige enables them to win the dowered maidens whom alone they woo, or, indeed, under army regulations, can woo. This social prestige of the military is "worked for all it is worth" in Prussia. I noticed how completely the offices of the burgher class form its élite; between them and the professions or bureaucracy is the same difference as in pre-Revolutionary France existed between *l'épée* and *la robe*. I. C. N.

Cincinnati.

GERMAN PROGRAMMES.

To the Editor of The Nation:

Sir: Aside from the question of cataloguing these productions, I am not inclined to dismiss them as of little value. Doubtless many of them were perfunctory performances, but, on the other hand, many are still of the highest value. Nothing is more common in editions of classic authors than references to "an instructive programme of A," or "the valuable contribution of B." There are numerous references to them in Hübner's guides to Bibliography; one—Bernhardt's "De Cicerone Græcæ philosophiæ interprete," published originally in Berlin in 1865—has, I think, been reprinted. The very fact that they are still published voluntarily would seem to show that they fill a want. On the commercial side, a Leipzig bookhouse publishes annually a special catalogue of them.

It would be an interesting problem to discover what influence the publishing of these programmes has had in stimulating and developing German scholarship. I have long thought that something of the kind might be introduced with profit in our American institutions of learning. Our young scholars, who are teachers also, are certainly not doing the original work, in philology at least, that ought to be done; yet it is very possible that such work has been done which has not seen the light, nor will see it in the present condition of things. The programme system supplies a stimulus and a means of publication—surely no mean advantages, whatever weakness the custom may have. W. A. MERRILL.

MIAMI UNIVERSITY, February 18, 1889.

SUUM CUIQUE.

TO THE EDITOR OF THE NATION:

SIR: I have lately been reading with considerable interest some 'Essays on the English Poets,' by James Russell Lowell, which are published in "The Camelot Series" by Walter Scott, London. At page 235, in the essay on Wordsworth, Mr. Lowell writes: "Many of Wordsworth's later poems seem like rather unsuccessful efforts to resemble his former self. They would never, as Sir John Harrington says of poetry, 'keep a child from play, and an old man from the chimney-corner.'" A note adds, "In the preface to his translation of the 'Orlando Furioso.'"

Sir John Harrington was born in 1561 and died in 1612. The dates of Sir Philip Sidney's birth and death are November 29, 1554, and October 17, 1586. The "Orlando Furioso: Translated into Heroicall English Verse" was published in 1591, and Sir Philip Sidney's "Apologie for Poetrie" in 1595, nine years after his death. But, according to Hallam, it was probably written about 1581; and Edward Arber, in his reprint in 1868 of the *editio princeps*, says: "The date usually given for the composition of the 'Apologie for Poetrie,' viz., 1581, may be taken as approximately correct." At page 40 of the reprint, in Sidney's description of "our Poet the Monarch," we read: "Hee commeth to you with words sent in delightfull proportion, either accompanied with, or prepared for the inchaunting skill of Musicke; and with a tale forsooth he commeth unto you; with *a tale which holdeth children from play, and old men from the chimney corner.*"

From the dates given above, I think it most probable that Sir John borrowed from Sir Philip the words quoted by Mr. Lowell, which he must have seen in Sidney's manuscript, unless, indeed, they happened to be a saying in common use at the time. Of this I am not aware that we have at present any proof.

Permit me to add to this note an instance in which Mr. Lowell's memory has undoubtedly played him false. In the first note to No. 4 of the first series of the 'Biglow Papers,' Mr. Lowell writes: "We might well exclaim with Austin (if a saint's name may stand sponsor for a curse), *Pereant qui ante nos nostra dixerint.*" Here the subjunctive *dixerint* is unnecessarily substituted for the indicative *dixerunt* of the original saying, and the words, moreover, are incorrectly ascribed to a saint. Mr. Lowell is so well read that he must surely have met with a charming book, which is now lying before me, viz., 'An Essay on the Genius and Writings of Pope,' by Joseph Warton, D.D. (5th edit., London, 1806). At page 88 of vol. i, Warton says: "St. Jerome relates that his preceptor, Donatus, explaining that sensible passage in Terence, 'Nihil est dictum quod non sit dictum prius,' railed severely at the ancients for taking from him his best thoughts—'Pereant, qui ante nos nostra dixerunt.'" In a note on this passage Warton refers to "Ante-Baillet, tom. ii, p. 207." The original anecdote may be found in Jerome's 'Exposition of Ecclesiastes,' 1, 9, and is as follows: "Comicus ait: Nihil est dictum, quod non dictum sit prius. Unde præceptor meus, Donatus, cum ipsum versiculum exponeret; Pereant, inquit, qui ante nos nostra dixerunt."

It may be further noticed that the saint has not quoted quite accurately the line of the comic poet. The actual words of Terence (Eun. Prolog. 41) are: "Nullum est jam dictum quod non sit dictum prius." Jerome's preceptor was, of course, Ælius Donatus, the grammarian and commentator on Virgil and Terence, who "flourished" in the fourth century.

I remain, sir, yours faithfully,

GEO. MURRAY.

65 AYLMER STREET, MONTREAL, February 17, 1889.

LANCIANI'S ANCIENT ROME.

TO THE EDITOR OF THE NATION:

SIR: In his note on the book of Prof. Lanciani, Prof. Platner, referring to a slip in the author's translation of Pliny, says: "The charge has sometimes been brought against archæologists that their classical scholarship is deficient;" and he is no doubt quite correct. There is also no doubt that the charge is sometimes well founded not only against archæologists, but against others who follow classical studies. We have heard of historians who blundered as badly as an archæologist, and with less excuse, if excuse can be. But for a working archæologist there does seem to me to be a better apology than for some others, as his attention is necessarily largely given to the practical investigations which furnish his peculiar material; and to men who are for the greater part of their time absorbed in the study of *things*, *books* fade into the distance. When a man is, for any reason, obliged to forego the just relation between classical study and actual archæological work, he sacrifices the one or the other; and when, like Lanciani, he is incessantly occupied with the work of a large province of great interest, he may be pardoned if sometimes Pliny and Herodotus become somewhat vague memories, and the version of them which remains in the worker's mind is somewhat distorted, and such as the scholar who has always his book in hand may justly characterize as due to "carelessness or ignorance of the Latin language," though it is really a distortion by memory of a passage well known or read long ago.

Prof. Haynes's criticism is, I believe, absolutely correct and merited, as no doubt Lanciani himself will admit on consideration. He has been so long devoted closely to the limited but extremely important field of Roman investigation, that he has not collated the finds in that district with those lately made in other provinces of Italy—fields intrusted to other workers. To cover the whole ground of the present Italian researches would be impossible without sacrificing something of the thoroughness of his work in his own field of Roman research; but he certainly should have known that in certain tombs of an earlier date than those he treats of there have been found objects of iron. I am inclined to think that it was carelessness rather than another cause that led him to the statement in fault, for he must have known that in the earliest tombs thus far discovered at Tarquinia there are iron implements, and that these tombs cannot be, according to Helbig (whose authority no one will deny), later than 900 B. C., while the date is by some Italian archæologists put still further back, and the foundation of Rome is not, even according to Lanciani, so remote. So far as I know, we have no necropolis in Italy in which iron is not found, though there have recently been found some, very extensive, in the western part of Sicily, in which no metal whatever occurs. But we must, I imagine, go much further back than the archaic Italian tombs to get beyond the use of iron, for the earliest Italic myths (which are only tradition crystallized) furnish Vulcan with a forge and make him hammer out the thunderbolts; and this can only relate to the use of iron, as bronze is not worked on the anvil, but hammered cold or cast.

Prof. Haynes's reference to the stone axe used in the sacrifice may be reinforced by the modern custom of the eastern Jews, of using a splinter of flint for circumcision; and I may add, as another illustration, that in certain parts of Sicily the husbandman has a superstition about the use of an iron ploughshare. The lack of iron in the Albano-Roman tombs, when it is found in the contemporary graves elsewhere in Italy, does, however, seem to me a strong confirmation of the Alban origin of Rome, though it does not help Lanciani otherwise.—Yours truly, W. J. STILLMAN.

GIRGENTI, SICILY, February 9, 1889.

Notes.

LONGMANS, GREEN & CO. are about to publish in New York and London a volume of poems by T. W. Higginson, entitled 'The Afternoon Landscape,' and dedicated to Mr. Lowell. It includes a number of translations, from Sappho's Ode to Aphrodite and from the sonnets of Petrarch and Camoens. The same firm announce further an autobiographic tale of Monmouth's rebellion, 'Micah Clarke: his Statement.'

'Janus,' a musical novel, by Edward Irenæus Stevenson, is in the press of Belford, Clarke & Co.

'Shall We Teach Geology?' by Prof. Alexander Winchell, to be published by S. C. Griggs & Co., Chicago, is a contribution to the perennial discussion over the claims of science and the humanities respectively to precedence in a practical education.

In the current issue of Mr. J. H. Hickcox's Monthly Catalogue of U. S. Publications, we read that the Printing Committee of the House has reported in favor of the Government's publishing a posthumous work by Gen. Emory Upton, viz., a complete analysis of the military records of the United States from the beginning of the Revolution to 1862, with a chapter on the military policy of the Confederate States.

We welcome the new volume of the 'Co-operative Index to Periodicals,' for 1888 (New York, 330 Pearl St.). It is longer by six pages than the corresponding Index for 1887. Not only have we here a clue to what is best in English and American periodical literature, but, as we have before remarked, the notable books and the notable personages of the year, even the chief art exhibitions—in short, what the cultivated world is talking about—is here reflected in reviews and obituaries. Moreover, we get a conspectus of the picked writers of the day, whose names are appended (when known) to their several articles, and are gathered up into an author-index filling thirty-four pages.

We observe with pleasure that Prof. Melvin M. Bigelow's 'Elements of the Law of Torts'

has reached the honor of an English edition. It appears, in a very attractive form, from the University Press at the English Cambridge, where it has for some time been a text-book.

To the valuable collections of cases prepared for the use of students of law at Harvard University there are now added two volumes of 'Select Cases and Other Authorities on the Law of Property,' by Prof. Gray, and two volumes of 'Cases on the Law of Quasi-Contracts,' by Prof. Keener. Teachers and students of law will wish to know of these careful compilations. Both are published by Charles W. Sever, Cambridge.

As an excellent companion to Reinach's 'Manuel de Philologie,' we call the attention of classical scholars to the following work, 'La Lingua Greca Antica: Breve Trattazione comparativa e storica, di Domenico Pezzi' (Turin: Ermanno Loescher, 1888). In eighty pages of preliminary matter the progress of Greek studies, in grammar and lexicography especially, is traced from the Alexandrian period down to the present decade. The rest of the work is divided into two parts (pp. 81-308, 309-474). Part 1, "Il panellenismo glottico," is devoted (*a*) to phonology, concluding with a section on accent, in which the opposing views of Drs. Bloomfield and Wheeler are considered, and (*b*) to the significant elements of Greek words, under which are treated the inflexions and their significations. Part 2 treats of the Greek dialects, giving for every dialect the most important documents, with appropriate bibliographical remarks, and then the more prominent characteristics of each, with examples. As is the case with Reinach's work, fully half of this book consists of foot-notes, presenting an excellent bibliography of the various subjects treated, making it a most valuable work of reference. We miss, however, the capital index that crowns the French scholar's Manual, though a full table of contents enables the seeker to find the various subjects that are discussed.

Another pictorial Cæsar, or fragment of Cæsar—his seventh campaign in Gaul, B. C. 52 (De Bello Gallico, Lib. vii.)—edited for school use by W. Cookworthy Compton and published in London by Geo. Bell & Sons, merits the attention of teachers. Mr. Compton has made the tour of the principal places of the narrative, accompanied by an artist who contributes slight but sufficient topographical sketches. Numerous maps are borrowed from Kampen, and these, with the pictures of scenery, modes of warfare, etc., are well calculated to interest the student and to aid him in his understanding of the text. There is also a list of constantly recurring idioms, which the editor judiciously recommends committing to heart.

The sixth volume of the *Forum* shows the usual variety of topics discussed or questions asked—the interrogative heading being, not inappropriately, a favorite. Labor receives a good proportion of attention, and rather more than any other subject or interest. The South, railroads, the tariff, education, annexation of Canada, the Chinese, are other prominent subjects. Mr. Edward Atkinson has oftenest had the floor. Other well-known names are Vámbéry, Goldwin Smith, Andrew Lang, James Parton, G. W. Cable, Max O'Rell, Andrew D. White, Jules Verne, etc.; and it was in this volume of the *Forum* that Mr. Edmund Gosse raised the question whether America had ever begotten a poet.

The bound *Critic* for 1888 makes two volumes, in whose contents we discern nothing unusual for comment. The "Authors at Home" series reaches No. 28 with Mr. R. H. Stoddard.

The 'Universal Atlas, Geographical, Astronomical, and Historical,' published at 19 Park Place by Geo. F. Cram, is a poor production, cartographically considered, and at most can only be recommended for rough reference. It contains a good deal of statistical matter, but none that might not more safely be sought elsewhere.

A *Gedenkbuch* has been made up for sale at and for the benefit of the German Hospital Fair in this city. Distinguished German and American authors have combined to furnish autographic sentiments, poems, etc., and a certain number of sketches by well-known artists has been interspersed with the facsimiles. Carl Schurz's address at the opening of the Fair introduces this souvenir.

The Georgia Historical Society celebrated at Savannah on February 12 its fiftieth anniversary, with good spirit and much satisfaction over what has been gained in reanimation and endowment since the war. It represents a force much needed not only at the South but in every part of the Union. Of very few even of the best of those now existing can it be said that they subserve any other purpose than that of a museum of books and relics. They hardly enter into the life of the community or of the age.

Georgia's leading living historian, Col. Charles C. Jones, was unable to share in the Historical Society's festivity. A portrait of him, with a biographical sketch and extracts from his numerous works, is given in *Literature* for February 9.

We have received the sixth biennial report of the Kansas Historical Society, a very vigorous institution, which counts more than 48,000 volumes, bound and unbound. Of these one-sixth are newspaper and periodical files. Almost the entire press of Kansas makes a direct contribution of its regular issues to the Society.

A reprint has been made from the *Magazine of Western History* of Mr. W. H. Venable's "Early Periodical Literature of the Ohio Valley." It begins with the *Western Review*, published at Lexington, Ky., in 1819-21. In the section on *Hall's Western Monthly Magazine* the writer falls into the error of saying that Lyman Beecher "had made Lane Seminary a militant post of offensive warfare against Catholicism and *slavery*." A citizen of Ohio should have been better informed on this point. The late James Freeman Clarke was the second editor of the *Western Messenger*, started in 1835, and was succeeded by the Rev. W. H. Channing, both drawing their literary support freely from the Unitarian denomination at the East. At least ten of the contributors, says Mr. Venable, were also among the writers for Emerson's *Dial*. In 1860 a new *Dial* was founded at Cincinnati by Moncure D. Conway, another Unitarian clergyman, who likewise drew upon his brethren in Boston.

We can recommend for instruction and for readability three Indian brochures on our table. "The Seminole Indians of Florida," by Clay MacCauley, is not (as one might suppose who thinks of the Seminole war as having ended in the extermination of the tribe) an historical essay, but a study of the living remnant on the soil of the peninsula. Physically and morally, the account of these people is altogether favorable, if we take no exception to the prevailing polygamy, which, singularly enough, produces more males than females. There is a certain admixture of negro blood. The pamphlet is illustrated. From vol. ii, No. 1 of the *American Anthropologist* Dr. Washington Matthews, U. S. A., reprints an article of his on "Navajo Gambling Songs," of which he translates a number by the side of the original, with some explanatory discourse. The first of the Archæological and Ethnological Papers of the Peabody Museum at Harvard University is an historical essay, "Standard or Head-Dress?" on a featherwork relic of ancient Mexico, by Mrs. Zelia Nuttall, a special assistant of the Museum. Three colored plates accompany this paper, and are needful for the comprehension of it and of the bearing of the discussion on the ancient Mexican picture-writings.

There is no end to universal calendars. That well deserves its name which is called "The Ready-Reference Calendar" (Union Printing Co., 15 Vandewater St.). By contenting itself with a range of two centuries (1753-1956) it makes the determination of a given day very simple and rapid. The finding of Easter Day is a part of the scheme.

On March 1, a new eclectic French monthly, *La Revue Française*, will be published. Its province will be to furnish readers and students of French with the select works of the best French authors, annotated where necessary, and with essays on the study of the French language and literature by competent teachers and writers. The selections will mostly be drawn from contemporary French periodical literature. The publication office is at 39 West Fourteenth Street, New York city.

The American Association for the Advancement of Science meets this year at Toronto, August 27 to September 3. The Local Committee have organized with the Hon. Charles Carpmael as President, with Mr. James Bain, jr., Treasurer, and Prof. James Loudon, Secretary. It is believed that this will be a large meeting, rivalling the Boston meeting of 1880. The President of the Association is Prof. Mendenhall, and Major Powell gives the address as retiring President.

—Mr. Charles Dudley Warner's article on Canada in the March *Harper's* has an interest beyond that of a mere contribution to a current discussion, and is quite the most thoroughly studied and valuable of the papers of this kind that he has been writing recently. He gives a good physical description of the country, some pages explanatory of its political constitution and recent history, and a good deal of the results of his own observation in a journey to Vancouver and back, over the Canadian Pacific, and in his various social opportunities. It would be a pity if Mr. Warner's reputation for other sorts of writing should put any readers who enjoy well-reasoned economical and political discussion off the scent of this article of his. The number affords scope to the engraver in the second paper on Norway, in Theodore Child's account of the Institute of France, and in Curt von Zelau's article on "New Vienna." By the latter is meant, of course, the Ringstrasse and its examples of noble architecture, which cannot be too often reproduced, at once to shame and cultivate our taste as displayed in public buildings. Among the shorter contributions, George William Curtis's sympathetic notice of Motley's 'Letters' is easily first in interest. "Poe's Mary" presents to us a young lady of fifty years ago, whose dealings with the poet, as lover and friend, make up an astounding revelation of the manners of the time—though it may not be safe to say that they could not be paralleled to-day.

—A word apart must be given to the article on the "Origin of Celestial Species," in which Mr. Norman Lockyer seeks to account for the evolution of the different forms of the heavenly bodies from a chaos of meteorites. The idea is an old one, but Mr. Lockyer advances it vigorously under the influence of much new light,

and makes out an excellent hypothesis. In a recent English photograph of the nebula in Andromeda, there appears endless detail of form, and two satellites of the central mass are in the actual process of formation, as it were. These, with the numerous concentric rings, must be taken as a striking confirmation of the nebular hypothesis. As the elder Darwin accounted for the origin of terrestrial species, so, in explaining the evolution of celestial species, his son, Professor George Darwin of Trinity College, is playing no unimportant part. Taking the Kantian idea of all space originally filled with nebulous, incandescent gas, and comparing it with the idea of space thickly strewn with meteorites in the beginning, Mr. Darwin has shown that the two may be reconciled by considering the meteorites as the magnified particles of a magnified gas, behaving like the molecules in the kinetic theory of gases, only on a vastly larger scale. And further, from his investigation of the question whether there is anything inconsistent in the assumption of a magnification so great, Professor Darwin concludes that Mr. Lockyer's hypothesis contains nothing at variance with the nebular hypothesis of Laplace. As the spectroscope a quarter-century ago revealed the presence of the same kind of matter throughout all space, so now a still more important generalization seems establishing, that "all celestial forms are due to an exquisitely simple evolution of matter in the form of meteoric dust."

—Mr. Appleton Morgan's book on 'The People and the Railways' is little more than a series of essays which have appeared in the *Popular Science Monthly* and other periodicals. The author is a pronounced defender of corporate rights. He believes that legislation on railroads has done much harm and little good. Some of his points are well taken—for instance, when he shows how the growth of trade centres results from natural conditions rather than from arbitrary action of the railroad managers, or when he exposes the fallacy of Mr. Hudson's indictments against the railroad system of the United States. But we fear that the book will do more harm than good to the cause which it is designed to advance. In his anxiety to defend railroads from ill-judged interference, the author often goes to the length of trying to shield them from their fair responsibility. The latter effort stands in the way of the former. Only by accepting full responsibility for what they do, can our railroads claim immunity from the most meddlesome legislation. If the advocates of the railroad system say, as Mr. Morgan virtually does, that our managers cannot prevent accidents, there will be a loud demand for the substitution of State control instead of private control. But, in point of fact, our railroad men do not thus seek to disclaim responsibility. They feel the burden, and accept it as one of the incidents of their position. When Mr. Morgan's article on this subject first appeared, more than a year ago, we showed that he was materially wrong in certain statements of fact. He replies by a slur on official investigations, and implies, though he does not exactly say, that he bases his statements on a report of experts. Unfortunately for him, the facts which we presented were based on the testimony of the company's own officials; and we do not believe that there has been any report of experts which will warrant Mr. Morgan's conclusions.

—We have been glad to observe and to take part in an appeal of American scholars to the incoming Administration in favor of retaining at his post our present Minister to Copenhagen, Prof. R. B. Anderson. Mr. Anderson has ideal qualifications for the place, in his Scandinavian lineage and American birth, and a scholarly cultivation and achievement which do honor to his native land. The hardship of his recall, supposing it to be contemplated or possible, lies in the fact that he is engaged in literary labors of recognized importance, and partly international in their nature, which can only be conducted on the spot where he is. They have not interfered with, but rather facilitated, the discharge of his functions at the court of Denmark, where he is *persona grata*. An open letter from citizens of Scandinavia to the President-elect of the United States lies before us, recounting the above facts, and affirming that "We would look upon it as a serious loss to the Scandinavians on both sides of the Atlantic if a new man, unacquainted with Scandinavian affairs, should succeed a Minister who, by his knowledge of our language, our history, and our customs, has for the past four years been so excellent a connecting link between the United States and us." This appeal is signed by Björnson, Brandes, Ibsen, Fr. Winkel Horn, A. L. Kielland, Jonas Lie, Viktor Rydberg, Niels W. Gade, Johan Svendsen, Carl Bloch, and many other persons eminent in letters, art, journalism, and politics, as, F. S. Bang, Councillor of State and Treasurer of the Royal Danish Society of Northern Antiquaries, Sofus Högsbro, President of the Danish Folkething, and some nine members of Parliament. Mr. Anderson's retention ought to be insured by so imposing a tribute to his worth as a scholar and as a Minister. Certain it is that his removal would be a scandal without the shadow of an excuse.

—Bodley's librarian is regarded, and not without reason, as holding the blue ribbon of the profession; and when the vacancy caused by the death of Mr. Coxe, "the lovable librarian," was filled by the appointment of E. B. Nicholson, there were misgivings on the part of some, for not all felt the same confidence in the wisdom of the choice as did the late Henry Bradshaw, the Cambridge librarian, who wrote that he was happy "in the conviction that they have found a man who, while there is no fear of his working slavishly in a groove, will, on the other hand, not despise the traditions of a place where *good traditions* are of such vital importance, if that aroma is to be preserved which gives the charm to the Bodleian and places it at the head of all the libraries in Europe." Six years have passed since these words were written, and a report on the Bodleian Library covering these six years has just been issued, which will be read with interest by many in this country (Oxford: Clarendon Press; New York: Macmillan). The report is a very full and systematic one, going into much detail concerning the progress of the library in all departments, and leaving upon the reader the general impression that a great amount of energy has been shown, much work has been done, and many changes have been made. Changes no doubt were inevitable, if not always desirable, and, judging from the report, Mr. Bradshaw's conviction has, on the whole, been justified by the event. It is unnecessary to follow out all the details, but a few salient points may be worth noting.

—Owing to the extreme parsimony with which the Bodleian had long been treated by the University, Mr. Coxe had been greatly hampered in all his labors, and the working force at his disposal being altogether inadequate to perform even the necessary work of the library, it was inevitable that arrears of cataloguing, classification, and binding should go on accumulating for lack of funds. It so happened, however, that at the beginning of 1882, in consequence of certain provisions made by the Universities Commission, a new and brighter era in the financial prospects of the library had just opened, and Mr. Nicholson was not slow to take advantage of the opportunity thus offered. The staff was largely increased, the arrears of cataloguing were attacked, and the work of classifying the slips for the subject-catalogue, begun in 1878, was so vigorously pushed forward that it is now estimated that the whole mass of slips, about 700,000 in number, will be ready for final revision by the librarian in 1892. During this period much, too, has been done in the direction of a more minute classification on the shelves, the old subject divisions having been multiplied some sixty-fold, and the report gives a brief explanation of the system of numbering adopted. The bulk of the accessions in the department of printed books is received under the copyright act, but large purchases have been made in the class of incunabula, and a much-needed catalogue of the fifteenth-century books in the library is in an advanced state of preparation. As an actual count of the books was made in 1885, the estimate that the number of volumes in the library at the end of 1887 exceeded 470,000, over 28,000 of these being manuscripts, is probably more nearly correct than such estimates generally are. Since 1883 the library has received a yearly grant of $2,000 for the purchase of manuscripts, and in this period the number of Armenian manuscripts in the library has been more than doubled, the Schlagintweit collection of Tibetan manuscripts was secured, and almost five hundred additions were made to the already rich collection of Sanskrit manuscripts. Much progress has also been made in the preparation of catalogues of the various manuscript collections. Nor has the comfort of readers been neglected; additional facilities have been provided, both in the Bodleian and in the Radcliffe, where a classified students' library of about 8,000 volumes has been arranged in open cases. There has been, as might be expected, a large increase in the attendance of readers. In some directions, however, it has been found necessary to introduce slight restrictions on the facilities formerly conceded to readers. The question of lending books from the Bodleian gave rise to much discussion in 1886, and the University has practically resolved on returning to what was the law on this subject before 1856, by requiring the assent of Convocation for every loan. Full details are given of the financial condition which, owing to the inability of All Souls' College to keep up the contribution called for by the Universities Commission, is by no means so bright as it was in 1882. In conclusion, it may be noted that in some portions the report reads like a defence against criticisms; but criticisms of his management no librarian can hope to escape, for, as Panizzi put it, one of the difficulties a librarian experiences, and perhaps the greatest, is that everybody thinks he knows how to manage a library of printed books, and everybody tries to interfere. No doubt, too, Mr. Prothero's remark concerning certain criticisms of Bradshaw's management, "An occasion for grumbling is a luxury of which few persons refuse to avail themselves, and university society is no more exempt than other societies from a tendency to exaggeration," is as applicable to Oxford as it was to Cambridge. At any rate, if the report is to be taken as a defence of Mr. Nicholson's management, it is certainly a complete one.

—It has been customary to say that the lack

of the principle of representation was the chief point of difference between the political system of the ancients and that of the moderns, and to wonder that so natural and apparently easy a step was not taken, when once the Romans had developed their municipal institutions. The wonder becomes greater when we learn that this step was actually taken in the provinces, but remained barren of political results. It is only very recently, and chiefly as an outcome of the study of inscriptions, that this fact has become known, and the institution in question has been studied. M. Fustel de Coulanges has some interesting chapters upon the subject in the first volume of his 'Institutions'; and M. Paul Guiraud has devoted to it an exhaustive monograph of 309 pages (Paris, 1887), entitled 'Les Assemblées Provinciales dans l'Empire Romain.' In these provincial assemblies we have real representative institutions, so far as the form and constitution were concerned; for the members were elected for this special purpose by the municipalities, and had their own officers and their own budget; but they stopped short of being representative bodies in the full sense of the term, because they were not in possession of any substantial powers; they were not a part of the Government, but only subsidiary agents of the Government, their functions being primarily religious, associated with the cult of the Emperor. As M. Guiraud says (p. 270): "The provincial assemblies possessed no authority of their own: they existed only by the will of the prince; they sat not by virtue of any power, but as a matter of duty; what was wanted of them was not to limit the action of the Government, but to assist it." It could not be otherwise under the autocratic rule of the Empire. If this system had been adopted in Italy under the Republic, a true representative government might have been the result; as it is, it is interesting to see how very near the ancients came to discovering the great distinctive principle of modern free government.

THOMAS POOLE.

Thomas Poole and His Friends. By Thos. Henry Sandford. 2 vols. London: Macmillan & Co. 1888.

WHOEVER has read much in the literary memoirs of the Lake School must have felt a lively curiosity to know more of the subject of this biography. Coleridge drew his portrait in a fine passage of 'Church and State,' as a type of strong, practical character. De Quincey described him in the 'Autobiographical Sketches'—"a stout, plain-looking farmer leading a bachelor life in a rustic, old-fashioned house," with a good library, especially in political philosophy, having some experience of travel, and "so entirely dedicated to the service of his humble fellow-countrymen, the hewers of wood and drawers of water in this southern part of Somersetshire, that for many miles round he was the general arbiter of their disputes, the guide and counsellor of their difficulties." Wordsworth, in a letter to him asking his critical opinion of "Michael," says: "In writing it, I had your character often before my eyes, and sometimes thought I was delineating such a man as you yourself would have been under the same circumstances." Poole was, besides, the valued friend of Rickman, the statistician and compiler of the first British census; of Thomas Wedgwood, whose career, beginning with the experiments in photography which are well known, was so unfortunately ended by incurable disease; of Sir Humphrey Davy, and of others of the most useful men of the time. Both personally and in his relations with those men who felt the revivifying influence of the French Revolution in England, he presents an interesting figure, and his memoir not only helps to complete our knowledge of Coleridge particularly, but exemplifies in a notable way the characteristics of his age of reform.

Poole is the more attractive because of the humbleness of the means by which he made his life remarkable. He was the son of a tanner in well-to-do circumstances, at Nether Stowey, in the region of the Quantock hills, and was bred to that business; but he had a thirst for knowledge which was perhaps encouraged in the home of his uncle, a more liberally-minded man than his father, where he found well-educated cousins, one of them going to Oxford. He could not have neglected his business very much, whatever his father may have thought, by his devotion to French and Latin, since he was chosen to be delegate to the Tanners' Trade Convention at London while still a youth, and made a favorable impression and brought away one valuable friendship. It may have been at this time and through the advice of the "great London tanner," Mr. Purkis, that he came under the influence of French opinions, which he imbibed sufficiently to alarm his Toryish cousins as well as the country neighborhood, by shaking the powder out of his hair. He was thought to be a democrat, and the word was at that time and place a thing to shudder at. How it was that he became acquainted with Coleridge, it is impossible to ascertain. There was a tradition that the two had met accidentally in a tavern, when the poet was in the army and Poole had metamorphosed himself into a common workman. It seems to be believed that Poole did carry out this plan of becoming thoroughly versed in the details of the tanning trade and acquainted with the minds and habits of the workmen; but the time of this is uncertain. It is as a possible adventurer in the Pantisocratic scheme that we first find him connected with Coleridge. He describes the plan in a letter to an inquiring friend, and as this account is the most detailed of any yet published about this famous project of settlement on the banks of the Susquehannah, we will extract the passage:

"Twelve gentlemen of good education and liberal principles are to embark with twelve ladies in April next. Previous to their leaving this country they are to have as much intercourse as possible, in order to ascertain each other's dispositions, and firmly to settle every regulation for the government of their future conduct. Their opinion was that they should fix themselves at—I do not recollect the place, but somewhere in a delightful part of the new back settlements; that each man should labor two or three hours in a day, the produce of which labor would, they imagine, be more than sufficient to support the colony. As Adam Smith observes that there is not above one productive man in twenty, they argue that if each labored the twentieth part of the time, it would produce enough to satisfy their wants. The produce of their industry is to be laid up in common for the use of all; and a good library of books is to be collected, and their leisure hours to be spent in study, liberal discussions, and the education of their children. A system for the education of their children is laid down, for which, if this plan at all suits you, I must refer you to the authors of it. The regulations relating to the females strike them as the most difficult; whether the marriage contract shall be dissolved if agreeable to one or both parties, and many other circumstances, are not yet determined. The employments of the women are to be the care of infant children and other occupations suited to their strength; at the same time the greatest attention is to be paid to the cultivation of their minds. Every one is to enjoy his own religious and political opinions, provided they do not encroach on the rules previously made, which rules, it is unnecessary to add, must in some measure be regulated by the laws of the State which includes the district in which they settle."

Such was the scheme of colonization worked out by Coleridge and Southey, the latter of whom Poole describes as "more violent in his principles than even Coleridge himself"; and he adds: "In Religion, shocking to say in a mere Boy as he is, I fear he wavers between Deism and Atheism." The cost to each undertaker was to be £125. But Poole, who was at this time twenty-nine years old, accompanied this information with very sound considerations as to the chimerical nature of the project, which is now interesting partly as an example of the French ferment, but mainly as a literary curiosity.

The lifelong friendship of Poole and Coleridge began some months later, in the summer of 1794. The actual day when Coleridge and Southey visited him was long remembered in the neighborhood as that on which the news of the death of Robespierre reached the place. Poole was already a suspected democrat, and had been warned that the Government had an eye on his private correspondence, but he made light of it. The violent expressions of his two companions on this occasion were scandalous. It is reported that, Tom's cousin (the tall, fair-complexioned Oxford don) being present, one of them had said that "Robespierre was a ministering angel of mercy, sent to slay thousands that he might save millions"; and Southey in particular laid his head down upon his arms and exclaimed, "I had rather have heard of the death of my own father!" But one must not rely on phrases handed down by tradition. It is certain that people were very much shocked, and in particular the fair-complexioned don, with powdered locks and precise attire, who recorded the occurrence, but not the words, in his Latin diary. "Uterque," he writes, "vero rabie Democratica quoad Politiam; et Infidelis quod Religionem spectat, turpiter fervet. Ego maxime indignor"; and after a few words more he concludes, "sed de talibus satis." The sisters of the Latinist, who was a most admirable man, were similarly indignant at "Cousin Tom" for entertaining such friends; and the situation was not improved when Coleridge, in the beginning of 1797, the friendship with Poole having now strengthened and become most intimate, came to live in Stowey, where he passed what must have been the most agreeable year of his life. It was here that he composed the "Ancient Mariner." To the young lady cousins the poet, "with the brow of an angel and the mouth of a beast," as he describes himself, was only a bugbear, and he received from them scant respect; but perhaps, as the biographer suggests, Mrs. Coleridge and the baby helped to reconcile him with the humbler neighbors. It was different when Wordsworth and his sister, with the young child for which they were caring, took the Alfoxden House near by, also with Poole's aid and counsel. Stories were rife about them at once: "the profound seclusion in which they lived, the incomprehensible nature of their occupations, their strange habit of frequenting out-of-the-way and untrodden spots, the very presence of an unexplained child that was no relation to either of them"—such are the reasons assigned for that cloud of distrust which gathered about the poet and his sister. It was now that the Government spy was sent to watch them, and they were warned to leave at the expiration of their year's lease, by the direction of the lady, Mrs. St. Albyn, who owned the estates. It was to no purpose, apparently, that Poole wrote to her a full explanation of the circumstances, and assured her of Words-

worth's character. Matters reached their pitch, however, when Thelwall came to visit Coleridge, and, tired of a life of persecution, also wished to settle in this favored locality. This was clearly impossible, and Coleridge wrote to remind him that Poole could not be asked to jeopardize further his reputation in the country side.

The disturbed mind of the neighborhood, in view of the presence among them of a nest of democrats hatching they knew not what, was a passing matter. To Poole himself the companionship of Coleridge and Wordsworth meant an invigoration of his intellectual life which must have been a stimulus of no ordinary force. At the same time his practical sagacity was never once at fault. From the beginning the character of Coleridge declares itself as it is now well known, with all its excitability and impulsiveness, and that half-frantic weakness which marks so much of his correspondence. Some of these new letters would be incredible were it not that, unfortunately, there are too many others like them. Poole, however, discharged well his duty as the friend whom Coleridge always regarded as nearest and most faithful. He was constantly serviceable. It was he who devised the gift which was to be made annually from the proceeds of £5 contributions by Coleridge's friends. Doubtless he had much to do with obtaining the Wedgwood annuity of £150, which at the time seemed to insure a life undisturbed by financial anxieties; and in lesser matters he was not less active. On the other hand, Coleridge explains the nature of the bond which united them very plainly: "I used to feel myself more at home," he says, "in his great windy parlor than in my own cottage. We were well suited to each other—my animal spirits corrected his inclination to melancholy; and there was something, both in his understanding and in his affections, so healthy and manly that my mind freshened in his company, and my ideas and habits of thinking acquired, day after day, more of substance and reality." As time went on, Poole, without lessening his admiration for his friend's abilities, saw more plainly the grave nature of his defects. He followed him with good wishes and high hopes on his German tour, but the winter in Malta and the months after Coleridge's return must have sealed his judgment that nothing of fulfilment of the expectations of Coleridge's genius was now to be looked for. He was never slow to give him advice, and it was always sagacious; but advice was the last thing that Coleridge wanted. Poole did not believe that Coleridge's ills were real. It is perfectly plain that in the years during which Coleridge suffered physically, and was making attempts to regain health by this and that project of travel, Poole regarded him as hypochondriacal, and told him so plainly enough, if not in so many words. This probably occasioned in part the disagreement, the coolness, in fact, which arose between them at one time, and which is the blot on their friendship. Coleridge resented the opinion that his ailment sprang from mental rather than physical causes; and, when an incident occurred to acerbate this feeling, he broke out in a manner which Poole rightly regarded as "outrageous." Wordsworth had written to Poole, detailing Coleridge's situation, and asking if he could not provide £100, for him to go to the Azores. Poole replied to Coleridge directly, and excused himself, saying he was ready to contribute £20; and he concluded in the old strain: "Coleridge—God, I hope, will preserve you. It seems to me impossible to imagine that you would not be well if you could have a mind freely at ease. Make yourself that mind. Take from it—its two weak parts—its tendency to restlessness and its tendency to torpor, and it would make you great and happy. It would in a moment see what is right, and it would possess the power, and that steadily, to execute it." Poole was a man with many calls upon his purse, for his benevolence was marked, and at the time his affairs, as Coleridge knew, were in an unfavorable state; Coleridge, too, was then owing him £37. Yet Coleridge so far forgot himself as to remind Poole of the difference in their education, and to impute to him an illiberal spirit arising from his regard for money. "It is impossible that you should feel," he says, "as to pecuniary affairs, as Wordsworth or as I feel—or even as men greatly inferior to you in all other things that make man a noble being. But this I always knew and calculated upon, and have applied to you in my little difficulties when I could have procured the sums with far less pain to myself from persons less dear to me, only that I might not estrange you wholly from the outward and visible realities of my existence, my wants and sufferings"; and he ends with, "Let us for the future abstain from all pecuniary matters." He followed up this letter by others in the same strain, and refused to see anything "outrageous" in these remarks. The friendship survived the strain, much to Poole's credit; but the correspondence grew less constant, and finally ceased, except for a yearly bulletin from Mrs. Coleridge until her death. Poole continued, however, to be serviceable to the family, assisted Hartley through college, and was always ready to fulfil his early promises of help. It is clear enough, it is pleasant to add, that Coleridge felt that Poole had really been his friend of friends, and that Poole on his side retained undiminished, however he might regret Coleridge's fate, his old affection for him.

We have left but scanty space for the record of Poole's own life, which might well be thought better worth detailing than the history of that friendship to which probably he owes his memoir. He was, as the biographer reminds us, a typical example of those Englishmen of his time who desired to make the most of themselves and live useful lives. He was, to begin with, fond of making and adopting improvements in his own business, which he conducted successfully until he retired from it, and at the same time he cultivated a large farm. In public affairs he had shown while still young a special interest in the condition of the working classes. The food riots, occasioned by the war, brought the subject very vividly to his attention, and he was directly engaged in the work of relief. We find him experimenting in ways of making cheap bread and in methods of planting wheat, and in later years deeply interested in the introduction of merino sheep into England. He built the village school, taught in it, and was eager to forward popular education. His cousin, John Poole, the young Oxford don, was the founder of the Enmore public school and a pioneer in the cause both by practical teaching and by means of his pen. Thomas Poole also founded the Female Friendly Society, for the purpose of assisting women in times of distress, and organized the savings-bank. In brief, there was, it is said, no local charitable institution that he did not originate or support. This interest in the condition of the people was the occasion of his friendship with Rickman, and consequently of his only public service. The two, after having met, corresponded on the subject of the Poor-Laws; and, an inquiry being shortly after authorized by Parliament, Rickman persuaded Poole to give some months of his time to the task of receiving and tabulating the returns. In this way, living in London, he was brought in useful contact with many public men.

His interest in politics, both foreign and domestic, never ceased to be keen; and although his early opinions, which do not seem to have been extreme, were modified with the course of years, he was at heart and in practice a reformer to the end. He was enlisted with Clarkson against the slave trade, and was one of those men who would use no sugar because it was raised by slave labor. Whenever one comes on the public questions of that day in these pages, Poole is found to be not only on the right side, but thoroughly in earnest and laborious in the work. It was natural that he should end his life as the leading and most respected man in his community, the adviser in all local affairs, and the friend and "common peacemaker," as he was called, of his neighborhood. His self-training intellectually, united with a capacity for fellowship, had made him the companion of many notable persons. He spoke French, and during his travels on the Continent in the year of the peace, he had the fortune to meet several of the distinguished men of the time; but such associations had not changed his original nature. He always affected a certain rusticity of manner; his voice was loud and disagreeable, made harsh by the constant use of snuff; there was a rough quality in him. When he was a county magistrate and coming to the end of life, he would proclaim, in what is styled an uncompromising tone, "For my part, I am a plebeian. I am a tanner, you know, *I* am a *tanner*." Southey speaks of him as "clod-hopping over my feelings"; but in a more amiable moment he also says, "Tom Poole is not content to be your friend; he must be your saviour." It is noticeable, however, that he had also that gift of tenderness which sometimes goes with rough natures. He was an excellent nurse, and was quick to come in all times of domestic trouble and bereavement, and no one was more welcome. In his drawer, after his death, was found among his mementoes a small packet labelled, "The hair of my poor shepherd, who served me faithfully for twenty-three years"; it is a trifling thing, but nothing could be more significant. He never married, and he outlived several of his best friends, especially Coleridge, Davy, and Tom Wedgwood; but his home was a centre of cheerfulness, and he was surrounded in his later years by young people who had experienced his perpetual kindness. He left no great thing behind him to preserve his memory—he was a man of his generation only; but at the end of these volumes the reader finds himself of one mind with those of his friends of whom Coleridge in his character of Poole says, "Not a man among them but would vote for leaving him as he is." It is not often that an humble life, with so much of the substance of virtue in it, gets itself written.

COLONIAL LIFE ON MASSACHUSETTS SHORES.

Colonial Times in Buzzard's Bay. By William Root Bliss. Illustrated. Boston: Houghton, Mifflin & Co. 1888. 12mo, pp. 185.

THIS unpretending little book is rather notably out of the common run of antiquarian productions. Generally our local histories fall into one of two classes. The one is mainly genealogical, with a vast number of details as to early colonial pedigrees, and it is often a storehouse of full and accurate research, not perhaps appealing much to one's love of light entertainment or æsthetic beauty, but referred to

now and then with innocent pride by the subscribers, and really having a good side in the stimulus which it gives both to historical study and to family feeling. The other and less valuable pattern is of the narrative kind, more or less discursive and oratorical in tone, tending to spread into a much gilt quarto with cheap illustrations, and to settle down upon the farmer's centre-table with his 'Pilgrim's Progress' and Tupper's Poems—weighty but seldom opened, unless to quiet the small boy with its prints on the long Sunday afternoons. A dozen years ago a history of Buzzard's Bay would probably have been of one or both of these types; but the spirit of the place has changed. Summer pleasure-seekers have invaded and conquered it, and villas gay with the amusements of modern civilization have crept up its beautiful shores, ousting the weather-beaten old farmhouses and the quiet old bucolic life, and this story is one of the results. It is not exactly a history: it is a vividly told description of life in southern Massachusetts that would fit almost any of our old country towns.

Its tale of the simple doings of a New England hamlet in the last century will seem commonplace enough to those unchanging old Yankee farmers, and they will receive it with the tolerant but superior smile which they accord to the vagaries of the city seeker for spinning-wheels and old brass candle-sticks. But for the summer sojourner there is a delightful charm about Mr. Bliss's animated narrative of the olden time which amply accounts for the popularity which is being accorded to it. From their own records we get peeps at the simple ways of our ancestors, and in some respects the story is not quite what we expected. We do not find the bitter religious bigotry, the enthusiasm for education, the heartrending struggles with the savages, the persecution of witches, the Revolutionary patriotism that we thought characteristic of New England. We look again, but they are not there. These shrewd, frugal, hard-working farmers were always ready for a good trade, but they could not get up much sympathy with the hot-bed extravagances of Boston. The settlers did not come into Buzzard's Bay until the religious enthusiasm in which the Massachusetts Bay Colony started had lost its force. They were the sons of trained farmers who had learned the lessons of moderation and industry which the new life so quickly taught. They were

"shrewd in their bargains, honest in their reckonings, industrious in their habits, but bound by a close economy which made them contented with small savings and small gains. The whole family—sons, daughters, and indentured servants—took up their daily work before sunrise, suspended it only for their meals, and ended it only when the candles were put out at early bedtime. The women did the housework, tended the hens, the geese, and the calves, scoured the brass warming-pans and pewter dishes, spun flax and wool yarns, and wove them into cloths from which the clothing and bedding of the family were made by their own hands; and if more was made than was needed at home, it was bartered away. The purpose of all was to get out of the farm every farthing that it would yield, and to squander nothing."

Money there was little or none, after the unfortunate attempt at legal-tender money; but barter on the strictest business principles went on, and we find Goodman Fearing, one of the substantial men of the town, correcting in his accounts "a mistak of 2 quarts of malasses," and charging his hired man with "time loost" by "sikness the fever and ago, 4 fites one weke and three the next." He furnished everything, from "the bordes and nayles for a cofen" for Widow Bates, to "the posts for your cradel" to Thomas Bates of the younger generation. He traded corn and rye (with a dog thrown in to balance accounts) with the tanner for dressing his hides, and then traded off the hides in the shape of "sken for briches," with some home-made shoes and some "stokens" of his daughters' knitting, for other goods.

It was a pastoral community. The first building was not a church or a school-house, but a pound; and, like their remote Teutonic ancestors, these farmers began with elaborate provisions for the several rights in the common pastures and forests. The grist-mill was quickly secured, but it was many years before either a meeting-house or a school-house was erected. It was a good deal cheaper to go fifteen miles of a Sunday to the next village than to put up a house of their own; and when at last the square four-gabled log meeting-house had been built, the difficulty of raising the minister's salary entirely obscured any question of doctrine. The people were eminently practical. They turned no one out for heresies as to saving grace, but they would have no teacher who was irregularly married. For a time the children went untaught—except for the little learning picked up from an itinerant mistress, who had her "dyet" and salary (which was about one-third the pay of a day-laborer) for her pains.

"In the opinion of the rural population of New England, schools were an unnecessary expense. Oftentimes the formalities of town-meetings, by which it was ordered 'to set up a school this year,' had no other intent than to show an outward compliance with the unpopular school laws of the province. Whenever the people could contrive a way by which the expenses of a school could be saved, there would be no school during that year. And when, on account of this neglect to observe the school laws, the town was presented by the grand jury of the county, it was customary to depute the most influential townsman to go and answer the presentment by such excuses as could be made."

"The frugal mind of the colonial farmer reckoned the schoolmaster as a day-laborer, and the desire was to hire him at as low a price, and to spread his labors over as large a territory, as possible. Each section of the town had his services during two or three months of the year, when the scholars were taught to read, write, cipher, and nothing more. He was paid sometimes in money and sometimes in merchandise, and his diet was thrown in. There was no standard by which to test his skill as a teacher, but the one generally esteemed the most skilful was he whose price was the lowest, even if he were the chief of blockheads,

"'Who tries with ease and unconcern
To teach what ne'er himself could learn.'"

In that quiet farming community large fortunes there were none, and pauperism was very rare. Once in a while we come across some odd record of the sale of a pauper to some one who would keep her for a year with "vettuals and close sutable." Here the town votes "to vandue the widow Lovell," after buying her a shirt; and once, as late as 1808, there is an item for "extra mending Jane George four dollars." Sometimes the poor were sold in lots, widow, children, and cattle together. Once they tried to put up all the poor in one lump, but it did not work. One economical farmer managed to get a grant for the care of his own father and mother, but this was not regarded as a precedent to be repeated. The sales were quite an event in the quiet town year. They usually took place in "the bar-room of the inn, where the landlord, as he served the thirsty guests from his decanters, discussed with them the value of the paupers for whose services they had come to bid," and the doctor's bills were sharply discussed in town-meeting.

There was a good deal of loyal Tory feeling at the breaking out of the Revolution. The town had felt little of the pressure of the British yoke, its instincts were all conservative, and as a town it did almost nothing except to appoint a committee of safety, while many families kept bright the lion and unicorn in the back of their chimneys. The usual resolution of grievances was passed in the beginning by an informal meeting of the inhabitants, and there was a little mob violence. As soon as they heard of the fight at Lexington, the militia started for Boston without waiting for authority. Later on, the town sent some supplies to the Continental army, and at the end it paid its troops something, with some sharp remarks against the grant of extra pay by Congress. On the whole, it was not very patriotic. It is not to be inferred, however, that the town was an agreeable retreat for Loyalists. The Committee of Safety had most extensive powers, and it used them. It opened letters, detained vessels, arrested suspects, and imprisoned or removed them, and drafted troops into the Continental army. Mr. Bliss speaks of it rather warmly as a reign of terror; but this seems an exaggeration. The records of the Committee are not in existence, and in their absence it is to be taken for granted that the common sense of this eminently sober neighborhood kept it from any very violent excesses.

The liveliness of Mr. Bliss's narrative does not conceal the quietness, the sombre severity indeed, of the life he describes. In spite of its occasional merrymaking, pleasure-seeking was rare, and prosperity was won only by close and unfailing economy. The people had the satisfaction which comes from deserved success and robust health; and, physically at least, their descendants have gained little or nothing in the complex and exciting life which has taken the place of the old simplicity.

In reviewing so interesting a book, fault-finding is a disagreeable task, but the want of any index and the poor quality of the illustrations must be mentioned.

BOOKS ABOUT THE STAGE.

Masks or Faces? A Study in the Psychology of Acting. By William Archer. Longmans, Green & Co.

The Life and Adventures of Edmund Kean, Tragedian. By J. Fitzgerald Molloy. 2 vols. London: Ward & Downey; New York: Scribner & Welford.

Frédérick Lemaître. Étude biographique et critique. Par L. Henry Lecomte. 2 vols. New York: F. W. Christern.

A Society Star; or, She Would Be An Actress. A Novel. By Chandos Fulton. New York: G. W. Dillingham.

Le Comédien. Par Albert Le Roy. Paris: Lemerre; New York: F. W. Christern.

Les Planches: Roman Moderne. Par Jean Blaize. Paris: Librairie Illustré; New York: F. W. Christern.

Mr. William Archer has deserved well of all those who have an intelligent affection for the stage. He is at once the best-equipped, the most acute, and the most independent of English dramatic critics; he is the Sarcey of London. It happens to us to disagree with his conclusions sometimes (although infrequently), but we have an unfailing respect for his judgment. He has studied the stage diligently, and has seized the vital principles of the dramatic art. In the 'Obiter Dicta' of Mr. Birrell there is a clever paper on the actor and on the influence of his profession on the man himself; but if any one desires to see the difference between

mere superficial (not to say verbal) cleverness and the writing of a man who has the root of the matter in him, we suggest a comparison of this paper of Mr. Birrell's with the equally brilliant but far deeper, sounder, and more convincing essay to be found in Mr. Archer's "About the Theatre." Where Mr. Birrell is flippant and contemptuous, Mr. Archer is dignified and sincere; and the superiority of his knowledge and of his insight is beyond question. In 'Masks or Faces?' Mr. Archer takes up again the vexed question as to whether an actor should feel his part, and how far he feels it, and how far his feeling it helps or hurts the impression made by his acting. In the 'Paradoxe sur le Comédien,' Diderot declared that an actor should not feel while he is acting; and the most accomplished and successful comedian of our time, M. Coquelin, declares that Diderot's is no paradox, but a simple statement of fact. Mr. Archer easily shows that Diderot is inconsistent with himself, and that his deductions were made on insufficient evidence. Mr. Archer has, therefore, now that the question is open again, searched the records of the stage for anecdotes bearing on the point, and he has addressed a series of questions to the leading performers of the day, many of whom answered fully. Much of this new material thus adduced is interesting and important; it sheds light on the individual actors of our time as well as affords evidence for the verdict on the main question. Among those who freely supplied Mr. Archer with their own experiences were Sig. Salvini, Miss Mary Anderson, Mrs. Kendal, Mrs. Bancroft, Mr. John Drew, and Mr. Boucicault.

The result of a careful study of this mass of evidence and of the author's summing up has been to convert one, at least, of Mr. Archer's readers who had hitherto been in agreement with Diderot and M. Coquelin, and who now inclines to the belief that M. Coquelin has pressed his contention too far, and that Diderot's 'Paradoxe' is a paradox still. No doubt the position of the extreme emotionalist is as far out as the attitude of the implacable anti-emotionalist. M. Coquelin declares that the actor should feel at rehearsal, during his study of the character, while he is mastering his part, but, that once acquired, the actor should be able to repeat it at will with unfeeling certainty. Mr. Archer shows that, while the actor should be able to do this, he ought also to be able to infuse feeling into his performance, keeping a tight rein on it and never allowing it to run away with him. (See the admirable illustration supplied by Mr. Edwin Booth and quoted by Mr. Archer, p. 71, from an interview with Mr. Lawrence Barrett.) We cannot dwell longer on this point, but we may heartily recommend Mr. Archer's book to all who are interested in the art of acting or in the psychology of æsthetics. The author has spared no pains to give the reader pleasure: his style is direct and brilliant; his arrangement is logical and coherent, and his research has been tireless. Of the mass of stories which he could have cited from the endless histrionic biographies, one can note the omission of no pertinent anecdote save that told by Mrs. Mowatt in the 'Autobiography of an Actress' about the late E. L. Davenport's laughing asides, as the *Stranger*, while the spectators were dissolved in tears by the pathos of their performance. Mr. Archer's book is excellently printed, with neatly arranged marginal notes and an adequate index.

That acting is an art, and an art of great difficulty and delicacy—this is the ultimate moral of Mr. Archer's book; and it is an interesting coincidence that it should be published almost simultaneously with new biographies of Edmund Kean and Frédérick Lemaître, actors who are popularly accepted as typical innovators, rejecting wholly the traditions of the old school, and relying on impulse rather than on art. There is a certain similarity between the French actor and the English, and it would be easy to construct a parallel. The elder Dumas felt this likeness, and it led him to prepare for Lemaître the play of "Kean, ou Désordre et Génie," of which Thackeray made so much fun in the 'Paris Sketch-Book,' but which survives none the less, although chiefly in Italian.

There are already two biographies of Kean, by "Barry Cornwall" and by Mr. F. W. Hawkins; and there are also two briefer and less worthy biographies of Lemaître. Whatever the similarity of the lives of the two actors, the present biographies are as different as may be. M. Lecomte is painstaking, precise, elaborate, and complete; Mr. Molloy is haphazard and happy-go-lucky. M. Lecomte begins at the beginning and sets down every fact of Frédérick's career. He discusses every play the actor performed in exact chronologic sequence, sketching the plot, noting the part, appending the criticisms, and collecting the anecdotes; no other actor of the nineteenth century has yet been honored by a life as careful and as conscientious as this. Mr. Molloy, who once accomplished the feat of writing an alleged biography of Peg Woffington in several consecutive chapters of which that lady's name did not even appear, has been a little more circumspect in this second attempt at a histrionic life; although he is still prone to start off on a tangent and to lug in any anecdote which he finds under his hand, whether it relates to the hero himself or to his rivals or to any one else in the same century and hemisphere with the hero, yet he manages to repeat effectively enough the accepted version of Kean's career. He seems to have collected nearly all the stories afloat about the great actor and to have set them all down, holding one as good as another. Mr. Molloy is entirely lacking in the critical faculty, and no reader of his book will get from it any exact idea of Kean's powers or position as an actor. A more striking likeness and a more lifelike portrait can be found in the few pages about Kean, written two or three years ago by Mr. Edwin Booth, than in all the two volumes of Mr. Molloy. We are sorry to have to say also that the book abounds in misprints, "De Champ" for "De Camp" (i., 33, *et seq.*), for example; "Joe Cowen" for "Cowell" (i., 133); "Gilferet" for "Gilfert" (ii., p. 135); "*Evadene*" for "*Evadne*" (ii., 256). From Mr. Fitzgerald Molloy, "we don't expect grammar, but at least" he might read proof.

As we have said already, M. Lecomte's book is as careful as Mr. Molloy's is careless; and it is at least as interesting. Kean played few new parts, while Lemaître was the chief actor of the Romantic revolt, playing leading characters in the plays of Hugo, Dumas, Lamartine, Balzac, and their fellows. For him, too, that altogether unequalled melodramatist M. Dennery wrote his best plays, "Don César de Bazan," "Paillasse," "Le Vieux Caporal." It was Frédérick who created Félix Pyat's "Chiffonier de Paris," and who transformed "Robert Macaire." Of all these performances M. Lecomte gives full particulars, with untiring labor, having had special advantages in the use of the documents confided to him by the actor himself. Upon the subject of Lemaître's failings, which were not a few, M. Lecomte is sufficiently frank—with the frankness possible nowadays only to a Frenchman.

The last three volumes on our list are novels of theatrical life; one is American and two are French. Of the American story, one need say little or nothing; it is dull and empty, and does not call for serious criticism. Of the two French stories, one at least would deserve elaborate consideration did our space permit; this is 'Les Planches,' one of the best of recent histrionic novels, in the strongest character of which we seem to recognize certain peculiarities of Frédérick Lemaître. 'Le Comédien' is far from equalling 'Les Planches.' In fact, it is hardly unfair to call 'Le Comédien' the ordinary French novel of commerce, with an accidental actor as its hero. Like many French novels it has a tendency towards lewdness for its own sake—although its structure and its character-drawing lead us to class it rather with the *romans Ohnettes* than with the *romans Nanaturalistes*, as the French punster has distinguished them.

Considering how often French novelists of late have chosen their heroes, and especially their heroines, from among stage-folk, and considering also that the constant dramatization of successful novels brings the writers of fiction into close contact with the people of the theatre, it is not a little remarkable that there are so few good novels of theatrical life. Mme. Gréville failed with 'Rose Rozier' as M. Georges Ohnet failed with 'Lise Fleuron,' while M. Jules Claretie (now the manager of the Comédie-Française) almost succeeded with 'Le Troisième Dessous'; and more serious writers, like M. Zola with 'Nana' (in so far as 'Nana' is a study of the French stage), and M. de Goncourt, with 'La Faustin,' have done no better. M. Cadol's 'Rose' and M. Edgar Monteil's 'Cornebois' are perhaps the best tales of theatrical life in France in our day; 'Cornebois' is far less conventional than 'Rose,' and nearer to the actual facts of existence. 'Les Planches' is worthy to be ranked with these. It is a careful study of certain conditions of the French stage. But a perusal of no one of these stories, good, bad, or indifferent, is likely to raise one's opinion of the manners and morals of the contemporary French theatre. Perhaps 'Cornebois' is the most wholesome of the lot, and it is a sorry set of people among whom he moves, and he is but a sorry hero. But his story and that of 'Les Planches' impress the reader with a sense of reality, and the trouble with most theatrical novels is that the artificiality we find on the stage is carried over into the book. They are painfully unreal. In 'Le Comédien,' for instance, we have the exotic princess of overmastering passions—and she is no more convincing in M. Le Roy's book than she was in M. Daudet's 'L'Immortel.' Perhaps, after all, making full allowance for its artificiality, 'Peg Woffington' is as good a study of histrionic character as we can find in any story.

The Building of the British Isles; A Study in Geographical Evolution. By A. J. Jukes-Browne, B.A., F.G.S. London: George Bell & Son; New York: Scribner & Welford. Pp. 343, illustrated with maps and woodcuts.

THIS treatise comes to us in the welcome uniform of Bohn's Library. The subject of it concerns the most modern and on many accounts the most interesting department of geological science. The earlier students of that science, as soon as they had apprehended the vast revolutions which had been undergone by land and sea, hurried to the conclusion that our continents are essentially instable, changing places with the seas in such manner that what in one great age is ocean floor may at another time be

altered into land ; the lands, in the meantime, sinking into the depths to take the place in the functions of the earth of the obliterated oceans. This simple and rude conception as to the metamorphoses of sea and land has of late, under the influence of more careful studies, been giving place to the hypothesis which suggests that the continents are great permanences, varying their forms from age to age, now submerged in this part and now in that, but for all that essentially constant. At present, probably the greater number of our geologists are adherents of this hypothesis. They owe this theory to the clear thought of Dr. James D. Dana, and something of its general adoption is doubtless due to the deserved influence of his great name. Other students, however, notably Dr. A. R. Wallace from the point of view of the distribution of animals, and Dr. Geikie from a more strictly geological standpoint, have maintained the same view. Mr. Jukes-Browne's book is directed to the end of demonstrating the essential error of Dr. Dana's hypothesis, though in the end he does not depart altogether from that view, since he only insists that the range in the alteration of the position and form of the continents is greater than that supposed by Dana and his school, though less extensive than was supposed by Sir Charles Lyell.

The geographic evolution of the British Isles is the main topic, though occasionally the difficulty of treating separately this narrow field leads the author to consider the geographical changes of other regions about the North Atlantic. Taking in succession the several periods from the Cambrian to the present day, the author endeavors, by assembling the remarkable work done by his predecessors on the history of the British rocks, to reconstruct the form of those islands and of the neighboring continent at each stage in the earth's history. The array of facts set forth is remarkable, both for the range and variety of the data and for the clearness which generally characterizes its presentation. It is doubtful if any other publication on geology of equal size presents as large a body of well-digested observations. It is of his inferences, together with the very numerous incidental hypotheses which our author adduces, that his critics will find reason to complain. On these points he will seem to most geologists to be open to some criticism. In the beginning of his treatise he assumes that at the dawn of the Cambrian period "the surface of the earth seems to have been extraordinarily rugged and uneven, exhibiting a series of lofty mountain ridges separated by deep troughs and hollows, the bottoms of which were 10,000 or 12,000 feet below the summits of the ridges." The evidence on which this assumed rudeness of the outline of the ancient earth rests is of a very doubtful nature. If the existing mountains of Switzerland were lowered beneath the level of the sea and their valleys filled by stratified deposits, the naturalist who should study them after their subsequent re-elevation, might as justly come to the notion that the surface of the earth in our day was extraordinarily rugged and uneven, as our author does from the study of the pre Cambrian beds of Great Britain. No such evidence of extraordinary ruggedness in the pre-Cambrian land is afforded by the wide fields of those strata in North America.

Among the most important data used by the geologist in determining the history of continental areas are the accumulations of conglomerates which are plentifully distributed in the various geological horizons. On the theory as to the origin of these conglomerates must rest in large part the interpretation of the continental history. It seems to the present writer that our author has failed to apprehend the meaning of such extensive conglomerates as those of the Cambrian section in North America, as well as those of the Carboniferous and later ages. He apparently does not see how necessary it is to suppose that these vast thicknesses of pebbly beds were the product of glacial action. He tacitly assumes that such wide fields of conglomerate were formed by the work done in the river basins and by the waves of the ocean. His failure to discuss this part of the evidence to the point of a satisfactory conclusion seems a defect in the method of his admirable treatise.

Throughout, our author assumes the existence of a continent of considerable size over the North Atlantic—land which endured from the earlier stages to relatively recent geological times. The evidence on which this assumption rests is extremely limited and of a very unsatisfactory character. All the facts can be sufficiently accounted for on the assumption of a considerable island or an archipelago to the northwest of the British Isles, occupying but a small part of what is now the Atlantic area. The difference between the organic species fossil in the rocks of North America from the palæozoic ages, and those of Europe of like age, leads the palæontologist rather to the assumption that there has generally been deep water in the North Atlantic, which afforded a barrier to the free intercourse of the organic forms of the shallow water near the shore. If there had been during these ages a continuous seashore from Europe to North America, it seems unlikely that such a separation in the species would have occurred. In the present state of our knowledge, it is a matter of uncertainty whether there was such a land or no. Its existence should not be assumed as a basis for other hypotheses.

In treating of the last glacial period, our author asserts that "there is no doubt that what took place in the last glacial period was simply an extension of the glacial conditions which now exist in the polar regions." In the present condition of the controversy as to the conditions of glacial time, this appears to us a very unsupported statement. Clearly, our author would not maintain that the existing glaciers in Switzerland or New Zealand imply simply the extension of glaciers which now exist in the Polar regions to the places in question. The character of the land mammals which lived upon the continent of North America during the glacial period appears to indicate the existence of a plentiful vegetation close up to the ice sheet. It seems more than possible that, so far from being essentially like the existing arctic climate, that of the glacial period differed decidedly from the present circumpolar conditions, in that the rainfall was very great and the cold by no means extreme. This and many other like criticisms on the details of this book will be made by geologists. Glacialists in particular will object to many of its statements concerning the last ice time. Nevertheless, the work is admirable in its conception, and is executed in a skilful and vigorous manner. It is by far the most important contribution to geologic science which the year 1888 gave us. The book is well printed; the maps are, however, insufficient, and the index fails to give a clue to the abundant store of facts contained in the volume.

At Home and in War. By Alexander Verestchagin. Translated by Isabel F. Hapgood. T. Y. Crowell & Co.

THE naïve egotism which permeates the pages of 'At Home and in War' is partly racial, and partly an individual possession of Colonel Verestchagin. To a book descriptive of scenes and people unfamiliar to us, this quality, through which we are let into many secrets, is not detrimental, yet no human characteristic can easily become more offensive. When a sense of self-importance prompts the author minutely to describe his father's estates and the life and customs of lord and serf, it is very valuable; but when it assumes that the public will be as much interested in his existence from infancy up as he was himself, it becomes, to say the least, fatiguing. Not even the photographs of the family with which the book is thoughtfully embellished, persuade us to care about what the Verestchagins ate and wore, or whether they ate or dressed at all.

When the author leaves home for war, he has less time for self-contemplation and becomes more interesting. He took part both in the Balkan war and the later Tekke campaign. In the former he was closely attached to the great "white general," Skobeleff. Being no worshipper of heroes, outside of the Verestchagin family, he does not hesitate frankly to express his opinions of famous men. Thus his portraits are vivid, and seem to have that discrimination which makes historical value. He exposes official corruption with commendable fearlessness, and directly imputes to the negligence and greed of people in power many of the appalling horrors of war. The picturesque and impressive in nature affect him deeply, and the pageantry of moving hosts made up of a dozen semi-barbarous races does not escape him. His sense for dramatic situations is quick and correct, and he describes tragic incidents with spirit and effect. The pages are strewn with personal anecdotes more or less worth telling.

One of these, in view of Skobeleff's sudden death, bears quotation. Two soldiers had just been buried in an Asiatic desert, and the priest concluding the service exclaimed: "And the glory of man is as a smoke which vanisheth." Skobeleff, riding back to camp from the graves, said to an officer, Baranok: "See here, Alexei Nikititch, that pope was tipsy, but he told the truth when he said, 'The glory of man is as a smoke that vanisheth.'" Two years later the General was dining in Duzzeau's hotel at Moscow, and turning to Baranok he said, "Do you remember Alexei Nikititch—'And the glory of man is as a smoke that vanisheth?'" Four hours later Skobeleff was no longer among the living.

Force and Energy: A Theory of Dynamics. By Grant Allen. Longmans. 1888. Pp. xiv., 161.

WHEN Mr. Grant Allen was writing the preface to this small book on a great subject, he must have had very vividly before his mind the fact that critics are a thick-skinned and hard-hearted race. Not once, but twice and thrice, does he profess his expectation of being summarily put out of court, and his humble resolve to take his sentence meekly and for ever after hold his peace ; not briefly, but with great detail, and with much dwelling upon the peculiar circumstances, does he explain how he happened to publish this book, in spite of his extreme reluctance to come before the world with radically new theories on a subject of which he does not profess to be in any sense a master ; until, at last, the most relentless persecutor of paradoxers begins to feel some stirrings of mercy, and to resolve that, whatever may be said of the offence, the offender at least shall, for the nonce, be treated gently.

It appears that the essential elements of the

theory expounded in this volume were contained in a pamphlet printed for private circulation by Mr. Allen some years ago. The physicists to whom Mr. Allen sent the pamphlet—or those of them who communicated their opinion of it to the author—came to one of two conclusions, which to the author seemed, naturally enough, to be contradictory. Some told him that his theory contained nothing but what was perfectly well known; others, that his theory was in conflict with what was perfectly well known. Unfortunately, however, it is the peculiar distinction of paradoxers upon subjects of this kind, that they are able to combine these two qualities in one and the same theoretical venture. It is not merely that "what is new is not true, and what is true is not new," but that the self-same thing is neither new nor true. The way in which this feat is accomplished is not so mysterious as one might at first blush suppose that it must be; all that is necessary is, that one should have got hold of the general ideas of an accepted theory in an exact science, but not have grasped its precise significance. There are some men who, having reached this stage, think that the most hopeful thing to do next is to remove any imperfections that exist in their vague conception of the theory, by such convenient interpretation of it as may enable it to "solve the universe" with all desirable expedition. And so it comes about that when the result of their meditations is published, it is found that what they suppose a new theory is nothing but the old theory so imperfectly conceived and so vaguely expressed that it is not surprising that those who are well informed should hesitate whether the verdict should be "not new" or "not true."

This is just what Mr. Allen has done for the doctrine of the conservation of energy. It is impossible to say from internal evidence whether the author has or has not any conception of the fact that the great theorem of the conservation of energy is a theorem relating to something which can be numerically measured. At any rate, he says nothing anywhere about its measure. Disdaining to mention so subordinate a matter, and treating in the same way everything else which comes into the domain of numbers or of geometry, he strides on, scoring triumph after triumph in the profusion of capital initials spread over his pages, until the critic forgets the modest preface and repents of his momentary weakness. Does Mr. Allen not know that without exact definitions of the meaning of his terms, so that the things they refer to may be numerically measured in a definite way, his grand generalizations are nonsense? That, without them, to say that "the total amount of Power, aggregative or separative, in the Universe, is a constant quantity, and no Power can ever disappear or be destroyed," is mere empty sound? We do not, by any means, assert that the author is unaware of this; what we do venture to say is, that if he had undertaken to express his theories in that precise language in which any theory of dynamics must be expressed in order to be truly intelligible, he would have been better able to appreciate how much of their novelty arises from their vagueness.

It is not worth while to enter into detailed criticism of a book every page of which betrays its author's unconsciousness of the fundamental conditions of research in the department of which he is writing. It is hardly an exaggeration to say that there is not a single argument in the book which, so far as its mode of thought is concerned, might not have been written in the time of Aristotle. There are, indeed, plenty of good illustrations of modern doctrines; but the doctrines themselves are given the loose and metaphysical character which belongs to two thousand years ago. Surely, whatever tolerance physicists may be expected to extend to ingenuous innovators, they have a right to demand that he who wishes to reform their science shall betray some sense of the meaning of that great intellectual conquest—perhaps the most brilliant in the history of the human mind—which began with Galileo and reached its culmination in Newton. They may be willing to listen to the most daring novelties; but they can hardly be expected to give them much heed when the propounder of them writes in the pre-Galilean spirit, and does not even seem to be conscious of it. To Mr. Allen and his kind, nothing fitter can be said than these words of Clifford's: "It is true in all departments of human action that reform is the most precious and sacred prerogative of a citizen; but in order to have that prerogative one must be a citizen, not an alien; and one must act like a citizen in a legitimate and constitutional way."

Corpus Documentorum Inquisitionis Hæreticæ Pravitatis Neerlandicæ, uitgegeven door Dr. Paul Fredericq en zijne Leerlingen. Vol. I. Ghent. 1889. New York: F. W. Christern.

THE learned professor of the University of Ghent has at length issued the first portion of his long-promised collection of documents concerning the persecution of heresy in the Low Countries. It is a massive contribution to the history of the subject, forming an octavo volume of nearly 650 pages, and giving the text of 446 official papers or extracts from chronicles, with abstracts of their contents. The period covered is from the beginning of mediæval heresy in 1025 to the outbreak of the Reformation in 1520, and the conscientious exhaustiveness of the work may be estimated from the appended list of sources, MS. and printed, amounting to 233, and forming an invaluable bibliography of Netherlandish mediæval history. Only those who have undertaken a task of the kind can appreciate the persistent industry requisite thus to search out the fragments imbedded in masses of irrelevant matter, and to gather them together in orderly sequence, so that each may reflect light upon the others.

Yet the most generally interesting portion of Dr. Fredericq's work is to come. The five centuries which he has thus traversed contain the records only of scattered and unresisting heretics—Catharans, Waldenses, Lollards, and the like—who lay in hiding and suffered in silence. The succeeding three-quarters of a century will present to us the great awakening of the human intelligence, when heresy grew bold through numbers and became a political factor; when for every heretic who perished, ten sprang up from the martyr's blood; when persecution, stimulated to the utmost, had at last to confess its ineffectiveness to control the conscience of a whole people. In the annals of mankind there are few periods more inspiring to the lover of spiritual freedom than that in which the might of Charles V. and Philip II. proved powerless to check the development of thought, and physical force exhausted itself in the vain endeavor to control the moral forces. To illustrate this period in the same thorough manner, with the same absolute command of all the sources as is displayed in the present volume, will be a service of incomparable value to the student. This first instalment only renders us more desirous of the second, and we can but hope that Dr. Fredericq will not make us wait too long for it. Probably no epoch has been so thoroughly worked over by native scholars as that of the Reformation in the Netherlands, and it is not probable that much MS. material of importance remains to be discovered; but the documents are scattered through an endless series of volumes, transactions of learned societies, and periodicals beyond the reach of all but the most favored students. Such a guide through the labyrinth as Dr. Fredericq can furnish will be most gratefully welcomed by all who recognize that, if history is to be anything but romance, it must rest upon absolute facts.

Religionsgeschichtliche Untersuchungen. Von Hermann Usener. 1er Theil. Das Weihnachtsfest. 2er Theil: Christlicher Festbrauch, Schriften des ausgehenden Mittelalters. Bonn: Max Cohen & Sohn.

No festival of the Christian Church is so popular or so universally observed as that of Christmas; and yet it is a well-known fact that the early Christians not only did not celebrate the birth of Christ on the 25th of December, but had no birthday festival at all, the great holidays of the primitive Church being Easter and Whitsunday, the anniversaries of the resurrection and of the foundation of the Church. The investigation of the times and circumstances of the origin of the Christmas festival leads one upon ground which the theologian can hardly tread without assuming a polemical attitude, and such an attitude almost inevitably leads to a distortion of the truth. It is, therefore, a matter for general congratulation that this work has been undertaken by a layman, especially as that layman is the one man best fitted to cope with the difficulties of his task. Prof. Usener, some of whose work in the field of early Christian legend has been noticed in the *Nation* (vol. xliv., No. 1123, p. 15), has lately published under the above title the results of long and diligent study of the MSS. and other sources of information concerning the introduction of the Christmas festival.

Until the middle of the fourth century, Christmas was not separated from Epiphany, and Prof. Usener, therefore, devotes a large part of his book to the discussion of the festival of January 6. He proves, with his customary historical accuracy and philological acumen, that neither the story of the baptism of Christ nor that of his birth was an original part of any of the three synoptic Gospels, but that they (or the originals from which they are derived) began, like the lost Gospel of Marcion, with the beginning of Christ's teaching. The baptism of Jesus is referred to in the Acts of the Apostles, but St. Paul knows nothing of it, nor of his miraculous birth. It is impossible to follow here the details of Prof. Usener's arguments, or even to give a complete summary of his results, of which some are new, while others confirm those of previous writers. He shows, apparently with conclusive evidence, that the first part of our canonic Gospel was added at so late a time (probably early in the second century) that but little confidence can be placed in it. His investigation is, however, inspired by no hostility to Christianity, but by real love of truth, as is shown by his own words:

"As surely as it is a God of light and truth whom we adore, so surely are we doing true and acceptable service to God in purifying and cleansing from the human inventions which darken it the truth of the religion we profess. Where it is possible to know, it becomes immoral to confine one's self to belief and opinion. It is painful to give up the heavenly images of our youth, far more painful to disturb the faith of others. We must bear that like men, in the confidence that the divine kernel of our religion, freed from the human additions of fancy and dogma, will prove itself to coming

riper generations only the more efficient as a fount of salvation and a pinion to raise them to God."

Epiphany began to be celebrated as the anniversary of the baptism of Jesus early in the second century, and the celebration of his birth was soon united with that of his baptism. This double festival attained to great importance among the feasts of the Church, especially in the East. The first celebration of Christmas in Rome as a holiday distinct from Epiphany took place in the year 354, but the new festival was not accepted by the Church of Jerusalem before 451. The story that the day of the birth of Christ was discovered by the investigations of Julius I., undertaken at the request of Cyril, Bishop of Jerusalem, is a mere invention.

As it is difficult to discuss part of a problem without throwing some light upon the rest, no one will wonder that the discussion of Epiphany and Christmas leads Prof. Usener to mention other days of the Church calendar. So the *litania minor* before the day of the ascension is shown to have taken the place of the Roman *ambarvalia*, and the *litania minor* of the 25th of April that of the *Robigalia*. The observance of Candlemas (February 2), too, is of heathen origin, being a survival of the Roman *amburbale*.

As Part II. of his 'Untersuchungen,' Prof. Usener publishes, with a masterly introduction, a Latin MS. in the library of Wolfenbüttel, which contains a description by a presbyter named Alsso of the Christmas practices of the Bohemians at the beginning of the fifteenth century, and Alsso's notes on the Bohemian observance of St. John's Day. Prof. Usener adds parts of Johannes of Holleschau's *Largum Sero*, and a curious list of questions to be asked in the confessional concerning vulgar superstitions. This list is contained in a MS. of the library in Munich, and is unusually interesting to the student of folk-lore on account of the light it throws upon the superstitious practices and popular beliefs of the Bavarians. Prof. Usener promises to continue his contributions to religious history, and every student of religion, ecclesiastical history, or folk-lore must join in the wish that nothing may interfere with the fulfilment of his promise.

The History of Fairfield, Fairfield County, Connecticut, from the Settlement of the Town in 1639 to 1818. By Mrs. Elizabeth Hubbell Schenck. Vol I. New York: Published by the Author. 1889. Sq. 8vo, pp. 423.

It appears from the preface that in 1880 the author of this work was requested by a number of the inhabitants of Fairfield to write the history of the town. The present volume carries the record to 1700, and a second volume is promised. We desire to congratulate the town upon having so good an historian, and we trust that every inhabitant who can afford it will become a subscriber. But as a reviewer we must record our regret at the scale on which the history has been projected. That the author has read and observed much is evident, but nine-tenths of her book has only the most remote relation to the special history of Fairfield. She has written a history of Connecticut in the eighteenth century, but the local flavor is gone. There is indeed much told about the town, but it is so overlaid by the extraneous matter that one can hardly separate it. So far as we can judge, the local history is unimportant, or valuable chiefly to the natives. But that is true of most other towns in New England, whose annals are uneventful and very much confined to a genealogical interest. We regret that Mrs. Schenck has been unwilling to give more space to family history, for she is evidently able to do good work in this direction. As an example, we would refer to what she prints about the pedigree of Gov. Roger Ludlow.

We can only say that the book probably contains all that can be found respecting Fairfield, and that the reader will be well repaid for perusing the whole contents attentively, unless he has already made himself familiar with the general history of the period. The second volume is to contain, undoubtedly, more particular records of lands and persons in the last century.

Practical Heraldry, or an Epitome of English Armory, etc. By Charles Worthy, Esq. Scribner & Welford. 1889. 16mo, pp. 250.

With all tenderness for a writer upon a subject which attracts but a small audience, we fail to see the object of this publication. Heraldry is a completed science, and new handbooks are justifiable only when they present some happy method of arrangement or condensation, or are enriched by new illustrations and examples from rare manuscripts. Mr. Worthy's book has none of these merits, being diffuse and unmethodical, while his illustrations are simply execrable. The only novelty is the insertion of some instructions as to the preparation of a pedigree. In regard to these we can only say that no man entitled to such a pedigree as he imagines, would be so ignorant of general matters as to need a guide to such preliminaries. No one, who, like most of us, is of a family unrecorded in Heralds' College, can get any useful information out of the book. Mr. Worthy intimates the possibility of a second edition; we advise him to revise his book, to remodel it, procure some new woodcuts from a good artist—and then to leave to his executors the task of issuing the volume.

KING'S HANDBOOK OF NOTABLE

EPISCOPAL CHURCHES

IN THE UNITED STATES.

This volume, as one of the Series of "King's Handbooks," describes and illustrates 120 of the notable Episcopal Churches in this country. It is, in fact, a popular Church history, for the story of the individual churches, taken collectively, becomes the history of the whole Church. The book is profusely illustrated, well printed, and handsomely bound in cloth and gilt. Sent postpaid for One Dollar.

English Men of Action.

General Gordon.

By Colonel Sir William Butler. 12mo, cloth limp, 60 cents; cloth, edges uncut, 75 cents.

"Sir William Butler tells the story of Gordon's life as a brother officer should. The interest never flags, and the narrative is imbued with a deep feeling of reverence."—*St. James's Gazette.*

"Sir William Butler's 'Charles George Gordon' makes a worthy initial volume to Messrs. Macmillan & Co.'s new series of biographies under the title of 'English Men of Action.' The story of Gordon's life has three conspicuous merits—it is briefly told, it is graphic, and it is discriminating."—*London Daily News.*

The Volumes to follow are:

HENRY THE FIFTH. By the Rev. A. J. Church. *March.*
LORD LAWRENCE. By Sir Richard Temple. *May.*
LIVINGSTONE. By Mr. Thomas Hughes. *April.*
WELLINGTON. By Mr. George Hooper. *June.*

Other volumes in press or in preparation.

A New Book by Francis Galton.

Natural Inheritance.

By Francis Galton, author of 'English Men of Science; Their Nature and Nurture,' 'Inquiries into Human Faculty and its Development,' etc. 8vo, $2.50.

A History of Eighteenth Century Literature.

(1660–1780.) By Edmund Gosse, M.A., Clark Lecturer on English Literature at Trinity College, Cambridge. 12mo, Library Edition, gilt tops, $1.75; Students' Edition, $1.

"In fact, 'Eighteenth Century Literature' is far from being exclusively adapted to students. The criticisms are never tedious or dry, and the short biographies contain interesting personal details of writers, some of whom are little known. We shall be surprised if the work is not as popular with the general public as with those who may claim a special knowledge of its subject."—*London Athenæum.*

"All will be grateful for the thoroughness of the work, the care and precision of the substructure of facts, the attention to minor characters—in this regard the book is specially excellent—and the general harmony of the judgments with the taste of approved critics and devoted students. . . . His work is a valuable addition to the histories of literature. It makes an admirable companion to Mr. Saintsbury's volume already alluded to, and warrants the expectation that the series of four special volumes to which it belongs will, when completed, become the most popular literary history of recent date."—*Scotsman.*

Recently Published.

A History of Elizabethan Literature

By George Saintsbury. 12mo, Library Edition, gilt tops, $1.75; Students' Edition, $1.

To be followed by

THE EARLIEST PERIOD. By the Rev. Stopford Brooke.
THE MODERN PERIOD. By Edward Dowden.

Popular Lectures and Addresses.

By Sir William Thomson, LL.D., F.R.S., Professor of Natural Philosophy in the University of Glasgow. In 3 volumes. With illustrations. Vol. 1, Constitution of Matter. 12mo, $2.

The Scientific Papers of the late Thomas Andrews,

M.D., F.R.S., Vice-President and Professor of Chemistry, Queen's College, Belfast. With a memoir by P. G. Tait, M.A. and A. Crum Brown, M.D., F.R.S. 8vo, $5.

CLARENDON PRESS NEW BOOKS.

Essays by the late Mark Pattison.

Sometime Rector of Lincoln College, Oxford. Collected and arranged by Henry Nettleship, M.A., Professor of Latin, Oxford. 2 vols. 8vo, $6.

*** With one exception, the essays in these volumes are a selection of what seemed to be the most generally interesting and valuable among the many papers and articles published by Mr. Pattison between the years 1845 and 1882. The fragment on the Life of Joseph Scaliger is printed from the author's MS., and forms part of his unfinished Life of Scaliger.

The Dynasty of Theodosius;

Or Eighty Years' Struggle with the Barbarians. By Thomas Hodgkin, Hon. D.C.L., Oxon., author of 'Italy and Her Invaders.' 12mo, $1.50.

*** In this volume the author describes in brief outline the leading events recorded in the first two volumes of his book 'Italy and Her Invaders.'

Shakespeare as a Dramatic Artist.

A Popular Illustration of the Principles of Scientific Criticism. By Richard G. Moulton, M.A., Cambridge University (extension) Lecturer on Literature. Second edition, enlarged and revised. 12mo, $1.50.

MACMILLAN & CO., 112 Fourth Avenue, New York.

A. C. ARMSTRONG & SON,

714 BROADWAY, NEW YORK,

HAVE JUST READY:

The Industries of Japan.

TOGETHER WITH AN ACCOUNT OF ITS AGRICULTURE, MINING, FORESTRY, ARTS, AND COMMERCE. From travels and researches undertaken at the cost of the Prussian Government. By Prof. J. J. REIN, University of Bonn. *Illustrated by Engravings, Lithographs, and Native Fabrics,* many full-page engravings, some beautifully colored, and three maps. Royal octavo, cloth, gilt top, $10.

"*A volume which is stamped on every page with evidence as to the care, research, and skill which have been freely devoted to its production. Dr. Rein writes about the industries of Japan with scientific accuracy and characteristic thoroughness; in fact, we know of no work, of the scores which have been written on the social and industrial condition of the 'Land of the Rising Sun,'* WHICH, SO FAR AS LEARNING AND PRACTICAL UTILITY ARE CONCERNED, IS WORTHY OF COMPARISON WITH THIS MASTERLY SURVEY."

ALSO, 2D EDITION BY SAME AUTHOR.

Japan: Travels and Researches

Undertaken at the cost of the Prussian Government. With twenty illustrations (many full-page) and two maps. Royal octavo, cloth, gilt top, $7.50.

N. Y. Nation.—"Those who have waited for the very best general work on Japan have now the opportunity of purchasing their full money's worth. Gathering the best of all previous scholarship and research on the subject, the author has added his own valuable contributions. . . . The text before us is more than a translation; it is a revision of the original work, and hence an improvement upon it. Every line has passed under the eye of the author. We commend the work as the best general handbook of Japan, and the most complete yet presented to the English reading public."

ALSO, JUST PUBLISHED.

Through the Heart of Asia, Over the Pamïr to India.

By GABRIEL BONVALOT, with 250 illustrations (many full-page engravings) by Albert Pepin, translated from the French by C. B. Pitman. 2 vols., imperial octavo, cloth, $10.50.

The *London Spectator* says: *The volumes, written throughout with French brightness,* ARE A VALUABLE CONTRIBUTION TO OUR KNOWLEDGE OF CENTRAL ASIA."

"*The narrative is sprightly and interesting, and contains much new information about a part of the central Asian region which, though plentifully written about, cannot as yet be said to be at all thoroughly known. The volumes are illustrated profusely, and a considerable proportion of the engravings are spirited and carefully executed. An index adds to the permanent value of the book, and it is also furnished with a good route map.*"—N. Y. Tribune.

NEW VOL. BOOK LOVERS' LIBRARY.

Foreign Visitors in England, and What They Have Thought of Us.

Notes on Their Books and Opinions during the Last 3 Centuries. By EDWARD SMITH. 12mo, antique paper, uncut edges, cloth, $1.25.

"Worthy of the brilliant series in which it appears. . . . The result is a charming and readable collection, made up of the comments and criticisms of all sorts of visitors, appreciative and disgruntled, odd, comic, and pertinent, of people from *Holland and Bohemia, France, Italy, Germany, and America,* during a long period of years. Few volumes of this series have had so pleasant a theme or have presented it with such success."—*N. Y. Commercial.*

The Nation.

NEW YORK, THURSDAY, MARCH 7, 1889.

The Week.

THE last veto message of President Cleveland, that of the Direct-Tax Bill, is a document which will be cited in history as a worthy rounding-off of his Administration. In every way it is characteristic of him as a President who, on important occasions, was as fearless in defending the best interests of the people as he was free from all taint of demagogism. The bill was a thoroughly bad one, and owed its being solely to the appetite born of the large surplus in the Treasury. It pretended to be a proposition to refund to the States the direct tax legally and constitutionally paid by them to the Government in 1861. There was no more reason for paying this back to the States than for returning to them the money which they pay to the Government in customs duties. The effect of the bill would have been to bestow upon the States and Territories named $17,000,000, in a way which the President forcibly and accurately calls a "sheer, bald gratuity." He shows very clearly that such a bestowal would be unconstitutional, and argues with great force against the unfairness and unjust discriminations of the bill, and the disturbing idea which it would introduce by going against the principle that the power of taxation by the Government should only be used in "cases where its necessity and justice are not doubtful." It was equally noteworthy and characteristic that the Senate should at once pass the bill over the veto almost as soon as received, by a vote of forty-five to nine. That fact also will be recorded in history as revealing the recklessness and fondness for extravagant legislation which most distinguish the Senate of the present day. It should be said that even the extreme partisanship of Senator Edmunds was not strong enough so to overbalance his judgment as a constitutional lawyer as to induce him to vote with the majority. He was one of the nine who sustained the veto.

Secretary Fairchild's ways in Custom-house administration are inscrutable. Consequently we shall attempt no explanation of his sending into Congress, on the last day of his term of office, charges of wholesale corruption, still unsupported by any proof, against the Custom-house officers of this port, and of Philadelphia, and of San Francisco. Of these establishments he has himself been for three years the official and responsible chief. It was his duty, *and his principal duty*, to see that they were manned in a proper manner, that the duties in each of them were honestly collected, and that persons guilty of fraud in them were arrested, indicted, and tried before Federal courts. Not one prosecution has he instituted. No proper inquiry by a competent tribunal into the condition of these great Government offices has he made. Instead of this, he has begun to publish to the world within the last three months that President Cleveland's administration has absolutely failed in its principal function, and that it leaves the chief Government offices honeycombed with corruption. Of course, Senator Ingalls himself could desire nothing better than this as an excuse for "a clean sweep" in every department of the Government. What President Cleveland and the Democratic managers have been thinking about—supposing them to look ahead at all—in letting the Secretary go on with his "statements" and explanations we cannot imagine. It would have done the Administration great honor to have overhauled the custom-houses three years ago, by competent investigators, and reformed them, if reform they needed. But think of making no reform at all, and simply hurling insult and denunciation at the principal Government employees just as the Democratic President is packing his trunks to leave the White House! Has the like of it ever been known in political history?

One of the most important and gratifying features of the inaugural address is its silence upon a subject which occupied a large space in the similar address delivered by Mr. Harrison's last Republican predecessor. Gen. Garfield spoke at length of ignorance in the voter, and especially of illiteracy in the South; declared that the nation was "under special obligations to aid in removing the illiteracy which it has added to the voting population"; and affirmed that "all the constitutional power of the nation and of the States, and all the volunteer forces of the people, should be summoned to meet this danger by the saving influence of universal education." This was a committal of the Administration to the policy of Federal aid to education in the South, as proposed by the Blair bill. Mr. Harrison has been earnestly importuned to make a similar declaration in favor of action by the nation in the matter of education in the South, but he has refused to do so. "If in any of the States," he says, "the public security is thought to be threatened by ignorance among the electors, the obvious remedy is education," and he adds: "The sympathy and help of our people will not be withheld from any community struggling with special embarrassments or difficulties connected with the suffrage, if the remedies proposed proceed upon lawful lines and are promoted by just and honorable methods." That the new President means by this expression only what Gen. Garfield called "all the volunteer forces of the people," and rejects the idea of Federal legislation in that direction, is made clear by his significant omission even to mention appropriations for education as a means of reducing the revenue, although he does mention and recommend such other methods as enlarging the navy, subsidizing steamship lines, and lengthening the pension roll.

President Harrison's silence upon this question shows that reflection has only strengthened the sound view which he took in a speech upon the Blair bill March 25, 1884, when he said: "The only permanent reliance for the education of the masses must be upon local taxation in the States; every one concedes that. One dollar voted by the people of any school district for the support of common schools is worth $10 given out of the Treasury of the United States. It evinces an interest in education, and guarantees a careful and intelligent supervision. Only a local supervision and interest will bring these constituencies that are now so backward in the race of education abreast with other States. In my judgment, there could be no worse policy than to throw in a single year into those States $15,000,000 out of the National Treasury." The refusal of the new Administration to endorse the policy of Federal aid to education in the South leaves that mistaken scheme to be buried under the rapidly growing load of popular disapproval. It has been severely condemned by the leading educators of the country, including such prominent champions of negro education in the South as Gen. Armstrong of Hampton; it is now vigorously denounced by a large proportion of the leading Republican newspapers of the nation, and advocated by scarcely one; it was stoutly opposed by prominent Republicans from both the East and the West when last before the Senate; and the tide of educated public sentiment now sets steadily and strongly against it. There is good reason to hope that, when it next comes before Congress, it will be beaten by the Senate, once for all.

Rumors of "war" upon the new Administration fill the air in every direction. "Steve" Elkins is said to have returned from Washington in a towering rage because he offered the new President some advice which was not accepted. The Republican Senators are said to be full of wrath because their advice about the Cabinet has not been asked. "Tom" Platt is said to be brooding in secret and sharpening his "knife" for vengeance because he has been left out of the Cabinet. About Warner Miller there are conflicting rumors. One set represent him as serene, because he assured Gen. Harrison immediately after election that he did not wish a Cabinet position. Another set represent him as sad, but consoled by the reflection that he is no worse off than Platt is, for both of them are lying "outside the breastworks." Probably all the rumors about them and other Republican leaders are largely imaginary, but there is visible behind them all a tremendous determination in the minds of all those disappointed about the Cabinet to get even by securing a share in the offices about to be distributed. The Platt-Miller tussle over the Cabinet will now shift to the Custom-house, for example, and in

various other directions there is likely to be a scramble which will make the President think Cabinet-making mere child's play in comparison.

Whatever may be Col. Dudley's reputation outside the Republican party, his popularity in the party was obviously never so great. At the National Convention of Republican Clubs last week his name was repeatedly cheered, and he was thanked by special resolution for his services in aiding President Harrison's election. At the Spellbinders' banquet in Washington on Saturday evening, at which Col. Elliott F. Shepard, the most religious Republican in the world, presided, Dudley received equal honor. According to the *Tribune's* report, "Col. Dudley's name was cheered between every course by the enthusiastic Spellbinders." No reasons are given for this admiration, but possibly it is because Dudley has thus far succeeded in eluding all attempts to have him explain his famous "floater" letter. Why a fervid Christian like Col. Shepard should lead in paying such signal honor to a man who is accused, over his own signature, of "buying floaters in blocks of five" to vote for Harrison, and who refuses to say whether or not the accusation is true, we do not know. The only man whom the Colonel has ever rebuked for the use of money in an election is John J. O'Brien, and he rebuked him warmly, not for using the money, but for basely failing to use it. Possibly he and the Spellbinders are cheering Dudley's name because he did not put the money of good religious Republicans in his own pocket, but sent it on its pious mission to the pockets of "floaters."

In the Assembly at Albany on Wednesday week, Mr. Ainsworth, a stanch Republican, chairman of the Appropriations Committee which has been investigating the ceiling scandal, made the following remarkable statement:

"We all know that politics was here last year thicker than the panels above us in this ceiling, and this bill was introduced to this house for the purpose of getting something through that would take out a pine forest that sustained the dangerous ceiling, and the question was, Shall we put it into Mr. Perry's hands? Then politics came up. Then the question was, Shall we put it into Andrews's hands? and politics came up. Then the question was, Shall we make a commission? and politics came up again. I consulted Senator Sloan, and he thought Mr. Perry should do the work. We canvassed the House to see if we could carry it with Mr. Perry's name in it, and we found we could not. And the only reason a commission was attached to this bill was for the simple purpose of taking care of the politics that was in the job on the eve of a Presidential election. Isn't that true? It was an unwise thing to do it. We ought not to have done it. If politics had been allowed to take care of themselves, and the charge of the construction had been given where it ought to have been given, to Commissioner Perry, the incoming President would be a Democrat, and we would have no occasion to go to the inauguration of Gen. Harrison next week."

How could the $100,000 or more which was stolen on the ceiling job have secured Gen. Harrison's election? Let us review the history of the job briefly and see. Mr. Ainsworth says truthfully that a commission was decided upon in order to let "politics" in. The bill creating the Commission passed the Assembly and remained in the hands of Gov. Hill for thirty days. He gave it a great deal of thought, and did not sign it till he knew who was to constitute the Commission, and who was to be put in charge of the work. There was, in short, a perfect understanding between the Democratic Governor and the Republican managers in the Assembly, as to the way in which the job was to be executed. The Commission, composed of three Republicans and two Democrats, all members of the Assembly, from the beginning to the end paid no attention whatever to the work, leaving it entirely in the hands of the Superintendent of Public Buildings, Mr. Andrews, who is a Democrat and a subservient agent of Gov. Hill. When the job was finished, it was discovered to be an outrageous swindle, by which the State had been robbed of at least $100,000.

The Assembly, after trying vainly to stave off investigation, had to let some of the truth come out. Mr. Ainsworth's committee, in spite of the most strenuous exertions of its chairman to keep the full truth from being known, was obliged to report that there had been fraud, and that the Commission and the Superintendent had been guilty of gross neglect of duty. The Assembly, in a spurt of virtuous indignation, called for the removal of the Superintendent. The Board of Trustees of Public Buildings, which has the power to remove him, is composed of Gov. Hill, Lieut.-Gov. Jones, Democrats, and the Speaker of the Assembly, Mr. Cole, who is also Chairman of the Ceiling Commission. They have thus far refused to remove him. Here are "politics" in bewildering profusion, and about equally divided between Democrats and Republicans. We have Mr. Ainsworth's word for it that the great result of the combination was the election of Gen. Harrison. He ought to have added "and of Gov. Hill." His explanation of the ceiling job is nothing less than a confession that it was concocted by the Governor and the Republican managers for the mutual benefit of Hill and Harrison. The State was robbed of $100,000 for the benefit of a "deal" by which the Republicans were to defeat their own candidate for Governor, and the Democratic candidate for Governor was in return to defeat the Democratic candidate for President. It is not the first time that such a "deal" has been hinted at, though it is the first full confession of its actual existence. That Gov. Hill would consent to enter into such an agreement, nobody who remembers his aqueduct "deal" can doubt. He did precisely the same kind of thing at that time, and the men who represented the Republican party in that agreement to plunder the State are the men who stand foremost in this State in that section of the Republican party which is now showing that it has the upper hand of the new President.

Two noteworthy deliverances on the subject of pensions have been made recently by Union soldiers. One was by Gen. J. D. Cox of Ohio, who, in an address at Chicago on Washington's Birthday, made an earnest protest against the demand for indiscriminate pensions and the cheapening of patriotism which such a policy involves, saying: "When I think of this, I long for some trusted leader to plant the colors at the front, that we may rally on them as in the crisis of a great battle. I long for a voice, potent as Sheridan's on the road to Winchester, crying like his: 'Face the other way, boys! Face the other way; *that* way lies dishonor.'" The other address was made by Joseph W. Fifer before the annual encampment of the Illinois Department of the Grand Army in Springfield, last week. "We have an overflowing treasury," he said, "and a surplus increase of over $100,000,000 annually, a burden scarcely felt by the people; and the Government that would not, under these circumstances, provide liberally for its defenders is not fit to exist, and should be blotted from the family of nations. *If the Government paid $1,000,000 daily for pensions, the nation as a nation would be just as rich at the end of the year as it was before, as the money would still be in the hands of our own people.*" Unfortunately, Jacob D. Cox is an ex-Governor, who has no influence with the controlling elements in the Republican party, while Joseph W. Fifer is the newly elected Governor of his State, chosen after a campaign in which a demand for more liberal pensions was one of the chief rallying-cries of the successful party.

Attempts to have the law of libel amended in the interest of the newspapers are being made in various States, notably Massachusetts, Maine, Michigan, and Ohio. That it needs amendment there is no question. The bill introduced in Wisconsin is the best we have seen. It does away with the legal presumption of malice, which in nine cases out of ten is absurd, forbids the recovery of any but actual damages sustained where actual malice is not proved, and forbids the bringing of any action for libel unless the plaintiff shall have asked for a retraction or correction; but it makes the retraction or correction pleadable in mitigation of damages, and bars all suits begun by lawyers for a contingent fee. This last provision would keep a very large proportion of the libel suits off the calendar of the courts. The Wisconsin bill is very much preferable to the Massachusetts and Pennsylvania bills, in that it does not make retraction or correction a complete defence. The Massachusetts bill would really leave every man in the community at the mercy of the Billy McGlory journalists, who are in the business (and proclaim it loudly) for money only, and do not care how they get it. They would print any story about anybody that would be likely to increase "sales," and then get off scot free and increase sales still further by printing a correction, probably a jocose one, a day or two later. For instance, there is much more money to be got by saying that the Rev. Dr. Toogood has eloped with his cook and then "correcting" it,

than there is by saying nothing whatever about Dr. Toogood or his cook. Consequently, on accepted journalistic principles, the Doctor would be made to elope with the cook just as often as sales were "slack." The true plan is to leave every man who thinks himself libelled his remedy at law, as he now has it, but saddle him with every condition necessary to insure good faith in bringing the suit, and then let correction or retraction, coupled with the character of the journal sued, have its proper weight with the jury, which it generally has.

The woman-suffrage question came before the Maine Legislature on Thursday on a proposition to give the sex the ballot in municipal elections. The matter has aroused considerable interest during the preliminary discussions, a notable feature of the case having been the presentation of a number of remonstrances against the proposed change from women. Ex-Gov. Robie, the leader of the House, made a long speech in favor of the bill, but it was defeated by a vote of 90 to 40. The friends of the cause will be somewhat disappointed at the poor showing which it made, because it indicates that the large vote cast by women at the Boston school election last December has not strengthened the movement as much as they hoped. It appeared possible then that the Republicans might take up this extension of the suffrage as a party measure, but the tone of the press in New England, as well as this vote in the Maine House, shows that no such step will be taken at present. On the eve of the decision at Augusta, the Republican organ published at the capital came out with an earnest protest against the bill, on the ground that "female suffrage would surely defeat its own avowed objects, and in the end render the government of cities, States, and nations more difficult and more perilous." The Boston *Journal*, the chief Republican newspaper in Massachusetts, is equally opposed to the change, and it is evident that for the present the movement in New England will be left to make headway without organized support from either of the great parties.

While it has become with us a question how to discourage and restrict immigration, the leading nations of South America are vying with each other in offering inducements to colonists from Europe. The result is a very marked increase in the number of newcomers, in the last few years, in Chili, Brazil, and the Argentine Republic. The last named country received upwards of 175,000 immigrants in 1888, and confidently looks for more than 200,000 in the current year. The nationalities represented are mainly Italians, Spanish, and French, in the order named. French emigration to the Plate River is astonishingly on the increase, so much so as to win the anxious attention of economists like Leroy-Beaulieu, who are asking why this great diversion of French labor should not go to French colonies, as it notably is not going. What troubles the Argentines, however, is that so small a portion of the immigrants—only about 10 per cent.—devote themselves to agriculture. They see clearly enough that it is only the rapid development of their natural resources that can enable them to pay for the vast system of internal improvements now under way. Over 5,000 miles of railway were under construction last year, and 3,000 more are planned for 1889; but this means an addition of $75,000,000 to the national debt. Ten thousand houses were built in Buenos Ayres in 1888, and the city now has a population of nearly half a million; but this means, just as does the enormous premium on gold, a feverish commercial speculation, which is distinctly in no need of encouragement. So strongly does the Government feel that more labor is wanted, not for railroads and harbors, but for farms, that it is seriously proposing to restrict immigration, of Italians at least, to those who will give themselves to agriculture.

Brazil, in like manner, is coming forward to take our place, if we definitely abandon it, as an asylum for the overcrowded and oppressed of Europe. From an average immigration of but 27,390 a year for ten years, the figures leaped in 1888 to 130,000 in the two ports of Rio and Santos alone. The incoming tide is not alone directed, as before, to the provinces of the south, but to those of the north and of the centre as well. A part of this quickened immigration seems to be due to the abolition of slavery. Europeans were reluctant to go as laborers to a country where the bulk of manual labor was servile. Now all laborers are equal before the law. But much also must be attributed to the provisions made by the empire to attract foreigners as settlers. Every immigrant coming with a family and proposing to follow agriculture is given free transportation from the port at which he disembarks to the point where he is to settle, with free support for eight days thrown in. If he prefers to join one of the Government colonies, he has support and wages guaranteed to him until the time of his first harvest. Bureaus of information have been established in various cities of Europe to make known the advantages of Brazil to intending emigrants, though rigid care is taken to prevent such scandals as have been seen in connection with Italian emigration, by the prohibition of any commissions to the agents.

The point which the London *Standard* raises against Parnell, and by which other people in London seem to be impressed, is that Parnell has himself to blame for his sufferings because he did not bring an action against the *Times* to disprove the authenticity of the letters. But this notion cannot have originated with anybody who has considered the difficulty, not to say the impossibility, of proving a negative. To the assertion that he signed a certain letter, Parnell could only oppose his naked denial, unless he knew the history of the letter—who produced it, and, in fact, *all* of the *Times's* reasons for thinking the signature genuine. This would have supplied, as it did subsequently supply, materials for exculpatory evidence. But the *Times* all along declared that it would not under any circumstances reveal the source of the letter, inasmuch as this would cause the murder of the person supplying it. But could not Parnell, in his suit, have extracted this information in cross-examination? He had no reason to think so. In the O'Donnell *agt.* Walter suit, the counsel for the *Times* declared in court that the proprietors would submit to the legal consequences, whatever they might be, of a refusal—that is, would, if necessary, let a verdict go against them and pay damages—sooner than say who gave them the documents. What Parnell had reasonably to fear was that damages awarded under such circumstances would be nominal, or, in other words, that the verdict would not vindicate him. For the chances were probably a hundred to one that a jury of London shopkeepers, after having been stuffed for a year or two by the *Times* with stories of Irish crime, and of the general wickedness of the Parnellites, would treat the excuse of the *Times* as a natural and proper one; would feel that "a great journal" like the *Times* might be trusted to act in such a matter in good faith and with proper caution; and send Parnell out of court with nominal damages, an enormous bill to his lawyers, and an additional stigma on his character for Tory journalists and orators to rub in at their leisure.

Pigott's suicide somewhat simplifies the situation in London, as each side accused the other of paying him to run away. The Irish—see Davitt's cable to Sullivan—said the Tories had bribed him to "clear out," while the friends of the *Times* maintained that the wicked Labouchere had done the same thing. He has vindicated the reputation of both by killing himself, because it is hardly probable that, corrupt as he was, he could have been hired to commit self-slaughter. The life of a blackmailer which he has led for the last twenty years, must, as Mr. Bryce is said to have remarked, have been an awful one—a punishment in itself. If it be true, too, that when Houston came to hire him to discover something about the Parnellites, he found him in the depths of poverty, with his wife lying unburied in the house for lack of money, one can hardly help pitying the old scoundrel. The more one learns about him, however, the worse does the case of his employers become. What the manager of the *Times*, Mr. Macdonald, and the astute solicitor, Mr. Soames, ought to do under the circumstances, it is hard to say. Americans, when beset by difficulties of this sort, "go to Europe till it blows over"; but where can a European go when he becomes an object of general ridicule and contempt? Mr. Smalley of the *Tribune* telegraphs that Mr. Buckle, the editor, is believed to be blameless—that he did all he could, including kneeling before Mr. Walter, to prevent the blunder of printing the letters; but he found that luminous intelligence absolutely inexorable. But this again, as to Mr. Buckle, is contradicted by Mr Labouchere.

THE CLEVELAND ADMINISTRATION.

THE late Administration met handsomely the most trying test to which it was subjected. For years half the people of the United States had been taught by their political guides that, if the other half should get into power, they would ruin the country. A large proportion of them had come to believe this. Very many white people at the North actually feared that, if Mr. Cleveland should be elected, "the Confederacy would be in the saddle"; that attempts would be made to pay the rebel debt and to pension the rebel soldiers; and that, by reason of all this, national prosperity would be destroyed, and their own property would not be worth half what it had been under Mr. Arthur. Many black people at the South really supposed that they would be put back into slavery. In short, in a country almost evenly divided in opinion, a large share of those who constituted one political organization regarded those who composed the other as foes to the nation, who would play havoc with all its interests if they should ever get control of the Government. This was a most terrible state of things, for, if these apprehensions were well founded, popular government had already proved a failure. It is the greatest credit of Mr. Cleveland's Administration that it has restored the ancient faith in our institutions, by demonstrating that either party can administer national affairs with success. The white Republicans of the North have suffered none of the ills which they feared, while the colored Republicans of the South have never seen an equal period since the war in which so much progress has been made in extending their educational advantages and promoting their general progress. Every Republican in the country to-day views the future with an equanimity which he never possessed before Mr. Cleveland became President, and by his wise and conservative course showed that patriotism and ability are not monopolized by one party.
